Address by Senator Martin at National Convention of Young Republicans

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, June 13 (legislative day of Monday, April 21), 1947

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Pennsylvania [Mr. MARTIN], at the national convention of the Young Republicans, at Milwaukee, Wis., on Friday, June 6, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

YOUTH SHAPES AMERICA'S TOMORROW

Chairman Becker, delegates to the Young Republican Convention, and my fellow Americans everywhere, I salute my fellow Young Republicans with special pride and satisfaction. Some years ago, while I was Republican chairman of Pennsylvania, we realized the then Young Republican organization had dwindled in numbers and weakened in influence. I helped to rebuild your great organization. Since that, I have felt myself one of you.

In passing upon legislation, as Governor and Senator, there is a yardstick that I have always applied: "Is it good for our young people—the coming generation." I have tried to think with you and to see things as you do.

I have great faith in you. Not long ago, you young men were establishing beachheads all over the world. Many of you young women served in the armed forces or did critical work on the home front. That meant you had strength, courage, and faith in America. Today you are preparing to take new beachheads, not by force of arms but by the vigor of your patriotic Americanism.

I know that you will play your part, and succeed. I am more concerned with my own generation. Will we pass on to you the tools and financial stability you need? With such help as we can give you, you must build America strong enough to withstand attack by a cancerous ideology—communism. Your job is to beat it down and go on to build a bigger, stronger America just as each generation has done before you.

The system which we call Americanism offers you individual rights and individual dignity. Under it you think as you please and speak as you please. You worship the God of your fathers as your conscience dictates. Yes; you are free to act as you please, if you respect the rights of others.

You possess also something that is granted to no other people in the world today. It is "The right to get ahead."

These are rights guaranteed by our American system. We forget how precious they are. No dictatorship or collective system dares to grant its people these things which we accept so casually.

In accepting these privileges you also accept the obligation to fight for them and pass them on untarnished.

We live today in an intensely competitive world. For sheer bitterness in the struggle for the minds and souls of men, there has never been its equal. We won the first round when we beat down the brutal cruelties of nazism.

Today we are in the second round. We are battling a force more subtle, more insidious—yes, more able to woo the minds of men—communism.

You were the spearhead that won that first round. The world looks to you young folks once again to lead the way to victory.

We shall not win this fight by pious platitudes or by name calling. We shall not win by mere political promises. We shall not win it by hand-outs to other nations.

We shall win it only by proving that we are bigger, tougher, stronger—and that our way of life is better.

This will not be easy.

Communism is a disciplined force. Its growth has been the result of cunning planning, of hard work, and of sacrifice by people who believe in their cause.

The way to win is to plan more carefully, to work harder, and to make greater sacrifices to uphold the American way. Against the godless faith of communism we must offer a greater faith in America, supported by our thousands of churches, looking toward the common God for inspiration.

In this struggle, you Young Republicans, and all our youth, must play a leading role in shaping America's tomorrow.

Be proud that our party has no subversives. We don't stand for fascism, for communism, or for any other foreign "ism." Many of the termites that bore from within to weaken our Government are holding important jobs in Washington. They were put there by the New Deal Party.

They have claims on that party, and that party owes obligation to them.

We Republicans have just one thing for them—a one-way ticket to Moscow.

We are proud of our party, you and I, but let us make it even a better party. We are not a party of obstruction and criticism. We are a party with a plan and purpose. We must move ahead steadily, building a better America.

We must beckon youth to our ranks. Youth is forward looking and liberal. It is enthusiastic in its desire for better things. Youth has a right to these dreams, but it must not succumb to false prophets who misuse the term liberalism.

Liberalism means to be free, but its meaning is warped by those who use it most. In its name, they call for more Government controls. That leads to loss of freedom and the socialistic system of a regimented slave state.

You have heard of the cuckoo bird, a creature which lays its eggs in the nests of other birds. Investigate carefully all the high-sounding new movements that invite you. For communism is a cuckoo bird that lays its eggs in liberalism's nest.

Not until we eradicate the assorted cuckoos and their ideas will we be able to take our country out of hock and give it back to our people.

At a time when our national debt stands at nearly $260,000,000,000, the present Democratic administration asks for a budget 12 times the average annual expenditure of the Federal Government following World War I.

Let me quote you something from one of the best known men of the twentieth century. I quote:

"The credit of the family depends chiefly upon whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good."

Let me end the quote there for a moment, to point out that this is what the Republican Party has been trying to do—to balance the budget, so that our Nation can live within its income and keep its credit sound.

Now to resume the quotation:

"Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are reflected in idle factories, in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain."

Let me digress once more:

Is not that what the Republican Party has been warning of and seeking to forestall?

And what has happened? The administration big guns have warned us that the President wants no tax reduction and will veto our tax bill.

And now to complete the quotation. Again I quote:

"I know something of taxes. For three long years I have been going up and down this country preaching that government—Federal, State, and local—costs too much. I shall not stop that preaching."

That is the end of the quotation. These many years we Republicans have been preaching that government costs too much. We shall not stop that preaching. Because we have fought for these things, we have been condemned and ridiculed by the New Dealers on the floor of Congress and across the Nation.

The quotation was good, basic Americanism. The pity is that both the prominent

American who uttered those words, and his successor, have failed to follow them. In case you have forgotten, the man who spoke those words was Franklin Delano Roosevelt in the Presidential campaign of 1932.

Now, 15 years later, for the first time, those words are being implemented with deeds—by a Republican Congress.

Youth, unfortunately, has thought too little of the national debt and taxes. It has failed to rally to the support of those who seek to reduce this debt.

Let me warn you Young Republicans here and young Americans everywhere, not to miss the boat. You are going to have to pay most of our $260,000,000,000 debt. You face this long-term mortgage on your homes and futures.

If you are a family man, your share of the national debt is $7,500 dollars. You cannot escape it. That is why our national debt and our Federal expenses should be even more your concern than that of the Congress.

And don't miss the boat on taxes either. You have a stake in having them cut.

Your younger years are your building years. They are the years you should be making some money to put into productive enterprise for your futures. They are the years you should begin providing for the time when many of you will not be able to work so hard. You will need savings for yourselves and your families.

But see what is happening today. The present high tax rates prevent the younger people from saving. All they earn is divided into two piles. One they must spend to live; the other is taken by the tax collector. When your fathers were your age, they were able to save and invest. You should have the same opportunity.

I am well aware of the condition of the world and of this Nation's obligations in that world. But I say this with utmost confidence. With your help and support we can reduce Federal spending, let you save part of what you earn, provide new opportunities, and still make good on those obligations.

With these before you—youth must shape the America of tomorrow.

You must realize, however, as I do, that many difficult problems will be encountered. Congress has been confronted with many of these problems. Unfortunately, not many of our people are aware of the severe handicaps under which Congress has been working.

I would like to suggest that the young Republicans take on this year the task of acquainting the American public with the facts. Here they are:

We have been in session for only about 5 months. The first part of that time it was necessary for the House and the Senate to remake themselves in accordance with the Congressional Reorganization Act passed last year. That consumed considerable time. It meant that Congress was forced to commence its actual legislative work weeks behind schedule.

But with the work of reorganization done—and considering the fact that we have refused to be a rubber-stamp Congress—we have moved far more swiftly than the public realizes.

Last year's election restored the legislative branch of their government to the people. Next year we will restore the executive branch.

In a short time, this Congress has hacked away substantial sums from inflated Federal budget requests. In that time, tax reduction—the first real individual income-tax reduction in many years—has been passed by a Republican Congress. In that time, the budget has been balanced and a start has been made toward reducing the national debt.

In that time, also, I should like to point out, numerous other bills, in line with our campaign pledges, have passed. The Congress overwhelmingly passed the bill to outlaw unwarranted portal-to-portal claims—a long step toward industrial stability. It passed new labor legislation in accordance with our pledges, so as to bring about better balance between employer and employee.

It passed the law to limit the Presidential tenure to two terms, and voted large funds to aid the needy of the world and to uphold the hands of those nations which stand as a barrier against communism.

It terminated many of the wartime powers of the administration and removed many of the Government controls from business and industry—all in line with restoring free enterprise.

I want to emphasize this and wish it could be driven home to our people in all the 48 States. We did these things in this short time under the handicap of an iron curtain dropped by the bureaus and departments which have withheld vital information from the Congress, and refused to cooperate in other ways. They knew if Congress had all the facts it would be in even better position to cut away more of the deadwood.

Congress accomplished what it has despite pressure groups set up by the departments and agencies to influence Congress. You've heard about some of the work of this big, unregistered lobby which feeds directly on tax dollars while it seeks to perpetuate itself.

You may have read about confidential letters sent into the field from Washington, advising Government pay-rollers how to stir up the folks against congressional economy. You may have heard about the Federal propaganda machine stirring up the folks back home to send letters and telegrams to Congress, protesting any cut in Federal expenditures—all in the best tradition of the professional lobbyist.

You probably heard of post-office branches being closed a day or two a week in various smaller communities. The people were advised that this was being done because Congress had cut the post-office budget. And, mind you, all of this was done even before the new budget goes into effect, July 1 next.

Of course, it is nonsense to think that Congress intends to close down post offices. Nevertheless, some people have been fooled by this trick and by similar tricks. That was one of the handicaps your Congress has had to overcome.

One of the problems we have faced has been the heavy opposition of the Truman administration to income-tax reductions. Many impressive arguments have been presented by the administration, but they have concealed the real reason—politics.

Yes—politics. Let me show you how that works.

If taxes were reduced in 1947, that would not help the administration very much in the Presidential election campaign of 1948. The administration works on the principle of removing the tight shoe that pinches the corn when it will have the best political effect.

Hence the New Dealers have announced they want no tax reduction until 1948, when they would claim the credit and tell the voters that they reduced taxes, hoping to cash in at the polls.

But there is this angle to it. If the administration had had its way, the American people would have been squeezed for excessive wartime taxes for another year, for no purpose other than to make votes for the administration.

They would have forced you to wear the tight shoe another year so they could have dashed up at the eleventh hour, given you relief, and demanded their reward at the ballot box.

It has been argued by the administration that all the savings by the Republicans should be applied to reduction of the national debt. This is a strange doctrine, indeed, to come from the lips of those who for nearly 15 years have advised the American people not to be concerned about our debt because, as they said, "we owe it to ourselves."

We Republicans are cutting taxes now—because we know that we can reduce taxes and still make a substantial payment on the Federal debt. We know both are necessary and vital to our national economy.

In conclusion I would like to make some suggestions for young Republicans and older Republicans everywhere.

1. Take a greater interest in Government. Use your power to make Government function as our forefathers blueprinted it, not as foreign dictators would have it.

2. Demand the blotting out of communism and other dangerous subversive ideologies being preached in this country.

3. Fight for lower taxes and continued reduction of the public debt. The way to bring these things about is to cut the cost of Government by eliminating useless functions and useless employees.

4. Demand a plan for strong national defense based upon the American tradition of our desire to live at peace with our neighbors, but of readiness to defend ourselves against any attack.

5. Insist upon some return for the aid we are giving so freely to other nations. Many of these nations have and can spare raw materials which are vital to our national defense. I refer principally to those scarce metals and minerals which we should stock pile for our protection. Why should we not have some of these in exchange for carrying the heavy relief burden?

6. Let us conserve our own national resources so that future generations will not find themselves living in a have-not Nation.

7. Let our actions follow the road of right and not expediency. In this connection let me emphasize one point which is not given sufficient emphasis in the harsh age in which we live. I mean, the virtue of tolerance. If we are to succeed in further building our country, in making it a better place in which to live, and a model for the future, then we must preach and practice tolerance and good will.

Let us seek to live at peace with our fellow Americans, no matter what their race, their color, or their creed. United we can be an influence for good that we could never be, if divided.

Your committee did me a great honor in inviting me to speak over the air to the Young Republicans of America. I appreciate most deeply this privilege and also the opportunity to discuss with you, the representatives of the young Republican organizations of the United States, the important things that we, as Republicans young and old, have to accomplish.

It is a real pleasure, while in the great State of Wisconsin, to express my admiration for your representatives in the Senate of the United States.

ALEC WILEY, the senior Senator from Wisconsin, has won recognition as a statesman of rare distinction. As chairman of the powerful Judiciary Committee, he has performed a marvelous American job. Through his efforts legislation has been placed on the statute books for the benefit of all our people.

Your brilliant, young junior Member, Senator JOSEPH R. MCCARTHY, is a freshman Senator like myself, yet he has already, by his exceptional ability, impressed himself most favorably upon that body.

You Young Republicans have a right to be proud of your attainments in the United States. For example, you already have three Members of the United States Senate—Wisconsin's able Senator MCCARTHY, California's able Senator KNOWLAND, and Indiana's able Senator JENNER. All of them served overseas in World War II and have outstanding military records.

Again, I want to congratulate the Young Republicans of the United States. With all the emphasis at my command I urge you to move forward as a group—rededicated to youth's greatest obligation and greatest opportunity—shaping the America of tomorrow.

Flag Day Address by Senator Johnston of South Carolina

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, June 13 (legislative day of Monday, April 21), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Flag Day address delivered today at the Eastern High School in the city of Washington by the distinguished Senator from South Carolina [Mr. JOHNSTON].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, General McAuliffe, distinguished guests, and young friends, it is with a feeling of deep humility and glowing pride that I share the honors of this hour with that great hero and alumnus of your school, Maj. Gen. Anthony C. McAuliffe, legendary hero of Bastogne. It is peculiarly fitting and proper that you have chosen Flag Day as the appropriate occasion to do honor to such a great defender of our flag. And I say to you young people gathered here today, that if you can grasp the deep, underlying significance, the dynamic confidence in that flag and what is represents, if you can come to grips with your own conscience and your own hearts and gain for yourselves the inner-confidence, the belief in the sacredness of your Government and your flag, and the sanctity of the human soul expressed in that term of vigorous defiance of the Nazi superman, "Aw, nuts," then you, like General McAuliffe, can attain your place of eminence in the annals of American heroes who have fought and bled, and died to defend and preserve those beautiful colors and that which they symbolize.

Beleagured and beseiged, apparently condemned to destruction, General McAuliffe, like other great American heroes, knew no fear, knew no defeat. His response to the demands of surrender from the so-called Nazi supermen was a masterpiece of defiance. His classic utterance "Aw, nuts" was an eloquent expression of American confidence and determination.

In thousands of words he could not more clearly have explained the American contempt and disgust for the stupid ideology that the Nazis state was more noble and powerful than the collective strength of the American individuals. I salute General McAuliffe as a great defender in the finest American tradition, of the greatest flag that has ever fluttered in the sky.

The history of the development of the Stars and Stripes is the story of the growth of a nation, born of blood and strife and dedicated to the preservation of the dignity and integrity of the individual citizen. We people of these United States have not always been free; we suffered long under a tyrant king who ruled in absentia from foreign shores. He lost his hold on us because he failed to comprehend the intensity of the love for freedom that burned fiercely in the breasts of those courageous and adventurous souls who had braved the Atlantic to establish a new colony, apart from oppression.

These pioneers, saying "Aw, nuts" to the English tyrant, showed their contempt in the shot for freedom that was heard round the world and resulted in a war of liberation.

Tomorrow is Flag Day, proclaimed by President Truman and the Governors of our 48 States. It is the final day in a week designated for a reaffirmation of our devotion to the ideal of freedom and justice under the law and beneath the flag.

That flag symbolizes 8 years of struggle to form a more perfect union. Each star in that beautiful blue field is the manifest history of a sovereign State. That flag has been unfurled over this young giant of a nation for a century and a half. Young—as nations go—this country has climbed the peak of progress to the pinnacle of might and power and strength as the undisputed leader of today's world. Dominant in war, benevolent in peace, America stands today the guiding star of a world much in need of repair—a world that needs to learn the story of America's flag and of her history.

That flag reminds us that here is a nation dedicated to personal freedom and a respect of religious beliefs, a sanctuary for the persecuted and oppressed of all the world wherein they might have continued life and liberty and be free to pursue their own happiness.

In that flag are crystallized all the hopes and fears of a nation established in the righteous principles of freedom of speech, freedom of assembly, and freedom of worship.

During the years of trouble with England, all sorts of queer flags had been designed as standards for the Colonies, first by one colony and then by another, each, however, having a distinctive pattern and design all its own.

But of all the flags and symbols since the world began, there is none other so full of meaning as the flag of our country. That piece of red, white, and blue bunting, represents 5,000 years of struggle upward; it is the full-grown flower of ages of fighting for liberty; it is the century plant of human hope in bloom

General Washington, George Ross, the uncle of Betsy Ross, and Robert Morris constituted a committee of three to prepare a suitable design for the new American flag. After some study they submitted their design to Betsy Ross, a widow then, 24 years of age, living in Philadelphia, conducting the upholstery business which her husband had previously run.

Betsy Ross, an expert seamstress, then drew a draft of the flag with 13 red and white stripes and 5-pointed white stars in a field of blue, which the committee accepted. They submitted the flag to Congress, but this flag was not approved until many designs were studied and discussed by the Members of the Colonial Congress.

Finally Congress, on June 14, 1777, adopted for the Nation the flag designed by Washington, Morris, and Ross, and made by Betsy Ross. The language of the congressional resolution was as follows:

"Resolved, That the flag of the 13 United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a field of blue, representing a new constellation."

In 1794, with the admission of two new States into the Union—Vermont and Kentucky—two additional stars and two additional stripes were added.

The flag flying over Fort McHenry on September 13 and 14, 1814, when Francis Scott Key wrote the Star-Spangled Banner, had 15 stripes and 15 stars.

It was my privilege a week ago to visit the old historic Fort McHenry at Baltimore. As I wandered over that old battleground it seemed to me that a panorama of my country's history came before me. I could vision Francis Scott Key, confined as a prisoner on one of the boats in the English fleet, waiting patiently during the 25 hours of bombardment, wondering whether at the beginning of dawn the American flag would be flying; and I could feel the thrill that must have come to him, when, with the first appearance of dawn, he found the flag still there; then he put his whole heart and patriotic soul into the burning words of the Star-Spangled Banner, now our national anthem.

As the Nation grew in size, it became impossible to add one new stripe and also one new star for each State and still preserve the symmetry of the flag. So Congress, in 1818, passed an act providing that the flag should be composed of 13 stripes, representing the original 13 States, and that new stars should be added on the July 4 following the admission of additional States. Therefore, in the flag today the 13 stripes signify the Thirteen Original Colonies and the 48 stars signify the 48 States of the Union.

I want to call your attention, particularly on this day, to the significance of the American flag. Our flag is emblematic of the sovereignty of our Nation.

It represents the ideals, aspirations, and history of our people and engenders a feeling of patriotism and respect.

It flies perpetually over the Nation's Capitol as a sign of national perpetuity.

It flies over the schoolhouses of our Nation signifying the Nation's endorsement of education and the Nation's protection.

It flies over the capitols of all our States and over our courthouses, signifying the administration of justice.

It is the symbol of every right enjoyed by the American people.

It represents the Declaration of Independence and the Constitution of the United States.

It reflects the wealth and grandeur and patriotism of this great land of opportunity.

It signifies the law of the land.

It stands for peace and good will among the nations of the world.

It believes in tolerance.

It is the badge of the Nation's greatness and the emblem of its destiny.

National Labor Legislation

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, June 13 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, the subject of national labor legislation is one of the most serious subjects confronting the country today. Daily the press of the Nation is discussing the question. Yesterday the social action department of the National Catholic Welfare Conference at Washington, D. C., issued a statement on this subject. I ask unanimous consent that that statement be printed in the Appendix of the RECORD, together with an article published in the Washington Post this morning relating to that statement; also a statement by myself on the same subject, published in the St. Louis Post-Dispatch of June 5, 1947.

There being no objection, the statements and article were ordered to be printed in the RECORD, as follows:

STATEMENT ON TAFT-HARTLEY BILL ISSUED BY THE SOCIAL ACTION DEPARTMENT OF THE NATIONAL CATHOLIC WELFARE CONFERENCE, WASHINGTON, D. C.

Now that collective bargaining and trade unionism occupy an accepted place in American life, it is the part of political and economic statesmanship to develop an organized system of employer-labor partnership by industries and in the general economic life of the country. Otherwise collective bargaining

may degenerate into class conflict instead of being a springboard toward cooperation for the good of the entire economy.

The Taft-Hartley bill does little or nothing to encourage labor-management cooperation. On the contrary, it approaches the complicated problem of industrial relations from a narrow and excessively legalistic point of view. It runs the risk of disorganizing and disrupting industrial relations by hastily and completely recasting the whole range of Federal labor legislation just at the time when industrial stability is most desperately needed and, ironically enough, just at the time when collective bargaining shows definite signs of moving toward collective cooperation for the common good. Instead of encouraging labor and management to work together in harmony for the general economic welfare, the bill puts a number of legal restrictions on collective bargaining and particularly on the activities of trade unions—restrictions which will almost inevitably lead to industrial strife and unrest. The bill is an open invitation to management to have recourse to the courts and to the Labor Board at almost every turn and thus to sidetrack or evade the normal processes of constructive collective bargaining. It will also result in strikes of all sorts during the long period in which the administration and the legality of the bill are being clarified. It will create the sort of confusion which prevailed in American industry during the period in which the National Labor Relations Act was being tested in the courts. There is no sufficient reason to risk such wholesale confusion at the present time.

More specifically, we oppose the Taft-Hartley bill because of the following unfair and unworkable provisions:

(1) By outlawing the closed shop, the bill disregards completely the history of industrial relations in the United States during the past 50 years or more. Hundreds of thousands of American workers are now covered by closed-shop contracts, which, in the vast majority of cases, have operated and are now operating to the mutual benefit of labor and management alike. To wipe out these long-standing contracts by the stroke of a pen is to invite legitimate rebellion on the part of organized labor and consequently to encourage widespread industrial unrest and confusion. If there are occasional abuses under existing closed-shop agreements, surely these abuses can be corrected without resorting to the wholesale prohibition of the practice of the closed shop itself.

(2) The bill denies to foremen and to certain other supervisory employees the legal protection of their natural right to organize into trade-unions of their own free choosing. This denial is at once unethical and impractical. Again it is an open invitation to foremen and supervisory employees to disrupt industrial relations by fighting a last-ditch battle for the free exercise of a right which they know to be theirs and which they are determined to safeguard. Recent events indicate very clearly that these workers have no intention of tolerating such a serious infringement upon their moral and constitutional right to organize. They have every reason to expect and to demand that the exercise of this right be guaranteed and protected by law.

(3) The bill, in effect, would tend to encourage the separate States to enact antilabor legislation. It would do so by going out of its way in a most unprecedented manner to provide that in spite of the Federal law the States are free to outlaw the union shop in any of its various and long-established forms.

(4) The provision in the bill which would deny official certification to a union unless all of its officers declare under oath that they are not members of the Communist Party and that they do not favor the forceful or unconstitutional overthrow of the Government is likely to lead to serious confusion. Likewise it will prove to be very embarrassing to the great majority of sincere anti-Communists in the American labor movement. Simply by refusing to sign the required affidavit, a single Communist officer could prevent an otherwise decent and legitimate union from being legally certified for purposes of collective bargaining. This provision of the bill is calculated, therefore, to play into the hands of the Communists, who thrive on confusion and disorder. Once again the bill reveals an uncritical tendency to try to solve complicated problems of industrial relations by an oversimplified legalistic approach—an approach which, in the present instance, is rejected as worse than useless by the vast majority of those who have had practical experience in combating the influence of the Communist minority in the labor movement.

We urge the Congress to reconsider its vote and to make haste more slowly in its approach to a problem which is far too delicate and far too complicated to be legislated out of existence. If additional labor legislation is necessary, let it follow and not precede the bipartisan study of industrial relations which is provided for in title IV of the bill. This study ought not to limit itself to the details of collective bargaining as such. Rather it ought to concentrate seriously on discovering ways and means of going beyond the limits of traditional collective bargaining into an organized system of labor-management cooperation on the whole range of industrial and economic problems. Anything less than this will tend to encourage class conflict by setting off organized management and organized labor as contestants in a continuing struggle for power.

Welfare Conference Urges President To Veto Measure

The social action department of the National Catholic Welfare Conference voiced strong opposition last night to the Taft-Hartley labor bill as one which "will almost inevitably lead to industrial strife and unrest."

It made four specific objections, including one saying that the requirement that union officers disclaim under oath any Communist Party links would "lead to serious confusion . . . and play into the hands of the Communists."

"It will prove to be very embarrassing to the great majority of sincere anti-Communists in the American labor movement," the social action department said in an official statement.

"Simply by refusing to sign the required affidavit, a single Communist officer could prevent an otherwise decent and legitimate union from being legally certified for purposes of collective bargaining.

"This provision of the bill is calculated, therefore, to play into the hands of the Communists, who thrive on confusion and disorder."

It called this method "an over-simplified legalistic approach * * * which * * * is rejected as worse than useless by the vast majority of those who have had practical experience in combating the influence of the Communist minority in the labor movement."

The National Catholic Welfare Conference is made up of all the Catholic bishops in the United States, who meet annually and elect an administrative board of 10. These board members administer various departments, of which the social action division is one. Headed by Bishop Karl Alter of Toledo, the social action department concerns itself with industrial and economic problems, international peace, interracial matters, etc.

Besides the Communist angle, the department objected to the Taft-Hartley bill on these grounds:

1. To outlaw the closed shop (where only union members may be hired) "is to invite legitimate rebellion on the part of organized labor and consequently to encourage widespread industrial unrest and confusion." Closed-shop contracts, "in the vast majority of cases, have operated and are now operating to the mutual benefit of labor and management alike."

2. Provisions directed against unionization of foremen are an "open invitation to foremen and supervisory employees to disrupt industrial relations by fighting a last-ditch battle for the free exercise of a right which they know to be theirs."

3. The bill "would tend to encourage the separate States to enact antilabor legislation. It would do this by going out of its way in a most unprecedented manner to provide that in spite of Federal law the States are free to outlaw the union shop." The union shop permits hiring of nonunion workers, but they must join the union shortly.

The social action statement said that the bill "runs the risk of disorganizing and disrupting industrial relations by hastily and completely recasting the whole range of Federal labor legislation just at the time when collective bargaining shows definite signs of moving toward collective cooperation for the common good."

The statement asked Congress to reconsider the whole matter of labor legislation with an accent on study before legislation. Copies were sent to President Truman, chairmen of the Senate and House Labor Committees, and to the Senate-House conference committee which put into final form the measure now awaiting Presidential action.

Against

(By Senator Murray, Democrat, of Montana)

The record of labor in America is a record every citizen may be proud of. Half a century ago American workers lived lives of squalor and deprivation, working under insanitary conditions, poorly housed, with inadequate food and long hours of grinding work. These conditions were emphasized by the surrounding splendor of the well-to-do classes.

The beginning of the century witnessed an improvement in democratic processes and the development of an increasing regard for the rights of the individual.

The Democratic campaigns of 1896 and 1900 brought to the attention of the people the need for a more enlightened attitude toward the problems growing out of labor-management relations and the exploitation and oppression of the unorganized workers of the country.

Unions' growth essential

The development of the labor union movement was absolutely essential to the protection of workers. After a long and bitter struggle strong labor unions began to emerge. They have contributed immeasurably to improving wages and working conditions, and have, more than anything else, contributed to the expansion of production and general prosperity of the country.

It is my conviction that the closed and union shops have contributed materially to improve these conditions and to the stability of industrial relations in America, the purchasing power of our worker-consumers, and the normal growth of trade-unions.

Basically, they grew out of the traditional opposition to American employers to trade-unions. Unions, instead of devoting themselves to the purpose for which they were organized, were engaged in a constant struggle for existence with employers. Until the unions attained the security of closed- or union-shop agreements, they were open to all the union-busting devices available to employers.

Not new ideas; very useful

The closed shop and the union shop are not new in American industrial history; they have been written into collective-bargaining agreements for over a century.

In the development of our labor history, it has been shown that these agreements serve many useful purposes.

In many trades, such as the printing industry, the employer knows in hiring a union man that he is getting a qualified journeyman who meets union standards. The union, under closed-shop conditions, acts, in effect, as an employment agency for the industry, reducing unemployment and spreading work equitably among its members. It is able to assure uniform employment conditions so that the chiseling employer does not receive any undue advantage. It enables the union to discipline incompetent or unqualified workers.

It is notable that our most successful collective bargaining is found in those industries which have long had the closed or union shops, such as clothing, building construction, the printing trades, the pottery industry, glass manufacture, and others.

"UNDEMOCRATIC" CHARGE DENIED

It is frequently objected that the closed shop and the union shop are "undemocratic"—to my mind, a fallacious argument. A union representing a majority of employees—and everyone agrees that majority rule is part of any democratic system—must, under modern industrial conditions, make agreements covering all employees, union and nonunion alike.

The demand that all employees join the union is merely a requirement that all who share the benefits shall also share the burdens; and, most importantly, all employees share the democratic rights of participation in the activities of the union. They gain the right to vote for union officers, to attend meetings, and to have a voice in the affairs of the union that represents them.

In this view, the closed and the union shop extend, rather than limit, democratic privileges.

Under the present bills, the closed shop becomes completely illegal and the union shop is legal only if a majority of employees in the plant agree to it. Once in the union, a worker may be discharged only for nonmembership arising out of a failure to pay dues.

WHOLLY UNDESIRABLE RESULTS

Taken together, these provisions will lead to wholly undesirable results.

First, they mean that the right of employers to hire antiunion workers and thereby disrupt the union, is restored throughout all American industry. Even where these arrangements have operated most successfully and even though employers, unions and all employees are completely satisfied, the closed shop is illegal.

Second, the usefulness of the union shop is greatly reduced, for, if a worker is incompetent, or a labor spy, or steals the union funds, or is a racketeer, his employer may not discharge him if he is suspended from the union. Certainly it will not help industrial stability to require union men to continue working with someone for whom they have a justifiable contempt.

Third, the responsibility of the union is thereby greatly weakened. Left without means of disciplining the incompetent or the slothful or the merely disruptive, carefully built-up union standards may be expected to decline.

OTHER GROUPS NOT REGULATED

We have not undertaken by Federal law to regulate the membership standards of other organizations, such as lodges, medical, and bar associations, many of which enjoy in effect closed shops, and I think we should not do it for trade-unions. We have not even regulated the membership requirements of organizations set up to represent the views of industry and to organize the strength of employers in their dealings with workers, such as the Associated Industries, the National Association of Manufacturers, and others.

That there have been abuses of the closed shop and the union must be conceded. There have been examples of nepotism, of race and religious prejudices, and of other arbitrary exclusions or expulsions.

But this legislation throws out the baby with the bath; instead of correcting the abuses of the closed shop, it merely abolishes it.

Employers have been, and are, guilty of similar practices, and have refused to hire, or discharge workers for arbitrary reasons. Yet the bill leaves that more serious problem completely untouched.

OTHER ARGUMENTS REBUTTED

One usual justification for the bill is that the Railway Labor Act prohibits the closed shop and that this has worked well; yet recently A. F. Whitney, of the Brotherhood of Railway Trainmen, pointed out to the Senate Committee on Labor the unsatisfactory results of that prohibition, which was originally adopted to outlaw the yellow-dog contract.

It is also insisted that Great Britain has not used the closed-shop agreement. Father Toner, of Seattle, Wash., an authority on the closed shop, pointed out to the Senate committee that in practice most English trade unions operate under closed shops.

This problem is too complex to warrant blanket legislation of the type now proposed by the Federal Government. It should be left where it belongs, at the plant level, to be worked out by the people on the spot—management, unions, and employees in the manner that best meets the needs of each problem.

I remain convinced that if this bill becomes law it will greatly inconvenience many employers who now benefit from such agreements. From unions and workers we may expect a storm of indignation as its weakening effect on trade-unions becomes clear.

For these reasons, I feel strongly that President Truman should veto the bill.

Statement of Principles Adopted by the Young Republican National Convention, June 7, 1947

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the statement of principles adopted by the Young Republican National Convention meeting in Milwaukee, Wis., June 7, 1947. This statement of principles was adopted by about 500 delegates representing 47 States, Puerto Rico, and the District of Columbia:

At this time, when the American way of life, with its emphasis upon individual enterprise, individual rights and freedom and political democracy, is under attack at home and abroad, the American people are turning to the Republican Party. Young veterans in particular see in the Republican Party, and in its flourishing young Republican movement, their best instrument for assuming political leadership. The Republican Party is the party of freedom. It alone has never comprised nor trafficked with any of the totalitarian factions.

To justify the support of the American people, this Young Republican National Federation offers and pledges itself to support the following statement of principles.

THE UNITED STATES AND THE WORLD

We advocate a strong, bipartisan foreign policy, which will bridge gaps between changing administrations and which should be made effective by:

1. We advocate effective opposition to the spread of communism and other totalitarian ideologies. We must have a positive, vibrant approach to the rest of the world which is designed to show our faith in the objectives and operation of our free institutions. This approach should be implemented by educational programs for the purpose of informing others of the virtues of our way of life, and by a program of economic help for other nations to the end that they may become self-supporting, such economic help to be conditioned upon free access of our press to such nations. This program would also entail the acceptance of our full share of responsibility for alleviating the food and clothing lacks of a poverty-stricken and war-torn world.

2. We should continue to play a leading role in the United Nations, work to make it more effective, and utilize and develop to the fullest possible extent its framework and machinery for peaceably settling conflicts between all nations, great and small.

3. We should maintain a strong, unified Army, Navy, and Air Force and their Reserves by securing voluntary enlistments and, to the extent that these are insufficient, by some equitable program of compulsory military training. Technological research and development must be continued on a large scale to insure the continuation of this country's technological superiority.

4. We should train and develop a competent corps of professional diplomats, with promotions dependent on merit rather than seniority, and with salaries and expense allowances sufficiently high to enable them appropriately to represent the United States without drawing upon private means.

5. To insure that complete and accurate information will be available as a basis for military and diplomatic decisions affecting our foreign policy we should maintain under civilian direction an independent, central intelligence agency with full authority to coordinate existing intelligence services in the various departments and to operate such additional facilities for the acquisition, evaluation, and analysis of intelligence from foreign countries as it may deem necessary.

THE UNITED STATES AT HOME

To keep the United States strong at home and to make her a living example of democracy at its best, the following principles should be adopted and implemented:

1. The individual's dignity and social and economic stature must be maintained and advanced, with free access to economic, social, political, educational and other opportunities, regardless of race or religion.

2. A strong, free society is dependent upon the physical and mental attainments of the people composing it. We should ensure by Federal grants in aid, if necessary, to States meeting reasonable minimum standards, while otherwise leaving control over education in the States, the fullest possible access to education. To attract better teachers, the States should develop a program of higher standards, higher pay and retirement benefits.

3. Veterans, as a whole, should by now have become reestablished in their communities, and our veterans' program should be designed to make them self-sufficient citizens. Casualties and their dependents should have the best possible care at Government expense. Maintenance allowances for veterans attending college under the GI bill should be reasonably increased, where an increase of allowance is necessary, and racketeering by a small minority of veterans under the various beneficial provisions of the bill should be eradicated. The Veterans' Administration should set its house in order

and administer more efficiently the various veterans' benefits provided by law.

4. Adequate appropriations should be made available to increase the productiveness of our country. For instance, reclamation projects and the completion of surveys for water conservation in the West should be adequately financed, particularly those projects which are self-liquidating.

5. We must restore our system of free competitive enterprise in an economy based upon free labor and free management. We favor giving free collective bargaining a genuine opportunity to function with a minimum of governmental regulation. We favor union as against closed shops, and appropriate bans against jurisdictional strikes and secondary boycotts. Collective bargaining requires good will and desire to reach an agreement—and for this reason Communist leadership must be rooted out of unions. This is fundamentally the job of the membership and we commend those unions which, through their own democratic processes, have thrown off the Communist yoke. We must adopt and enforce rules which will prevent the monopoly of power and planned interruption of full production by Government, labor, or business.

6. We advocate the elimination of unnecessary expense by national, State and local governments; the adoption of a long-range tax plan designed to encourage the productive use of capital and the fullest initiative, and a reasonable reduction in tax rates consistent with operation under a balanced budget and the gradual retirement of the national debt.

7. Mob violence is the negation of law and order and we favor Federal legislation against it. We also favor a constitutional amendment abolishing poll taxes.

8. Present prices for farm commodities are high enough to support the full production necessary to supply the abnormal world demands made upon the American farmer, and there is no need for subsidies at this time. To help provide an expanding market and new users for farm products, we urge the continuation and expansion of Federal-research facilities. To protect American consumers, we urge the vigorous enforcement of the present program designed to prevent the spread of hoof-and-mouth disease. We urge the expansion of the rural electrification and soil-conservation programs.

9. The American housing problem can best be solved by American industry. But in the field of low-cost housing, building costs do not allow an economic rent level. Therefore, Federal aid for low-cost housing and long-term slum-clearance programs is urged so that our low-income groups may be adequately housed.

10. We urge a national program of education and publicity designed to publicly expose the real intent and practice of Communists and other un-American groups in the United States.

Respectfully submitted for the committee.

JOHN A. WELLS,
Chairman, Platform and Resolutions Committee.

Housing and Socialism

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mrs. NORTON. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following article from the New York Times entitled "Housing and Socialism":

HOUSING AND SOCIALISM—PAPAL ENCYCLICAL AND THE STAND OF CATHOLIC CLERGY CITED ON PROBLEM

To the EDITOR OF THE NEW YORK TIMES:

The late Msgr. John A. Ryan, for many years professor of moral theology at the Catholic University in Washington, was and remains recognized as one of the great pioneer sociologists and social scientists that this country has produced. Inevitably he was on the receiving end of much of the abuse from which pioneers always suffer. Time and again he was accused of radical or socialistic tendencies.

It must have been with no little glee, therefore, that he greeted the papal encyclical "Quadragesimo anno," issued in 1931 by Pope Pius XI, which endorsed everything for which Monsignor Ryan had pleaded. And one can just picture with what satisfaction the grand old man must have put his whole tongue into his cheek as he wrote shortly after the appearance of the encyclical an article for a current periodical which he entitled "The Radical (quoted by Monsignor Ryan) Aspects of the Quadragesimo anno."

Today the same confused thinking and the same technique of opposition as resulted in Monsignor Ryan's being branded a radical because he espoused such social reforms as a living wage, old-age pensions, and the like, is manifest in the campaign to discredit the Taft-Ellender-Wagner housing bill. It would be easy to multiply examples of such misleading propaganda, but a letter published recently in your columns from one Paul P. Swett, Jr., of Baltimore is an excellent case in point. "I am amazed at your willingness," writes Mr. Swett, commenting on a previous editorial in The New York Times, "to say that this bill is not socialistic."

Your correspondent then proceeds, as is customary in anti-Taft-Ellender-Wagner fulminations, to focus his whole attention on the 500,000 units provided by the bill for low-income families, completely ignoring the fact that the bill also aims to stimulate the erection of 15,000,000 other units on a straight economic basis, i. e., with no subsidy whatsoever.

Incidentally, it might well also be pointed out here that even in the case of the 500,000 units for the low-income groups, the total capital expenditure involved is repaid to the United States Treasury with interest, the only Government assistance being in the form of a rent subsidy to bring decent and safe housing within the reach of those unfortunates for whom our economic system has not yet found it possible to provide adequate means of livelihood.

If to stimulate the production by private industry of the commodity presently most needed in our Nation, homes for our people, and to give some small assistance to a very limited number (curiously enough, Mr. Swett himself stresses this limitation) of underprivileged families is socialism, well, I'm afraid I'm a Socialist. Furthermore, so are the Popes and many of the bishops of the Roman Catholic Church in the United States.

The same pontiff, in another notable document, his encyclical letter on Christian marriage, has this to say: "If, however, for this purpose" (i. e., adequate opportunity for family life) "private resources do not suffice, it is the duty of the public authority to supply for the insufficient forces of individual effort. * * * If families, particularly those in which there are many children, have not suitable dwellings * * * it is obvious great peril can arise to the public security and to the welfare and very life of civil society itself. * * * Wherefore, those who have the care of the state and of the public good cannot neglect the needs of married people and their families without bringing great harm upon the state and on the common welfare."

If that be socialistic, make the most of it.

Very Rev. Msgr. EDWARD ROBERTS MOORE.

NEW YORK, *June 5, 1947.*

One Coup Instead of Two

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to call attention to an editorial appearing in the New York Times under date of June 12, 1947, entitled "One Coup Instead of Two."

It is my feeling that the public in general will agree with the position taken by the Times and the action of Congress in support of the Truman doctrine.

The editorial follows:

ONE COUP INSTEAD OF TWO

The Communist seizure of power in Hungary is hailed in certain quarters in this country as the Soviet answer to the Truman doctrine. It is obviously intended by the Moscow government as an answer, and especially that it should be interpreted as such by the opponents of the Truman policy in the United States. But the only sense in which it is an answer is that our action in Greece forced the hand of the strategists in the Kremlin and impelled them to do a little sooner what they were quite determined to do in any case.

Anyone who has followed developments in Hungary knows that the plot to discredit and get rid of the Smallholders' Party has been hatching ever since the elections of November 1945, demonstrated that this party was supported by the great majority of the people. The Communist minority, backed from the beginning by the Russian military government, which does not hesitate now to intervene openly in the situation, immediately took over key positions, including control of the police, with the unconcealed objective of taking over the government. The first arrests of deputies of the majority party, on charges of conspiracy, took place last January, long before the Truman doctrine was thought of. Deputy Premier Rakosi, the Comintern graduate, who is the Hungarian Communist leader, boasts that he put one over on the western powers. After the last elections he was boasting that the next election would be different, as, indeed, it promises to be.

Actually, the Hungarian coup is the best justification to date of the Truman policy. It shows us exactly what was planned in Greece, and what would certainly have happened if the United States had not intervened. Greece is not occupied by the Russian Army, so the design to put the Communists in power there had to be engineered and aided from the outside. The report of Mark Ethridge, American member of the United Nations Investigating Committee and an observer of unquestioned competence and integrity, leaves no doubt that this was the case. Because it is so bald and contemptuous of the majority, the Hungarian affair is an eye opener in the new method of conquest. It is also contemptuous of the Allied Control Commission, as the State Department makes clear in a sharp protest noting that Hungary is legally under three-power control and demanding a tripartite investigation.

The Truman doctrine may have hurried the long-prepared overturn of the elected Hungarian Government. But if we had not acted in Greece, there would have been two coups instead of one; even three, perhaps, if Turkey is counted in.

Letter to Chairman of the Subcommittee on Fascism of the Committee on Un-American Propaganda Activities

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. SABATH. Mr. Speaker, I was naturally very gratified when I learned that the distinguished gentleman from Pennsylvania [Mr. McDOWELL] had been designated as chairman of a subcommittee of the House Committee on Un-American Propaganda Activities with specific instructions to carry out a detailed and thorough investigation of Fascist propaganda and influences, with the same vigor that the committee has shown in ferreting out Communist and liberal tendencies.

The gentleman brings to this task not only the dignity and responsibility of a lawmaker, but also the capabilities of a newspaperman and a soldier's knowledge of what we were fighting against in the last war.

I have taken it on myself to submit to the gentleman a letter expressing my views on the scope of his investigation, and I was indeed pleased that on the very same day he received my letter he delivered his reply to me in person here on the floor.

I hope sincerely that all Members will take the time to read this exchange of correspondence, and I hope that the people of the country will be reassured by the letter of the subcommittee chairman. I hope likewise that the unfortunate misrepresentation of his words in various publications will not discourage or restrain him from carrying out a vigorous investigation.

I now insert at this point a copy of my letter to the gentleman from Pennsylvania [Mr. McDOWELL], in his capacity as chairman of the subcommittee investigating fascism, and following that you will find his gracious reply to me:

JUNE 9, 1947.

Hon. JOHN McDOWELL,
Chairman, Subcommittee on Fascism, Committee on Un-American Activities, House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: I regret sincerely that the great press of other urgent matters has prevented my submitting to you sooner suggestions regarding the conduct of the investigation of your subcommittee of fascism in America. It is my belief that the report of your subcommittee might have been different had I been able to place this communication in your hands sooner. The evidence of Nazi-Fascist thinking is on every side, both in organized and in unorganized form. It should be investigated just as much as communism.

I supported all resolutions to create the various special committees to investigate un-American propaganda activities, and I have criticized only the failure to pay as much attention to reaction as to the alleged Communist fronts, and to the way the committee has smeared honest liberals and labor leaders without giving them an opportunity to be heard.

Aside from its lack of judicial conduct and its rash jeopardy of the good name of the Congress, the special committee under Mr. Dies' chairmanship made itself a partisan agency of repression which constituted a severe assault, bolstered by all the majesty and prestige of Congress, on fundamental freedom of thought, writing, speech, and association. As a standing committee there has not been the same reckless disregard of judicious procedure, and consequently, I have voted for all appropriations and I shall continue to do so; but I feel the committee should investigate Fascist activities, movements, and propaganda with the same vigor that it investigates alleged communism, both of which seem, to me, equally objectionable.

I certainly hold no brief for the protection of any person or any group actually engaged in revolutionary propaganda, whether it follows the international Communist line or the international Fascist line. I will agree fully and heartily that any alien found abusing the hospitality of the United States or violating its statutes should be dealt with according to law, and I likewise believe that any citizen shown to be engaged in any subversive activity of whatever character should be exposed and prosecuted under the applicable statutes.

Your committee should recognize, however, that the economic system of the United States rests on no statutory basis save the constitutional guaranties of private property rights and the regulatory statutes enacted under constitutional powers. There has been a constant tendency of your committee to confuse big-business interests and public interests, and to regard criticism of the economic status quo, however well taken, as an effort to discredit and overthrow by violence our free constitutional political system. By the same token, open efforts to defeat and nullify the suffrage and civil rights statutes guaranteed to all American citizens by the Constitution have been tacitly condoned by the committee through failure to take cognizance of the activities of individuals and organizations flagrantly engaged in such activities; worse, certain members of the committee have expressed public support of those views, encouraging those subversives doing most to undercut our freedoms.

I have said before, and others have said, what cannot be repeated too often: The political struggle in the United States is not between communism and Nazi-fascism, but between American democracy and all foreign isms.

I stand for America and for the American system of democratic government, founded on equality before the law and freedom of the individual. I am opposed to every authoritarian ideology. I believe in progress, because progress is growth.

To be opposed, even violently opposed, to fascism is no proof of Communist sympathy. No freedom-loving American, convinced of the advantages of the democratic way of life, can logically embrace any form of authoritarianism. While the term "Red fascism" is a barbarous contradiction in terms which no serious student of political philosophy will use, it has this much truth in it: That by their nature Nazi-facism and communism are authoritarian, and therefore undemocratic as we understand the meaning of the term.

Furthermore, I believe—and again this cannot be said too often—that communism and every other form of authoritarianism can best be checked by making our American democracy work, and by improving the condition of the people. We need more democracy, not less.

This is so self-evident that I am constantly amazed by those un-American individuals who believe that the way to preserve the American way of life is to suppress all criticism and to convert our free constitutional republic into a police state in which a small minority would determine all laws and administrative policies and control the dissemination of information.

The history of the American Republic is the history of constant growth and progress in the democratic processes. It is perhaps the most inspiring story in the long, slow march of man from ignorance and slavery to enlightenment and freedom.

For myself, I resent and resist with equal vigor assaults on the form and philosophy of the American way, whether from the right or from the left.

The Nazi-Fascist ideology is wholly repugnant to the ideals of the American people, and to the American way of life. Its realization would destroy the American democratic form of government.

It probably would be difficult to find in America today a single cell of the old German Bund or of the National Socialist Party; yet there is incontrovertible evidence on every hand of the existence of organized fascism in America; and no official investigation has more than touched the suface of the movement.

There follows a brief list of organizations or movements which to my knowledge have displayed sufficient similarity to the criteria I have suggested to justify careful investigation. They vary in the degree of their danger to American institutions, and they vary in the viciousness of their propaganda, in their influence, and in their resources; they have as a common factor the usurpation of the American way of life by a foreign and un-American system.

1. The Ku Klux Klan, wherever found, and under whatever name it may masquerade.

2. The Columbians of Atlanta, Ga. Although exposure by the Anti-Nazi League resulted in jail sentences for the leaders, it now appears that the followers are preparing to revive the movement with new leaders but with similar ends.

3. Democratic Nationalist Party, linked to the Columbians, modeled on the order of Hitler's Nazi Party, and reputed to be Nation-wide in its organization. One member, Maynard O. Nelsen, has been convicted in Minnesota of threatened breach of the peace as a result of his hate campaign at the University of Minnesota. Police there found evidence that Nelsen had collaborators in his widespread campaign of hate and violence.

4. The Committee for Constitutional Government, New York City. Although repeatedly under investigation by House and Senate committees in regard to political activities, its propaganda is bolder than ever, its finances greater, and its propaganda machine more extensive and better organized. It has a number of affiliates and dependent organizations, and demands the fullest possible airing of its objectives and its backers.

5. The National Economic Council, New York: This organization is perhaps the most open advocate of the corporate state in the United States, at least among "respectable" fronts. It appears to have ample financial resources, and its officers are known to have had close ties with foreign government inimical to the United States. It produces a constant stream of un-American propaganda and is not too "respectable" to employ political anti-Semitism to promote its cause.

6. The so-called America First Party, and all the connections and activities of its führer, Gerald L. K. Smith: It happens that Smith was called before your committee and given an open forum for the dissemination of his un-American hatreds. He was not even questioned on his repeated declarations that he would become dictator of this country in

the economic collapse which he predicts for the near future, nor was he questioned as to his fascistic veterans' organization, his ties with subversive, political "evangelists", the Ku Klux Klan, the Columbians, and the White Supremacy League. There is considerable reason for believing that he has close and lucrative connections with all those groups, and others. Certainly his revenues and disbursements demand congressional scrutiny; more than once congressional investigations have successfully broken up squalid financial rackets which were just within the law and therefore beyond the authority and jurisdiction of law-enforcement agencies.

7. Christian American, Inc., Houston, Tex.: This organization, again, has been investigated in relation to political activities; but never adequately. The Federal Bureau of Investigation also has made investigation; but since no public announcement of impending prosecution has been made, it is inferred that this is another organization which has successfully kept just inside the law. Your committee could render a great public service by exposing its highly developed commercialism to its victims, as well as by exposure of its un-American campaign of vilification and repression.

8. Phony veterans organizations: Before the war had ended there were some 600 veterans organizations of various complexions clamoring for recognition by the Veterans' Administration. A casual study of the list showed that their backers ranged all the way from responsible leaders imbued by the highest ideals of service to crummy little letterhead organizations designed as rackets to catch veterans' dollars, and in some cases sponsored by individuals tarred by association with the indicted seditionists still awaiting trial. While I have no current information as to which of these organizations of highly dubious intent have survived, it is a rich and rewarding field for investigation from which your subcommittee might flush some highly objectionable characters.

9. American Action, Inc., New York, Chicago, and other large cities. This group sprang into prominence in the 1944 campaign as a coalition of a number of highly reactionary groups representing great wealth and a complete lack of conscience or good taste in injecting racial and religious issues into an American political campaign. It has had 8 months in which to branch out, consolidate, and gain new adherents and new contributors. If its aims are harmless, exposure will do no harm, if they are not, exposure will do great good.

10. Steuben Society, a respectable group which sprang from the fertile mind of the German propagandist, George Sylvester Viereck, and already is taking up the pro-German line of a soft peace, kind treatment, rehabilitation of Germany's war potential, defense of the Nazi regime, and vicious attacks on the American Government.

11. Foundation for Freedom, Inc., 1628 Connecticut Avenue, Washington. This is a new organization, incorporated in the District of Columbia January 11, 1946, engaged in the publication of high-powered studies with strong anti-Semitic and antialien implications. Percy L. Greaves, former assistant publicity director of the Republican National Committee and a former congressional investigator, has lent his name to the reports. The incorporators are a law firm, Milton E. Hartley, Ernest Paland, and Winston E. Hobbs, doing business as the Corporation Trust Co., and are not, therefore, the true incorporators, but only dummies. It is noticeable that their literature is not identified by a union label. I do not suggest that this organization has no right to libel a great many good Americans; I do suggest that your committee has a duty to ascertain the names of the true backers and to discover their purpose and objectives and their financial resources. Greaves will be remembered as an individual who, through misrepresentation, gained access to the most secret parts of the foreign propaganda division of the Office of War Information during the course of the war.

I could, of course, go on for many pages with a catalog of organizations and individuals carrying on Hitler's work in America today; but the same sources of information are open to you and your staff—the newspapers, the magazines, the source books on the subject, the private organizations devoted to defense of American democracy against all dangers, and your daily congressional mail.

I shall, of course, be most happy to supply further names if you indicate a desire to have them. I shall be glad to open my files to you or to a designated responsible investigator. I shall be glad to talk to you or your agent.

I have confined myself, in accordance with the purpose of my letter, to movements representing a native Nazi-Fascist ideology; besides, the committee has, in the last 10 years, combed the list of liberal organizations, and has ruined the reputation of many admirable progressive groups by making unfounded and unsupported charges of Communist sympathy, infiltration, or sponsorship.

I have also confined myself to rather specific groups.

It is my belief, however, that careful and thorough investigation, uncolored by prejudgments, would develop positive evidence of foreign importation of Nazi-Fascist ideas, and certainly of un-American tendencies and propaganda.

The introduction of organized bigotry for the purpose of destroying our form of government, especially when organized and encouraged from abroad, has forced us to be wary of all. I do not believe that the American people will accept any statutes designed to limit the right of individuals to hold and express opinions; but I believe the people will welcome positive action from your committee forcing the preachers of hate and disunity to take public responsibility for their words and deeds, and to explain where their financial backing comes from and what their purposes are.

It is obvious that some of the hate peddlers are merely twisted psychotics who speak for themselves alone; but it is equally obvious that others are but willing pawns in a grand design, frequently with no real knowledge or understanding of the sinister conspiracy to which they have lent themselves, or so blinded by personal animosities that they do not care.

I realize, of course, as you do that many of the hate organizations are merely money rackets designed to separate gullible and fearsome old men and women from their money, to the enrichment of the promoter. These, too, should be exposed for the cheap petty rackets they are, no matter how imposing the names of the sponsors or how glittering the declarations of purposes.

In conclusion, Mr. Chairman, I can only say that I have written in the utmost good faith, and should be most happy to learn from you your own reactions to my views.

Sincerely yours,

A. J. SABATH.

WASHINGTON, D. C., *June 11, 1947.*

Hon. ADOLPH J. SABATH,

House Office Building, Washington, D. C.

MY DEAR COLLEAGUE: I have just this moment received the report you were so good to furnish me with. I have not read it, but merely skimmed over, and when I do I shall address you further.

The purpose of this note, however, is to inform you that the newspaper accounts of my making a report on fascism to the Committee on Un-American Activities are entirely wrong, as I have made no report, and I am merely drafting the various parts of a report to be made. Where in the world they got the statement attributed to me that I had devoted 10 minutes to the study of fascism, I do not know, as it is entirely untrue. I have devoted hundreds of hours in study, research, in reading reports, examining documents, and reading also the history of the beginning of fascism in Italy and nazism in Germany. The subject is so wide and so profound that I felt I would be unable to make a report until I knew something about fascism, which thus far has not been defined, so far as I am able to discover.

Fascism is a deadly and a dangerous thing, as all of us know, and almost 30,000,000 human beings are dead because of it. It is quite possible in this country and it is the purpose of the subcommittee to determine what it is and then to determine and report to the House of Representatives if there be any movement in America that may lead us down that deadly, murderous path.

Believe me, sir, I am deeply grateful for your contribution to the subcommittee.

Respectfully,

JOHN MCDOWELL,
Member of Congress.

Hon. Emmet O'Neal

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 11, 1947

Mr. THOMAS of Texas. Mr. Speaker, by virtue of unanimous consent heretofore granted me to revise and extend my remarks, I should like to say a few words about our distinguished friend, Ambassador Emmet O'Neal.

During Mr. O'Neal's long stay in the House, he made an outstanding record through hard work and brilliance of mind. His service to his district and State, and to the Nation, set an example to which all Members can aspire. His recent appointment as Ambassador to the Philippines offers to him another opportunity for great service to his Nation and to the fine people of the Philippine Republic.

In addition to his fine human qualities, Mr. O'Neal is a born diplomat. His many friends in the House are confident that the Philippine people in a very short while will learn to love and admire him, as do his many friends in this country. All of us predict for him a very brilliant career.

Hawaii's Population and Property Compared With That of 29 States at Time of Admission to the Union

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a table

showing the population, racial classification and value of property, raw materials, and goods produced by the Territory of Hawaii today compared with that of 29 States at the time of their admission to the Union.

The tabulation should prove of interest with H. R. 49 to admit Hawaii to the Union, having been reported by the Public Lands Committee by a unanimous vote and now pending before the House.

The tabulation is as follows:

Territory	Date of organic act	Date admitted as State	Population at date of organic act	Racial classification and total population at date of admission as State				Value at date of admission as State [3]		
				Negroes	Whites	Indians [1] and Orientals [2]	Total	Real property [4]	Raw materials	Goods produced
Ohio	1787	1803		337	45,028		45,365			
Tennessee	1790	1796	35,691	13,893	91,709		105,602			
Mississippi	1798	1817	8,850	33,272	42,176		75,448			
Indiana	1800	1816	5,641	1,420	145,758		147,178			
Louisiana	1804	1812	76,556	42,245	34,311		76,556			
Michigan	1805	1837	4,762	707	211,560		212,267			
Missouri	1805	1821	20,845	10,569	56,017		66,586			
Illinois	1809	1818	12,282	1,374	53,837		55,211			
Alabama	1817	1819		42,450	85,451		127,901			
Arkansas	1819	1836	14,255	20,400	77,174		97,574			
Florida	1822	1845		40,242	47,203		87,445	$7,924,588	$220,611	$668,235
Wisconsin	1826	1848	30,945	635	304,756		305,391	22,458,442	5,414,931	7,293,068
Iowa	1838	1846	43,112	333	191,881		192,214	15,672,332	2,356,681	3,551,783
Oregon	1848	1859	13,294	128	52,160		52,288	6,279,602	1,452,000	3,138,000
Minnesota	1849	1858	6,077	259	169,395		169,654	25,291,771	2,060,000	3,600,000
New Mexico	1850	1912	61,547	1,628	304,594	21,078	327,300	34,682,427	4,430,134	9,320,067
Utah	1850	1896	11,383	672	272,465	3,612	276,749	68,515,498	11,440,250	17,981,648
Washington	1853	1889	11,198	1,602	340,829	11,181	353,612	177,640,259	19,917,057	41,768,022
Nebraska	1854	1867	28,841	789	122,117		122,906	38,365,999	2,902,074	5,738,512
Kansas	1854	1861		627	106,390		107,017	16,088,602	669,269	2,800,000
Colorado	1861	1876	34,277	2,435	191,126		193,561	35,604,197	8,806,762	14,260,159
Nevada	1861	1864	6,857	45	6,812		6,857			
North Dakota	1861	1889	2,977	373	182,407	8,174	190,954	166,559,896	6,611,001	10,710,855
South Dakota	1861	1889		541	328,010	19,854	348,405			
Arizona	1863	1912	9,658	2,009	171,468	30,877	204,354	84,328,045	39,283,038	64,098,510
Idaho	1863	1890		201	82,117	4,223	86,541	9,977,463	638,673	1,396,096
Montana	1864	1889	20,595	1,488	117,000	11,206	129,794	54,943,531	2,375,093	5,507,573
Wyoming	1868	1890	9,118	922	59,783	1,844	62,549	12,719,221	1,084,432	2,367,601
Oklahoma	1890	1907	61,864	137,612	1,444,531	74,825	1,656,968	719,703,439	34,152,894	53,682,405
Hawaii [5]	1900		154,001				502,122	500,493,838		112,441,163

[1] No census of Indian population by State available prior to 1890.
[2] Orientals: New Mexico, 706; Utah, 989; Arizona, 1,676.
[3] Figures for the population, assessed valuation of real property, and production, taken from the census nearest the date of admission as a State.
[4] No figures available for the assessed value of real property or value of products prior to 1850.
[5] Data on Hawaii: Population, board of health estimate for 1945; assessed value of real property for 1945—Territorial Tax Office. Hawaii's export of raw materials is insignificant. Goods produced include sugar (1945 figure), pineapple (1941 figure), coffee (1945 figure). For racial classification in Hawaii, see exhibit 21.

Sources of data on other Territories: Carter's Territorial Papers, vol. 1; Census reports; Compendium of the Enumeration of the Inhabitants and Statistics of the United States, 1840; organic acts in the Statutes at Large, U. S.; J. D. B. DeBow, Industrial Resources, etc., of the Southern and Western States; Samuel Hallett, Industrial and Financial Resources of the United States of America.

Reorganization of Executive Branch

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Friday, June 13 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Sensible Way To Economize," published in the News, of Buffalo, N. Y. The editorial relates to the bill, now pending in Congress, for reorganization of the executive branch of the Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SENSIBLE WAY TO ECONOMIZE

The Federal bureaucracy, it seems, is a good deal like the weather: everybody complains about it but nobody does anything about it. The present Congress, however, has an excellent chance to do something, if it will recognize that the job calls for some scientific pruning.

Every few weeks some congressional committee brings out a new report denouncing the immensity of the governmental structure. The latest is the Senate Committee on Expenditures in the Executive Departments, which shows in a gigantic chart that there are some 2,369 distinguishable subunits of the bureaucracy, broken down in separate classifications including divisions, offices, branches, services, sections, bureaus, boards, corporations, commissions, administrations, councils, and whatnot. In all, some 2,285,570 civil servants were on the United States pay roll last December 31.

Congress is now chopping at this tangled underbrush, albeit ineffectively, by cutting down the departmental budgets for the 1948 fiscal year. But the meat-ax approach obviously will not bring real efficiency, economy, or simplification of structure.

A more logical way to get started with this job is proposed in a bill by Representative CLARENCE BROWN, of Ohio, and Senator HENRY CABOT LODGE, JR., of Massachusetts. They would establish a joint congressional-Presidential commission to go through the Government with a fine-tooth comb, as Senator LODGE puts it, and make its recommendations for a thoroughgoing streamlining to the Congress that meets in January 1949. The commission, which would thus have a year and a half to try to bring order out of today's bureaucratic chaos, would include four Presidential appointees (two from the administration, two from private life) and eight congressional appointees (two from each House, four from private life).

One virtue of such a bipartisan study is that it would provide a comprehensive array of factual data on which the administration taking office in 1949 could base a sound program of governmental reorganization. The proposed study will not, of course, prevent either Congress or the President from doing what it can to promote efficiency and economy in other, more immediate ways. But in the absence of a broad-gage study such as contemplated by the Lodge-Brown bill, the results of these hit-and-miss efforts to economize are sure to be disappointing.

Hon. David I. Walsh

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 12, 1947

Mr. MARTIN of Massachusetts. Mr. Speaker, I join with my colleagues in expressing my deep regret at the death of David I. Walsh, who for many years was an outstanding Member of the United States Senate.

As a member of the General Court of Massachusetts, as Lieutenant-Governor, Governor, and Senator, he served with great ability and distinction. His efforts in behalf of the building of a strong American Navy will long be remembered. He possessed an intimate knowledge of the needs of New England and was a stalwart champion of its needs. He was a sturdy defender of the Constitution and the American way of life. Massachusetts has lost a fine public servant.

Civil Service Retirement: H. R. 3232

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. STEVENSON. Mr. Speaker, I submit herewith a statement made before the Subcommittee on Retirement Legislation of the Post Office and Civil Service Committee of the House of Representatives regarding the report of the actuaries of the Civil Service Commission Retirement and Disability Fund, dated May 14, 1947:

After studying the report of the Committee on Civil Service of the Senate to accompany S. 637, amending the Civil Service Retirement Act of May 29, 1930, as amended, dated April 25, 1947, in which it was stated in the last six lines of the report, and I quote:

"It is estimated by the Civil Service Commission that the contributions from the employees plus the savings brought about through the economies cited above would almost totally finance the cost of S. 637, as amended. On the basis of maximum estimated expenditures and minimum estimated savings, the ultimate cost to the Government when the system reaches maturity, approximately 30 years hence, may be four or five million dollars per year; no immediate increase in appropriations is required. The Civil Service Commission endorses the amendments proposed."

I asked that this subcommittee be furnished with expert counsel, facts, and figures to justify the statement and conclusion as set forth in the report to S. 637, as amended.

Instead of getting what the subcommittee had asked for, the chairman of the full committee received a letter from the President of the United States Civil Service Commission under date of May 21, 1947, containing a report dated May 14, 1947, addressed to the President of the United States Civil Service Commission from New York City, signed by George B. Buck, R. R. Reagh, and Edward B. Fackler, who comprise the Board of Actuaries of the Civil Service Commission retirement and disability fund, accompanied by a statement, as follows:

"In accordance with the request of the Civil Service Commission, the Board of Actuaries has prepared an estimate of the cost of amending the Civil Service Retirement and Disability Act in accordance with Senate bill 637, as originally introduced and as modified under Calendar No. 144.

"Attention is called to the fact that the Board of Actuaries has not been able to make a detailed valuation of the proposed amendments (S. 637, as amended). The costs have been estimated on the basis of the last quiquennial valuation, with adjustments to reflect subsequent changes in the number and pay roll of the membership."

On page 10 of the report immediately following table 2 as therein set forth, the Board of Actuaries made this statement: "The comparative costs given above indicate that the adoption of S. 637 (Calendar No. 144) will increase the costs of the civil-service retirement and disability fund to the Government by the difference between 10.82 percent of pay roll and 6.68 percent, or 2.14 percent of pay roll, or $105,324,269 per annum on the basis of the pay roll as of June 30, 1946.

Inasmuch as the report of the Board of Actuaries admittedly figured their costs on the basis of the pay roll of personnel in civil service as of June 30, 1946, and inasmuch as their report was apparently in such contrast to the report of the subcommittee of the Senate, endorsed and substantiated by the Civil Service Commission itself, as chairman of the subcommittee of the Civil Service Committee of the House of Representatives, which is now considering H. R. 3232, I have considered it my duty to bring the Board of Actuaries making that report, as well as members of the Civil Service Commission, before this subcommittee to explain the costs to the Government of H. R. 3232, if passed, on the basis of the present pay roll of civil-service employees as of June 1947—not the pay roll of June 1946.

The number of Federal employees on the pay roll in civil service at this time is much less than the number on the pay roll in June 1946. I am told there will be between 1,000,000 and 1,500,000 less employees on the civil-service pay roll by July 1947. It would seem clear that with a million to a million and one-half less on the pay roll in 1947, as compared with 1946, the cost of maintaining the civil-service retirement and disability fund would necessarily be much less from year to year.

I trust the actuaries and members of the Civil Service Commission, when testifying before this subcommittee, will take that into consideration.

Another matter I want to call to the attention of the members of the subcommittee at this time is that the report of the Board of Actuaries of May 14, 1947, was apparently made on the assumption that the civil-service retirement fund is maintained on an actuarially solvent basis, or what is known as an actuarially funded plan, under which private retirement funds and insurance corporations are required by law to be maintained. On that basis the reserve fund is necessarily high because as Mr. Phenix, staff actuary of the Senate Civil Service Committee, in defining "actuarial solvency" said: "Assuming a discontinuance of the fund 'actuarial solvency' means that there is enough in the fund to take care of all benefits allowed until all the beneficiaries have died, with enough left over to give benefits to those now in active service when they retire, based on service rendered to date of discontinuance of the system." But neither Congress nor the Civil Service Commission at any time has ever indicated a desire to maintain the civil-service retirement fund on an actuarial basis. In 1946, for instance, under the plan of actuarial solvency, as used by the Actuarial Board, Congress would have had to appropriate $453,578,155 to the retirement fund; but instead Congress appropriated $246,220,000 for this year. On December 31, 1946, the civil-service retirement fund had a reserve of $2,201,224,979.33, which is 10 times the total amount disbursed to Federal employees under the fund in 1946. And if the civil service retirement fund had been on an actuarially solvent basis, which is the basis on which the Board of Actuaries submitted their report to the President of the Civil Service Commission on May 14, 1947, the retirement fund would have been compelled to have a reserve of $5,000,000,000.

Furthermore, to show that Congress has never intended to maintain the civil service retirement fund on an actuarially solvent basis, I refer you to the fact that during the first 9 years of the existence of the fund (1921–28 inclusive), Congress did not appropriate a cent to the fund. I might add that in 1946 the employees themselves contributed to the fund $279,537,869.58, almost equaling the total amount of disbursements by the Government to all Federal employees under the fund for every purpose in that year, which totaled $285,190,762.28.

I sympathize sincerely with the Federal employees who have been and are now being discharged or involuntarily separated from Government service.

H. R. 3232 provides that all these employees should be refunded the total amounts they have contributed to the fund plus interest up to 10 years in the civil service.

WM. H. STEVENSON,
Chairman of Subcommittee on Retirement Legislation of Post Office and Civil Service Committee of House of Representatives.

The Graduate in Today's World

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 12, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me on June 11, 1947:

Vice President Jones, members of the faculty, graduates, ladies, and gentlemen, I consider it a great distinction to be invited to deliver the commencement address before the Columbus University School of Law. However, today all honors belong to you, the graduates. This is your day. It belongs to all those who this day graduate from a world of theory and study into a world of work and reality.

The real world which faces you, as it faces us all, is a world of stress and strain, of action and reaction, of good and evil, of life and death. To know what course of action to pursue, what choices to make in such a world is not always a simple matter. Even the best educated and best informed among us cannot always know what is the right thing to do. But surely without knowledge and without information we are lost. I would remind you, therefore, that even though you may this day receive your diploma, your education has not been completed. This is an age of science, yet the men of science are the first to admit the vast areas marked "unknown" on the map of man's understanding and knowledge.

If we would progress, we must keep on learning and the training which you have received in the study of the books of the law and the study of the books of figures will help you to live in the age of the atom. America cannot depend upon the uneducated, no matter how civic minded they may be, to maintain this Nation as the greatest in the world. Yet the learned who disdain politics because of its earthiness are the cause of whatever corruption and greed exists in the political life of our country. Politics has rightly been said to be the science of government. We, who have the finest form of government in the world, must fight continuously against those subversive elements who would destroy it. If the education you have received is to serve a noble purpose, you must participate in the fight to maintain the system which made it possible.

We, in this Nation today, are confronted by the specter of educated men, who consider themselves liberal, advocating the cause of communism. True liberalism is not to be condemned; it has existed within the framework of our constitutional government since the inception of our Nation. Those founding fathers who created this country were liberals; those who followed afterward and expanded the benefits available to our citizens were liberals. It is the misguided liberal who endangers our system by advocating government by men rather than by law.

There is a place for all citizens in our political system; it is incumbent upon you to perform more than just the skeleton duties of citizenship. To vote at our gen-

eral elections is not enough; although too great a segment of our population neglects even that responsibility. You should participate in the affairs of your community, actively leading in the betterment of its people. When you leave community administration to those who have a selfish interest, you receive second-rate government. Know the people who run your community and what they plan for you and your families. Remember that educational facilities are administered locally. Your schools reflect the interest of the citizens in their local problems. Acquaint yourselves with legislative matters before your State legislature and before Congress. Make known to your local representatives, your Congressmen, and your Senators the views which you hold on matters of concern to you. They will soon become aware of your interest, and know that you are a wide-awake citizen who gives more than lip service for his beliefs. The choice is yours; a narrow area of interest confined to your work; or a wide circle of friends who respect your concern for your community, your country, and the world you are living in.

Today the representatives of the nations of the world are in convention assembled, trying to balance the books, seeking to make the figures come out right, hoping for a total in black, rather than a total in blood red. In such a world your knowledge of how to balance the books will help you give a good account of yourself.

You who have studied law know that the strength of government, the peace and prosperity of societies, the security and happiness of individuals, depends upon law. You know that our democratic civilization and the development of free societies has been possible only through the growth of law. We look to the law to protect us in our property and in our civil rights. We look to the law and the power which supports the law to keep the peace among us.

At Lake Success, N. Y., an attempt is now being made to establish in the world the reign of jurisprudence, the rule of law. The world has just fought a long and costly war to prevent domination by force. Now we must exert every effort to bring into being the laws and the administrative instruments which will dominate the world in the place of force.

I do not think I have to indulge in any long flights of rhetoric to tell you what will happen if we fail. If the last war was a mechanized war, the next will be an atomic, biologic, supersonic, hemispheric, stratospheric, Arctic and sub-Arctic war. In the next war, our schools, our churches, our courthouses, and our homes will be blasted into rubble and that love of God, of truth, and of justice which built them will be buried beneath the stones.

Everyone who has an awareness of the realities of the world of today, knows this to be a fact. We must somehow find the means to do away with war, or war will do away with us. How can this be done? The United States has consistently maintained, through its representatives in the United Nations, that the first step must be the establishment of an international system for the effective control and development of atomic energy, with full access for international inspection and with provision for swift and certain punishment of illegal activities in the atomic field.

The chief opponent, at this time, of such a plan is the Soviet Union—yet they are agreed that some system of control is necessary. Our positions are not so unrelated that we should despair of agreement. Only this afternoon at Lake Success, N. Y., Russian delegate Gromyko offered amendments to the previous Soviet position on international control of atomic energy. Mr. Gromyko stated the necessity for international control, and agreed that the control should be vested in an international authority responsible to the Security Council. This, of course, retains the power of veto, which is at variance with the stand of the American representatives. Under the new Russian plan, inspections, while by international teams, would be only periodical and subject to national control. The proposal for simultaneous control would require that the United States disarm unilaterally with other nations, thus nullifying our superiority in the atomic field. I believe this shift in policy to be indicative evidence that agreement can be attained. These differences are not insurmountable.

Agreement on international control of atomic energy can and, I believe, will be realized if there is the will to agree among all of the nations. It must be reached if we are to live in peace with the world. America must lead in the search for a better world through lasting peace.

If we do achieve agreement and an effective and enforceable system of control is established, then we can look forward to an era of health, wealth, and prosperity such as mankind has never known. Atomic energy can bring electric power to all the far and undeveloped places of the earth to help do man's work. By-products of atomic energy used in the study of plant life may eventually reveal nature's secret of photosynthesis and soil fertility and lead to the improvement and increase of the world's food supply. Radioactivated isotopes used as tracers can help us understand the nature of organic as well as inorganic matter, and may eventually point the way to cures for some of our most baffling diseases, such as certain types of cancer.

These numerous blessings of atomic energy can be ours only when we are secure against the misuse of atomic energy. In the meantime, America at least, will have as many of these blessings as safety and security will allow. Already we have an active Atomic Energy Commission functioning under the watchful eye of the Joint Committee oh Atomic Energy, of which I have the honor to be a member. Already a pilot plant for the production of atomic power is under construction at Oak Ridge. Already radioactivated material is being used as tracers in industrial processes and agricultural research. However, research and development of atomic energy for peaceful purposes will advance most rapidly when there can be free interchange of scientific information. But so long as we lack security, we must maintain secrecy. We must concentrate on keeping ahead of the world in the development of atomic energy for military purposes. In such a situation research and development for peaceful purposes naturally must be subordinate to our defensive needs. Our national safety is and must always be our first concern.

Yet, in my opinion, we are neglecting our first line of defense: intelligence, the knowledge of what others are up to. Without adequate intelligence it is impossible to act intelligently. Our British neighbors have for years maintained a system of military intelligence which has no superiors. Without it, this tight little isle, with its far-flung dominions, could not have weathered the storm of war and rebellion through the years. We, the greatest nation in the world, with our linguists, geographers, and host of citizens familiar with the peoples of the world, their habits, speech, and problems, have not progressed in our system of intelligence one iota. The Office of Strategic Services, with which I was proud to serve during World War II, performed heroically under the handicaps confronting it. It was hastily formed and mobilized to do a job which requires years of background and study.

Under these conditions the thousands of men and women recruited from all walks of life performed nobly under the stress of war. Immediately upon cessation of hostilities this organization was demobilized and its functions assumed by the Central Intelligence Group founded by Executive order. This group composed of the Secretaries of War, Navy, and State, with advisers from the military services, is inadequate to perform the task allotted to it. All intelligence information gathered by agents is submitted to the board for review and consideration of action. This necessitates delay in transmittal and in action taken upon such information.

What is needed is a separate, independent, intelligence agency with a civilian director responsible only to the President of the United States. Such an agency could procure and disseminate information without delay and without divided authority or friction.

An independent intelligence system must be our first line of defense for the atomic age.

Atomic warfare will not be conducted through exploratory raids and massing of troops preparatory to a declaration of war. The effects of the atom bomb will become known to the defending nation within minutes after a decision to wage war is reached by the aggressor.

It is vital that we know the intent of other nations and the scope of their activities in the field of potential military aggression. It is necessary that the heads of our Government are made aware of these intentions beforehand so that proper precautions can be taken either by defensive or retaliatory measures.

Every responsible person connected with the harnessing of atomic energy is agreed that there is no military defense against atomic bombs, nor is there likely to be one. The best defensive measures of the last war were only 90 percent effective which, while high, would mean certain disaster in atomic warfare. Defense through decentralization of industry and population would take years and would completely dislocate our economy and would still be only partially effective.

The sensible solution lies in effective international control resulting in the abolition of atomic weapons by international agreements. Even the peacetime use potential must be subordinated to this aim.

Agreements outlawing the use of atomic weapons as "legitimate" is not enough. There must be a system of rigid supervision through inspection to make certain that no nation is clandestinely engaged in the manufacture of these weapons while other nations in good faith are abiding by the agreement. Hand in hand with this must go a system of enforcement so that penalties may be applied to those who, with nefarious intent, are violating the covenant.

Supervision or control must take into consideration three factors: those of raw materials, personnel, and production. If sources of supply of the materials necessary to produce atom bombs are known and carefully and continuously scrutinized, there can be no clandestine use of such material. Through registration and restriction of construction, the plants necessary to process the materials may be kept under control. No project of great magnitude could be undertaken without the collaboration of many scientists well known by their contemporaries for their accomplishments and abilities. Their whereabouts and experimentations must always be known. Should a potential aggressor make the first move toward a violation, the fact would instantly become known to us through the international inspection authority or through our independent intelligence system.

It may be charged that such an independent intelligence system, as I advocate, would be a negation of the United Nations and the International Atomic Control Agency.

When the people of the United States have become so that they have voluntarily eliminated their Army and their Navy, then it will be time enough to do without our own intelligence system. Until that day arrives an effective and independent intelligence system must remain our first line of defense and is

no more antiethical to the United Nations than are national armies and navies. We must, for the protection of our national security, be certain that an alarm is sounded the moment the first step is taken toward a violation of the atomic-energy agreement. To wait until the violation actually occurs before becoming aware of it is, in the age of push-button warfare, to place our very existence in jeopardy. An independent intelligence force is our alarm system and our insurance against an atomic Pearl Harbor. Such a force in effective operation will not only guarantee America's safety, it will help to guarantee peace to the world. For we have learned from the last war that whereas weakness is a challenge to an aggressor, a strong defense can be an effective deterrent.

It is my firm conviction that if the people of the world will fight as strenuously for peace as they did in war, they will find that war is not inevitable. The development of the atomic bomb has been described as the greatest cooperative enterprise in the history of science. It required the pooled knowledge and skill of many sciences developed over many years in many lands. The achievement of a world of peace will require even greater concentration of effort and greater cooperation on the part of all peoples. With a strong and effective United Nations to settle the differences that arise among countries and with an effective and functioning world-wide atomic energy authority, men and women everywhere can look forward not only to peace but to progress and prosperity for all.

May God grant that the world of reality you are now stepping into becomes such a world in the years ahead.

You, who are the graduates of Columbus University, are truly fortunate, as the professions you have chosen are those two laudable ones of law and accountancy. The two are intertwined in our day-to-day life; friendships formed or accelerated here at the university undoubtedly will be continued or strengthened further by the constant contact which one profession makes with the other. More competent authorities than I are unable to determine where the one ends and the other begins. The understanding gained here of one another's problems should serve well in future activities.

The path ahead is precipitous, but the goal worth while, as a truly useful life as a competent and good citizen is an objective worthy of the best of men.

I now take this opportunity to offer my congratulations and best wishes to those who, through their earnest endeavors, have successfully completed their course of study here at Columbus University. May you face the future with fortitude, knowing that you possess that of which no person can deprive you—a fine education. Your teachers from elementary school through high school, and those here at the university, have done their work well. Your future rests upon you alone. Good luck!

Our Stake in German Economic Recovery

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 28 (legislative day of Monday, April 21), 1947

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exceedingly able discussion of our stake in German economic recovery before the Economic Club, of Detroit, Mich., on May 19, by Hon. M. S. Szymczak. Mr. Szymczak has long been one of the Governors of our Federal Reserve System. He has recently returned from a distinguished tour of duty in Germany as Director of the Economics Division in our Office of Military Government for Germany. I know of no more reliable authority as a source of dependable information respecting our critical occupational responsibility in Europe. His address is well worth the careful study of the Congress.

An estimate from the Public Printer indicates that Mr. Szymczak's address will exceed by one and a half pages the two pages allowed to be printed in the Appendix without an estimate, and the cost of printing is stated to be $248.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR STAKE IN GERMAN ECONOMIC RECOVERY

Two world wars and their aftermath have made it clear that the problem of Germany is one of the keys to world peace and prosperity. For 2 years, your representatives in military government have sought a basis for the solution of this problem. They can only succeed if the American people are aware of both their achievements and their difficulties, and if in turn the military government officials in Germany understand the attitude of the public at home. To contribute to a mutual exchange of such information is the main purpose of this paper.

PRINCIPLES OF AMERICAN ECONOMIC POLICY IN GERMANY

We all know that the German economy operated in the past as one integrated unit. Each part made its contribution to, and received its support from, the rest of the country. This integration alone made possible the industrial development of Germany. None of the areas that constitute the nation was ever self-sufficient in the past or can be made self-sufficient in the future. None of the German industries draws its tools and raw materials from one single area or one single zone of occupation. Steel and coal of the British zone are vital to the metal-working industries of the American zone, but the coal mines in the British zone cannot operate without pit props from the American and Russian zones. The light industries of the American zone need optical glass from the Russian, and glue from the French zone. On the other hand, they supply the French and Russian zones with electrical equipment, antifriction bearings, and dyestuffs.

For purposes of occupation Germany west of the Oder-Neisse line has been divided into four zones: American, British, French, and Russian. Moreover, the area of prewar Germany lying east of that line has been put under Polish (or Russian) administration. The Potsdam agreement provided that the four zones should be treated as one economic unit. It has not worked out that way, however. Therefore, I shall not speak so much of global German problems such as economic unification, the levels to be established for German industry, and the reparations program. Instead I shall concentrate on discussing the economic problems of the American zone and as far as necessary of the combined American and British zones.

All of us are aware of the importance of early high-level decisions on the basic economic questions which were recently discussed at Moscow. The issues were pointed out some time ago by Secretary Marshall and we all know their substance and the urgent need for their solution.

In view of the history of German aggression and the part played therein by German industry, it may be difficult to understand that one of the major tasks of military government is the provision of assistance in rebuilding at least part of the German industrial system. Such a reconstruction, however is necessary for two reasons: To prevent Germany from remaining a source of perpetual unrest in Europe, and to aid in the recovery of our Allies.

In the crop year 1946–47, German farmers in the combined American and British zones of occupation are producing foodstuffs sufficient to provide an average diet of only about 1,000 calories daily for that part of the population that does not live on self-sufficient farms. Such a diet is less than half of the minimum standard endorsed by the United Nations Food and Agricultural Organization. Unless we are prepared to forego payment for the large supplies of food that must be sent to Germany for an indefinite period just to prevent wholesale starvation, we must permit Germany to redevelop its manufacturing industries which alone can produce the exports necessary to pay for food imports.

Moreover, the products of German industry are indispensable for the reconstruction of continental Europe. In 1936—the last year in which the bulk of the German economy was operated on a peacetime level—Germany was the largest exporter to, and the largest importer from, Austria, Bulgaria, Czechoslovakia, Greece, Hungary, Italy, Rumania, Switzerland, Turkey, and Yugoslavia. It was first as a supplier and second as a market for the Netherlands, Poland, and Sweden.[1] Almost the entire manufacturing industry of continental Europe was dependent upon German machinery, precision instruments, electrical appliances, optical goods, transportation equipment, and chemicals.

The fact that Germany today cannot even supply spare parts is hampering economic reconstruction in such different countries as Austria, the Netherlands, and Poland. The general shortage of coal, which is the greatest single factor in retarding European recovery, is due largely to low production in the Ruhr mines. Lack of German potash is delaying the rehabilitation of agriculture all over Europe. An increase in the output of coal and potash mines, however, depends upon the availability of mining equipment and upon larger supplies of consumer goods for miners. A German miner can earn in two days all he needs to buy his meager weekly rations and thereafter has little incentive to work. A relatively small increase in consumer goods offered to miners was an important element in raising production in the Ruhr mines by about one-fifth between the fall of 1946 and the spring of 1947. A large-scale revival of German consumer goods industries would have proportionately greater results.

Our own economy would benefit from the resumption of German industrial exports

[1] The importance of Germany for continental Europe is indicated by the following table, showing Germany's trade with some of the leading European countries:

Country	Imports from Germany	Percent of total imports	Exports to Germany	Percent of total exports
	Mil. of dol.		*Mil. of dol.*	
Netherlands	151	23.3	74	15.7
Italy	116	26.4	77	19.5
France	106	7.0	40	4.3
Sweden	99	23.9	61	15.8
Switzerland	92	24.8	51	19.4
Denmark	83	25.3	62	20.3
Belgium	82	11.5	69	10.4
Soviet Union	62	22.8	23	8.5
Czechoslovakia	55	17.5	45	14.3
Norway	41	17.6	23	13.2
Austria	40	16.9	29	16.1
Turkey	34	45.1	48	51.0
Rumania	33	39.0	30	21.1
Hungary	33	25.8	35	23.1

because the availability of German goods would help meet the foreign demand for many American goods which are still in scarce supply relative to our own domestic demand. Furthermore, some European countries can pay for imports from the United States only with the aid of dollar credits because they lack dollar resources and lack exportable commodities adapted to the American market. If they could import goods from Germany, however, they could pay for them by exporting products urgently needed in that country. In that way, they would lighten the burden which the American economy has had to bear both in respect to the reconstruction of their own economy and to the rehabilitation of Germany. For instance, before the war the Netherlands exported substantial quantities of vegetables to Germany while Germany paid for these imports in steel and machinery. If that commerce could be restored today, it would make it unnecessary for the American economy to extend credits to the Netherlands in order to enable that country to buy American machinery and it would make it also unnecessary to divert scarce American foodstuffs to Germany.

OBSTACLES

While the principle of assistance to German recovery has been generally accepted in this country, it has been very difficult to carry out the program on an adequate scale. For obvious reasons of justice and policy, the countries invaded by Germany have been given a prior claim to our aid. Our financial and material resources are limited and foodstuffs and raw materials continue to fall short of total demand. The allocation of wheat and nonferrous metals, for instance, is a task that simply cannot be fulfilled to the satisfaction of all. Similarly, coal, of which Germany is a major producer, is in generally short supply. In order to promote reconstruction in the rest of Europe, we have had to undertake substantial exports of German coal even though the revival of German manufacturing industry would have been considerably accelerated if it had been possible to retain German production for German domestic use.

It may be hoped that these scarcities will disappear within a few years, but other obstacles may take their place. Concern has frequently been expressed that the reconstruction of German industry may go too far and restore Germany's war potential. The occupying powers have tried to differentiate between industries that could be used for aggressive purposes and therefore should be restricted, and others that might be considered peaceful and therefore should be encouraged. The most innocuous industries, however, could conceivably be used for war purposes, and dangerous ones frequently are indispensable for peacetime uses. For this reason, some of the United Nations are critical of any move to improve the level of German industry even though they concede that such an improvement would benefit them from the economic point of view.

Finally, some countries see in Germany less a source of supplies or a market for exports than a dreaded competitor. At present, such fears seem premature since production the world over has not caught up with demand, and German production remains a negligible part of the total. As soon, however, as world market conditions become less favorable to the sellers, any increase in German industrial production and especially in German industrial exports, may injure the interests of some industrial group in other countries. Although such exports will in turn make possible imports into Germany and thus benefit the economies of Germany's trade partners as well as its own, the groups benefiting from access to the German market frequently will be different from those affected by German competition.

ACHIEVEMENTS OF MILITARY GOVERNMENT

Despite the conflict of objectives and the limited financial and material means at the disposal of the occupation authorities, there has been a degree of rehabilitation in Germany.

(a) Food and agriculture: The food situation continues to be the central German problem. It is far from satisfactory, but we have been able to avoid not only outright starvation but also any serious deterioration of public health. Since last fall the official ration has been maintained in the American and British zones until recently at 1,550 calories daily for the so-called normal consumer. This ration still is more than one-fourth below the minimum necessary to insure health in the long run and more than two-fifths below the German prewar standard of nutrition. Moreover, the diet is far poorer in quality than would be advisable from the point of view of nutrition, a larger proportion consisting of grain products and a smaller proportion of so-called protective foodstuffs. Even so, the ration has been maintained only by importing into the combined American and British zones foodstuffs equal to about 60 percent of their domestic production. These imports, including monthly shipments of 200,000 tons of bread grains and flour, and substantial quantities of potatoes, sugar, fish, and milk, require an expenditure of $360,000,000 in the current crop year.

The food situation is constantly being threatened by the fact that stocks of supplies are dangerously low. Food is needed in many parts of the world. For the sake of food importing countries a further rise in world market prices must be avoided as far as possible and priorities must be established by the exporting nations. Every ton of food allotted to Germany causes hardship in other parts of the world. Difficulties in ocean transportation frequently delay shipments urgently needed for maintaining stocks in Germany at the minimum level needed for the planning of equitable distribution. German farmers frequently fail to deliver their quotas. Trains must be rerouted to alleviate a crisis in some part of Germany, thus creating a shortage in another part. Losses from pilferage increase in proportion to the deterioration of food conditions. An unfortunate accumulation of such factors was the cause of the difficulties currently experienced in the Ruhr district. Delays in delivering the full rations invariably lead to unrest, diminish the efficiency of labor and the output of industrial goods, and thus add to the difficulties of rehabilitation.

In future, we expect domestic production, collection, and distribution to yield substantially larger quantities than this year. Such an improvement will depend upon the availability of fertilizer and upon a supply of industrial consumer goods which will induce farmers to raise more crops for sale. It also will depend upon the enforcement of a strict program of collection and distribution which must be efficiently performed by German officials. We can have the utmost confidence in the ability of military government under General Clay to meet this situation if they are given fair means to carry out their program.

In the long run, however, the efficiency of industrial labor cannot be maintained on a diet representing less than 2,600 calories daily for the so-called normal consumer. The American and British zones cannot expect to produce more food than sufficient for an average of 1,600 calories daily. Import requirements in the long run therefore will be the equivalent of at least 1,000 calories daily, or about two-thirds more than actual imports in the current year.

(b) Industrial production: In 1945 most manufacturing industries in the western zones of Germany were at a standstill. By November 1946, industrial production in the American zone had reached 44 percent of 1936—a year of virtually full employment in Germany.[2] With the exception of lumber, the production of all commodities is below the 1936 figure, but by 1948 prewar output is expected to be reached in a number of important industries. In the British zone, industrial production had recovered last fall to only 38 percent of 1936. The British zone includes mainly heavy industries, most of which are under severe restrictions as possible war industries, while the American zone contains mainly light industries, manufacturing consumer goods.

Unfortunately, the exceptional severity of the last winter has undone some of the progress experienced during the preceding year. Industrial production in the American zone fell in December to 39 percent, in January to 31 percent, and in February to 29 percent of 1936. In March it recovered to 35 percent, but this level still is about one-fifth below the peak of November 1946.

In spite of the low level of production there is little unemployment. Even in February 1947, unemployment in the American zone was less than 450,000 out of a labor force of more than 7,000,000. Only in the white-collar classes is the number of job openings constantly smaller than that of job seekers. This is the result of three facts. The labor force has been greatly reduced by war losses and by the Allied retention of a large number of prisoners of war in some countries. Secondly, much labor is needed for work, such as removal of rubble and plant repair, which does not show in production statistics but nevertheless is vital for resumption of economic activity. Thirdly, for physical and psychological reasons, the productivity of labor has fallen considerably, in some cases by as much as two-thirds. The gradual revival of economic activity, more food, housing facilities, and improved availability of industrial consumer goods will do much to remove the causes of low efficiency.

(c) Housing: Next to food, housing accommodations are the most pressing requirements of the German people. Despite all war losses, the population of the American and British zones has risen by around 20 percent in comparison to prewar, mainly because of the inflow of Germans expelled from the area under Polish administration and from Czechoslovakia and other eastern European countries. At the same time, urban housing suffered from terrific bomb damage during the war, especially in the industrial and commercial centers. In Bremen, for instance, 55 percent of all homes were unusable in the summer of 1945. Reconstruction has been hampered by the scarcity of building materials, which in turn is due largely to the lack of coal; approximately 12.5 tons of coal are needed for producing the material necessary to build a small apartment. Allied legislation provides for the equitable distribution of available housing among the population, but this measure can bring only small relief since the complete equalization of all housing would only provide around 80 square

[2] The rise in industrial production in the American zone is indicated by the following table, comparing production of some important commodities in the first and the last quarter of 1946:

Commodity	First quarter 1946	Last quarter 1946
Trucks (units)	400	1,434
Electric motors (thousands of horsepower)	28	131
Lumber (thousands of cubic meters)	549	1,015
Potash (metric tons)	36,849	311,098
Textile yarns, including rayon (metric tons)	5,737	10,200

feet per person in the American, and less than 70 square feet per person in the British zone.

Improvement in housing conditions is particularly needed in the Ruhr district since the inflow of additional miners from the southern area of our combined zones, required to fulfill the program of output expansion, depends upon the availability of homes. A short-range program has been and a long-range is being prepared to provide additional housing, including temporary camps and billets and permanent reconstruction. In addition to building material, beds, bedding, and furniture must be produced. While military government plays an important role in drafting the program, its execution is entrusted to the German authorities. Military government has helped in that task by reducing to a minimum the requirements for military installations.

(d) Domestic trade and transportation: Despite the interdependence of the four zones of occupation, interzonal trade has been slow to develop largely because of the lack of economic unification.[3] Since January of this year, trade between the American and British zones has been free, as the result of the economic merger of these zones, and trade between the merged zones and the rest of Germany will be increased under agreements concluded among the zonal authorities. Until and unless the over-all economic unity of Germany is achieved, however, German recovery will be hampered by obstacles to the free flow of goods within the country. Transportation has suffered particularly badly from war damage. Military government can be proud, however, of its record in repairing railroads, inland waterways, port facilities, and highways. Railroad tracks in operation represent 97 percent of the prewar total. Almost as many sunken vessels have been raised in the American zone as in all other zones together and the proportion of port channels cleared is higher than in any other zone. The American zone also has a larger proportion of operating motor vehicles than any other zone.[4] Despite this progress, transportation is even now in need of repair and maintenance is a constant problem. Allocations of materials are being made for this purpose but must be revised as required to meet new priority demands from other sides of the battered economic structure.

(e) International trade: In 1946, the foreign trade of the American zone was almost entirely confined to the importation of foodstuffs and other essential goods by the occupation forces in order to prevent disease and unrest among the population. Such imports are financed by War Department appropriations. The only other substantial import transaction was the shipment of some surplus American cotton held by the Commodity Credit Corporation. This cotton was delivered to German processors; the finished goods are being exported in an amount sufficient to pay for the cost of the imports, and the rest is available for German consumption. In the fall of 1946, similar arrangements were made by American Military Government for the importation of raw materials required for the manufacture of ceramics, optical instruments, building materials, chemicals, and toys. The interim financing for these imports is handled by the United States Commercial Corporation, a subsidiary of the RFC. Exports from the American zone in 1946 were confined mainly to lumber and hops and a few industrial goods, taken from existing inventories or produced from raw material stocks. The amounts shipped were very small, in the neighborhood of 3 percent of the estimated prewar exports of the zone's area.

Imports into the British zone were similar to those of the American zone, but exports from the British zone were considerably larger, due almost entirely to Ruhr coal. Coal exports reached a weekly volume of 260,000 tons in the summer of 1946, or about 40 percent of prewar, but this involved heavy drafts on existing stocks and inadequate allocations to the needs of the German economy. As a result, exports of coal had to be reduced by about 30 percent in the fall of 1946. Even the peak figure in the summer of 1946 was far from sufficient to meet demand in the rest of Europe, and the reduction of coal exports was a heavy blow to the importing countries.

In the first months of 1947, exports had to be curtailed still further, reaching a low of 103,000 tons per week in February. Meanwhile, however, the output of the Ruhr mines had risen and coal exports could be increased again. In April and May, the unsatisfactory food situation brought about some labor disturbances which kept coal output somewhat below the March peak.

As soon as these difficulties are overcome, a further rise in output is expected, and in that case exports will reach in summer a minimum of 265,000 tons per week, while, at the same time, allotments for the needs of the merged zones will be a minimum of 860,000 tons per week, or about 30 percent above the peak allotment in 1946. The increase in domestic allotment will mainly benefit industrial enterprises, which in this way will be enabled to raise their output and thus to contribute more efficiently to the projected expansion of foreign trade.

Apart from coal exports, foreign trade of the merged zones in 1947 will be determined by the working of the bizonal merger agreement. This agreement provides for the cooperation of the American and British occupation authorities and of the representatives of the German states in formulating an import-export program for the rehabilitation of the German economy. A major objective of this rehabilitation program is to put the merged zones of Germany back on a self-supporting basis, i. e., to develop exports to a point where they cover imports. Meanwhile, however, the occupying powers must bear the cost, not only of the basic program for the prevention of "disease and unrest," but also of the raw material and equipment imports required to "prime the pump" of German export industries. Certain funds are already in hand for this second part of the program, including the receipts from exports of 1945–46, some former German external assets transferred to the occupying powers under agreements with neutral countries. and the credits negotiated with the U. S. Commercial Company. The United Kingdom is participating in the program in two ways. It bears half of the costs of sending basic necessities to the merged American and British zones and it finances half of the funds needed for "priming the pump" of the area's industry. Whenever, in the future, additional advances should be required, the United Kingdom also will bear an equal share with the United States.

The expected increase in imports will necessitate, but also make possible, larger German exports. In order to facilitate exports, the occupation authorities have authorized foreign businessmen to correspond with prospective German trading partners. Only so-called nontransactional mail, i. e., correspondence preparing rather than concluding actual contracts, has been allowed so far, but transactional mail may be admitted in the near future. Military government also provides facilities for foreign businessmen to travel in Germany and renew trade contacts. Contracts have to be submitted for approval to the Joint Export-Import Agency of the United States-United Nations occupying powers, and all payments have to be made to the account of the Agency rather than individually to German exporters. The Agency has issued rules of procedure, stating the principles which will determine the approval or rejection of contracts, and has established branch offices in the most important trading centers of the merged zones, mainly the state capitals. Finally, the Agency is prepared to act as seller of goods if a foreign buyer is prevented by Government restrictions from entering into legal contracts with German nationals.

The necessity of setting up the bizonal export-import organization and the hardships of the winter months have delayed the beginning of the new program. Despite these handicaps, foreign trade has started to rise. In the first quarter of 1947, contracts for exports were negotiated to the amount of $22,000,000. Export deliveries, which, however, include coal, reached $34,000,000. Imports, excluding basic necessities imported by the occupation authorities, were approved to the sum of $10,000,000. These amounts still are far below the levels that must be reached in order to fulfill the bizonal program, but they represent a material improvement in comparison with preceding periods.

(f) Money and exchange: When the occupying powers entered Germany, the collapse of the currency appeared imminent. Money in circulation had increased to approximately six times the prewar level. The German people's recollection of the hyperinflation that followed the first World War added to the dangers of the situation.

Despite the oversupply of money and the scarcity of goods, the occupying powers took over the existing German system of price and wage controls and have been able to prevent any serious rise in legal prices and wages. The official cost-of-living index stood in December 1946 at approximately 120 percent of 1938. It is true that only the meager official rations can be purchased at these prices. The supply of black market goods, however, is probably smaller than the amount of goods distributed through legal channels. Furthermore, many black market transactions take the form of barter, especially for cigarettes, rather than the form of sales at high money prices.

The maintenance of the official price and wage level at virtually prewar figures has had some unforeseen consequences. At the beginning of the occupation, a military exchange rate of 10 marks per dollar was established, as compared to a prewar exchange rate of 2½ marks per dollar. This rate was introduced merely for the administrative use of the occupying authorities, especially in calculating payments in marks to the troops. Its application for general purposes, however, would have tended to upset the entire price and wage system. German domestic prices even before the war were managed in such a manner that they had lost all relation to world market prices. No uniform exchange rate, and least of all the military rate, would represent a generally applicable ratio between domestic prices as expressed in marks, and world market prices in dollars.

Thus, a difficult problem has arisen in connection with the pricing of export and import goods. The German exporter receives for his sales the legal domestic price in marks. Similarly, the German importer has to pay for

[3] In the 9-month period, April through December 1946, the American zone shipped goods valued at 475,000,000 marks (around $190,000,000 at the prewar exchange rate) into and received goods valued at 471,000,000 reichsmarks from the other zones. Trade with the British zone accounted for 63 percent, with the French zone for 28 percent, and with the Russian zone for only 9 percent of the total.

[4] The work done in this respect may be illustrated by some figures: More than 200 miles of railroad tracks, 78 bridges, and 18,000 miles of railroad telephone lines have been rebuilt; about 1,600 locomotives, 109,000 freight cars, and 8,600 passenger railroad cars have been repaired; about 800 miles of inland waterways have been cleared and 3,000 miles dredged; 978 river barges have been raised, and about 1,350 repaired; more than 900 miles of highways and 261 highway bridges have been rebuilt.

his purchases the legal domestic price in marks. On the other hand, the foreign importer of German goods pays, and the foreign exporter of goods receives, the world market price in dollars.

Therefore, the occupation authorities have decided for the time being to refrain from fixing a uniform conversion factor for the translation of mark into dollar prices, and vice versa. Instead we have issued a long list of various conversion factors, reflecting for all major commodities the actual relation between legal domestic prices in marks and world market prices in dollars. For instance, the conversion factor for carbon brushes is 30 cents, and for pharmaceuticals 80 cents per mark. This means that a certain quantity of carbon brushes that sells domestically for 100 marks has to be priced for exports at $30, but pharmaceuticals that sell domestically for 100 marks have to be priced for exports at $80. As a practical matter, this is the best that can be done until major monetary reforms are undertaken in Germany and a more normal price system is developed there. These problems have been under quadripartite (four zones) discussion for some time and it is to be hoped that an early agreement will be reached.

(g) Banking: In December 1946, military government established a new central banking organization in the American zone. Following the principle of decentralization, each German state received its own central bank, which took over the assets of the former Reichsbank as far as they were located in its area. The organization of the central banks was largely influenced by the model of the Federal Reserve System. As soon as the economic unification of Germany is implemented, the state central banks will be coordinated by a central board, which will issue currency through the medium of the state central banks. Until such time, however, the central banks have no power to issue bank notes or any other currency.

In consequence of our principle of decentralization, commercial banks in the American zone have been ordered to sever their connection with central offices in Berlin. Depositors are free, however, to dispose of their accounts both within the American and in transactions with the British and French zones, except for blocking measures applied in the process of denazification. From the beginning of occupation to the end of 1946, deposits in the American zone increased by 75 percent. Most of the rise in deposits had to be kept by the banks in cash or with other credit institutions since no other investment opportunities are available. Total assets of the banks in the American zone were 75,000,000,000 marks on June 30, 1946, of which one-third was kept in cash or bank balances, and two-fifths in Treasury bills and other government securities, the service of which has been suspended since the end of the war.

PROBLEMS AND PROSPECTS

All these achievements are merely the first step on the road to rehabilitation. The obstacles that still have to be overcome are, no doubt, as great as any which we have encountered so far.

First of all, the provision of the Potsdam declaration which calls for the economic unification of Germany must be carried out. Unification in itself will not solve the economic problems of Germany, but it will insure the development of the whole German economy on a more rational basis. Uncertainty as to economic unification is a handicap in many fields, notably in adjusting the so-called level-of-industry plan to changed conditions. Under that plan, which was approved by all four occupying powers 1 year ago, maximum levels were established for most German industries with a view particularly to preventing the resurgence of German war potential. Most experts agree that this plan needs substantial corrections, but the necessary amendments in each zone will largely depend upon developments in other zones and upon the question of whether the German economy is to be redeveloped as a unit or in separate self-sufficient parts.

Another problem that urgently needs attention is currency reform. The disproportion between the supply of money and of goods at prevailing prices cannot be maintained indefinitely. All experts agree that a reduction in the volume of currency will be necessary. Obviously, the execution of such a reform also depends upon the fate of unification. If common action of all four occupying powers is not forthcoming, the advantages and disadvantages of separate action in the merged American and British zones must be weighed.

Other problems arise in connection with the political aims of occupation. The decentralization of the German economy must be achieved in order to make it impossible for the country to reorganize for aggressive purposes. In this connection military government in the American zone has enacted a drastic decartelization statute, which is aimed at destroying the concentration of economic power in German industry. Property of Allied nations looted during the war has been and is being restituted. War plants have been and are being destroyed, and other plants have been and are being removed for reparations. The over-all problem of reparations, however, still remains to be solved.

The lack of unified action of the four occupying powers, moreover, creates uncertainties that are detrimental to economic progress. As long as the management of an enterprise does not know whether or not a plant will be subject to restitution, or to destruction, or to removal, under the reparations program, it cannot make definite plans for reconstruction or start an investment program which might be interrupted at any moment.

Finally, military government has to deal with the problem of reaching equilibrium in the balance of international payments of the merged American and British zones. In this connection the question of economic unification again becomes decisive. As long as unification is not achieved, interzonal trade must be treated as international rather than domestic commerce, with the resulting need for controlling interzonal payments.

The problem of equilibrium is particularly interesting to the American public. As long as the proceeds from exports do not exceed import requirements, they must be devoted entirely to paying for current imports. Only when an export surplus is reached will it be possible for our merged zones to start repaying the advances made by the occupying powers for the importation of basic necessities.

Our stake in the economic problems of Germany, however, is greater than our interest in receiving repayment of our advances. We want peace, and we know that in order to have peace we must have economic stability in Germany and in the rest of Europe.

Saving the Lives of Good Neighbors

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by T. J. Woofter, Director of Research, Federal Security Agency:

Seven million immigrants within the next 10 years are hoped for by South American countries recently canvassed by Phil Clark, of La Prensa Asociada. These, he states, are to be recruited "under bold immigration programs instituted by Latin American republics striving toward agricultural and industrial self-sufficiency." Immigration policies were also of major concern to the First Inter-American Demographic Congress, which recommended: "That the governments of the American countries include in their postwar planning the immigration problem, and establish the relations, qualitative as well as quantitative, between the actual population and the addition necessary to maintain and increase production in that land, without injury to the social level." Thus, methods of attracting immigrants constitute a major postwar program of a number of South American governments.

Many population experts, however, are skeptical as to the possibility of attracting immigration in a volume of 700,000 a year in the near future. In this connection, it will be remembered that the United States never received over a million immigrants a year except in a few years which were characterized by very marked industrial expansion in this country coinciding with population pressure out of Europe. The immediate future does not promise a comparable industrial expansion in Latin America, and the deficits of population in Europe which were caused by the two world wars have made most European nations seek to import labor rather than to export it. Practically all of them seek at least to hold the population they now have.

It is encouraging to see that one large segment of the world is anxious to extend a welcome to the harried, distressed, homeless people uprooted by the war. This skepticism is, therefore, not intended to discourage the efforts of our southern neighbors to attract immigrants—it is rather a warning against undue hope for large population gains from this source.

Doubt as to the ability to secure such a large volume of immigration may, however, serve to focus attention on another population resource which is nearer at hand and from which an increase of over a half million a year is potentially attainable. This is the rate of natural increase. Most Latin-American countries are still characterized by high birth rates and relatively high death rates. Although death rates in Argentina are about as low as those in the United States, crude death rates of 20 per thousand prevail in some countries, and rates of 16 and over are the rule in most of the countries.

These rates would indicate that there are approximately 1,750,000 deaths a year in Latin America. While data are not sufficiently accurate to make reliable estimates as to the number of these deaths which are postponable beyond age 65, sufficient material is at hand to warrant a fairly safe conclusion that from 500,000 to 600,000 of these deaths could be effectively postponed. Such a saving would still leave the death rates in most of the countries somewhat above present mortality levels in the United States. This would yield an attainable population increase almost as large as that envisioned by the rosy optimism of those who expect large immigration.

This conclusion is based on the following considerations:

1. From 35 to 40 percent of the deaths occur under 5 years of age. That is to say, there are approximately 600,000 child deaths. Deaths under 1 year of age per 1,000 live births run well over 100 in most South American countries and up to 200 in Chile. Even Argentina, with a relatively low general death

rate, has an infant rate of 90 as against 40 in the United States. A saving of half of these deaths would leave child mortality still considerably higher than that in the United States and would produce a population increment of 300,000 a year.

2. The conservative estimate of the potential saving of life between the ages of 5 and 65 would add another 200,000 or 250,000 increment. This would seem feasible in the light of present high rates of maternal deaths and deaths from parasitic diseases, pneumonia, typhoid, smallpox, and, in some areas, yellow fever, plague, and other tropical diseases.

3. According to the Peruvian statistical abstract of 1943, only about one-third of the deaths in that country occurred with a physician in attendance, and the ratio of physicians to population was 1 to 5,000, as against an optimum ratio of 1 to 1,000 proposed for the United States. Likewise, the ratio of hospital beds to persons was 19 beds per 10,000 people. Thus, a strenuous effort to increase health personnel and facilities would contribute greatly to the reduction in sickness and postponement of death. Not only can great improvement in health be expected by the over-all expansion of medical personnel and facilities, but much can also be secured by more adequate distribution of these facilities. As in the United States the rural areas of South America are relatively underprivileged. In Peru, the ratio of physicians to people in Lima Province is 1 to 1,000, while one department, with over a quarter of a million people, has only 3 doctors or 1 to 90,000. The distribution of hospital beds is likewise irregular, since the department of Callao has 102 beds per 10,000 inhabitants, as against only 2 in some of the rural provinces.

4. Postponement of death is also more feasible in Latin-American populations because they are relatively young in their age distribution. Past excess of births over deaths has left a high proportion of the population under age 20. In fact, the census populations show from 48 to 55 percent under age 20, as against about 38 percent in the United States (in 1930). If South Americans escape the extreme hazards of mortality in the younger ages, then longevity seems about as great as that of other countries. Bronson points out that after age 40 expectation of life is about as long in the South American countries for which life tables are available as it is in the United States.

While saving in mortality would be the most measurable result of intensified public-health measures, a reduction in sickness would go hand in hand with postponement of death, with the result that the well years of life added would constitute a priceless economic and social resource.

The reproductive potential of Latin-American populations, when mortality is curbed, is exemplified by recent Puerto Rican experience. There, from 1910 to 1944, the birth rate has remained about 40 and the death rate has declined from 25 to 14.8, with the result that the population nearly doubled (82-percent increase) in spite of some outmigration. Density has reached 550 per square mile.

While this and the other islands of the West Indies typify the almost explosive natural increase possible when mortality is reduced, they show at the same time the danger of poverty which can result from such expansion if it is not accompanied by proportionate expansion of economic opportunity.

While the land area of the Caribbean islands is more restricted than that of continental nations, the area of optimum utilization on the continent is not unlimited. Policies of population expansion in these nations should, therefore, be coordinated with policies of optimum population distribution and adjustment to agricultural and industrial opportunity. Equal attention needs to be devoted to the development of systems of education, security, and welfare which will assure a rising standard of living as well as an expansion in numbers.

It must, of course, be recognized that reduction in mortality cannot be obtained quickly or inexpensively. The necessary expansion of facilities, training of personnel, and diffusion of knowledge is a long-time process.

A considerable segment of the cultural exchange program, promoted by the State Department in cooperation with other Federal executive agencies, has a direct bearing on the improvement of health and the attainment of a better balance between population and resources in Latin America. The professional skills of the departments chiefly responsible for the promotion of the public welfare in this country are mobilized through the Interdepartmental Committee on Scientific and Cultural Cooperation and made available to Latin America by means of exchanges of Government officials, professors, students, and scientific and cultural materials.

The description of a specific project in this field will illustrate the character of this operation and indicate some of the possibilities for cooperation by social scientists in universties. This project is the 1950 Census of the Hemsphere and the correlative efforts to improve vital statistics.

A first requisite for sound selection of necessary public health measures and planning their operation is better information as to the nature and distribution of public health problems. A first requisite for a rational adjustment of population to resources is a thorough analysis of the resource potential and the inherent population trends.

As we noted previously, the character of the information at hand is highly unsatisfactory for any determinations except those of a most general nature. Both the population figures on which rates are based and the registration of deaths and causes of deaths on which incidence is based leave much to be desired in completeness and accuracy. Some of the countries have never had a census in the modern sense of the word, and others have had none for several decades. Registration and processing of vital statistics in all but a few of the countries are rudimentary or not nation-wide in coverage.

Social scientists in the United States have a unique opportunity to collaborate with South American schools in bringing about a marked improvement both in the raw material and in analytical methods for planning population and public-health policies. On the initiative of the Inter-American Statistical Institute, all Latin-American nations have expressed a lively interest and agreed to cooperate in a comparable census of the hemisphere in 1950. It is axiomatic that the preparation for a successful census and the plans for meaningful analysis of its results will depend upon a broad and thorough program of training of the technicians who will supervise and analyze the census. It will also require a considerable degree of preparation of public opinion for a successful census in some of those countries which do not have a census tradition.

To facilitate this training program, the Interdepartmental Committee on Scientific and Cultural Cooperation, under the leadership of the Department of State, is giving major attention to training technicians for the 1950 hemisphere census. A number of statistical employees of South American governments, it is hoped, will be brought to this country for training on the job in the Bureau of the Census and other statistical bureaus of the Government in order that they may receive actual experience in census procedures and administration. Statistical advisers will also probably be sent under the Department of State auspices to assist in the organization and staffing of census units and vital statistics bureaus. This program will be developed as rapidly as appropriations from the Congress will permit.

In addition to these exchanges officially fostered by the Department of State, there are hundreds of Latin-American students in the colleges of the United States who are here either on their own resources or on private scholarships. All of these are, of course, not majoring in social science, medicine, or public health, but the majority will probably return to positions which will enable them to exert influence on public opinion. All would, therefore, profit by a closer knowledge of the plans and possibilities of the 1950 census. This means that the teachers of social science in the institutions which enroll a considerable number of Latin-American students have an opportunity to acquaint these students with this movement for improvement in the basic materials for social research and planning.

A realistic approach to the improvement, collection, and analysis of fundamental social facts will contribute greatly to the understanding of the human relationships in the hemisphere. Certainly one of the finest manifestations of good neighborliness would be the wholehearted cooperation of all the social scientists in the exchange of knowledge and skills which have a bearing on the conservation of human resources.

St. Lawrence River Development

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, June 13 (legislative day of Monday, April 21), 1947

Mr. AIKEN. Mr. President, I ask permission to have printed in the Appendix of the RECORD an editorial entitled "Build the St. Lawrence Seaway," from the May 29 issue of the Advertiser, of Montgomery, Ala.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUILD THE ST. LAWRENCE SEAWAY

If democratic America is to hold her own against totalitarian governments abroad, we must act like a unified nation and not like a miscellaneous lot of competing peddlers.

We refer to the way representatives of the railroads, of the West, the South, and many interests have succeeded in blocking the urgently needed St. Lawrence seaway.

Now such men as Secretary of State George Marshall and former President Herbert Hoover have appeared before a Senate subcommittee to testify for the seaway, which would permit passage of the larger ships right on up into the vital industrial heart of America and create a vast new store of electric power.

This is no time to complain that the seaway would hurt the railroads, or New York, or the South—it is time to meet the urgent and vital needs of the Nation. And we may be sure that if a project is needed by America, the result of its completion ultimately will be to the benefit of us all.

Good-Neighbor Diplomacy

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. TEAGUE. Mr. Speaker, Guatemala's experience with a farm-minded envoy from the United States might well set the pattern for a new sort of good-neighbor diplomacy. Ambassador Edwin J. Kyle, former dean of agriculture at Texas A. & M. College, is making a remarkable record with our neighbors to the south. I sincerely hope that his methods of showing others the best-known agriculture practices will be employed with all other nations of the world.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Arnold Nicholson entitled "Ambassador of the Soil," which appears in the Country Gentleman magazine of June 1947:

AMBASSADOR OF THE SOIL

(By Arnold Nicholson)

When Edwin Jackson Kyle arrived in Guatemala as Ambassador from the United States, he told everyone that he wasn't much shakes as a diplomat. Thirty-three years as dean of agriculture at Texas A. & M., he intimated, had taught him practically nothing about the mysteries of protocol or when to wear striped pants.

"But," he announced, "I do know something about agriculture and education. That training is at the disposal of Guatemala. Through it I hope to serve both your country and my own, as long as I am here."

That was 2 years ago. The tall, elderly Texan's approach to his duties then seemed a bit naive to some of our specialists in foreign relations. They were used to the cautious diplomacy of career men, and the eccentricities of millionaire appointees, but this was the diplomatic corps' first experience with an "ag" colleage dean. No one was sure—not even Dean Kyle—how it was going to work out.

It has worked like a charm. I visited Guatemala recently for Country Gentleman and came away convinced that Dean Kyle's experiment as an ambassador specializing in agriculture has opened up a new and practical avenue for international friendship and cooperation between Latin America and the United States. His good neighbor path is not lavishly paved with dollars, nor has it wandered into a maze of politics at either end.

You understand why an envoy with roots in the soil has advantages denied the more conventional type of ambassador almost the moment you set foot in Guatemala. From sea-level jungle to the highest mountain slopes, agriculture is the Nation's sole resource. There are no minerals of commercial importance; no fuel other than wood. The economy of Guatemala, like that of most Latin American republics, is completely wedded to the land.

That economy and the social and political life as well head up in Guatemala City, the mile-high capital, where the heat of the tropics is tempered by the thin, cool air to almost perpetual spring. It is an orderly little city of amazing contrasts. Oxcarts mingle with motor scooters and automobiles in the narrow streets, and the white and pink and blue walls of the low buildings unexpectedly flaunt soft-drink and gasoline signs—with Spanish slogans—that you thought you'd left behind in the States. Green plazas and massive church buildings are accent points, but the dominant structure, in size, in architecture, and in all respects, is the National Palace.

The deliberations in the high-ceiled offices and open-air corridors of the Palacio Nacional are just as vital to every Guatemalteco as the happenings in our own White House or on Capitol Hill are to American farmers. But there's another spote in Guatemala City—a modest little building—where developments that influence the technical side of agriculture also begin. It's the headquarters of the Guatemala Agricultural Asscociation. Because Guatemala is small—in land area and in population the equivalent of Tennessee—the members of the association include nearly all the ranch and plantation owners who have the means to improve their operations, and thereby help the nation as a whole.

I watched Ambassador Kyle in action both at the palace and at the agricultural association headquarters. The ambassador's advice and official counsel are frequently sought, but when the dean gets an idea, like the introduction of broad-breasted turkeys or of purebred sheep to up-grade low-producing native bloodlines, he doesn't wait in the flower-filled patio of the American embassy, expecting Guatemala to come to him. He seeks the right people to interest in the job, with a rare diplomacy that he prefers to call making friends.

The turkeys, for instance, are now strutting in fields maintained by the Instituto Agropecuario Nacional, a joint research project financed by the Guatemalan Government and staffed by our own Department of Agriculture. They came from Texas Luling Foundation, of which Dean Kyle is a director. The sheep—three airplane loads of them—were delivered from the States to one of the members of the agricultural association, who bought them to stock a mountain range.

At the time of my visit the foot-and-mouth disease was relatively new in Mexico. Guatemala is Mexico's neighbor on the south, and naturally fearful that the disease may slip across the border, which zigzags through nearly 500 miles of primitive jungle and mountains. Ambassador Kyle asked the directors of the agricultural association to call a meeting, and brought them the latest reports from our American observers in Mexico. The outbreak, he explained, was going to delay shipment of two Jersey and three Brahma bulls that he had been instrumental in obtaining as gifts from American breeders to the association, and to Guatemalan Government herds. (They were later shipped.) Then the Ambassador described a brush-clearing machine recently developed by Texas ranchers. Something of the sort, he suggested, might help the Guatemalan cattlemen to clear their pastures without the legume-destroying burning that is the custom today.

When the meeting had ended one of the English-speaking directors—a grower of coffee, sugar, and citrus, and a cattle breeder as well—took me aside. "I am speaking for all of us," Señor Carlos Dorion said, "when I tell you that Dr. Kyle has done more for Guatemala than all of the Ambassadors you have sent here in the past 100 years. We said this when he had been here only a few months. We repeat it and hope that all of your people may know how we feel."

TOUR TO THE STATES

Carlos Dorion was one of a party of eight Guatemalans, including the Minister of Agriculture, a congressman, and the director of animal husbandry, whom Ambassador Kyle brought to the United States to tour farm areas in 1946. Their time was largely spent in Texas and in Iowa—the latter because of its corn.

The golden grain that means so much to the agriculture of North America originated, our scientists believe, either in Guatemala or in neighboring Yucatán. It supported the mysterious, highly developed civilization of the Mayan Empire during the years when Europe was plunged in the Dark Ages. The Mayans had no plows and cleared land with fire. When erosion and jungle grass strangled the cornfields, it is now surmised, the Mayan cities were too weak to withstand marauding tribes and perished almost overnight, leaving huge stone temples and carvings to be swallowed by the jungle. The Indians who are descendants of the Mayans—more than 2,000,000 of them in Guatemala—still mingle worship of the ancient gods and stone idols with the religion the good padres brought 300 years ago from Spain, and they still live on corn—and very little else.

The importance of corn in a country we know as a "banana republic" has to be seen to be believed. The bananas are there—eight to nine million bunches exported a year—and so are thousands of acres of the world's finest coffee trees, which produce Guatemala's most valuable export. But nimble brown fingers to pick the coffee or to cut down the bananas would not exist if it weren't for corn to make tortillas for the Indians to eat.

The Indians' milpas—little fields of grain planted, cultivated and harvested with only a hoe and machete—cover every available inch of ground in the highlands where most of these modern Mayans live. The fields run right up to the 8,500-foot elevation on the sides of Guatemala's tall volcanoes, sometimes with rocks painstakingly placed below every corn plant to keep them from sliding downhill if the slope is extra steep. Production runs from 15 to 30 bushels an acre, and every community, in fact almost every family, has its own strain of corn. There are white, yellow, purple ears; flint and dent; and every conceivable mixture of these qualities. I saw flint and dent on the same ear.

The opportunity for the plant breeder to better yields, and at the same time unearth characteristics that geneticists have never observed before, is unique. Iowa State College turned to this genetic treasure-trove recently, and established a research station under direction of Dr. I. H. Melhus in cooperation with the Guatemalan Government. Collection of strains began in 1945. Nearly 300 sorts have been yield-tested in fields at varying elevations; and of these, 25 selected for increase.

The link between Iowa and Guatemala was strengthened when Ambassador Kyle brought his touring guests to Ames in 1946. He has since been hard put to explain that Iowa hybrids can't be expected to perform in Guatemala as they do at home. But he, and Dr. Melhus, hold out the promise that the work which heads up at Antigua, and a similar program by American technicians employed by Guatemala's own Instituto Agropecuario, in time will give the nation its own adapted hybrids and better corn.

NONCOMPETING CROPS

Corn improvement is No. 1 in Ambassador Kyle's The Agricultural Economy of Guatemala, published a few months ago by the Guatemalan Ministry of Agriculture. I doubt if many ambassadors have either taken the time to prepare as thorough and thoughtful a document for local consumption, or been honored by having the government to which they are accredited sponsor its publication. The opportunity for Guatemala, he points out, lies in its varied climate and fertile, volcano-nourished soil, and the proximity of the huge United States market for noncompeting crops like coffee, bananas, rubber, and the like. But to take full advantage of this, Guatemala first must build a stronger food base at home.

"This country shouldn't have to import corn, as it did in 1946." Ambassador Kyle

remarked. We were walking through the Agropecuario experimental plots established by the Guatemalan Government at Chocola under the direction of Dr. William C. Davis, whom our Department of Agriculture has lend-leased, so to speak, together with a staff of five other Americans. Corn is one of an infinite variety of crops under test at Chocola, a 6,000-acre plantation—or finca, as the Guatemalans call all farms—which was expropriated by the government from its former German owners during the war. The seized German fincas make the Guatemalan Government the biggest farm operator in the nation today. Nearly a fourth of all the coffee grown now comes from government-owned or controlled fincas. At Chocola, 3,500 acres are interplanted with coffee and bananas—the bananas furnishing, in addition to fruit, the all-important shade for the lower-growing coffee trees.

We stood near an ancient Indian mound, in an open, grassed field. A plot of one of the 28 corn varieties that Dr. Davis' men have selected from the 366 sorts they have discovered grew in isolation in the middle of the field. Beyond the corn the field sloped down to the coffee trees, and they in turn, like an endless green sea, vanished below into the blue haze that veiled the Pacific Ocean 30 miles away. At our backs rose the great wall of 12,000-foot high volcanoes that marches straight across Guatemala from the Mexican border to El Salvador.

Ambassador Kyle turned to gesture toward the cone-shaped, happily silent volcanoes, and the rugged highlands that lay behind them. "Up there, where the Indians have their little fields," he said, "better corn may someday ease their endless labor to grow enough food. But the big opportunity for all Guatemala lies here." And he swung back to face the Pacific and the flat plain of deep, fertile volcanic soil that rose gradually from the ocean to the foothills where we stood. "Corn, cattle, sugarcane, cacao, rubber"—he ticked them off on his fingers. "There's no end to what this country can produce. The plant and animal breeders, the mechanization, the health measures to do it are ready. Soil and climate will do the rest."

The United Fruit Co., the American concern that dominates Central America's banana trade, is showing the way at Tiquisate. Most of the United banana plantations are in the humid, hot lowland on the Atlantic coast of Central America. One of the oldest is near Guatemala's Caribbean gateway of Puerto Barrios. About 10 years ago the fruit company moved over the mountains to the shores of the Pacific, at Tiquisate, and blocked out 23,000 acres of jungle for development as a banana farm.

Three-fourths of the acreage is underlaid with pipe for overhead irrigation. All of it is crisscrossed with an entirely separate system of buried pipes—6,000 miles of them—that carry Bordeaux mixture spray. A rail line travels the length of the plantation, and roads fan out from the tracks to the remotest corner. As the bananas are harvested—one bunch to a tree, with the tree cut down so a new shoot from the roots can replace it—they are loaded on rubber-tired trailers and a tractor pulls them to the rail line.

Tiquisate is one of the world's largest mechanized farms. The plantation and the model town that houses 9,000 workers and their families represents an $8,000,000 investment. The irrigation, which seems a paradox in a country that gets up to 80 inches of rain annually, has nearly doubled the size of the banana bunches. The water comes from the rivers that rise on the slopes of the volcanoes, where 200 inches of rain a year is common. It is pumped with Diesel power to revolving sprinklers atop standpipes 30 feet high. Each sprinkler showers artificial rain on 3⅓ acres. The Bordeaux controls a leaf disease called sigatoka. Each banana tree must be completely coated once a week.

Wages at Tiquisate are above the national level, but the most remarkable accomplishment is in health. Malaria is an ever-present threat almost anywhere in the tropics below the 3,000-foot altitude, yet the rate of infection at Tiquisate is far less than in many cities in our Southern States.

Tiquisate serves as a proving ground in many agricultural fields other than bananas. Although Guatemala, during the war, was able to supply a limited amount of beef to feed our forces in Central America, the local market is far from oversupplied. Better stock and better pastures are the first need. Tiquisate maintains a herd of 8,000, mostly to supply meat for the workers, and has assembled some of the finest brown Swiss and Brahman blood available to build a heat-resistant beef animal. I saw some of the first calves, and their gains compared to purebreds and native criolla cattle were outstanding.

In the crop line, the fruit company has done well with lemon and citronella grass, sources of essential oils that came from the tropics of the Orient before the war. Nursery plantings of oil palm, mahogany, and other tropic woods are maintained, and if the dread Panama disease ever should strike the bananas at Tiquisate the company would be prepared to set out replacement crops.

Although not endowed with resources to match those of the immense fruit company, individual finca owners also are setting a new, and modern, agricultural pace. Some dairies in the vicinity of Guatemala City match grade A establishments in the States. Feed is a problem. I watched a worker, at one dairy, hand harvesting alfalfa from a patch about the size of a basketball court. Each precious clipping went into a tiny hand cart, going to add a little green salad, as it were, to the diet of the cows. They were purebred Jerseys, producing about 30 pounds of milk a day. The best blood is sought. At another farm one of the famous Carnation bulls is siring the Holstein herd. Beef-producing fincas maintain Brahmas and Shorthorns it would be hard to match anywhere.

The flow of foundation stock into Guatemala from the States has accelerated in the past year or so. In part this is due to the relative proximity of the country by air and the ease of shipping animals that way. A four-motored plane needs only 6 hours to reach Guatemala City from New Orleans. It is partly due, also, to the way Ambassador Kyle not only keeps a constant stream of American experts, from Government agencies and from private life, visiting fincas, but likewise helps his Guatemalan friends to find the livestock or other items that they want from the States. Some might consider this a bit below the dignity of an ambassador. But Texas' former dean, though he may leave the details to his hard working, thoughtful agricultural attaché, Graham S. Quate, seldom can resist drawing on his experience and wide acquaintance back home when his Guatemalan friends have a problem to solve.

ENTHUSIASM IS CONTAGIOUS

This enthusiasm carries over into his relations with the Government of Guatemala and has contributed to the manner in which the budget of the Ministry of Agriculture has grown in recent years. Guatemala, under President Juan José Arevalo, now spends between three and four million of its $30,000,000 budget on agriculture. The sum is small, considering agriculture's importance, but four times its size 2 years ago. A great deal of the money is going to finance agricultural colonies, to promote cooperatives, and to aid in subdividing some of the Government-owned fincas for the use of small farmers. The administration of President Arevalo, now in office for his third year, is committed to a comprehensive farm program, including research and extension teaching. His political opponents hint that too much attention has been paid to distributing Government lands, while the President's own adherents clamor that more be parceled out.

Ambassador Kyle stays clear of the political arena, although his aid and advice are available to the Government for any of its own projects, as well as those in which the United States has a cooperative stake. Our Department of Agriculture, in addition to working with the Instituto Agropecuario, maintains a rubber research station in Guatemala. The State Department, through the Office of Inter-American Affairs, assists in operating a normal school for rural teachers and has set up and continued several health and sanitation programs. The latest project, launched by Dean Kyle, has led our Interior Department to send men from the Fish and Wildlife Service to study ways and means to increase food supplies and sport in Guatemala's lakes, forests, and sea.

AG COLLEGE IS TOPS

Guatemala is justly proud of her National School of Agriculture, revitalized by the Government 3 years ago when the school was moved to the 10,000-acre Finca Barcena, near Guatemala City, with Albert S. Muller, a Cornell graduate, who has spent most of his life in the tropics, installed as director. The plant, which includes a modern, spotless dairy barn and milkhouse, sanitary hog-houses, shops and other buildings that reflect the ingenuity and energy of Muller and his students, is worth half a million dollars or more today. Facilities exist for 150 students, who take a 5-year course. The alumni of the school, known as the Association of Agricultural Experts, recently named Ambassador Kyle their honorary president because, as they said, "of the liberal and important help which you have lent to the development of the different phases of our agriculture."

The ambassador is well aware of the advantages his background provided for him to win the friendship and respect of individual Guatemalans. "Understanding between individuals," he insists, "is the basis on which any lasting international good will must be built. Then, and only then, do the governments have a real chance of composing the differences that internal and world politics are sure to impose between them."

He hopes that he will have another year or two in Guatemala before retirement, but is even more anxious that the United States consider agricultural and engineering backgrounds in choosing future envoys to Latin America. "Men with that training," he is sure, "can't help but be, as our good neighbors put it, simpatico. Then the major problems of the country to which they are accredited are also the problems they understand."

When Ambassador Kyle retires, it will be for the second time. He stepped down from Texas A. & M. in 1944, and at that time was named Dean Emeritus. His intimate acquaintance with Latin America began 3 years earlier with a tour of Central and South America sponsored by Nelson Rockefeller. Previously he had served as unofficial adviser and friend to the Latin American students who came in increasing numbers to Texas A. & M. while he was dean.

It was the urging of Senator TOM CONNALLY, of Texas, that resulted in his appointment as ambassador to Guatemala by President Roosevelt in January 1945. "It took me several weeks to make up my mind when the appointment was offered," he said. "After all, I was 69 that year, and that is rather late in life to start a new career. It was, however, a chance to serve my country—even if only for a few years. And that, though my ways may be unorthodox, I'm proud to do."

Address of Gen. Dwight D. Eisenhower

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the proceedings of the National Board of Underwriters, May 27, 1947, including an address by Gen. Dwight D. Eisenhower:

President HAINES. Members of the National Board of Fire Underwriters, ladies and gentlemen, guests who have distinguished us by being with us tonight: It is my great pleasure to say that we are back on this old dinner program. Those luncheons that we had to have during the war years were all right with that little bit of dried-up chicken, but tonight we really had groceries and this seems like old times.

This is the dinner following the eighty-first annual meeting of the National Board of Fire Underwriters. My task is made very easy for me tonight by reason of the fact that our guest, who has kindly consented to speak to us, is so well known and his record of achievement so great that he needs no words of mine to elaborate upon it.

Certainly he needs no introduction to the insurance business. Sometime when you are trying to wonder whether you should take a thousand-dollar risk on a mattress factory or whether you should up your line a quarter of a million dollars or so on a fireproof building, I wish you would just ponder upon the risks that this man had to weigh in the North African campaign, in the invasion of Italy or the landings on the beaches of Normandy.

Incidentally, I understand that that landing in North Africa was known as the Torch Operation. Well, if it fooled the Nazis, it was all right. But it was not a happy choice of a name from a fire-insurance standpoint.

And think of it. He not only had to weigh those risks, but without benefit of actuarial science and without exact experience to guide him. He had to weigh and determine the premium that had to be paid to make those operations successful from an underwriting standpoint.

The man who could and did do what he did to insure that we should be allowed to continue in the way of life that suits us best, to insure that we should at least have the opportunity of peace if not for all time at least in our time, is a good enough insurance man for me. [Applause.] I hope, but do not expect, that during the term of office to which you so graciously elected me this afternoon you will always agree with me as wholeheartedly as you seem to on this point.

Now, ladies and gentlemen, it is my great privilege and honor to introduce to you a man who needs no introduction, and to welcome him to our midst, Gen. Dwight D. Eisenhower, Chief of Staff of the United States Army. [Applause.]

Gen. DWIGHT D EISENHOWER. Mr. President, ladies, and gentlemen, there was something rather terrifying for me in the thought of addressing an insurance association. It seemed that I could hardly go further afield in order to associate with a group of Americans with whose business I would be so little acquainted.

Yet this thought came to me: Had it not been for some eleven or twelve million fighting men in the blue and the brown during this war, there would have been a terrible insurance bill to pay in this country. In fact, there would not have been assets enough in your combined companies to pay the terrific losses. And so there must be some sort of kinship between us and our purposes in life, other than the mere fact that we are citizens of the same great and noble country. [Applause.]

Your president spoke a word just now that struck deep within me. It was the premium you had to pay, the premium you have to pay in war—and it's not measured by any actuarial science. I feel that everyone of us who has it within our power to do anything that may keep us out of war must share forever with me any responsibility I had for having to pay that premium. [Applause.] And I have addressed myself this evening to this great problem of the worst disaster that the world can face and have tried to develop my thoughts as to personal responsibility, not governmental, not somebody else's, personal responsibility in the effort to see that that great conflagration will never again strike this earth.

In our tightly knit economy, all professions and callings—no matter how widely separated they may be in purpose and techniques—all have points of contact and areas of common interest. Banker or housewife, farmer, carpenter, soldier—no one of us can live and act without effect on all the others. Since a world grown small makes all men neighbors, the philosopher's maxim, "Nothing human is foreign to me," more than ever is embedded in fact. But for our citizens, this truth demands as its corollary, "Everything American vitally concerns every American."

Even actuarial tables compiled over scores of years from hundreds of millions of individual experiences, the product of lengthy and abstruse calculations—even they directly affect the life of every man and woman in this country. During the last war they played an important though little known part in the Nation's victory effort. Their effect justifies me in seizing this particular moment to pay tribute to all of your board who were closely connected with the War Damage Corporation.

For more than 5 years they served without compensation this United States agency which issued 5,000,000 policies covering $140,000,000,000 in liability. A wise and prudent national enterprise, designed to protect the country against financial disruption and to lessen the physical cost of war, should it strike within our shores, was buttressed by your patriotic service.

No matter how much planning, how much wisdom may go into planning, whether it be an insurance program, an armed invasion of a continent, or a campaign to reduce the inroads of disease, the measure of its success always will be the spirit and mettle of the individuals engaged in its execution. No matter how much treasure may support a project or how elaborate its organization or how detailed and farsighted its operational scheme, the human element is always the central one. A business, an industry, the Nation itself prospers and is strong only insofar as its men and women are determined to make it great and work together for that end.

Particularly in matters concerning the Nation's welfare, the citizen, the community, the Government are jointly responsible: the individual American, because he is the source of all energy in a democracy; the community, because it is the most immediate agent of action; and the Government, because only through it can there be effective coordination of all the skills and knowledges, the resources and capacities that are demanded by an enterprise concerned with the welfare of 140,000,000 human beings. But the root of success is still in the contribution of the individual. National welfare—that is, general security from the four fundamental evils of human existence: Fire, famine, pestilence, and war—is the business of each citizen because it is he, ultimately, who suffers or profits. Because he has made it his business, we have attained measurable success over fire, famine, and pestilence.

We have not achieved decisive supremacy over these dangers or complete independence from fear of them. No matter how much we may boast of our accomplishments in medicine, in economic productivity, in fire prevention and control, there is evidence always about us that we are still far from full success. Epidemics cut wide swaths of death; starvation or malnutrition become so serious that the future of a people is darkened; catastrophes reduce great structures to flaming ruin. But each eruption of a natural evil spurs us to new effort for its remedy control, and future prevention. Charity, impelling us to aid our stricken fellows at home and in distant lands, is joined with studious effort to unearth the causes of disaster and with national and international planning to prevent their recurrence.

We realize that calmity is a part of human life so long as men through carelessness, stupidity, ignorance, or criminal intent breach the barriers against it. But we do not relax our effort to make its penalties less severe on the innocent. Although our tribute during the past 12 months to the god of fire cost hundreds of millions in dollars and more than 10,000 lives, we do not accept such losses as inevitable, if men are prudent and alert. Fire, famine, and pestilence, consequently, have lost much of their ancient terror as the scourages of human existence. We recognize their remaining threat as largely the penalty of our indifference or neglect.

War, however, is not a natural evil; it is man-made. Combining all the horrors of the other three its malevolence and diabolic savagery have been increased by man himself in the very years that he has learned control over the natural evils of life. As never before, the essence of war is fire, famine, and pestilence. They contribute to its outbreak; they are among its weapons; they become its consequences. The tragedy of war is multiplied by acceptance of its inevitability, although since man is its origin—his carelessness, stupidity, or criminal intent, the occasion of war—it should be subject to the same prevention and control as the evils that comprise it.

For men like myself whose professional concern is defense against war, there is obvious benefit in the study of endeavor directed toward the prevention of natural catastrophes. I do not suggest any mechanical parallel between fire prevention and war prevention, between a fire department and a war department, although effectiveness of both depends on immediacy of action with trained men and proper equipment. But there is a parallel in the development of methods and attitudes that have removed fire as a daily menace to civilized life and in what must be done if we are ever to be liberated from dread of war and its consequences.

In the former it has been and in the latter it must be a process of education and research, understanding causes and blocking their outbreak, of improving methods and devising safeguards. Above all these is the task of developing in the individual an awareness of his personal responsibility, so that the efforts of many may not be nullified by the fault of a few.

Citizen, community, and Nation joined to help defeat the menace of fire. To win security against it in the crowded city, the individual early joined his fellows in the volunteer fire departments. He entered into associations for relief from loss or injury. He sought out better devices to prevent or to extinguish. He designed legislation to curb carelessness or selfishness that might endanger property and lives. He engaged in an untiring campaign that still continues to teach the cause and prevention of fires.

To observe fire codes, individuals surrender their right to build as they choose. Communities join with other communities to learn more about prevention and control. Government cooperates through its manifold facilities. The Nation's attention by such measures as the President's conference is focused on the evil. It is a mighty effort involving all our citizens, requiring the expenditure of immense sums of money and covering every area of our social and economic life. And no one questions the value of the effort or balks at its cost. Fire, all men realize, must be controlled if the economic structure we have built is to be free from the threat of recurrent destruction.

There is here the shadowy outline, at least, of a pattern of effort against war. For too many generations too much of the world has taken it for granted that war is a normal part of human life, whose penalty can be lessened, not by rooting out the cause of war, but only by maintaining so large and powerful a war machine that defeat would be impossible—the equivalent, say, of maintaining fire departments on every street corner while building cities of tinder and of tissue.

Let no one mistake me. We need strong security forces. In the world of chaos, of disorder, doubt, and hysterical fear there is only one source to which we can look for our protection, that is, ourselves. And we must meet that practical danger of today with practical means now available. That true and that stern necessity must not ever prevent us from seeking better ways to eliminate the evil and the threat itself. [Applause.]

As I see it, we need an organized effort, embracing every phase of society, whose goal will be the development of individual, community, and national attitudes that will remove war from the category of the inevitable into its proper position as an evil subject to prevention, or at least control. Understanding by the citizen of the causes of war, acceptance by him of his responsibility to correct them so far as he can; vigilance of the community against apathy or defects that might awaken control of war; readiness of the Nation to act as a single force should war strike—these four are basic attitudes or postures whose attainment will end the weakness that provokes attack and the indifference of the individual that permits the chance of war to become the fact of war.

War is no longer the concern of the soldier alone. In its commencement, its waging, and its settlement he is only one of many. Although the outcome of battle is dependent on his action, his strength for victory is the product of the entire Nation behind him. The economist, industrialist, scientist the farmer, worker, and teacher are all necessary to the waging of war. Likewise they are all likely targets of enemy action in war. In the same way it is the business of all to contribute to the prevention of war—security against war is a function of citizenship.

From kindergarten to the Nation's highest councils war should be considered, as it is in fact, an evil whose outbreak is the result of human errors, human ignorance, human greed. Seen in its proper focus as the product of man himself, its causes known and its development predictable, we can build within this Nation a security establishment that, because it comprises all our capacity, will be a powerful curb against the eruption of war and an effective force for its extinguishment should it break loose. [Applause.]

Of necessity, it would be a very involved process. The prevention of war is a far more complicated matter than fire prevention. It must be a long-term effort—traditional attitudes toward war, developed over centuries, cannot be corrected or displaced within a generation. It may be at the start a one-sided endeavor. We cannot expect others to abandon deep-seated prejudices merely on our counsel. Discouragement is inevitable whenever humane leadership encounters a resentment and opposition that appear wholly without reason. But even such discouragement must never be permitted to develop into desertion of the cause. The difficulties are of little moment if each step toward their solution is an increase in our security against another war that, if permitted to develop unrestrained, may destroy civilization.

To teach our children so that they may be well-informed citizens of their country and their world; to train our young men that they may be able defenders of the peace; to integrate our economy so that all our resources may be mustered to meet the disaster of war—all that is nothing more or less than the duplication in another and larger sphere of the effort by which we have liberated the communities of this country from the constant menace of destruction by fire.

In the effort toward international safeguards, we shall not work alone. Nations now are seeking, at the highest level, to develop cooperation and arbitration as a barrier against war. There is no people that does not hope for their success in this attempt. I say people, not governments. I am of the earnest conviction that there is no people—and I mean the men who fight wars, the people who fight and suffer from war, that want any more of it. [Applause.] If we lead the way in showing how this international endeavor may be reinforced and supported all the way back to the individual citizen, we shall not lack for followers. Regardless of his race, politics, or creed, the common man, when given a worthy goal and guidance toward it, does not rest until it has been attained.

In a world of interdependent nations where men comprehend the causes of war and understand their mutual responsibility to control them, war may happen—but it will cease to be an institution, a characteristic of human society.

The stake in the campaign is not property and dollars, no matter how wasteful war is of these commodities. It is not merely famine and pestilence for a given proportion of the earth's population. It is rather the way of life to which we are devoted; it is civilization as we know it. Even more, it is rapidly becoming humanity's existence. The earth may become a flowering garden or a sterile desert—and we may make the difference.

Thank you very much. [Applause.]

[The audience arose and applauded as General Eisenhower and his staff left the grand ballroom.]

President HAINES. I don't know how you all feel. But I feel much better for having been here tonight.

This concludes the eighty-first dinner of the National Board of Fire Underwriters.

Good night.

Mundt Bill Should Be Passed—Information and Cultural Program Necessary Part of Our Foreign Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. KEFAUVER. Mr. Speaker, during this week the House of Representatives has been considering legislation—the Mundt bill—to authorize a foreign information and cultural program. The idea is that if we are going to spend billions of dollars for the relief and rehabilitation of people in foreign countries we ought to spend a small amount to get world news to them and to let them know something about the United States, the democratic institutions we support, and the policy of democracy that we hope they will follow. It is true that today in Russia and in all of the satellite nations people live behind an iron curtain. We are in direct conflict with the political philosophy that governs these people behind the iron curtain. We want to wean as many of them away from communistic doctrines as we can. The newspapers behind the iron curtain give them little news of what is happening in the rest of the world, and the news they have is always distorted to present the communist viewpoint. What the people read and what they hear is of tremendous importance in a campaign of this kind. It goes a long way toward determining whether people are going to understand communism and democracy, and whether they are going to embrace an autocratic control or a democratic system.

For some time we operated the Voice of America from Munich, Germany. It was heard by millions of people behind the "iron curtain." It was the only counterpart to the constant stream of Communist propaganda with which they are inflicted. The purpose of this legislation is to continue our operation of the Voice of America. Also in those countries to which we have access in the capital or large cities we have maintained small information offices. In these offices newspapers, magazines, and books about the United States and about our foreign policy are available. The number of people who seek information is astounding, and what they get is printed in their newspapers and talked about over their radios.

I think it would be a great mistake if this program were not approved. After all, we cannot and must not discount the value of information and news. Some people call this propaganda, but a diagnosis of what is said and done shows that we are merely trying to give the people the facts.

Further consideration of the measure has gone over until next week. The bill should be passed. Let us hope there is no further delay.

Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NATIONAL HOUSING AGENCY,
FEDERAL HOME LOAN
BANK ADMINISTRATION,
Washington, D. C., June 12, 1947.

Hon. FRANK BUCHANAN,
House of Representatives,
Washington, D. C.

DEAR MR. BUCHANAN: We believe you will be interested in having some current facts concerning the progress of liquidation of the Home Owners' Loan Corporation, particularly

the record of its accomplishment in your State.

Out of a total of nearly 2,000,000 applications filed throughout the United States and its possessions during the period from June 13, 1933, through June 12, 1936, 1,017,821 loans were closed having a dollar value including subsequent advances, chiefly for taxes, repairs, and other necessary expenses of nearly $3,500,000,000.

Since June 12, 1936, at which time the Corporation's lending activities ceased, it has been engaged in a rapid yet orderly liquidation of its assets. As of March 31, 1946, a total of $2,695,784,648 had been liquidated, or 77.2 percent. As of March 31, 1947, 1 year later, a total of $2,896,279,856, or over 82.9 percent had been liquidated. In other words, during the 12-month period from March 31, 1946 to March 31, 1947, the Corporation liquidated a total of $200,495,208. Out of a cumulative total of 198,191 properties which the Corporation was forced to acquire, there remained on hand as of March 31, 1947, a total of but 78 properties throughout the entire country.

Out of the total number of loans made, 58,793 were closed in the State of Pennsylvania, representing an aggregate amount of $188,741,387. This amount includes subsequent advances chiefly for taxes and insurance made for the account of the borrower. In this connection you will be interested in knowing that according to the 1940 housing census 40.8 percent of all owner-occupied, nonfarm dwelling units in the State of Pennsylvania were under mortgage and 15.3 percent of these mortgages were refinanced by the Home Owners' Loan Corporation.

As of March 31, 1946, the total amount of outstanding loans of the Corporation in Pennsylvania together with the value of the properties acquired, had been reduced through collections and the sale of its properties to a balance of $46,686,924, a liquidation equivalent to 75.2 percent. As of March 31, 1947, 1 year later, the amount of the outstanding loans and the value of the properties acquired had been reduced to a balance of $34,881,548, a liquidation equivalent to 81.5 percent, or a liquidation of $11,805,376 during the 12-month period.

A total of 31,958 borrowers have paid their accounts in full as of March 31, 1947. This represents an increase of 5,248 over the number who had paid their accounts in full a year ago. A substantial number of borrowers in the State of Pennsylvania are making monthly payments in excess of the amount required under their contracts.

The Corporation was obliged to take over through foreclosure in the State of Pennsylvania a cumulative total of 10,724 properties. As of March 31, 1947, 10,720 properties have been sold, representing a liquidation of acquired properties in your State equivalent to 99.9 percent.

According to the present trends of the Home Owners' Loan Corporation's income and expense and the projection of these into the future, if the present loan balances are liquidated in accordance with amortization schedules, the Corporation should not only be able to cover all future expenses but also be able to wipe out its present deficit and thus make possible the return to the Federal Government of the entire original $200,000,000 capital of the Corporation advanced in 1933 by the Secretary of the Treasury.

We believe that the Corporation's record will be a source of pride to you and to the Congress which passed the original Home Owners' Loan Corporation legislation, which has proven to be one of the most advanced measures ever undertaken in any country for the encouragement and maintenance of home ownership.

Sincerely yours,

JOHN H. FAHEY,
Commissioner.

The Genius of Hawaii

EXTENSION OF REMARKS
OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article from the Hawaii Educational Review of April 1947 entitled "The Genius of Hawaii," by Dr. Laura Thompson, coordinator of Indian education and administrative research.

Dr. Thompson spent her childhood and received her early education in Hawaii. She has achieved Nation-wide distinction in the field of scientific research as a result of her studies of the problems of Pacific people. Her comment, therefore, concerning the significance of Hawaii is of great interest in view of legislation now pending before the House to enable Hawaii to become the forty-ninth State.

The article follows:

THE GENIUS OF HAWAII

(By Dr. Laura Thompson, coordinator, Indian education and administration research)

Now that the confusing aftermath of war is somewhat abating, it is perhaps a good time to take stock. What is Hawaii's place in the postwar world? Where does she fit in the confusing cultural patterns which are emerging? What potential contribution have these islands to make toward creating a lasting peace?

Obviously a major trend of our era is the change that is taking place in the status of colonial and dependency peoples all over the world. Some groups like India, Burma, and the Philippines are moving toward, or have achieved, self-government and political independence. Others like Indonesia are gaining full citizenship rights and complete equality within the mother country. Both trends are bringing some 750,000,000 subject peoples of the world toward greater self-determination, cultural freedom, and political equality. And the whole movement away from colonialism and toward local and national autonomy is part of the great birth trauma of a peaceful and liberating world order.

Hawaii, as she advances rapidly toward statehood and full franchise status within the United States, is in the vanguard of the the world trend toward colonial freedom. Indeed, the Territory is setting a precedent in the development of mechanisms whereby a culturally diverse, geographically distant area may become an integral part of the dominant national unit. Hawaii is showing the world how political and legal unity may be achieved within a pattern of cultural diversity.

The people of these islands have worked out a way of life whereby many ethnic groups of diverse cultural heritages may live together in harmony and with equal status under the law. It is important to emphasize, however, that this life-way does not demand complete cultural conformity. It builds unity upon cultural diversity.

Indeed, an analysis of the culture of Hawaii shows us that a unified, harmonious community may be achieved among diverse ethnic components by building up conformity in certain vital areas of interpersonal and intergroup relations, and by allowing cultural freedom and variation in other areas. For example, every ethnic group in Hawaii must obey the law, send its children of school age to school, use a common language and a common medium of exchange when dealing with other groups, and conform to certain standards of public health and hygiene. On the other hand, a wide scope is allowed in family life, child-training patterns, ways of making a livelihood, social mores, club and association formation, religious beliefs and ceremonies, attitudes and values. Thus, here in these islands, has developed a unique pattern of living which allows a wide range of cultural diversity within a politically and legally unified community.

Many people in many parts of the world do not understand the creative value of cultural diversity. That which the people of Hawaii experience every day, that which gives the vital spark to island life, that which is woven into the very social fabric of Hawaii Nei, is the vital ingredient which is often missing in schemes for community, national, and international order.

For it is a truism that world peace must be built on the basis of the many culturally diverse groups which people the earth and form the human component of whatever order may eventually be achieved. Cultural diversity is one of the immutable human facts in the world, with which we must come to terms. It exists. It cannot be willed, exorcised, voted, legislated, or educated completely out of existence. It is the very stuff of which world order must be built.

But our age is cursed with a fatal simple-mindedness in regard to social and political problems. We tend to think of everything as either true or false, white or black, good or bad, smart or stupid, logical or illogical, etc. Applying this mental approach to ethnic problems, we tend to assume that in every community one culture must be the best, one race must be superior, one religion the truth, one morality the absolute. We tend to take it for granted that to be unified a community must be uniform. It is difficult for many people to grasp the fact that communities may be multicultural and at the same time unified.

This conformity mindedness is a major obstacle to the building of a peaceful world community. For it handicaps us in finding solutions to ethnic problems not only within the United States but elsewhere, and it prevents us from clearly seeing the way toward a peaceful and liberating world order. Indeed, our simple-minded approach, our drive toward conformity, gets in the way of our realizing that local government and national government and world government must be built out of cultural diversity.

The people of Hawaii, on the other hand, grow up with an understanding of a multi-patterned life-way. Island-born Japanese, Chinese, Hawaiians, Filipinos, Haoles, as well as all the other local ethnic minorities, experience from early childhood the fact that many different kinds of people, expressing different kinds of customs, attitudes, and values, can live together and create a unified community on the basis of their differences as well as their similarities. In fact, the flavor of island life, its uniqueness and vitality, lies in the existence of these differences within an over-all pattern of unity.

This, in my opinion, is the genius of Hawaii. The islanders have found a life way of unity within diversity. This is Hawaii's potential contribution to a peaceful world order. As such, it should be made explicit, strengthened, and guarded as a priceless treasure. And the way to strengthen Hawaii's genius is to recognize it, to appreciate it, to shield it against the trend, so strong in American culture particularly, toward uniformity.

In the postwar confusion and the drive toward statehood, pressures toward cultural conformity will increase in the islands. Will Hawaii be able to resist them, to strengthen her tradition, to follow her unique genius? Will she fulfill her potential leadership role in showing other communities at home and abroad a way toward harmonious cultural pluralism?

Mississippi Memorial Day Address

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include herewith a copy of the Memorial Day address delivered by me at the Washington Memorial Chapel, Valley Forge, Pa., June 8, 1947, on the observance of Mississippi Memorial Day, sponsored by the Daughters of the American Revolution:

Mr. Chairman, ladies and gentlemen, I regret exceedingly that His Excellency, Fielding L. Wright, Governor of the State of Mississippi, for unavoidable reasons, is unable to join you and address you on behalf of the citizens of that Commonwealth. But I must tell you that he, as well as 2,000,000 fellow Mississippians, is with us in mind and spirit, as we gather to give recognition to the contributions of Mississippi to the glorious history of America and our democratc way of life.

By special designation, it has become my duty, privilege, pleasure, and honor to speak for him on this auspicious occasion.

Reflections upon the suffering and sacrifices of a little band of men gathered at Valley Forge in the winter of 1778 lend further reverence to the hallowed ground upon which rests this beautiful and sacred edifice, and enhances the glory of the Father of our Country for whom this church is appropriately named.

The struggle of Washington's valiant heroes of Valley Forge did not end with the coming of spring, nor did it end with the surrender of Cornwallis at Yorktown—but it goes on today to manifest itself as a shining inspiration to liberty-loving peoples the world over in their ceaseless quest for freedom. It was at Valley Forge that America earned the love and respect of all of civilization; Valley Forge furnished the embryo which grew to maturity among nations and never ceased to grow until it became the richest and most powerful nation on the face of the earth. Students of history and lovers of our country, through generations yet unborn, will visit here or read of this epochal struggle which is such a significant part of American history and directed the course of many milestones of America's journey.

America is today the citadel of freedom—the bastion of democracy.

It is with pardonable but justifiable pride that I point to the innumerable contributions made by Mississippi toward achieving for America her place in the society of nations, and I wish to express on behalf of every Mississippian our gratitude for your gracious gesture of today, which I feel to be a generous acknowledgment of those contributions. If one had a yardstick with which to measure the achievements of men, he would find Mississippians among those of the greatest stature. Such men as L. Q. C. Lamar, and Sargent S. Prentiss, whose ringing oratory in the Halls of Congress has become legendary; Jefferson Davis, soldier and statesman, President of the Confederate States of America, whose memory shall live in the hearts of all Americans for time immemorial; James Z. George, statesman and scholar, and within the memory of all of us—James Kimble Vardaman, John Sharp Williams, and the late Byron Patton Harrison, have joined in the exclusive company of the immortals, and their footprints are indelibly stamped in the sands of American history. Mississippi has never failed to produce more than her share of men when our Nation has become imperiled, and thousands of her sons lie today in the soil of foreign lands—never to return—sacrificed to the cause of America and the democratic way of life. Nowhere is democracy stronger, nowhere are citizens more patriotic, nowhere is love of home and devotion to duty more in evidence among a people.

And today, as America emerges from the shadow of the last great war, names of great Mississippians emerge with her. We are proud indeed of the deserved glory brought to our people by the heroism of Admiral John S. McCain, Gen. Dan I. Sultan, and Sgt. Jake Lindsay, and thousands of unsung Mississippi men and women whose names have never graced the pages of the American press, but who fought and sacrificed with equal vigor and determination for the preservation and advancement of our unimpeachable ideals.

As America developed—so did Mississippi. Admitted to the sisterhood of States in 1817, Mississippi has made great strides. She has experienced a physical evolution from vast wildernesses to a thriving modern country, replete with the handiwork of God and man.

Mississippians are good people, believing in the divinity of God and adhering to the tenets of Christianity, humbling themselves before God, always unswerving in their zeal for the principles of righteousness. But we are also proud—proud of the heritage which is ours and the opportunities which are offered us.

May the glorious banner of the great State of Mississippi and the flags of her 47 sister States forever march onward behind the stars and bars of our great Nation toward more glory for Old Glory.

United States Information Program

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Post-Gazette of June 9, 1947:

VISITOR TO MOSCOW STRESSES NEED OF UNITED STATES INFORMATION PROGRAM—AMERICANS "OVER THERE" MAY DISAGREE ON SOME THINGS BUT THEY ALL BACK PLAN, POST-GAZETTE EDITOR REPORTS

(By Andrew Bernhard)

To anyone who has been in Moscow recently, the uproar here at home over the appropriation of $31,000,000 to continue the State Department's information program abroad is incomprehensible.

Americans stationed in Moscow, for their Government or on private business, disagree on many things. But during the Conference of Foreign Ministers, I found none who objected to the information program.

Here at home one gets the idea that the radio program called the Voice of America is the whole issue involved. It isn't, though it may well be the most important as far as Russia is concerned.

CENSORSHIP IN RUSSIA

Most Americans know that no Russian can read anything his Government does not wish him to read. No foreign books, periodicals, newspapers, or magazines can be sent into Russia without permission of the Russian Government. So the impression the Russian citizen gets of the rest of the world is precisely the impression the Russian Government wants him to get.

For more than a year the Kremlin, through all avenues of communication, has carried on an unremitting, violent propaganda campaign to convince the Russian people that the western powers, headed by a predatory, greedy United States, are conspiring to attack Russia.

The United States is pictured as a Nation in the grip of bloodthirsty monopolists, who hunt down minorities like wild beasts, who exploit the resources and people of the country and who are trying to stir up war to prevent their victims from finding out what a paradise the workers of Soviet Russia live in.

TOUGH PUBLIC RELATIONS JOB

Unless we Americans wish to brush all that off and leave the masters in the Kremlin a clear field in their perversions of the truth, we are confronted with a job of public relations, and about the toughest job of public relations in history.

Through an arrangement with the Russian Government the United States sends to Russia 50,000 copies monthly of a slick-paper magazine called Amerika, printed in the Russian language.

Amerika is a combination of text and pictures presenting to the Russian reader a completely factual account of American life.

Americans in Moscow say that it is so popular with Russians that its circulation easily could be increased tenfold overnight if the Kremlin would permit it.

Considering that most Russians are aware that their government frowns on people with too great an interest in foreign affairs, that is a tribute alike to the curiosity of the Russians and to the effectiveness of Amerika.

The magazine is part of the State Department's information program which apparently would be dropped if the people who wish to be known as the watchdogs of the United States Treasury have their way and are able to kill the appropriation for the program.

VALUE IS UNDETERMINED

The Voice of America radio program is a little harder to assay as to value, just as it is always hard to determine the number of listeners for any radio program.

A firm advertising a product over the radio in the United States judges the value of its program, finally, less by its so-called rating than by its results. If sales pick up it has proof the program is doing its job.

By that judgment the Voice of America must be doing its job. It was started without the advantage of a single word of publicity in the Russian press or on the Russian radio.

Obviously, the Russians were not going to publicize a program which might expose the falsity of their propaganda drive.

Ilya Ehrenbourg, most famous living Russian writer, attacked the Voice of America program for two or three columns in the Russian press recently. That would seem to prove that the program is hitting where it hurts, that the Russians finally decided it could no longer be ignored.

I read the Voice of America program script pretty regularly while in Russia. It seemed to me that if they had a fault it lay in their dullness, their adherence to straight fact and their avoidance of the color, drama, and liveliness with which American domestic radio seeks to add appeal to its programs.

SECRET OF ITS APPEAL

But after a while I came to see that it was precisely because of this flat, unemotional, objective treatment of the news that the program developed appeal among the Russians. Their emotions, nerves, eyes, and ears are continually so harried, shouted at, and alarmed that they welcomed a program without stridency, that appealed to logic rather than prejudice.

Word got around, from one man to another, that at such and such a time and

on such and such a wave length, the Americans were telling about America. And as Russian curiosity about America is as insatiable as American curiosity about Russia, the word circulated fast.

Of course there immediately occurs to an American the question of how many short-wave sets there are in Russia. I was told that while figures were impossible to obtain, the proportion of short-wave sets is far higher there than in the United States, since the Russian radio, because of the vast distances it must cover, has developed short wave to much greater relative degree than is true in this country.

And radio sets are owned largely by professional people, engineers, scientists, managers, those best able to influence others.

AWARE OF TAXPAYERS' BURDEN

Finally, both Secretary of State Marshall and Ambassador Smith, have testified to the value of the State Department information program and to the Voice of America broadcast. Both of them are clearly aware of the American taxpayers' burden and are not men who wish to throw money out of the window.

Their testimony should carry considerably more weight than the prejudices of Congressman JOHN TABER, chairman of the House Appropriations Committee.

Thirty-one million dollars is a lot of money, but viewed as an advertising appropriation to build good will for us in the world it does not look so formidable.

Compared with what the Russians probably are spending it must be peanuts.

Legislation on TVA Law Opposed

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. KEFAUVER. Mr. Speaker, on Tuesday the House, pursuant to the recommendation of the Appropriations Committee, amended section 26 of the TVA charter. Under leave I include a letter of L. J. Wilhoite, president of Southern Dairies of Chattanooga and chairman of the electric power board. Mr. Wilhoite is recognized as a citizen of great ability and he has taken the lead in defending the TVA from the various assaults made against it.

His letter is as follows:

ELECTRIC POWER BOARD
OF CHATTANOOGA,
Chattanooga, Tenn., June 6, 1947.

Hon. ESTES KEFAUVER,
House Office Building,
Washington, D. C.

DEAR ESTES: I was glad to learn through Mr. Ken Whitaker that we have the same point of view about the latest proposal to impede the TVA.

It is my opinion that the adoption of the proposal (TVA amendment) would constitute a repudiation of the legislative intent of the framers of the TVA Act. It was the intent of those responsible for the creation of TVA to attempt the rehabilitiation of an area that was rapidly becoming a liability to the Nation by combining under unified direction those activities that could reasonably be expected to produce results without doing violence to our democratic processes. Many of the methods authorized had already been tried out with limited success. It was believed, as it was common sense to believe, that these several measures if brought under unified direction would be more successful, and the record of TVA demonstrates that these views were sound.

The very nature of the undertaking was such as to make it necessary for the Government of the United States to assume a capital risk. For the Government to come back to the people of the TVA area within the short span of 10 years, before anything conclusive has been established as to the ultimate long-term success or failure of the effort, and ask those people to agree to give the Government a first mortgage on their economic future in exchange for the risk capital which the Government invested in the venture, violates a fundamental principle of justice that irrespective of any legalistic right the Government may have to resort to such conduct.

I hope that you will never agree to compromising the basic principles incorporated in the TVA charter, because while expediency may be necessary at times in determining conduct, it should never be resorted to if it results in injustice—and that goes for political, as well as any other kind of expediency. My grandfather always told me that it didn't make a lot of difference whether I won or lost, but that what I fought for, and how I fought, did make a lot of difference. I would rather see TVA turned back to the Indians than to compromise the principles that guided George Norris, Franklin Roosevelt, and others, in its creation.

I am absolutely convinced that if we take this fight to preserve the charter of TVA to the people of the TVA area and the Nation strictly on its merits, and let the common sense, the decency, and the fairness of the plain people of the Nation determine the issues, we will not have to compromise with the enemies of TVA and content ourselves with the crumbs that fall from their tables.

Good luck and best wishes.

Sincerely,

L. J. WILHOITE.

This is what I had to say about the legislation in the appropriation bill on TVA's charter in a radio address on Thursday:

The Tennessee Valley Authority suffered a legislative defeat this week which will be quite harmful to this great agency which has done so much for the people living in the Tennessee Valley, and which has meant so much to the Nation both in times of war and in times of peace. Before discussing the action of the House Appropriations Committee which dealt this blow to TVA, a little background will be of interest.

The great success of the TVA has been due in a considerable measure to the fact that it has some latitude in its operation—that is the directors of the TVA, situated in the Tennessee Valley, have been able to operate this great agency and make decisions about matters that come up, without having to refer everything to some bureau in Washington. The people of the Valley have an opportunity of seeing and talking with TVA directors, and the decisions are made there on the ground.

Furthermore, out of the revenues received from the operation of the electrical facilities of TVA, the directors have been able to use part of this money for the purpose of building transmission lines, putting in new generators, restoring facilities which might be damaged or destroyed, without having to first come to Congress for specific appropriations for everything done. What they do, of course, must be within the purposes outlined in the TVA Act, and the directors are held strictly accountable for the proper expenditure of this money which they take in, and in all the history of this splendid agency no one has ever contended that one penny has been misapplied, nor has there been any graft or improper conduct.

Those who conceived this great blessing to the people provided for this freedom of action in section 26 of the TVA Act. Ever since then critics and enemies of the TVA have tried to amend section 26. Their purpose is to require the TVA to turn in all the moneys it collects from the sale of power as it collects it, and to come directly to Congress for appropriations for operating, costs for expense for repairs to transmission lines, etc.

Amendments to destroy the independence of TVA have passed the Senate from time to time, but they have always been defeated in the House. Well now the House has taken action itself. Without giving TVA officials a chance to be heard in public hearing, and without giving any of the cities, municipalities or co-ops in the Valley which buy power from the TVA, or any of the interested citizens in the Valley a chance to protest and present their side of the question, the Appropriations Committee of the House has written legislation amending section 26 of the TVA Act. The sponsors of these amendments may not have in mind doing great damage to the TVA, but I fear the result will be to strait-jacket and impede its operations.

The House has required that the investment in power facilities be amortized or paid back to the Government within 40 years. Ordinarily private utilities take 75 to 100 years to amortize their investments, but the 40-year provision is not so bad standing alone, because the TVA would probably pay back all this money within 40 years anyway. But the plan of the Appropriations Committee of the House goes much further. It says that at least 40 percent of the revenues from the sale of electricity must be paid to the Treasury every year, and the Appropriations Committee can and may decide upon a larger amount each year. Heretofore the decision as to what amount was necessary in order to meet contingencies which any power facility might be confronted with was up to TVA officials. So this opens up the door to allow the Appropriations Committee to require that all the money be paid back within 20 or 25 years which, of course, would be a disastrous requirement for those who are dependent upon the TVA for electricity, as it would probably require an increase in rates.

The plan of the Appropriations Committee requires that at least one-fourth of the amount invested in power facilities be paid to the Treasury every 10 years. The trouble with this is that during one 10-year period we might have a depression or business would be bad and TVA might not earn $90,000,000, which is substantially the amount it would have to pay. If it met this contingency it would have no alternative but to curtail service and increase rates.

The provision also contains a limitation to the effect that no money can be spent on new power projects, without the express consent of Congress. Well, it is somewhat uncertain as to just what new power projects are. If that refers to new dams or new steam plants, this amendment might not be harmful, but it might conceivably be interpreted to refer to other things such as new generators or substations.

Perhaps the worst feature of the whole thing is that in adopting these amendments the Appropriations Committee also provided that it should have jurisdiction over any future legislation affecting section 26 of the TVA Act. This deprives the regularly constituted legislative committees of their jurisdiction. The Appropriations Committee does not have hearings on these matters as other committees do, so the people of the Valley have been substantially deprived of their ability to be heard in the future.

Another bad feature is, that by writing this legislation on the TVA's appropriation bill, it can be enlarged upon in the Senate

by a simple majority vote. If the legislation had not been included by the House in this bill a two-thirds vote in the Senate would be required.

Credit Where Credit Is Due

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent granted to me, I am inserting in the RECORD an editorial entitled "To Make America Strong," taken from one of the great newspapers of this country, the Youngstown Vindicator. This editorial was taken from the Vindicator issue of June 10, 1947, and I think it is very much worth while to call it to the attention of Congress for its consideration. Not only does the article point out the significance of the speech made by President Truman in his address to the Thirty-fifth Division Reunion at Kansas City, but it lays great stress upon the development of our natural resources and the situation in which the West finds itself at the present time. The editorial points out that the House cut nearly one-third from the Department of Agriculture appropriation and has reduced the Interior Department funds for reclamation, water control, and power by nearly two-thirds.

Most significant of all, the Vindicator's editorial pointed out that what the President said at Kansas City paralleled in great part the arguments which had already been presented on the floor of the House by that outstanding champion of the West, the Honorable MIKE KIRWAN, of Youngstown, Ohio. Mr. Speaker, I want to say that we from the West have no greater or more sincere friend than MIKE KIRWAN whose views are not limited by the boundaries of his constituency but are as a matter of fact and record thoroughly national in their scope. MIKE KIRWAN realizes the importance of the West in the development of America's economy and I, for one, and I know I speak for all westerners, am deeply grateful to Mike for the fine work he has consistently done in our behalf. He is a credit to his city, his district, his State, and his Nation and what this country needs, in my opinion, is more men like MIKE KIRWAN who have the vision, the understanding, and the knowledge to do the right thing in the right place at the right time. I wish also to congratulate the Youngstown Vindicator for its recognition of the qualities which have made MIKE KIRWAN so outstanding in this body.

The editorial follows:

TO MAKE AMERICA STRONG

President Truman, addressing the Thirty-fifth Division reunion at Kansas City, properly stressed the need to make America strong, both militarily and in natural resources. Anyone who looks about in this troubled world will earnestly second the President's motion.

"The will for peace," Mr. Truman said, "without the strength for peace is of no avail." Hitler struck because he thought we were weak, and Japan attacked Pearl Harbor under the same illusion. "Hence we must maintain our Army and Navy and Air Force in effective readiness for any emergency. They should be organized in an efficient single military establishment and they should be supported by reserves of well-trained civilians."

Americans must look to their strength in other fields than Army-Navy unity and universal training. As Mr. Truman said, "to a greater extent than ever before our prosperity and security depend upon our natural resources." With millions of hungry men, women, and children clamoring for food, reclamation of wasteland is needed. The West is facing a serious power shortage in the next few years; its abundant water power should be harnessed. The Missouri-Mississippi rampage shows the need for flood control.

In the face of these facts the House has cut nearly a third from the Agriculture Department's appropriation, and reduced the Interior Department's funds for reclamation, water control, and power by nearly two-thirds. In asking for restoration of the money Mr. Truman paralleled Congressman MICHAEL J. KIRWAN'S arguments on the House floor against the cuts. The President said:

"Money spent for water control, reclamation, and power projects cannot be regarded in the same light as expenses for other construction programs. Appropriations for reclamation and power projects are investments which are repaid by water and power customers. To curtail construction on projects already begun because construction costs are high is to waste vast amounts of public capital already invested by postponing the time when repayment begins."

The President and Mr. KIRWAN are right. The country will look to the Senate, which is now considering the appropriation bills, to take a further-looking view than the House majority's penny-wise, pound-foolish attempt to make an illusory record of "economy" for political purposes.

Clothing Fires

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I submit an editorial appearing in the Standard-Examiner, of Ogden, Utah, on June 8, 1947:

CLOTHING CATCHES FIRE

Many persons, particularly women and children, are dead today because their clothing was made of material that catches fire too readily.

Congressman GORDON CANFIELD, of New Jersey, long has fought to obtain a law that would forbid the sale of textiles that are dangerously flammable or at least provide the wearers with a warning that their garments will burst into fire when exposed to a puff of flame or a few sparks.

Nothing has come of the Congressman's efforts "because of the opposition of some groups."

Now, however, the National Retail Dry Goods Association has entered the field on CANFIELD'S side with a statement that "during the month of April the record of clothing fires that resulted in either serious injury or death ran to better than one a day."

Most of these tragedies were needless, the retail dry goods people say.

Persons who are innocently purchasing flammable fabrics should take warning. Consumers who don't like the situation should let Congressman CANFIELD know their views.

Immigration Into Palestine

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the General Assembly of Connecticut on May 28, 1947, advocating opening Palestine to unlimited and unrestricted immigration:

Whereas it has been the consistent and traditional policy of the American people evidenced by statements of our Presidents, resolutions of Congress and the State legislatures, including a resolution by our own legislature as recently as 1943, and the party platforms of both the Republican and Democratic Parties, to support the aspirations of the Jewish people to establish Palestine as a free and democratic commonwealth in accordance within the intent and purpose of the Balfour declaration and the mandate granted to Great Britain by the League of Nations; and

Whereas the need for the implementation of this policy has become acute and immediate as a result of the systematic persecution of the Jewish people for the last 10 years and the resulting present desperate plight of over a million homeless and despairing Jews, where only hope for survival lies in the development of Palestine as a Jewish commonwealth in which they might find refuge: Therefore be it

Resolved by this assembly, That the general assembly of the State of Connecticut hereby memorializes the Chief Executive of the United States to exert the good offices of our country toward the immediate opening of Palestine to unlimited and unrestricted immigration, especially of homeless, displaced or persecuted Jews everywhere, and the immediate annulment of all laws restricting or preventing the purchase of land, its colonization or the development of the land and its natural resources in order that Palestine may as soon as possible be reconstituted by the Jewish people into a free and democratic commonwealth; be it further

Resolved, That the Secretary of the State transmit copies of this resolution to the President of the United States, the Secretary of State and Senators and Representatives in Congress from this State.

Passed: State of Connecticut Senate, May 29, 1947.

Passed State of Connecticut House of Representatives, May 29, 1947.

Defense Housing Projects

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following letter and resolution:

CLAIRTON, PA., *June 11, 1947.*

Hon. FRANK BUCHANAN,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE BUCHANAN: Resolution 926, adopted by City Council of the City of Clairton, Pa., June 10, 1947, refers to the Lanham Act defense housing projects in this city.

Your kind and thoughtful consideration of the resolution will be appreciated greatly by the mayor and council.

Very truly,

D. J. PATTERSON,
City Clerk.

Resolution 926

Resolution petitioning the Federal Public Housing Authority to set aside in reserve at Clairton defense-housing projects, inter alia, for conversion to low-rent housing pending the advice and consent of Congress of the United States, and of the local communities and local government bodies

Whereas the members of the Allegheny County Housing Authority have been designated by the county commissioners as the disposition committee for the purpose of studying and recommending in the matter of the disposal by the Federal Government of the 14 Lanham Act defense-housing projects in Allegheny County; and

Whereas this disposition committee was set up at the request of the Federal Government so that the ultimate disposal (under the term of the Lanham Act), of the said defense-housing projects might be carried out with proper consideration for national and local need; and

Whereas the said disposition committee for Allegheny County has been engaged for some time in studies and will be engaged for some further time in studies and surveys, in conjunction with the many local communities, to determine and formulate a practicable, reasonable, and advantageous plan of disposal: Now, therefore, be it

Resolved by the city of Clairton of Allegheny County, Pa., in council assembled:

1. That preliminary studies indicate that these 14 defense housing (Lanham Act) projects, erected by the Federal Government to assure Allegheny County which is metropolitan Pittsburgh, the workshop of the world and the very center of the arsenal of democracy, of an adequate supply of skilled defense workers, should as a matter of continuing national defense be continued for the use and occupancy of workers and their families at rents within their financial means to pay.

2. That Federal Public Housing Authority should be petitioned and the same is hereby petitioned to set aside and reserve these 14 defense housing (Lanham Act) projects in Allegheny County for conversion to low-rent housing projects, pending the advice and consent of the Congress of the United States and pending the advice and consent of the local communities and local government bodies.

3. That the disposition committee for Allegheny County shall continue its studies and surveys in conjunction with the local communities, local public officials, and interested persons with the objective of developing and recommending a plan of disposal which will serve national and local need.

4. That a program covering the administration of said low-rent housing projects be instituted by the Congress of the United States and the Federal Public Housing Authority so that the handling of the tax payments or payments in lieu of taxes shall be so set up as not to place any burdensome expense upon the city of Clairton, nor upon any other community in Allegheny County wherein the aforesaid defense projects are located.

Resolved this 10th day of June 1947.

JOHN J. MULLEN,
Mayor and President of Council.

Appropriation for Home Owners' Loan Corporation

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mrs. DOUGLAS. Mr. Speaker, the Republican leadership with eyes glued on 1948 rushes recklessly on in their program of cut the taxes, whatever the immediate or ultimate cost to the people.

As this cut-the-taxes program has unfolded it has become very clear just whom it is meant to benefit—the greedy, not the needy. Yes, this cut-the-taxes program will make the rich, richer, and the poor, poorer.

The cut in the appropriation for the Home Owners' Loan Corporation is a good example of what I am talking about. The Republican leadership recommended, and the Republican majority voted this cut.

Now let us see who will get the golden egg.

Every Member of this House, or anyone else who knows anything about the facts, must know that the Home Owners' Loan Corporation has, as the public reports show, been liquidated by more than 82 percent. It made loans and advances to a total of about three and a half billion dollars. These have now been reduced to a little less than $600,000,000.

Instead of losing a half billion to a billion dollars, as all the bankers and loan people, as well as many Members of Congress, predicted, it will lose nothing if it is let alone. The Treasury has never been called upon to put up a cent from the time in 1933, in the midst of a national home-mortgage panic, we voted the $200,000,000 to start it going.

HOLC has paid all of its operating expenses out of its income, and if it is allowed to keep up its good work for the next couple of years, it will pay back every cent advanced and return the capital to the Treasury. It has already wiped out $337,000,000 of losses which it had to take on foreclosed property, and it turned in over $21,000,000 of net profit last year to cut down previous losses.

The report of the Committee on Appropriations itself states:

> It was originally anticipated that this Corporation would suffer considerable loss but it now appears that the actual loss eventually to be taken will be only a fraction of the amount loaned.

All the figures up to date show that there should be no loss at all if the Corporation is let alone and permitted to operate successfully as it has thus far—a fact which cannot be denied.

I challenge any Member of this House to cite any liquidation by this Government, at any time, which has made anything like the showing this Corporation has.

Back in the Hoover administration a Farm Board was created to make loans. Congress appropriated $500,000,000 for this undertaking. It was sponsored in the Senate by the late Senator McNary, chairman of the Committee on Agriculture. In 1935 he reported to the Congress, with regret, that the entire $500,000,000 was lost in that operation.

Apparently the Republican leadership in the Committee on Appropriations wanted to make sure that the Home Owners' Loan Corporation does not wind up its work without imposing some loss on the taxpayers. Otherwise why did it cut the Corporation's appropriation by $723,000 to a flat $3,000,000 to run a $600,000,000 business without a word of explanation as to how it can be done?

The Home Owners' Loan Corporation had more than 450 offices and 21,000 employees at the top of its operations. It is now down to but two offices, New York and Chicago, and has but about 800 employees. Its budget was over $37,000,000 at the top. It asked for but $3,723,000 for the fiscal year 1948, a reduction of more than a million and a half from the 1946 fiscal year. Although it is already liquidated far beyond what Congress ever expected when it was organized in 1933, with only four dissenting votes in this House and none in the Senate, it is still the largest home mortgage company in existence.

On inquiry I am told it will have to close one of the two offices it now maintains and run a serious risk of its collections falling behind. The Republican leadership in the committee evidently intends to force the Corporation to sell its mortgages. It claims, and I quote, "It should be possible to make such sales by areas or States, selling en bloc all the mortgages in a given area."

This scheme was put forward several years ago by mortgage-lending institutions which at that time wanted to grab off all the mortgages which had been made good. It was shown at the time this steal would mean a loss to the Government of about $400,000,000. To put over such a plan now would soak the Treasury and the taxpayers about $67,000,000.

When the drive to force the sale of the mortgages of the Corporation was on it was shown that any deal to dump the mortgages by cities or States would not work because of the great number of small loans scattered in over 15,000 small communities. More than 10,000 such towns have but one to five loans. Nearly 7,000 of them have but one to two loans, and practically all of these are small.

The private lending institutions, which were saved from bankruptcy by the Government, do not want to buy loans of this kind. They are not profitable enough for them. All they want is what they have been after for years—to get the loans that are large enough to bring in a good income and leave the Government holding the bag with the rest. It would have to keep up an organization to collect on the smaller mortgages, but without enough coming in from such loans to pay its expenses. This would mean heavy losses.

When this House voted the cut recommended by the Committee on Appropriations for the Home Owners' Loan Corporation it voted to hog-tie it.

The people of the country and all our home owners should realize the effect of the legislative joker which gives to the financial interests their opportunity to steal the golden egg.

We Must Aid the Revolution

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article written by Dorothy Thompson appearing in the Boston Globe of June 11, 1947.

In the light of existing world conditions, and the ruthless disregard of international—atheistic—communism of the rights of peoples to make a free choice of their governments, and the peaceful maintenance of the same, this article contains a strong suggestion that cannot be ignored in connection with other strong, affirmative steps that must be taken in meeting this challenge to our civilization.

The article follows:

WE MUST AID THE REVOLUTION

(By Dorothy Thompson)

AS BRAZEN A PUTSCH AS EVER WAS PULLED OFF

How well the Hungarian conspiracy was organized is indicated by things other than the vulgar chortling of Mr. Rakosi—if that is his name, which is doubtful since Comintern agents usually operate under pseudonyms.

The government that was ousted—by as brazen a putsch as ever was pulled off—had just negotiated a credit in London, and Budapest businessmen were in correspondence with old American clients in an effort to reestablish relationships.

Now tens of thousands of Hungarians are attempting to flee into Austria, as people always flee from bolshevism, but between them and any conceivably friendly hosts is the Russian zone of Austria from which they are pushed back.

The putsch is as horrible as was Hitler's breakthrough. And it is far more dangerous, because more successful, than Hitler's prewar moves that got him only Austria and Czechoslovakia.

Czechoslovakia will now be pushed upon by Hungarian Communists, hostile Slovaks, and German Communists. The eastern bloc is moving faster than most people dreamed could happen. President Truman says it is an outrage and that he will take measures—perhaps bring the case before the United Nations. But, in Communist theory, possession is ten-tenths of the law. It is not the first cold-blooded breaking of the Yalta agreement. There was Poland.

The first thing to realize is that what is left of Europe will not be saved by our present foreign policy. Secretary Marshall says the governments of Europe must get together and plan, but admonition will not be enough. The governments themselves are, to a large extent, hamstrung by internal Communist opposition and are operated by unstable majorities. The anti-Communist parties everywhere are divided.

The situation demands a great new European party—international as communism is—of revolutionary elan, social, deeply rooted in the people, and grounded in Christian principles. This combination is the essence of the creative spirit, and decisively and exclusively backed by the United States and Great Britain.

The advantage on our side, if we act with great imagination, is that communism has failed utterly to win the European revolution. It has nothing with which to mobilize creative, new European forces. It must depend on wretched stooges, Moscow-trained, in the technique of the coup d'etat, bureaucrats, and putschists, not leaders of revolutions. Communism cannot organize Europe; it can only disintegrate and destroy it. Thus what faces western civilization is not rebirth, but destruction, and not by war, but by social disintegration.

It is very late, but it will never be earlier for us to set out to give aid and direction to the true great European revolution predicted by Victor Hugo: the revolution for civilization.

Congressmen's Voting Records

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, today I am introducing a bill to provide that the Legislative Reference Service shall compile and make available the voting record of Members of Congress. Under my measure, it will be possible for the editor of any newspaper or other publication published in the United States, or any group of 10 or more citizens of the United States, to apply to the Legislative Reference Service of the Library of Congress and receive without charge the voting record of any Member of Congress for any period desired. It is impossible today for any voter to get such information from the Congress without authorization of the Member whose voting record is sought.

I feel that the wide dissemination of a Congressman's voting record should be made so that the people will know where he stands on each and every issue that is brought before the Congress for its consideration and disposal. It is my hope that the Congress will see fit to consider this legislation and report it favorably at the earliest opportunity.

St. Louis Communists Lead Missouri Drive for Taft-Hartley Labor Bill Veto

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks, I include the following statement which I have made to the press this week. It speaks for itself. Following the statement is the Communist record of William Sentner as it appears on page 175 of House Report No. 1311, Seventy-eighth Congress, second session:

Representative WALTER C. PLOESER, Republican, of Missouri, revealed today that the advertising campaign in St. Louis, Mo., to urge President Truman to veto the Taft antilabor bill is headed by William Sentner, an avowed Communist. Mr. PLOESER emphatically declared that the labor bill is constructive labor-management legislation and denounced the veto campaign movement as full of misrepresentations and lies.

In the St. Louis Post-Dispatch of Monday, June 9, a three-quarter-page advertisement appeared addressed to President Truman and demanding that he veto the Taft antilabor bill. It charged that this legislation would cripple the Wagner Labor Relations Act, break the Norris-LaGuardia Anti-Injunction Act, shackle the labor movement, lower wage standards and working conditions, and encourage industrial strife. The advertisement was supported by about 350 Missourians, whose names were listed. At the lower left-hand corner of the ad was an address where contributions were solicited to help carry on the campaign. The address was Veto Campaign, room 603, 705 Olive, St. Louis, Missouri.

Mr. PLOESER said today: "I am reliably informed that this headquarters is being run by the United Electrical Workers of the CIO, and the man in charge of both the headquarters and the campaign is none other than the avowed Communist, William Sentner. That alone should be sufficient to tell the people the motive behind this advertisement campaign against this constructive labor-management legislation.

"The contents of the ad are full of misrepresentations and lies. The labor-management bill, which has passed the House 4 to 1, and 3 to 1 in the Senate, will prove to be a great benefit to labor; but then how can anyone expect other than lies, when this veto campaign is being run by Communist William Sentner. It is regrettable that many innocent people have signed this advertisement."

Mr. PLOESER emphasized that the labor bill would "free the Nation from paralyzing strikes and the attendant threat to public health and safety." Further, he said it would grant freedom from union-imposed restrictions on production and distribution of goods, secondary boycotts, and jurisdictional strikes. It also eliminates the burdensome cost of union-sponsored "feather-bedding" and other artificial "make-work" practices and the racketeering that has characterized the labor movement in recent years.

Mr. PLOESER said that his mail contained several letters of protest against the Post-Dispatch carrying the advertisement, one of which stated "We resent having the Post-Dispatch using its columns to solicit us surreptitiously for money which will be used by known Communists for their purposes and to pay the Post-Dispatch."

WILLIAM SENTNER

Report of the Committee on Un-American Activities of the United States House of Representatives, on William Sentner, as it appears in House Report 1311 of the Seventy-eighth Congress, second session:

According to the U. E. News, official organ of the United Electrical, Radio and Machine Workers of America, one William Sentner was "the featured speaker" at a huge St. Louis banquet where he propounded the objectives of the CIO Political Action Committee.

Who is this William Sentner, key figure in Sidney Hillman's political drive in the Midwest? We shall permit his record to speak for itself and in so doing to speak for the CIO Political Action Committee also.

William Sentner, vice president of the United Electrical, Radio and Machine Workers of America, and president of the

same union's district no. 8 in the St. Louis area, has a record as a member and official of the Communist Party since 1933. "When I joined," he declared in an interview published in Fortune magazine of November 1943, "I told everybody in town." He admitted that he still pays his party dues and solicits new party members, but devotes most of his time to union activities.

Sentner has held numerous posts in the Missouri-Arkansas District No. 21 of the Communist Party, among them being the following: secretary of the East St. Louis section committee (1934); secretary, Communist Party of St. Louis (1935); district organizer, Communist Party of Arkansas (1935); organization secretary, St. Louis (1935); member of district committee (1938); delegate to Arkansas Convention of the Communist Party (1938); and member of city committee of Communist Party of St. Louis (1939).

Records in the files of the Special Committee on Un-American Activities show that he participated in the following Communist Party meetings in St. Louis within a comparatively recent period:

January 24, 1942: Lenin Memorial Meeting, 1041 North Grand Avenue.

February 22, 1942: Farewell party for John Rossen, city secretary, Communist Party, 1041 North Grand Avenue.

August 10, 1942: Meeting in honor of Ella Reeve Bloor, Communist leader, Castle ballroom.

May 3, 1942: Meeting with Robert Minor, Communist leader, 1041 North Grand Avenue.

May 16, 1943: Meeting to celebrate release of Earl Browder, 1041 North Grand Avenue.

December 31, 1942: Communist New Year's Eve party, 1041 North Grand Avenue.

February 21, 1943, chairman of trade-union sponsoring committee: William Z. Foster, Production for Victory Rally, St. Louis Municipal Auditorium.

This 36-year-old executive of a Communist-controlled union, operating in important Midwest war plants, has been neither an electrical, a radio, or a machine worker. He studied architecture in Washington University in St. Louis and never completed his studies. As an artist he joined the John Reed Club, named after the founder of the American Communist Party, and became one of the club's national officers. He also spent some time at sea. In other words he owes his present powerful union post in a key war industry solely to the operation of the Communist Party patronage machine and not to any special qualifications in this field of industry.

Although classified as 1-A by his local draft board, he has secured deferment at the request of his union. Moreover, he was selected as a member of the War Labor Board for Region No. 7 (Missouri) on February 17, 1943, until his record caught up with him and he was forced to resign on February 10, 1944.

Sentner's earliest activities as a Communist include his acting as organizer of the Food Workers Industrial Union, affiliated with the Trade Union Unity League, a section of the Red International of Labor Unions with headquarters in Moscow. In this capacity he led a strike of St. Louis nut workers who marched militantly on the city hall. The Daily Worker reported that "the strikers, one after another, told Mayor Dickinson, of St. Louis, that it was the Food Workers Industrial Union and the Communist Party who were responsible" (June 1, 1933, p. 3).

Sentner was arrested during this period for violation of the National Recovery Act, in connection with a strike at the Lewin Metal Co., engaged in the manufacture of material designed for the War Department. The Daily Worker's account of what took place is illuminating.

"The strikers succeeded in keeping the locomotives out of the company's gates * * * Switchmen * * * refused to switch the cars * * *. The party has boldly appeared from the beginning" (Daily Worker, August 11, 1933, pp. 1 and 3.).

In accordance with the Communist Party's doctrine at the time, Sentner was concentrating on the vital parts of the American war machine. More recently, as organizer for the United Electrical, Radio and Machine Workers of America, he organized the United States Cartridge Co., of St. Louis.

In 1938, Sentner, as district president of the UERMWA, was arrested on charges of criminal syndicalism in connection with the Maytag strike at Newton, Iowa, and found guilty after a jury trial. In 1939 he was sentenced to a maximum penalty of 10 years in jail and a $5,000 fine. His case was defended by the International Labor Defense, "legal arm of the Communist Party" (Equal Justice, July 1938, p. 3). The law was later declared unconstitutional by the Supreme Court of Iowa, and Sentner was accordingly released.

Police records of St. Louis show that he was arrested on October 14, 1933, on charges of suspicion of inciting a riot and that he was fined $25 and costs.

Sentner's record shows that he has used his post as a trade-union official to promote the current line of the Communist Party. In 1937 he was a speaker at a Communist May Day meeting in St. Louis, as national organizer of the United Electrical, Radio and Machine Workers of America, and rallied strikers from the Emerson Electric Co. and the Century Co. to attend (Daily Worker, May 4, 1937, p. 3).

In 1938 he was a sponsor of the St. Louis branch of the American League for Peace and Democracy, the largest Communist front of that period.

In 1940, Sentner joined with other officers of district 8 of the UERMWA to urge participation in the movement for the repeal of Burke-Wadsworth conscription bill (Daily Worker, September 25, 1940, p. 1).

In line with the Communist Party's most recent position, Sentner today pretends to be a patriot. His offer of cooperation with the war effort has elicited the commendation of Gen. Dwight D. Eisenhower, who no doubt was not aware that his correspondent was a man with a long Communist record. Sentner's union-management cooperation activities have brought forth praise from Stuart Symington, head of the Emerson Electric Manufacturing Co., of St. Louis (Fortune, November 1943). These gentlemen are certainly unaware that Sentner's patriotism is always conditioned by the line of the Communist Party.

Among the Communist organizations supported by Sentner have been the Scottsboro Defense Committee, the International Labor Defense, Citizens' Committee to Free Earl Browder, Harry Bridges defense, Commonwealth College, New Theater League, and National Federation for Constitutional Liberties. On February 12, 1938, he was cited on the honor roll of the Midwest Daily Record, official Communist organ of Chicago.

The Role of the United States in the United Nations—II

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent granted to me, I am inserting the second part of an address I made before the National Federation of Catholic Students with the cooperation of the social-action department, NCWC, and the Catholic Association for International Peace, at New York City on Monday, June 9, 1947:

The work of the United States in the General Assembly is as important as it is in the Security Council. The United States has been in the forefront among the advocates of the regulation of armaments. This was clearly brought out on October 30 last by our representative (Senator Austin, of Vermont). He insisted that in a "system for the regulation of armaments emphasis must be placed on the creation of effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions." The draft presented by the United States on November 30 last and subsequently adopted, stressed three principal points: "First, that the Security Council should give prompt consideration to working out the practical measures, * * *, secondly, that the Council should give first consideration to the report of the Atomic Energy Commission * * * and the essential establishment of international control of atomic energy; and thirdly, that the provision of practical and effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions is essential to the regulation and reduction of armaments." This matter of regulation and reduction of armaments later became so involved with the control of atomic energy that it will be treated with the work of the Atomic Energy Commission.

The United States stand on the voting in the Security Council was made clear. The United States position may be briefly given as summarized in President Truman's report:

"The principle of the unanimity of the permanent members of the Security Council is of the highest importance for the success of the United Nations. * * * The maintenance of world peace and security rests upon the unity of those nations which formed the core of the victorious coalition against the Axis.

"The United States believes that the failure of the permanent members of the Security Council to agree upon important issues before the Council frustrates the carrying out of the principle of unanimity and leaves unsettled questions. * * *

"The United States hopes that the five permanent members of the Security Council may find it desirable at sometime in the future * * * to support modification of the unanimity requirement dealing with pacific settlement of disputes."

So far the discussions held among the permanent members of the Security Council "did not produce the desired result of complete accord among the permanent members."

The United States part in the Economic and Social Council is clearly shown by our participation in every phase of Council's activities. As President Truman put it, "The active and wholehearted participation of the United States in the Economic and Social Council reflects a fundamental principle in this Government's foreign policy." The United States has been fully aware especially of three most urgent economic and social problems: The reconstruction and devastated areas, the repatriation and resettlement of refugees and displaced persons, and renewal of the free flow of trade and transportation. In addition, "The United States has initiated action for the establishment of new specialized agencies in such important fields as trade and employment, health and refugees." Under the initiative and leadership of the United States representative in the Economic and Social Council the International Refugee Organization was created. The Soviet Union delegate's proposal "that the life of the organization be limited to 1 year * * * (was) successfully resisted * * * largely

under the leadership of the United States." The first year's (1947) budget of the organization is set at $156,000,000, the United States share being about 45 percent of this sum, and the Senate has already voted for the legislation appropriating $75,000,000 for that purpose.

We have also taken the lead in the field of international trade and employment. A Preparatory Committee, set up by the Economic and Social Council for this purpose, met in London in October last and discussed a draft charter prepared by the United States Government. Having arrived at a very large measure of agreement of the text of the charter, the Committee is now holding its meetings in Geneva, where this Government is represented by a delegation headed by Under Secretary of State William L. Clayton.

The creation of the Trusteeship Council was delayed; and before the Council was set up President Truman announced, on November 6 last, that "the United States is prepared to place under trusteeship, with the United States as administering authority, the Japanese mandated islands and any Japanese islands for which it assumes responsibility as a result of the Second World War." The Trusteeship Council was set up on December 13 last, and the Security Council acceded on April 2 to the request contained in President Truman's statement of November 6, subsequently put forward formally, by voting that the United States be designated as the administering authority for these islands.

The Korean problem may also be treated under the treatment of the Trusteeship Council. At the Moscow meeting of the Council of Foreign Ministers in December of 1945 it was agreed that a Joint Commission of the United States and Soviet commands in Korea, with the participation of a provisional Korean democratic Government which was to be set up, should submit proposals for the joint consideration of the United States, the Soviet Union, the United Kingdom, and China for the working out of an agreement concerning a four-power trusteeship of Korea for a period of 5 years. The Joint Committee began its work at Seoul, Korea, on March 20 of 1946, but its meetings were adjourned sine die in May without agreement. We have been most anxious to have this matter settled, and the recent correspondence between Secretary Marshall and Foreign Minister Molotov, begun upon the initiative of the former, promises good for the Koreans as well as for the relationship between the United States and the Soviet Union in the Far East.

In the instances mentioned above the United States has played a prominent part; in the Atomic Energy Commission her part has been distinguished, marked by selflessness and with due regard for the safety of humanity.

In the fall of 1945 the United States Government took the lead, along with the Canadian and British Governments, in expressing its willingness to proceed with the exchange of fundamental scientific information. The statement issued on November 15 of that year, jointly by President Truman, Prime Minister Attlee, and Prime Minister Mackenzie King, added that "we are prepared to share (the knowledge essential to the use of atomic energy) on a reciprocal basis with others of the United Nations." On the basis of this statement the Big Three foreign ministers agreed, at the Moscow Conference of December 1945, to recommend, for the consideration of the General Assembly of the United Nations, the establishment by the United Nations of a commission to consider problems arising from the discovery of atomic energy and related matters. On the basis of this recommendation the General Assembly of the United Nations, at its meeting in London on January 4, 1946, established the Atomic Energy Commission. The Commission was duly constituted and began its meetings in New York on June 14, 1946. In the meantime, the President and the Secretary of State, as well as members of the Acheson-Lilienthal group and Members of Congress, Mr. Baruch and his associates worked out the broad lines of the United States policy. The plan as evolved by June 14 was submitted to the Atomic Energy Commission on that day. This plan called for the establishment of an international Atomic Development Authority, responsible for control (including, where necessary, accounting, inspection, supervision, management, and licensing) of all activities in the field of atomic energy. It was proposed that no single state should have power to prevent the carrying out of punishments for crimes specifically defined in advance by voluntary agreement. The United States proposal gave the international control body a degree of autonomy commensurate with its responsibilities, and it also emphasized that the use of the veto should not apply in the field of atomic energy matters. It also called for effective safeguards by way of inspection and other means to protect complying states against the hazards of violations and evasions.

On June 19 the Soviet Union had proposed a convention calling for the immediate outlawing of the production and use of atomic weapons and the destruction of all stocks of atomic weapons. At this point it seemed difficult to reconcile the United States plan and the Soviet proposal, for the Soviet representative took the position that the United States proposals were not acceptable as a whole or in their separate parts. Toward the end of the year the Commission as a body was willing to agree with the provisions of the United States plan, and on December 17 last the Commission adopted the principles on which the United States general findings and recommendations were based. On December 30, 1946, the Commission approved a report to the Security Council. As accepted, the findings and recommendations placed in this report constitute the basic principles of the proposals that have been consistently advocated by the United States.

In summarizing his report to the Congress last February, the President stated that "In the work of the United Nations Atomic Energy Commission, the United States, owing to its unique position in the field, has taken the lead in providing the information essential to a reasonable understanding of the problem of control and its proposals. * * * While the Commission has still a long way to go before a treaty can be drafted to establish a fully effective international system of control, the progress made to date is heartening." That is the sum of the work the United States has done in the Atomic Energy Commission.

As was stated at the outset, in this summary count it is not possible to elaborate, or even present a mere catalog of the very numerous and important parts played by the United States in all the organizations—councils, commissions, committees—of the United Nations. It is impossible to do justice to the work of our educators and educational leaders who have given their best in the work of the United Nations Educational, Scientific, and Cultural Organization. Nor is it possible to dwell on the stout stand our representatives have taken on behalf of human freedom in the United Nations Commission on Human Rights. It should not be forgotten that the United States citizens have been, in a large measure, instrumental in keeping all the United Nations organizations as going, solvent concerns by contributing generously both to the administrative and operational budgets of these organizations. As it was stated, our share in UNRRA has run into billions (direct contribution, $2,700,000,000). Our share in the International Monetary Fund, and in the International Bank for Reconstruction and Development totals about $6,000,000,000. Such large sums voted by Congress year after year should serve as eloquent testimony for our unselfish and unstinted support to the United Nations. And we have just been assessed almost 40 percent of the United Nations 1947 budget. In addition, we have made some indirect and invisible contributions to the work of the United Nations. This invisible contribution is in the form of reparations which we have allowed other United Nations to exact from former Axis countries and satellites. When Secretary Byrnes first opposed the reparation clauses in the peace treaty signed with Italy, he did it because he knew that we have to contribute toward the payment of these reparations; and he said so in so many words. But he allowed, for the sake of peace and the United Nations, our wartime allies to draw reparations from Italy.

Having worked so hard in the creation of the United Nations, having worked unswervingly and wholeheartedly in its organizations, and having played prominent—in many cases a leading—part in all of its activities, the United States regards the work of the United Nations as part of our own work. When our representative on the Atomic Energy Commission (Mr. Bernard Baruch) pleaded with his colleagues of the Commission he declared on December 2 last: "I beg you to believe that the United States seeks no advantage. I beg you to hold fast to the principle of seeking the good of all and not the advantage of one." His statement truly reflected the action of the United States Government. If recently the United States, by its newly enunciated "Truman doctrine," seems to have taken a step which appears to be a move to discredit the United Nations, it was done partly to meet an urgent emergency and partly to relieve the United Nations from such an onerous responsibility. And if our representative on the United Nations Security Council spoke on March 28 last (as did Mr. Austin) as though we have a mandate to redress human wrongs, he also meant that we are prepared, almost at any price, to stand by the United Nations for the maintenance of international peace and security.

The hope of the world lies in making the United Nations work. Not for one power or one people but for all nations and all people. Mankind, through its own stupidity, has not been able to keep away from us the scourge of war and its ugly aftermaths. Mankind now, through an instrument such as the United Nations, is given a new opportunity to reason collectively, to discuss problems across a conference table, and to arrive at solutions satisfactory to most, if not all, the nations. While the results of the United Nations to date have not been entirely satisfactory, nevertheless the foundations for international understanding have been laid and the United States will help to the utmost to build a structure based on tolerance and understanding which will eventually bring, in the words of the Saviour, "Peace on earth and good will to men."

Americans Taxed for the Whole World

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. VAN ZANDT. Mr. Speaker, in view of the interest in the tax bill which is now on President Truman's desk, I am

inserting herewith the following timely editorial from the pen of Mr. Robert W. Boyer, managing editor of the Altoona Tribune, Altoona, Pa., and which appeared in the June 11 issue of the Altoona Tribune.

The editorial is as follows:

AMERICANS TAXED FOR THE WHOLE WORLD

The power to tax is one of the greatest powers granted a democratic government. Taxes have been the issue upon which many a government has fallen.

Our Congressmen and legislators, our Presidents and governors sometime accept the power to tax too casually.

Two years after the great war, this country still is under the burden of the greatest tax levy in all our history. Most of our people had expected reasonable relaxation of this terrific burden with the ending of the war. Business has been waiting for the Government to let it use some of its own money as risk capital to start new industrial expansion, to widen new business horizons.

But, now we are given to understand from Washington that although the Congress passed the tax-reduction bill, Mr. Truman will veto it. The House has a sufficient margin to override the veto. The Senate does not. That means that if Mr. Truman vetoes the bill, it is dead.

It requires only a little experience for even a boy to realize that when it comes to spending money, there is absolutely no limit. That a man or a government can spend and spend and spend endlessly and forever.

That has been and is, one of the great principles and fallacies of the New Deal instituted by Franklin D. Roosevelt, and to which Mr. Truman and his closest advisers subscribe.

The President would not cut his budget of $37,500,000,000 for the coming fiscal year. He plans, so it is said, to veto this proposed reduction of taxes to bring relief to the people.

This, in our opinion, is not in the best interests of America.

Mr. Truman, we feel sure, is motivated by the New Deal fear that tax reduction must mean, of course, reduced expenditures, an abhorrent thought to the bureaucrats and internationalists in the Government who advocate Federal bureaus of some kind in every township of America and who are urging with reckless abandon that America set aside billions of dollars on a lend-lease basis to finance the world back to normalcy.

Only the people of America can halt this ruinous ideology which requires that the pressure be maintained on Americans while our national strength is drained into Europe.

Our international commitments are reaching so vast a figure and such a vast increase is planned in them that it is absolutely true that the American pepole are being taxed to support the peoples of foreign nations, even to their military.

There is no justification for this. It is a mad policy of government that is endangering the very foundations of our Nation.

It is further evidence that once the power to tax is given to a governmental body, it relinquishes that power only with the greatest reluctance.

The legislature at Harrisburg, too, should bear that in mind as it widens the power to tax for local governments.

The power to tax can ruin a city, a State, or a Nation. It must be used wisely, and with the utmost discretion.

We submit that the New Deal Government of Mr. Truman, if this tax reduction bill is vetoed, is not, and has not, used this power wisely or for the best interests of the people of America.

This issue can go far. It may not be too much to ask wherein the Government derives its authority to tax the people of America for the use of foreign governments. Look at some of the more recent gifts.

Aid to the Peron government of Argentina, a reported haven for Nazis, a totalitarian government heretofore unfriendly to the United States. This aid to include military materials.

One hundred and twenty-one United States warships to Latin-American countries.

The famous $400,000,000 for military aid to Greece and Turkey.

A contemplated expenditure of millions for military aid to Latin-American countries and to Canada during the next 10 years.

A Chinese military aid plan, now in abeyance.

These are the most notable. They do not take into account millions upon millions of dollars loaned—actually given—for direct relief and economic aid.

Truly, this has become a tax upon America for the whole world.

American Educators Provide Convincing Evidence That Educational Exchange Features of H. R. 3342 Are Vital Aids in Crusade Against Communism and for Peace—Student Teacher Exchange Provisions Cited as Paying Greatest Goodwill Dividends at Smallest Cost—State Department Record on That Score Unchallenged

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 13, 1947

Mr. MUNDT. Mr. Speaker, the Committee of the Whole House on the State of the Union by its affirmative votes on sections 201, 202, and 203 of title II of the so-called Mundt bill, H. R. 3342, earlier this afternoon did real credit to itself and rendered the Nation a great service through authorizing the Secretary of State to provide for the interchange of students and teachers, together with books, periodicals, and other publications on a reciprocal basis with other countries on this globe. By that action we took a great stride forward in creating the climate of mutual understanding and friendship which is essential if peace is to endure and tolerance triumph.

Some pertinent questions were raised by the gentleman from Wisconsin [Mr. KEEFE] regarding the meaning and interpretation of paragraph 1 of section 701 and while the House has now rejected the motion of the gentleman from Indiana [Mr. HARNESS] to strike this paragraph from the bill I want to elaborate just a bit so that the legislative record will be crystal clear as to the purport, the intent, and the interpretation included in the language of paragraph 1 of section 701. Our colloquy with the able gentleman from Wisconsin [Mr. KEEFE] high-lighted and underscored the definite and specific meaning of the language in question. The following facts from the hearings, and from the Federal Register, however, provide additional evidence as to how this language has been interpreted in the past, how it has operated under our prevailing legislation which authorizes such a program with Latin-American countries, and how it is definitely understood and agreed it will operate under H. R. 3342.

The grants of money, services, and materials referred to in paragraph one, aside from the authority provided to make certain Government publications, exhibits, et cetera, available to educational institutions, is included to detail the process by which the Secretary of State pays the tuition of foreign students which we may select for special training in educational institutions. These may be public institutions of learning such as the University of Minnesota, of Wisconsin, of California, et cetera, or they may be great private institutions of learning such as Yale or Harvard or Princeton. Furthermore, Mr. Speaker, I would like to point out that as the program has operated with the Latin-American countries the State Department scholarships are administered by the Institute of International Education in New York, a private organization which was founded from the Carnegie Corp. Such visiting students would be screened and selected by our American authorities, their enrollment at American colleges is handled by private organizations such as the institute referred to above and the payments by the State Department are the scholarship advances made in the form of tuition payments. With this understanding, it is clear paragraph 1 of section 701 conveys no important new authority to the Department of State and invests it with no great new discretionary power even in the matter of determining which educational institutions—public or private—are to be selected by the foreign student selected to prepare himself in our American ways by study on an American campus.

EDUCATORS FROM BOTH COLLEGES AND SECONDARY SCHOOLS STRONGLY ENDORSE STUDENT EXCHANGE AS AN AID TO PEACE

Mr. Speaker, in my opinion it would have been a tragic commentary upon the desire of this Congress to promote and preserve the peace had we failed to reach agreement on a satisfactory reciprocal formula for the exchange of students, teachers, and publications with other friendly countries in the world. If the world is to use right instead of might as its directive force, Mr. Speaker, it is imperative that the people of the world come to know what is right. We would surely be derelict in our duty as Americans if we refused to share with others the concepts and the ways of life which long experience has convinced us are eternally right.

Yesterday in his press conference, Secretary of State Marshall, upon whose Department we must rely for the administration of peace promoting and protecting policies, made this highly significant statement:

> I am unreservedly in favor of the exchange of students, professors, and books. These methods in the long run may be far more important for the interchange of information than broadcasting.

And Mr. Speaker, in the final paragraph of his press statement yesterday, Secretary of State Marshall again

implored Congress to authorize this comprehensive program with its variety of peace tools and to include the requested encouragement for carefully selected exchanges of students and teachers as a weapon for peace. He said in conclusion:

I do not believe that a bill limited to broadcasting would give this Government the opportunities it must have to explain itself to the rest of the world.

EDUCATIONAL EXCHANGES ARE NOT AN UNTRIED FORMULA

Mr. Speaker, the vital force of education in creating and cementing international friendship is not a new and untried formula. It is not an untested experiment. Who can deny that the famed Rhodes scholarships have won many lasting and understanding friends for Britain? Who dare deny that the Chinese scholarships provided years ago by wise American action on the so-called Boxer indemnities have done much to bring about the warm friendship China has always demonstrated for America? For the past 7 years we have operated identically the same student exchange program with the Latin-American countries which the Mundt bill now proposes to expand to other areas of the world. Who can deny that these contacts paid priceless dividends during World War II when almost to a country the Latin-American countries threw in their lot with ours although they were not attacked and made valuable contributions to our great battle for freedom? Mr. Speaker, here is a device which has demonstrated its effectiveness for peace. Surely with atomic war threatening the world as an awesome possibility, we cannot afford to deny ourselves full use of a weapon of peace which has proved effective in the past and which costs us each year less than the price of a modern superbombing plane.

During the past few days, Mr. Speaker, schoolmen and educators from large cities and small towns, from great universities and small colleges, from secondary schools as well as from the offices of superintendents of public-school systems have been reading in the papers and hearing on the radio that a determined minority among us here in Congress is opposed to the student and teacher exchange provisions of H. R. 3342. They have read that section 201 of the Mundt bill is in peril. As a result, I have received well over 100 telegrams and many more letters urging that I do all I can to retain this important section. Perhaps some of the rest of you have also heard from schoolmen that you know and in whom you have confidence; in fact several of you have quoted prominent educators and have read messages from forward-looking and outstanding institutions of learning which are participating in this program either with Latin-American countries or through private scholarships supplied to students from other countries or programs provided by the State Department under its temporary authority which expires July 1 this year, except for the legislation, H. R. 3342, which we are now considering.

Since some of you perhaps come from areas and States or from districts or communities which have not participated in this student-teacher exchange program for international understanding and enlightenment, however, I am going to include with my remarks a small sampling of the many communications I have received on the subject. The authors of these messages are outstanding educators; they are intelligent, articulate Americans; they want to help in this battle for peace; and above all they challenge you and me to give them and the vital force of education an opportunity to demonstrate itself as a force for peace at a time when the world is close to ruin as a result of the fact that up to now no other plan, no other program, no other organization, and no other force has been able to keep peace permanent.

Surely in the face of such calamitous failure by others, it is not asking too much to give educators an opportunity to do their best in these trying times. Who among us dare risk denying the cause of peace any effective method at our command at a time when we all protest so emphatically that our most important single purpose is to preserve the peace?

HERE'S THE PROOF OF THE PUDDING

Mr. Speaker, I now refer the Members of this House to the following unsolicited communications which are a mere sampling of less than 10 percent of those coming to my desk during the past few days. Let no one shrug lightly aside the testimony of those who work with the minds and hearts of the people of this earth.

From Oberlin College, Oberlin, Ohio:

Communism is utterly anathema to me, and I should certainly oppose any ways in which it might become more effective in this country. To limit exchanges of students, however, is not a way of combating such ideas. Please support section 201, the Mundt bill.

HOWARD ROBINSON,
Head of Department of History,
Oberlin College.

From University of Chicago:

Hope you support section 201, the Mundt bill. Such exchanges essential in training foreign students to appreciate American democracy. Have no evidence of any communistic propaganda, being taught by any of our foreign students. That is based on close official observation during past years. Such exchange programs do not let down bars on immigration as all students, teachers, and professors are admitted on temporary visas and are controlled by United States Department of Justice and must—repeat must—leave this country upon termination of course.

WELLS F. CHAMBERLIN,
Adviser to Foreign Students,
University of Chicago.

From Service Committee Society of Friends, Philadelphia:

I believe exchange of students and teachers is most constructive step to demonstrate American good will and to increase sound world understanding. Critically important in advancing faith in democratic way of life at this time. Strongly endorse your bill, especially section 201.

BURNS CHALMERS,
Director, Student Program.

From University of Iowa, Iowa City, Iowa:

This university believes strongly that section 201 of Mundt bill authorizing Secretary of State to promote interchange of students and teachers between United States and other countries is essential. We are definitely opposed to efforts to eliminate these educational exchanges.

VIRGIL M. HANCHER,
President, University of Iowa.

From Northwest Missouri State Teachers College, Maryville, Mo.:

Concerned lest amendment to section 201, Mundt bill, obstruct program of exchange of teachers and students with those of other countries. Consider that program of utmost importance in postwar reconstruction and in building permanent peace. Urge you use every effort to defeat such a calamatous move.

J. W. JONES,
President, Northwest Missouri State Teachers College.

From Fisk University, Nashville, Tenn.:

We have had exchange students and teachers at Fisk University for several years and it has been our experience that educational exchanges are of great importance in promoting better international understanding and facilitating extension of democratic practices to other countries. I urge you to strongly oppose any attempt to eliminate educational exchanges from H. R. 3342.

CHARLES S. JOHNSON,
President, Fisk University.

From National Jewish Welfare Board, Washington, D. C.:

Three hundred Jewish centers in United States with affiliated membership of 450,000 wholeheartedly back your bill H. R. 3342. Our form of democracy and self-defense requires orienting the rest of the world to help protect future civilization. We urge continued fight for your bill.

PHILIP SCHIFF,
Washington Representative, National Jewish Welfare Board.

From Carnegie Endowment for International Peace, New York City:

Strongly urge retention section 201, Mundt bill, authorizing exchange of students, teachers, and professors because of importance in encouraging exchange of knowledge and building international understanding.

HOWARD E. WILSON,
Carnegie Endowment for International Peace.

From former Ambassador John G. Winant and John D. Rockefeller, Jr.:

EAST NORTHFIELD, MASS.

To live together in peace the nations must know and understand the best we have to offer in democratic living. Student teacher exchange facilitates this on most intelligent level. On behalf of 200 carefully screened American students and in the interest of 150,000 devoted to youth hostel ideas we urge your continued support section 201, Mundt bill.

JOHN G. WINANT and
JOHN D. ROCKEFELLER, Jr.

From president, Wellesley College, Wellesley, Mass.:

Strongly urge passage Mundt bill particularly those sections encouraging exchange of foreign students and professors.

MILDRED MCAFEE HORTON,
President, Wellesley College.

From a great Catholic institution, Marquette University of Milwaukee.

Mr. Speaker, I doubt that even the most suspicious of our colleagues, whoever he may be, who fancies he sees a Communist behind the desk of every college professor and who fears

that our Americanism is so frail and fickle that contact with students from abroad will sell their foreign ways of life to our American college youth instead of having the result that our American youth and our American concepts will in fact make a lasting and favorable impression on our visitors. Sir, I doubt that even such a frightened and frightening American would go so as far as to associate a Catholic university with atheistic communism. Consequently, I especially call to your attention this telegram just in from Marquette University:

Please stand by section 201 of Mundt bill favoring exchange of students and professors on reciprocal basis with foreign countries. They need to learn our democratic viewpoints.

GEORGE E. VANDERBEKE,
Administrator, Marquette University.

From State president, Pennsylvania State Education Association, Allentown, Pa.:

We have had two exchange teachers from British Isles this year. They have done marvelous work in creating international good will. Two of our teachers are in Britain and it is our opinion that this is one of surest ways to build strong international good will.

FRED W. HOSLER,
President PSTA.

From State of Kansas come messages of approval and support:

We have had British exchange teacher. In letters from our teacher in England am convinced that exchange teacher plan builds international understanding.

HUGH C. BRYAN,
Superintendent of Schools,
Leavenworth, Kans.

And from the University of Kansas, Lawrence, Kans.:

Our experience with exchange students through the years is that no foreign student or teacher ever vaguely suspected of promoting communism. Our committee which observes closely the work of 50 foreign students and teachers this year strongly feels that international understanding and world peace fostered by an expanded program of international exchange. Urge you support program.

WILLIS L. TOMPKINS,
Chairman, Faculty Committee on
Foreign Students, University of Kansas.

From New Albany, Ind.:

Four thousand five hundred New Albany school children and our many service and civic clubs enthusiastically endorse our exchange teacher plan. Greatest single teaching force in world understanding we have ever had. We adults have failed miserably in world affairs. Lets give the children a chance to do better.

HARRY DAVIDSON,
Superintendent of Schools.

From Toledo, Ohio:

Understand move under way to amend H. R. 3342 to delete student teacher exchange program. Since 1941, Toledo has had three exchange teachers. Our experience leads us to believe that exchange is a fine move toward international understanding. We unalterably oppose proposed amendments to delete this program.

E. L. BOSHER,
Superintendent of Schools,
Toledo, Ohio.

From Weymouth, Mass.:

As superintendent of school system with an exchange teacher from England this year and one expected next year may I urge favorable vote on continuation of exchange program by teachers and pupils.

ELMER S. MAPEES,
Superintendent of Schools.

From Union Township, N. J.:

Union Township has had two British exchange teachers all this year. From actual experience, know that this program is of inestimable value in building international understanding and good will. Don't let section 201 be deleted from H. R. 3342.

CHARLES T. HASSARD.

From Bloomington, Ind.—urges exchange program for defeat of communism:

Exchange of teachers and students best way to build world understanding. Convinced that such a program sells American way of life and undoes bad impressions given by many American businessmen abroad, Hollywood movies, and Communist propaganda.

Foreign teachers tend to impress on American students values of our way of life too often taken for granted. Russia seems not to favor exchange program lest her young Communists learn truth. America is made of stronger stuff. Those who observe and learn first hand in Uncle Sam's own back yard prove our best friends.

LEO R. DOWLING,
Adviser, Foreign Students,
Indiana University.

And from the superintendent of schools in Bloomington comes this word:

Our experience with an exchange teacher from Britain was educational and a distinct benefit to our students, teachers, and community. Experience helped greatly to carry out the objective of international understanding.

H. E. BINFORD,
Superintendent of Schools,
Bloomington, Ind.

From Birmingham, Ala.:

English exchange teacher helped us greatly this year. Hope plan continues.

L. FRAZER BANKS.

From Rockville, Md.:

Exchange teacher from England has worked in the public schools of Montgomery County, Md., this year with very great success, and the plan for exchange teachers is so vital and helpful nothing should be done to destroy it. We strongly urge that the real service in international understanding through the exchange of teachers should be more fully understood and supported, for it has no semblance of any opportunity for foreign agitators to in any wise enter our schools.

EDWIN W. BROOME,
Superintendent, Board of Education,
Rockville, Md.

From Bloomington, Ill.:

Firmly convinced educational exchanges build international understanding.

GEORGE N. WELLS,
Superintendent, Bloomington
Public Schools, Bloomington, Ill.

From Kalamazoo, Mich.:

Kalamazoo has this year an exchange teacher from Aberdeen, Scotland. This lady has made a grand contribution in helping better understand Great Britain, and our teacher there has been enthusiastically received. Kalamazoo strongly favors such exchanges as a means of creating better relations.

LOY NORRIX,
Superintendent of Schools,
Kalamazoo, Mich.

Mr. Speaker, I have on my desk at least 100 additional similar letters and telegrams from the educators of well over half of the States of the Union. Surely the earnest, voluntary, and even enthusiastic signed testimony of these good Americans who live with this program and see it in action cannot be ignored.

It is true, of course, the Committee of the Whole House on the State of the Union this afternoon acted favorably on section 201, and on the other sections, including paragraph 1 of section 701 of H. R. 3342. It is, unfortunately, also true that some of the bitter and determined foes of this program of educational exchange have announced that on next Monday, or whenever we next take up H. R. 3342 for final action, they expect to offer a motion to recommit for the purpose of scuttling this portion of the bill and a few other sections to which they object. And some Members, of course, are opposed to all sections of the bill and all efforts to establish these contacts of understanding and accord with the friendly nations of the world.

The fate of H. R. 3342 and of this program of educational exchanges in which the State Department has rendered sterling service through making the contacts and facilitating these exchanges, as well as paying American teachers the requisite differentials in salaries and living expenses so they could carry the American message abroad, is in your hands. Your action on Monday or Tuesday will ring down the final answer. I once again urge you to support this program for peace. I submit that to devote less than $30,000,000 a year to the purpose of making it unnecessary to use in the blood bath of another war the more than $11,000,000,000 of defense establishment which we are annually appropriating is just simply good sense and sound action. It merits your support.

I have read into the RECORD the foregoing samples of communications reaching me primarily for the benefit of those of you who do not have within your Districts, school men or educational institutions which have participated in this program and which have learned from intimate experience of its values. I have noticed several of my colleagues reading into the RECORD, telegrams from institutions and individuals in support of H. R. 3342 and especially in support of its sections and provisions on educational exchange.

Now that the word has been carried to the country over the radio and by the press dispatches of the Associated Press, the United Press, and the International News Service that the hardest fight is being waged here in the House against these educational exchange provisions perhaps some others of you may hear from groups and institutions which have had first-hand experience with this program. If so, I hope you will share those messages with your colleagues by inserting them in the RECORD or by reading them to the membership of the House next Monday. Give us the true story of those experiences and those recommendations, be they favorable or unfavorable, but it is noteworthy that despite the caustic criticism of some and the suspicions of others the testimony and the evidence is to the effect that the State Department has done a highly

commendable service in these educational exchanges and that they, together with the other provisions of H. R. 3342, merit your support and your approval.

Mr. Speaker, the biggest single job this Congress faces is to take appropriate action to avert another war. H. R. 3342 is action of that type. H. R. 3342 provides the weapons of peace which are requested by the State Department if it is to be equipped with a complete array of what is needed in these troublesome times to produce a climate of understanding and honest information. Need I add, sir, that it is only in such a climate that permanent peace can flourish and endure.

Petrillo in a Corner

EXTENSION OF REMARKS
OF
HON. SAMUEL K. McCONNELL, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 13, 1947

Mr. McCONNELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Bulletin of Wednesday, June 11, 1947:

PETRILLO IN A CORNER

James C. Petrillo, boss of the American Federation of Musicians, is a man of few words. But when he uses them, especially in the form of epithets, his choice leaves no doubt of his meaning. Usually he prefers action to words, and the more highhanded the action, the better it suits his purpose.

Petrillo is now on the defensive, and his opening speech to the federation's annual convention showed it. He threatened to expel Congressman KEARNS from the union, and lashed out against pending labor legislation.

That legislation would clip Petrillo's wings. It would prevent hiring stand-by musicians, and bar an employer from firing a union member for anything except nonpayment of dues. Besides that, the Lea bill, aimed directly at Petrillo, is now being tested in the Supreme Court.

The Petrillos in the labor movement are responsible for whatever restrictions may be written into law. State legislatures in number have ended the closed shop and curbed union activities. The temper of the public has been aroused to such an extent that there is widespread demand for the elimination of abuses from union practices.

Organized labor will do itself a service by getting rid of all the Petrillos.

Flag Day Address by Senator Wiley

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Flag Day address delivered by me at a Flag Day celebration in Milwaukee on June 15, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR FLAG'S MEANING IN THE ATOMIC AGE

We are gathered on this beautiful spot for the purpose of "charging our souls anew" with the love of country and the love of the principles which have made her great.

We have assembled here under the inspiring auspices of the Elks, just as in Elks' lodges throughout the Nation, men, women, and children have gathered to rededicate themselves in love of flag and country.

It is a pleasure for me to be here in Milwaukee today to greet so many old and dear friends, to make new ones, to speak at first hand with the people of this great city, and to see the old, beloved sights here.

It is with a spirit of deep humility and appreciation for this privilege that I will make these brief remarks.

SILENT HOMAGE TO FLAG

This is a day more for the silent tribute of hearts than for the spoken tribute of mere words. It is a day for reconsecration by deeds rather than by mere phrases.

As we look at this lovely American banner, verses of yesteryear come to our mind:

"What shall I say to you, Old Flag?
You are so grand in every fold,
So linked with mighty deeds of old,
So steeped in blood where heroes fell,
So torn and pierced by shot and shell,
So calm, so still, so firm, so true,
My throat swells at the sight of you,
Old Glory, my flag."

HISTORY OF OLD GLORY

Every school child knows the history of Old Glory from that day in 1775 when the Continental Congress appointed a committee to consider the question of a single flag for the Thirteen Colonies. This action resulted in the recommendation of a "Grand Union Flag." We remember that John Paul Jones hoisted this flag on his masthead early in December 1775, and that the emblem flew over the headquarters of George Washington.

We remember, too, that it was on June 14, 1777, that the Congress proclaimed "that the flag of the United States be 13 stripes of alternating red and white, and that the Union be 13 stars, white, on a blue field representing a new constellation." Thus, today, 170 years later, we here on this spot, like others throughout the Nation yesterday and today, honor this immortal symbol of our liberty. Today is the final day in National Flag Week in our State, as proclaimed by Governor Rennebohm.

It is altogether fitting that we take this occasion to exmaine into the past, the present and the future of America. What mighty deeds have occurred since that day in 1777. What great sacrifices have been made for America and what inspiring challenges face us now.

Today our own State of Wisconsin alone has a larger population than the entire country had at that time.

BATTLES OUR FLAG HAS SEEN

The flag that floats from yonder mast has been altered somewhat in design, but the convictions, the ideals, and the hopes which it represented then are the same today. This is the same flag that fluttered over the ragged Continentals of George Washington when they marched to Yorktown. This is the same flag that flew at Bunker Hill, the flag that went with "Old Hickory," Andrew Jackson, to New Orleans, the flag that was pierced by shot and shell at the Alamo, that went with Custer at the Little Big Horn. It is the same flag that stormed the heights of Chapultepec, and soared with Admiral Dewey at Manila Bay. It is the same flag that the doughboys took to Chateau Thierry and the Battle of the Argonne. It is the flag that Byrd hoisted at the South Pole, that Perry hoisted at the North Pole. It is the flag that was hauled down at Bataan and Corregidor, but it is the same flag that was hoisted up again triumphantly by MacArthur and his men; the flag of victory in the battles of the Coral Sea, of Normandy, of the Ardennes, of Iwo Jima, and of Japan.

No man can pay tribute to that flag more than the brave men from Valley Forge to Corregidor who bled for it, died for it.

FLAG OF PEACE

While the flag inspired our veterans and people in time of war, it is primarily not a battle flag, but a flag of peace; and an eternal symbol of peace, of freedom, of growing souls, of pioneers, of immigrants seeking the larger life, of free schools, of religions uncontrolled by the State, of growing villages, cities, and countrysides, of singing children, of expanding industry, of free labor, of happy homes, of a land and people of unlimited horizons.

WE AND THE FLAG

Our flag is what our people made it. Our country today is what our citizens in war and peace have made it.

Our flag and our country in the future will be what we make it.

We—you and I and the next fellow, citizen and official, young and old, farmer, businessman, laboring man, teacher, housewife, are our flag.

I remember that one day many years ago one of my youngsters came home from school and told about a fine lesson her teacher had taught that day. The little one explained with a light in her eye that "Mommy and daddy, this flag is you and me and grandpa and grandma and all of us." I was thrilled by this wonderful lesson the teacher had taught my child. The teacher had wisely explained to her that the flag is not a mere piece of colored bunting. It is not meaningless cloth. It is you and I and our destiny—the destiny of this new breed of men—Americans—derived from every race, every creed, every color on earth.

When we pledge allegiance to Old Glory, we salute ourselves and our Nation. We salute all that is good in our lives and in the lives of our fellow citizens. When we sing of "The Spar-Spangled Banner," we sing of liberty and freedom, free speech, free press, free assembly, freedom of worship. We sing of the Bill of Rights and the United States Constitution.

Yes, our flag is meaningful to us as a symbol of a heritage that is very precious.

The Meaning of Our Flag in the Atomic Age—this is the subject of these brief thoughts to you today. Let us explore that meaning—the meaning of your flag and my flag.

The poet tells us:

"Your flag and my flag,
And how it flies today
In your land and my land,
And half a world away!
Rose-red and blood-red
The stripes forever gleam;
Snow-white and soul-white—
The good forefathers' dream;
Sky-blue and true-blue,
With stars to gleam aright—
The gloried guidon of the day,
A shelter through the night."

What is the particular meaning in 1947 of the red, white, and blue?

1. AMERICA'S BLESSINGS

The first meaning of our flag in the atomic age is that you and I live on soil more blessed than anywhere else on earth. By every standard of comparison, spiritual standards, and material standards, America stands unsurpassed by any other nation on earth.

The bomb which was released at Hiroshima ushered in the atomic age. It did not merely obliterate a city. It symbolized the obliteration and destruction everywhere in the civilized world except in the United States. Our land has been unmarred by the physical

scars of war. Our factories, our homes are intact. Hunger and starvation and disease do not stalk our people, as they do foreign peoples. Envy and distrust over boundaries, dating back to centuries of feuds and rivalries, do not mar our peace of mind.

This, then, is the first meaning of our flag in this atomic age—the meaning of ourselves in relation to all other peoples.

We are not haughty in our spiritual and material wealth. What we have, we wish all other peoples had. We want to help them, if at all possible, like the Good Samaritan, to help themselves to realize the blessings we alone enjoy. We want to raise a standard to which the wise and the honest will repair.

2. CLOSENESS OF NEIGHBORS

The second meaning of our flag in this atomic age is that it floats within the view of every citizen of earth, because ours is a contracted world. Man's ingenuity and invention have virtually eliminated time and space. Everything that we do on our soil is noted by every other people. The standards we live by, the achievements we make, are duly observed by them. We are the custodians of the light, spiritual and political, that the teeming millions of earth long for. We must see to it that the light never goes out.

In the atomic age, every nation is in every other nation's back yard. Jet planes, guided missiles, atomic energy—these are but the opening phases of the new era which we have entered. We must prepare our minds for discoveries and advances within the next few years bolder and more amazing than we have dreamed to date.

3. UNITED STATES AND RUSSIA

The third meaning of our flag today is our awareness that, although the people of earth are living in one world geographically, we are living in two worlds spiritually and politically. America's flag stands today in contrast to another flag already flying over one-sixth of the earth. The 48 stars on the blue field with the red-and-white stripes confronts the Red flag of the hammer and sickle in every corner of the globe.

We are contesting one another not only for territorial control and economic resources control throughout the world, but for the minds of men. Two worlds face one another—the one world based upon the doctrine of statism; the other world having as its major principle the doctrine of individualism. The one upholds the right of the state above everything—the right of the state to control, to destroy, to regiment. The other upholds the right of the individual to all his freedoms, to all his natural heritage, so long as he does not harm his brother.

United States foreign policy

We are giving aid to Greece and Turkey, not as a measure of imperialism, but as a means of halting communism. Our economic aid is for the purpose of preserving liberty and for the purpose of preserving the peace.

Although the Soviet Union and the United States are in diplomatic conflict, we are still hoping to reach substantial agreement with the Russians. We are demonstrating the will, intent, and purpose for a just and lasting peace, and we have every reason to ask and expect the Russians to demonstrate likewise. History is the story of conflicting ideas. Many of these conflicts were resolved peacefully.

Russian-United States differences

The problem is not an easy one because of these factors:

(a) The differences in political ideology between the United States and Russia, to which I have already referred. Russia's political philosophy seems to operate on man's minds like a fanatic religion, whose god is worldly power, and which is worshipped and served, if need be, by cunning and violence in total disregard of the rights of other nations and individuals. Witness Poland, Hungary, Bulgaria, etc.

(b) The differences in economic ideology with America seeking to promote freedom of enterprise throughout the world and Russia seeking to promote economic Marxist ideology wherein the State owns and distributes everything.

(c) The differences in spiritual values. There is a vast gulf between our way of thinking and Russia's way. We must span that gulf.

(d) Russia's historic fears, based upon the countless invasions she has suffered through the centuries; and upon the atomic bomb and bacteriological disease weapons which aggravate the fear of each nation. We must antidote that fear.

(e) Russia's new dominance in the world in which she feels the new strength of her more than 70 amalgamated peoples. She feels now, for the first time, her ability to realize her ambitions of centuries.

(f) The limited nature of vital mineral and other resources such as oil on which the modern state and modern military forces depend.

Hopeful outlook with Russia

Yet, in spite of all these differences, I have faith that we can achieve peace with Russia. We must find the way to live together, to rebuild a war-wracked earth. This does not mean that we must be innocent and blindly trusting. On the contrary, we must ever remember that "Eternal vigilance is the price of liberty." You remember that flag which was carried during the Revolutionary War which showed a coiled snake. On that flag was the inscription "Don't tread on me." That is our message to communism and fascism today. We must prepare ourselves against any emergency with the most advanced, up-to-the-minute weapons and training as Wisconsin's Billy Mitchell would have us prepare were he physically in our midst today. And we must be united—we must get rid of the saboteurs within.

But we will have faith that peace can be secured through peaceful means, and we will work without ceasing toward that end.

We will not be discouraged at temporary set-backs. Yes, I have every faith that we can make the United Nations succeed. I pray God that reason and judgment will be born anew so that true international understanding will result.

4. MAINTAINING AMERICA UNIMPAIRED

We turn now to the fourth meaning of our flag in the atomic age. It is that we must pass Old Glory's values on, vital and unimpaired, to those who are to follow after us. We are the heirs of all the generations that preceded us. They gave to us our unmatched liberties and abundance, and we want to do the same and even better for our children and our children's children.

As the poet said:

"The glory of our present
Is to make our future free.
We love our land for what she is
And what she is to be."

Passing on our heritage will not be an easy task. In our midst today, there are influences which would subvert our American philosophy of constitutional checks and balances. These communistic, fascistic and other influences would set class against class, race against race, religion against religion. They would foment hate, envy, greed among our people. They would create strife in labor relations and in human relations.

We must antidote these influences with the searing light of publicity, with "the truth that sets men free." We must be alert to counteract un-American ideas, whether they be spread by word of mouth, by deed, or by the printed word.

We want no racketeering in our land to sully the flag—be it economic racketeering, political racketeering, or spiritual racketeering. You and I know what a racketeer is—he is a fellow who wants to play the game only his own way, with his own methods, his own tactics, regardless of the decent rules of society, regardless of his fellow man's welfare.

We want a law-abiding America, and America unlimited, an America unimpaired.

HOME, SCHOOL, CHURCH, AND INDUSTRY

We all know the flag can fly proudly over the American home—only when the family in that home live in the grand, old tradition of thrift, honesty, and decency—the kind of sober, old-fashioned American life, in which there is no place for loose living and thinking.

The flag can fly proudly over the American school only when that school effectively teaches the youth of our land their obligations as well as their rights, so that it produces graduates of vision and initative. Such graduates build for themselves and their land, know their civic responsibilities, and do not evade them. They are the kind of graduates who do not look to government to support them, but who look rather to their own efforts and their own industry to build a life.

The flag can fly proudly in the churchyards of America only when the churches effectively teach and inspire the moral character and the spiritual verities and vigor which have always made our Nation great. Such qualities can be a vast reservoir of strength in fighting off the moral breakdown, the postwar jitters and the postwar neurosis which followed the First World War.

The flag can fly proudly over American industry only when management and labor join wholeheartedly in a common cause, dedicated to the general welfare and prosperity of all of the people.

This, then, is our job. Our job is to so live our lives that the flag may fly as proudly for us in peace as it flew for us soldiers in war.

CONCLUSION

My fellow Americans, it has been a wonderful privilege to be home in Wisconsin with you today. Seeing you gives me renewed faith and confidence that America will be adequate to all the challenges up ahead.

We have today explored together some of the meanings of the flag in relation to the past, the present, and the future.

We will continue, I am sure, to carry on with a full appreciation of our responsibility before us, living gallantly, courageously, making our flag even more meaningful to those who are to follow after us. Then indeed—

"The Star Spangled Banner in triumph shall wave,
O'er the land of the free and the home of the brave."

Charity Medical Care or National Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief radio address entitled "Charity Medical Care

or National Health Insurance," which I have prepared for delivery in Montana.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, I wish to talk briefly about the costs of medical care—something which is a constant source of worry to every family in America. About doctors and debts; about how we can afford to keep our children well; and about how—when sickness does strike—we can be sure of getting the care we need without going through the nightmare of asking public charity.

For many years we have fought—first to have the problem of constantly mounting medical costs recognized in Washington and then to find a solution. We have won the first part of the battle. Now even the Republican Party and its leadership admit there is a problem and that it's serious.

The fight has shifted. Today the question is not whether something should be done but "What should be done?"

There are now two different proposals before the Congress. Republican Senators TAFT, BALL, SMITH, and DONNELL have told us how they think your family should get medical care. They propose relief medicine, through public charity, under monopolistic control.

They propose to solve our national medical care problem by appropriating two hundred millions of tax money each year. This money would be turned over to the States with instructions that they use it to provide care to those people whose need is so great that they are willing to put their families on public record as applying for charity.

The amount proposed is pitifully small—enough perhaps to aid that 3 or 4 percent of our population now dependent on welfare funds. Far worse, however, is the shocking proposal that the American people accept State relief as the way to solve a problem which confronts almost every family in the land. For Senator TAFT has agreed that to get aid under his bill, people must submit to a means test—that is prove that they are poor and unable to pay medical costs.

Under this Republican proposal, a family asks for and gets charity or it gets nothing. This is what the Republican leadership in the Congress asks you to accept as the answer to your medical-care needs.

The other proposal now before the Congress is the national health insurance bill which I have had the honor of introducing along with Democratic Senators WAGNER of New York, TAYLOR of Idaho, CHAVEZ of New Mexico, PEPPER of Florida, and MCGRATH of Rhode Island.

Instead of grants of tax funds, this bill is based on the well-tried, truly American principle of insurance. In place of limited, relief care in emergencies, it provides for high quality medical care—and for preventive care to keep people healthy as well as for care when they are ill. In place of regimentation and relief investigations, the democratic national health insurance bill guarantees the patient complete freedom in choosing or changing his doctor and guarantees the doctor his freedom of choice.

Under the national health insurance bill, people would contribute to a national insurance fund. The money would be collected by the Federal Government under a plan managed locally—with representation from the doctors, of course, but principally by local citizens representing your interests.

Thus you will see, the national health insurance bill makes care available to the great mass of American citizens—makes it available to them as a right and not as charity.

The choice seems clear. On one side—State medicine, regimentation of patients, a tax-supported relief program, and limited, charity medical care. On the other side, as embodied in the national health insurance bill, comprehensive, quality medical care based on the American way of insurance. Medical care as a right of free people and not charity care for a nation of paupers. This is what the American people want. There is no question but that the people will demand national health insurance. I hope they will voice that demand so loudly and so clearly that all Washington will hear.

Your Chances of Getting Ahead

EXTENSION OF REMARKS
OF
HON. ALBERT W. HAWKES
OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by James H. McGraw, Jr., president of the McGraw-Hill Publishing Co., Inc., which appeared in the Washington Post on Thursday, June 5, 1947.

This article, entitled "Your Chances of Getting Ahead," seems to me to go to the essence of what made the United States of America. It means to me that there will always be a penalty of leadership, but we must not put a penalty on leadership. The whole history of the world has proved that the uncommon man, or the man with ability and good leadership, is vital to the success and happiness of the common man, and whenever a government uses its power to tax for purposes other than proper expenses of government, the future of the people involved is in jeopardy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUR CHANCES OF GETTING AHEAD

For 20 years we have been whittling away the foundations of our economic structure. We have been cutting away the incentives to get ahead in the world, to increase production and to improve efficiency. Unless this process is reversed soon, we risk the sort of industrial stagnation that currently afflicts Great Britain so disastrously.

How far the whittling has gone is shown by the statement at the end of this article. It shows that everyone's stake in working harder and getting ahead has been reduced sharply since 1929. In that year, anyone who was even moderately successful could look forward to reaping the rewards of his success. If he earned $5,300 annually over a period of 25 years, he could retire on a comfortable income of $3,000 per year. Or he could pile up enough capital to go into business for himself. He could fulfill the American dreams as phrased by Abraham Lincoln in his first annual message to Congress in 1861:

"The prudent, penniless beginner in the world, labors for wages awhile, saves a surplus with which to buy tools or land for himself, then labors on his own account another while, and at length hires another new beginner to help him. This is the just and generous and prosperous system, which opens the way to all, gives hope to all, and consequent energy and progress, and improvement of condition to all."

Look at the situation today. To retire on an annual income from investment that will buy as much as $3,000 did in 1929, a young man needs to earn over $13,000 a year for 25 years. That's more than two and one-half times the income he would have needed in 1929. The same thing is true of acquiring a stake in a business.

WHY TRY TO SUCCEED?

While the income needed for retirement today has increased two and one-half times—or by more than 150 percent—since 1929, the average person's income has increased only 80 percent. So the average man's chances of achieving success are really slimmer now than a generation ago.

This 1929–47 trend is something new in America. The average person's chances of getting ahead improved during 1914–29. In that period the dollar income needed for retirement or a stake in business rose by 75 percent, but the average income rose by 100 percent. So more people were within striking distance of success and security in 1929 than in 1914. The story has been different since 1929.

Fewer people actually do achieve financial success today. Only 1 percent of all families now have incomes large enough to build up a retirement fund or a stake in business. In 1929 almost 6 percent of all families attained a comparable degree of success.

Higher taxes are the most important reason why it takes so much mor now to build up a competence. They account for one-half the increase in the amount needed. The other half is explained by higher living costs and lower interest rates.

It is, of course, true that few people ever get into the higher income brackets. So the process of cutting away the incentives which play such a key role in our economic system affects comparatively few people immediately. It does, however, have a powerful indirect effect on all of us.

EVERYBODY LOSES

When from one-half to four-fifths of any additional income of successful people goes to Uncle Sam, a heavy drag is obviously put on doing the work to get it. Thus, we stand to lose the benefit of full use of the Nation's best brains. By so doing we stifle industrial progress. And the loss in productive efficiency far outweighs the amount of tax revenue the Treasury gains. Carried far enough the process of stifling economic progress by slashing rewards leads straight to industrial stagnation.

The same process also multiplies the risks of embarking on new capital investment. High taxes rule out all but the most profitable new projects and restrict most expansions to boom times when profits are high. So capital invesment follows a boom and bust pattern and, by so doing, contributes much to ups and downs in production and employment.

BRITAIN'S SORRY PLIGHT

The case of Britain today provides an object lesson of how blighted incentives produce industrial stagnation. Britain's number one economic problem is to get more production. But the tax load there is so heavy it stifles the incentive to produce more.

A coal miner who works an extra shift pays about a third of his added earnings to the tax collector. And, as the London Economist comments, tax rates on business executives are so high that they kill every incentive except that to tax evasion. In short, not only is the incentive to succeed blighted, but so is the incentive to work.

A root-cause of Britain's trouble is this: The cost of an expensive program of social benefits has been piled on top of the heavy costs of paying for past wars and trying to prevent future wars. Tax rates are boosted accordingly. What her experience proves is that the attempt to provide excessive social benefits may defeat itself. It raises the tax burden on rich and poor alike and smothers the incentive to work. So the underlying basis of all economic benefits—production—is eaten away.

IT'S NOT TOO LATE

We in the United States haven't traveled as far down the stagnation road as Britain has. Taxes amount to about 26 percent of national income here as against about 45 percent there. But unless we start soon to build up incentives to do better work, instead of whittling them away as we have been doing, we will catch up with Britain fast.

Can anything be done? Decidedly yes, particularly by tax reform and reduction in the cost of living. As far as interest rates are concerned, any large increase would raise excessively the cost of carrying our war-swollen national debt, and hence raise taxes. But some increase in what are now excessively low interest rates may well be both feasible and desirable.

Action on the tax front is the first order of business. Our jerry-built tax structure is the thing that is chiefly responsible for cutting the incentives to work harder. Two things are important: (1) Government spending must be pared to the bone; (2) the tax system must be completely overhauled to remove the shackles on all-out production.

The fifty-sixth editorial in this series, published in March, outlined major steps that need to be taken in remodeling Federal taxes in order to increase incentives to individual and business enterprise. The individual income tax reduction act of 1947 is no more than a short step in the right direction. Much more must be done to clear the way for high production and rising living standards.

Lifting the blight which taxes now place on incentives would help cut the high cost of living. It would stimulate greater production and greater efficiency. But a further step is necessary. Part of the benefits of improved efficiency must be passed on to consumers in the form of lower prices.

In the past few years we have been following precisely the opposite course. In many cases wages have been increased all out of proportion to increased productivity. Result—soaring prices and a severe squeeze of the consumer, to which some greedy exploitation of war-created shortages has also contributed.

TO GIVE ABILITY A CHANCE

Our basic and most crucial problem is to get back on the track which leads to higher production and improved living standards all along the line. We got off that track in the 30's. Then, we started scrambling for larger slices of the same pie instead of trying to produce a larger pie. Now the process of getting back on the track is greatly complicated by the tremendous tax burden growing out of the war.

Yet it's not too late to turn back from the road that leads to industrial stagnation. As the statemen in the center of the page shows, we could restore the odds of getting ahead to what they were in 1929. Cutting the Federal budget to $25,000,000,000 a year and putting the tax structure in good order are the crucial first steps.

By taking these steps soon, Congress can go far to restore the incentives to hard work and efficiency which have been so largely washed away in the past 20 years. If they are not taken, the American dream of getting ahead by hard and effective work will exist only in the history books, and our children will inherit from us an economic order without opportunity, without hope, without individual liberty.

JAMES H. MCGRAW, JR.,
President McGraw-Hill Publishing Co., Inc.

YOUR CHANCES OF GETTING AHEAD

To see how your chances of getting on in the world have changed during the past few decades, the McGraw-Hill Department of Economics has calculated how much it now takes to save enough to acquire a retirement income or a comparable stake in a business, as compared to what it took in 1914 and 1929.

The objective set is an income from investment equal to $3,000 a year in 1929 dollars. It is assumed that the savings required to yield this income are made over a period of 25 years. During that period it is also assumed that $4,000 per year (in 1929 dollars) is spent on living expenses.[1]

Here is how the figures work out:

Yearly income needed:

1914	$3,075
1929	5,267
1947	13,221

It now takes more than four times as large an annual income as it did in 1914 to gain a comparable stake. It takes well over twice as much as it did in 1929.

Changes in three factors—Federal income taxes, living costs, and interest rates—explain why the income needed has multiplied so. Here's how these factors line up for the 3 years.

	Federal income taxes, married man, 2 dependents		Cost of living (index numbers 1935-39)	Interest rate, high-grade corporate bonds
	$5,000 income	$10,000 income		
				Percent
1914	$10	$60	71.8	5
1929	3	40	122.5	5
1947	589	1,862	155.0	2½

Similar calculations show that if we could reduce Federal expenditures from $35,000,000,000 to $25,000,000,000 annually, raise interest rates by one-tenth and lower living costs by 15 percent—all realistic possibilities if we make the effort—then the income needed to build up such a retirement fund would come down to $9,500. The chances of realizing that goal would then be restored to what they were in 1929.

[1] Several other factors were omitted from the calculations because they would not have a decisive effect on the results. Thus, existence of social-security pensions and retirement funds now reduces the income needed; but if State income taxes were added, the income needed would increase.

Freezing Appropriations by the President

REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. MILLER of Nebraska. Mr. Speaker, I introduced House Joint Resolution 176 on April 22, 1947, which has for its purpose preventing the Chief Executive from freezing and making impotent the appropriations as provided by the Congress of the United States.

You will remember that last year the Congress, after exhaustive hearings, passed an appropriation bill for public works which included flood control and reclamation and that the President declared a "moratorium and screening procedure for all Federal construction programs."

This was an unusual procedure. It will be remembered that—

First. The Bureau of the Budget and the President had recommended, to the Congress, all appropriations that were made for Federal construction programs.

Second. Upon this recommendation the Congress unanimously approved the funds for the recommended program.

Third. These appropriations were sent to the President for veto or approval. He approved them without the slightest opposition being registered. In fact, he signed the bills in the presence of a score of the Members of Congress, pictures were taken and pens passed out to the sponsors of the bill. The President said, "it was a forward stride."

Fourth. Congress adjourned on August 2, and on August 3, with a letter dated August 2, the President stopped this forward march and made impotent, without approval or consultation with Congress, all Federal works by a drastic limitation of their expenditures.

The President claimed he had authority to do this under the Second War Powers Act. Many Members of Congress felt it was beyond his statutory or constitutional rights.

A few days ago the Congress found it necessary to appropriate $12,000,000 for the emergency flood repairs in the Missouri and Mississippi Valleys. A million and a half acres of land are now flooded, with a tremendous loss of property. If the President had permitted the Army engineers to proceed, perhaps much, or all, of this damage could have been prevented.

If the President can nullify the acts of Congress for public works, he cou'd do the same for a part or all of the appropriations for the military, the veterans, and other important activities of the Government.

Mr. Speaker, I maintain this is entirely too much power for the President to have. That section of the Second War Powers Act, under which he claims to have this authority should be repealed. I am asking the Public Works Committee to proceed with the hearing on the resolution which will prevent the President from nullifying the appropriations as provided by Congress. If we do not do this and the authority is once conceded, then there is no limit to which a President might go. The Congress will no longer control the purse strings as provided by the Constitution and popular self-government will be at an end. The resolution follows:

Joint resolution to provide that Federal public-works projects and programs shall be carried out to the full extent authorized by law

Resolved, etc., That, notwithstanding any moratorium or curtailment policy heretofore put into effect at the direction of the President, it shall be the duty of all officers, departments, and agencies of the Government to proceed, to the full extent authorized by law and the limit of present appropriations, with all Federal public-works projects and programs coming under their jurisdiction.

Cyrus S. Eaton's Admonitions to Capital

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, there are many rumors in circulation to the

effect that several leading industrialists have gone to the White House and recommended to the President that the labor bill, which is now on the President's desk, be vetoed. I do not know the correctness of those rumors, but I find in the New York Herald Tribune of Sunday, June 15, a statement by Cyrus S. Eaton. Mr. Eaton is one of the country's leading industrialists and financiers one who has taken a great pride in the development of industry in the United States, and he is recognized as a man entitled to speak on behalf of American industry. In an article which he has contributed to the Chicago Law Review he has much to say with reference to the proposed labor legislation. He said in the article:

We will have to make immediate and radical changes in our attitude toward labor and our methods of dealing with labor.

He further said:

We will have to begin by muzzling such organizations as the National Association of Manufacturers and by recognizing, and sincerely regretting, that there is bad feeling on both sides.

I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CYRUS S. EATON BIDS CAPITALISTS PLACATE LABOR—INDUSTRIALIST WARNS AGAINST LEGAL CURBS, CALLS FOR MUZZLING OF THE NAM

CHICAGO, June 14.—Cyrus S. Eaton, Cleveland industrialist and banker, said today that "to avoid extinction" capitalists will "have to make immediate and radical changes in our attitude toward labor and our methods of dealing with labor."

"We will have to begin by muzzling such organizations as the National Association of Manufacturers and by recognizing and sincerely regretting that there is bad feeling on both sides," he said.

In an article entitled "A Capitalist Looks at Labor," published in the current issue of the University of Chicago Law Review, he discussed labor legislation, saying, "Let no businessman be naive enough to believe * * * that restrictive legislation will be any more effective in bringing about industrial harmony than the Volstead Act was in discouraging drinking."

WARNS CAPITALISM

Mr. Eaton, who has broad interests in the iron-ore, steel, coal, and railroad industries, asserted that "capitalism cannot survive without the support of labor." He added:

"The casualness with which we capitalists seem willing—nay, even eager—to invite the collapse of our economic system in almost every industrial dispute for the sole purpose of thwarting labor is utterly incomprehensible. Labor not only produces the goods and consumes a large part of them; labor also has the votes. * * *

"Eventually (labor) unity is practically a foregone conclusion. The prospect of labor united should be sobering to even the most embittered and embattled capitalist.

"I also believe we may ultimately see a strong alliance between labor and the farmer, accompanied by a tremendous expansion of the manufacturing and selling cooperatives. The effecting of such a formidable combination awaits only the magic touch of some dynamic personality.

"Then, if capitalism has not already gone by the board, its continued existence will be completely at the mercy of an estranged 95 percent of the electorate."

LAUDS LEWIS FOR RESTRAINT

He credited John L. Lewis, head of the United Mine Workers, an affiliate of the American Federation of Labor, with exercising wisdom and restraint during the soft-coal controversy last fall and accused the mine owners of working "under cover * * * feverishly night and day to keep a torrent of abuse turned on the miners and their leaders through every channel of publicity and to urge all three branches of government—executive, legislative, and judicial—to crack down on labor."

"Throughout the entire time," he added, "John L. Lewis never uttered a syllable of complaint and never issued a statement criticizing anybody."

Mr. Eaton said the Supreme Court decision against the miners "will be productive of untold evil in the whole field of labor relations."

In an article in the same publication Senator WAYNE MORSE, Republican, of Oregon, said the American people are "expecting entirely too much of labor legislation as a panacea for industrial ills."

"I am afraid that too many, both in and out of Congress, have misled themselves into thinking that a maximum of industrial freedom in this country can be attained by putting American labor in a strait-jacket," he added.

River and Harbor Projects

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the projects committee of the Thirty-Seventh National Rivers and Harbors Congress:

NATIONAL RIVERS AND
HARBORS CONGRESS,
Washington, D. C., May 3, 1947.

Hon. JOHN L. MCCLELLAN,
President, National Rivers and Harbors Congress, Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the President, your projects committee met on May 1 to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 35 proposals embracing all water resource improvements with which this Congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, this committee is convinced that 12 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $328,270,000. Two proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 10 proposals, surveys have been authorized but the reports on such surveys have not been completed and we therefore recommend in these cass that Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this Congress. We find 8 proposals, which on preliminary examination appear to be desirable and needful and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization. Of the proposals investigated, we find 3 are without the necessary data or sponsorship to enable the committee to reach a reasonable conclusion on their worth. However, we desire to give the applications sympathetic consideration, and, if possible, offer to the proponents the services of this Congress in reaching a solution to their problems. We have, therefore, not classified these but have suggested that the Secretary communicate with the applicants concerned and request additional data upon the receipt of which further consideration will be given to their proposals.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

Your committee has taken cognizance of the desires and views expressed by representatives of the many interests concerned with the development, use, and control of the Nation's natural resources. In this period of transition from war to normal peacetime endeavors it is propitious to summarize herein such views which reflect both individual and organized public opinion regarding the development of water and land resources of our country. As summarized by your committee they indicate:

(a) A greater and more widespread interest in the development and utilization of water resources and an unprecedented awareness by the general public of the importance of such improvements to the progressive advancement of the national welfare and security.

(b) The necessity for prosecuting an adequate Federal program of improvement of waterways and harbors, the control of flood waters, the reclamation of arid and semi-arid lands, soil conservation, and related projects in order to keep pace with the increasing needs of industry, agriculture, and business in general, and to establish a proven asset in time of national emergency.

(c) The need of sufficient annual Federal appropriations with which to construct additional projects to meet the immediate and foreseeable requirements in accordance with programs prepared by the responsible Federal agencies and authorized by the Congress of the United States.

(d) The vital necessity of adequate appropriations for proper maintenance, operation, and care of projects that have heretofore been completed.

(e) The advisability of continuing sizable survey and planning programs to consider and screen the many additional projects advocated during and since the war so that new projects which are found economically justified may be presented for consideration and approved for future appropriation.

Your committee endorses the foregoing views which have been coordinated with the resolutions committee in order that they may be embodied in the resolutions of this session of the Congress. A large backlog of sound and meritorious projects has accumulated during the past several years due to the necessity of suspending all public improvements not essential to the war effort. Many of these projects that were in the study stage prior to the war have subsequently been reported upon favorably and have now been authorized. The economics of the projects have been reexamined in the light of increased costs and the cost to benefit ratios have been found favorable. Their construction requires only the appropriation of funds.

These projects are spread over the entire 48 States, the Territories, and island possessions and have an estimated construction cost of several billions of dollars. It is obviously impracticable to prosecute such a huge program in 2 or 3 years. In fact, some of the large projects in that program will require, even with sizable annual appropria-

tions, 4 to 6 years to complete. Therefore, the large backlog of projects now authorized and those still in the study stage must be considered a long-range program to be carried out as expeditiously as the financial ability of the Government will permit.

The committee feels that those projects which are particularly important and of immediate and substantial benefit to industry, agriculture, commerce, or the welfare of the people should be carried out without undue delay. The premise is sound that public improvements in the interests of navigation, flood control, soil conservation, reclamation, and related purposes ultimately return to the people benefits more than sufficient to repay the Federal investment in these improvements. Your committee therefore recommends that our Congress and each and every Member thereof take proper steps to insure that the Congress of the United States appropriate each year adequate sums for the orderly prosecution of a balanced, long-range program of public works, which is so important to the advancement, development, and strength of this Nation.

Respectfully submitted.

SID SIMPSON,
Chairman.

APPENDIX A

(Letter R following the project number indicates revision of a previous application)

Class I. Projects endorsed

Endorsed: This means that the committee is convinced that the project is sound, needful and sufficiently advanced in status and should be promptly constructed in the public interest.

Project No.	Name of project	State	Division
99-R-3	Sacramento River, 30-foot ship channel	California	S. P.
360-R	Taunton River	Massachusetts	N. E.
632-R-3	New Haven Harbor and Quinnipiac River	Connecticut	N. E.
663-R	Intracoastal Waterway, Jacksonville to Miami, Fla	Florida	S. A.
705-R	Big Sandy River waterway	Kentucky, West Virginia, and Virginia.	O. R.
712	West Fork River Reservoir	West Virginia	O. R.
716	Appalachicola, Chattahoochee, and Flint Rivers	Alabama, Georgia, and Florida	S. A.
717	Buggs Island Reservoir, Roanoke River	Virginia and North Carolina	N. A.
720	Lehigh River	Pennsylvania	N. A.
729	St. Andrews Bay	Florida	S. A.
732	Lower Snake River	Washington and Idaho	N. P.
733	Bridgeport Harbor	Connecticut	N. E.
733-A	St. Josephs Bay Channel	Florida	S. A.

Class II. Projects classified as meritorious

Meritorious: This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and open for further consideration by the committee.

Project No.	Name of project	State	Division
722	Cape Fear River at and below Wilmington	North Carolina	S. A.
726	Channel from Manteo to Oregon Inlet	do	S. A

Class III. Expeditious report on authorized survey requested

Expeditious report on authorized survey requested: This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.

Project No.	Name of project	State	Division
427-R	Duwamish River and Green River	Washington	N. P.
706	Allegheny River, extension of canalization from East Brady, Pa., to Olean, N. Y	Pennsylvania and New York	O. R.
707	Red River sedimentation, flood control, and river crossing	Oklahoma and Texas	S. W.
708	Muscatine, Iowa, harbor improvements	Iowa	U. M. W.
714	Scioto-Sandusky Conservancy District, plan for flood control and other purposes	Ohio	O. R.
718	Kincaid Creek (flood control)	Illinois	U. M. V.
719	Little River, Niagara Falls	New York	G. L.
723	Cape Fear River flood control	North Carolina	S. A.
730	Saugatuck River-Westport Harbor	Connecticut	N. E.
731	Provincetown Harbor	Massachusetts	N. E.

Class IV. Projects recommended for survey

Recommended for survey: This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Project No.	Name of project	State	Division
709	Upper Monongahela River, modernization of existing navigation facilities	West Virginia	O. R.
711	Niobrara River Basin development project	Nebraska, Wyoming, and South Dakota.	M. R. D.
713	West Fork River, drainage area survey for run-off and water flow retardation and soil erosion prevention	West Virginia	O. R.
721	Southport yacht basin, enlargement and shrimp-boat harbor	North Carolina	S. A.
724	Inland waterway, Beaufort to Cape Fear River, including waterway to Jacksonville	do	S. A.
725	Channel from inland waterway to Carolina Beach	do	S. A.
727	Neuse River, navigation and flood control	do	S. A.
728	Morehead City Harbor	do	S. A.

Pick-Sloan Plan—Or Missouri Valley Authority?

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a very able guest editorial appearing in the Denver Post of June 3, 1947, written by Hon. Leif Erickson, of Montana. The editorial constitutes a penetrating analysis of the Pick-Sloan plan of Missouri Valley development.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PICK-SLOAN PLAN—OR MVA?—PRESENT PROGRAM DECLARED INADEQUATE

(By Leif Erickson)

Hearings on the proposed Missouri Valley Authority legislation now appear likely sometime after June 20. Sentiment for the creation of a Missouri Valley authority has grown tremendously in the valley in recent months. From Missouri to Montana, the people are learning that the so-called Pick-Sloan plan is not a plan for the development of the river, but a plan for underdevelopment of its potentialities. The main stem projects in Missouri which will inundate tens of thousands of acres of land unnecessarily and the destructive nature of the Army's proposed Osceola Dam in that State have turned that State vigorously to an MVA.

The fact that the Pick-Sloan plan will develop only about 30 percent of a reasonable minimum potential of electric power, recently revealed by the Federal Power Commission, has turned everyone sincerely

interested in industries for the West to the proposed MVA.

The total failure of the Pick-Sloan plan to consider land problems, water crop areas, erosion control and conservation, recently pointed out by the regional forester at Denver and Governor Donnell of Missouri, has high-lighted to people in agriculture and in the cities the inadequacy of present bits-and-pieces engineering.

In South Dakota, the proposed Oahe Dam, which would stand as a barrier to navigation through an area where elevators are clogged with wheat because of the boxcar shortage, has turned the people of that State to the MVA proposal.

North Dakota is in the midst of intercity strife over conflicting Army and Interior dam proposals, and alarmed at the effects which the gigantic Garrison Dam will have on her people

Colorado is disgusted with the Army's construction of the uneconomic Cherry Creek Dam near Denver, and the recent nearly 200-percent increase in cost estimates for the Interior Department's Big Thompson diversion project, which has been jumped from $45,000,000 to $128,000,000.

Here in Montana, we have learned from three splendid engineers that the Pick-Sloan plan, in terms of river engineering alone, is only about 60-percent efficient, and would waste or fail to develop 40 percent of the river's potentialities for irrigation, power, flood control, and navigation.

Hope for any revision or improvement of the planning through the interagency committee, which was set up to give an appearance of coordination, has long been abandoned.

The fact that Congressmen and Senators know of the true inadequacy of the Pick-Sloan plan, of the interagency committee, and of the inter- and even intra-agency differences is undoubtedly, in a large measure, responsible for the paralyzing reductions being made in western development appropriations at this time.

The great majority of the people of the Missouri watershed are fed up with the conflicts and the bickering, the sham and the shortcomings, and the lack of progress under the Pick-Sloan procedure. Within a majority of the Federal agencies themselves, there is a desire that a new administrative pattern be established under which there can be real unified and coordinated planning for the valley and its problems, and intelligent administration.

President and Congress: Crucial Test

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. OWENS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of June 14, 1947:

PRESIDENT AND CONGRESS: CRUCIAL TEST

A veto by President Truman of the labor bill would do more harm to international peace than to industrial peace. Two-thirds of the Congress may override a veto, but how could the President expect future cooperation from Congress if he sets up his judgment against the carefully considered views of more than two-thirds of the Senators and Representatives?

Congress knows far more than the President about the need for legislation and about the way the new law will meet that need. Congressmen have been holding hearings and arguing among themselves and with constituents over labor relations for many months. The President has been engrossed in a multiplicity of other problems. He won't be able personally to study the labor bill adequately. He must rely largely on advisers to analyze its merits and demerits. What advisers are as reliable as two-thirds of the Congress?

In foreign affairs the President must constantly call upon the Congress to trust him, because his source of information are so intimate and his responsibility is so great. But how could he expect the Congress to trust him if, when its Members are much better informed, he showed no trust in them and refused to follow their good judgment?

Furthermore, the Congress knows, and thinks the President should know, that our international influence and our domestic strength have been seriously weakened by abuses of organized labor power—and particularly by the reckless industrial warfare of 1946. Is our memory so short that we forget the serious conditions that created the public demand for the intervention of law? Unless labor as well as management is legally required to fulfill its obligations to the general welfare, our country will steadily deteriorate and our Government become more and more impotent to protect our interests at home and abroad. The world will wonder who pulls the strings of our Government.

It is the primary duty of the Congress to legislate. The veto power of the President was never intended, and should never be used, to impose his will upon the American people contrary to the judgment of their chosen lawmakers. The veto power is only designed as a safeguard against legislation which, because of mistake or haste or the overlooking of important considerations, would not be approved by the Congress after being advised of its errors. An example of hasty legislation which thoroughly deserved the veto it got was the Case bill. Another piece of legislation equally deserving of a veto because of its overlooking of prospective world reconstruction needs is the lopsided tax-reduction bill now on the White House desk.

But this Congress has given to the labor bill an extended and detailed consideration which cannot be duplicated by the President in 10 days or 10 weeks. This legislative judgment should weigh more heavily with the President than a million letters from persons selfishly affected, more heavily than a hundred memoranda from public officials personally concerned, more heavily than the well-intentioned but inexpert counsel of intimate advisers, certainly more heavily than the intimidation of labor leaders who, after cold-shouldering all requests for cooperation in framing wise legislation to cope with crying needs, are now filling the woods with lamentations.

When two-thirds of the Congress vote to pass a much-needed law against violent opposition, they have a right to expect cooperative approval from a President who cannot fulfill his high responsibilities except by giving cooperation in exchange for the cooperation he must obtain.

Good Advice

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of June 16, 1947:

HOOVER PLEA FOR AID LIMITATION BACKED BY BARUCH

Bernard M. Baruch, elder statesman and United States economic guide in two World Wars, today put his weight behind bipartisan foreign-policy spokesmen in urging a new, more comprehensive approach to the problem of this country's overseas air program.

Mr. Baruch commented on the appeal of Herbert Hoover for a new appreciation of the limits of American aid to foreign countries.

"What he has advocated is sound and simple, and if it could be undertaken speedily and effectively could bring great results in peace and work for all."

ALL IN LINE

Mr. Baruch observed that the former President had entered specifically into principles he himself had advocated in the past, and that this urging complements recent statements on European recovery by Secretary of State George C. Marshall, Senator ARTHUR H. VANDENBERG, Republican, of Michigan, and Senator HARRY F. BYRD, Democrat, of Virginia.

Other observers, however, viewed the Hoover statement as running smack against the administration's campaign to maintain present high levels of foreign trade—for both domestic- and foreign-policy reasons.

Mr. Hoover charged that the record rate of exports, although not the sole factor, was the major one in the continued rise in prices at home. This same view was expressed recently by Senator ROBERT A. TAFT, Republican, of Ohio, and brought a heated rejoinder from President Truman.

Mr. Hoover proposed that "our limited resources" be concentrated in areas where western civilization can be preserved. This last suggestion was a bid to abandon the Soviet Union and her satellites as areas where cooperation cannot be expected.

Mr. Hoover placed the blame on the Soviet Union for imposing billions in expenses on the United States during the last 2 years. In this, he was supported by retiring Under Secretary of State Dean Acheson, who, in a speech last night at Middletown, Conn., warned that financially Europe is bleeding to death and that the shock and crisis which will come next year will reverberate throughout the world.

Two years ago Mr. Baruch wrote Representative ALBERT GORE, Democrat, of Tennessee, in regard to overseas aid:

"We ought to examine our productive capacity and determine how to divide that production, first, to see that enough of what is produced remains in the United States to avoid disastrous inflation, and then how much to allocate for rehabilitation of Europe, China, and the Philippines.

"Unless this dividing is done wisely we will sink and the whole world will go down with us. We should direct our aid to foreign countrie by giving priority to those who need the most and who will use it to help themselves on their own feet."

Mr. Baruch is known to favor a supreme European economic council to determine what each country could contribute to European recovery, integrating this with United States aid.

Republican leaders have charged figures on European needs have been somewhat inflated because most nations seeking help know they are competing before the United States with many other countries.

When Mr. Hoover last year made his round-the-world study of food needs, requisitions totaled 28,000,000 tons. Estimates indicated the United States could supply no more than 14,000,000 tons. The Hoover study showed actual needs closer to 17,000,000 tons, and the gap was bridged in part by conservation here at home.

French failure to cooperate more fully in Europe is costing us $100,000,000 a year, according to some estimates. Another estimate is that full French-British cooperation in European relief and rehabilitation might save us $750,000,000 annually.

Too Much Politics in the Post Office Department

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. HAGEN. Mr. Speaker, the other day in reading my home town daily newspaper, the Crookston (Minn.) Daily Times, I observed a syndicated column which I felt outlined rather adequately some of the inequities now existing in the rates charged by the Post Office Department for several classifications.

In addition, the columnist, Mr. George E. Sokolsky, severely criticized the political manipulations which tend to decrease the efficiency of the Post Office Department.

Because I feel that his article rather graphically portrays some of the conditions in the Department, I am making it a part of my remarks.

There is only one point on which I disagree with Mr. Sokolsky and that is where he states that post offices are "usually dirty, ill-kept places." I know that in the State of Minnesota these adjectives do not apply.

The article, distributed to newspapers throughout the country by the King Features Syndicate for publication on June 10, follows:

The most usual contact that most Americans have with their Government is with the post office and the postman. The post office does a huge business at a deficiency. Postmen are poorly paid in comparison even with other Government employees. Post offices are usually dirty, ill-kept places, except in those colossal, ornate, marble and granite buildings erected wastefully and beyond practical needs. Of course, there are plently of exceptions and this is not intended as a reflection on the men down the line, but on the incompetence of the politicians who operate this business enterprise.

The real trouble is that the politician appointed to run the post office is usually either chairman of the Republican or the Democratic National Committee and therefore has no time to operate the business for which the taxpayer pays him a salary. The present Postmaster General, for one reason or another, is not around too much to manage this business. Its policies are made by the permanent subordinates who, at any rate, know that a stamp is not something exclusively for philatelists.

Each year the Post Office comes to Congress to make up a deficit. Nobody investigates why the Post Office has a deficit. Nobody tries to find out why it cannot be run efficiently. The problem is to make up the deficit. The Democrats for 15 years wrangled this problem without too much trouble, because they did not care how much they spent. The Republicans, who should shake out the waste in Government, take the Post Office's word for it that there is a deficit and decide that one way to make it up is to add $8,200,000 by a new tax on the users of second-class mail. They select 250 out of 25,000 users of second-class mail to make up this amount. And they justify the discrimination by the New Deal doctrine that the more competent and successful should be penalized in the interest of the smaller units. It was generally thought that doctrine died with Harry Hopkins.

The post office asks for an appropriation of $1,500,000,000, which is more than they are spending this year and is twice as much as during the prewar years. The types of publications selected for soaking are metropolitan newspapers, farm journals, and national magazines. All other publications will be exempt from the new provisions. Small newspapers are exempt; labor, religious, fraternal, and veteran publications are exempt.

The large magazines will really carry the full load, which is what the post office plans should be the case. The 15 large, national-circulation magazines are the ones that are to be soaked. These magazines generally pay their way completely; that is, they paid $6,579,080 in postal receipts against $6,570,332 in ascertained postal costs for the fiscal year June 30, 1945.

Now, generally speaking, very few care about the other fellow being soaked, so those who are exempt will be well pleased that the load has been passed to the other fellow. If, however, these 15 discover some way of getting out from under, by rearranging their publishing or some other means, the deficit will be there again next year, and somebody now exempt will have to be soaked. So passing the buck does not solve the problems.

The way to solve this problem is to discover who says there is a deficit and why. The administration ought to hire one of the great business engineering firms of this country to study the post office as a business enterprise, with the object of reorganizing it so that it functions right.

Cutting air mail for spotlight politics and then searching around for some place to tack on the deficit is not a business operation. Nor is it a business operation to promote one kind of mail against another, air mail against ordinary mail, and then to send air mail by train without a rebate to the sender, as was done for many years. All these shenanigans represent nothing realistic. Soaking the 15 big magazines will probably bring no additional revenue, but it looks like good politics to soak the successful. Good politics for whom? For the Postmaster General or for the country?

Appointment of Magill Advisory Committee Is Republican Move To Replace Income Taxes With a Federal Sales Tax

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. DINGELL. Mr. Speaker, when H. R. 1 was under consideration in the House, I tried to point out the windfalls the 20 percent across the board plan would grant to upper bracket taxpayers. The rank injustice in a tax reduction program that would have given 2,166,923 taxpayers in the State of Michigan an increase in take-home pay of less than 5 percent and the 62 top taxpayers with incomes over $300,000 a 60 percent increase in take-home pay was obvious. Yet, under the backing of the Republican leadership, this fraud upon the American public was advanced as the answer to an election promise of tax relief.

From the very first day I laid eyes on H. R. 1, it smelled rotten and the aroma became more nauseating as the bill proceeded to enactment. But the awful stench that now emanates from the Republican tax program is stifling to the olfactory senses.

I should have realized from the beginning that H. R. 1 was fragrant in contrast with the shifting of the tax load to the people in the low income groups that is now in evidence. When testimony of outside witnesses before the Ways and Means Committee on H. R. 1 was limited to Mr. Roswell Magill, the Wall Street lawyer, and Mr. John Hanes, the New York banker and business executive, the Democrats on the committee protested that the views of these gentlemen on Federal tax matters were already known. Both of them probably are in the income brackets where the increase in take-home pay from H. R. 1 amounts to around $20 an hour in comparison with the 4 or 5 cents an hour for people with incomes of less than $5,000. So we expected them to favor H. R. 1. But I wondered at the time why both Mr. Hanes and Mr. Magill should go out of their way to present to the committee their views on a Federal sales tax.

Mr. Magill advised:

I would like to see the excise tax system strengthened.

And further:

I know it was not very many years ago when 40 percent of the revenues of the Federal Government used to be produced by excises. Now, as you [Mr. GEARHART] say, it is less than 20. My feeling would be that it should be at least 25, and the system as a whole would be more stable for good times and bad if it were more than that.

Mr. Hanes said at page 196 of the hearings on H. R. 1:

I have advocated a sales tax because I think we have to get the revenue where the revenue is, and we are going to be pressed very hard for revenue in the next few years.

So Dr. Magill and Mr. Hanes counseled the prompt enactment of H. R. 1 to stimulate managerial incentive and venture capital investment. Yet at the same time they urged that revenue requirements justify the enactment of additional Federal excise taxes, or even a sales tax.

It is to the credit of these gentlemen that they were honest. They did not attempt to hide—as did the Republican majority in the Congress—their real intention to shift the tax load of the wealthy to the poor through a sales tax. No, Mr. Speaker, all along the line the people were assured that not only could there be income-tax reduction, but debt retirement as well.

It is only recently, since H. R. 1 passed the House, that the Republican tax leaders have revealed that they secretly agreed with Mr. Magill and Mr. Hanes about enactment of a Federal sales tax. In the current hearings of the committee on the 1948 tax revision a witness on May 28 was urging the repeal of the tax on transportation of property. This tax is one of the most regressive excises and increases the cost even of the poor man's

salt. In questioning the witness, Chairman KNUTSON asserted:

We are now undertaking a revision of the tax code. It is the hope of the committee to be able to shift much of the burden that is now being carried by the income-tax group, which includes almost everyone, over to the excises at least in part, because the income tax is not a reliable source of income in times of depression or recession.

And he said:

Obviously, if we are going to extend the excise field we will have to include a great many items that are not now included. It is the thought of the committee that perhaps the revenue derived from excises should be set aside into a fund that could be called the war retirement tax fund.

Since then, Mr. Speaker, at least four or five majority committee members have dared to discuss this scheme to enact a Federal sales tax or a host of excises—which are nothing more than sales taxes.

The implementation of the plan has presented its complications, however. With H. R. 1 awaiting enactment under the theory that revenues now afford a surplus to provide tax relief for the wealthy, it was a bit embarrassing to be talking of sales taxes and new sources of revenue. So it was agreed to lie low until H. R. 1 had cleared the Congress.

Hardly had this happened, however, when appointment by the chairman of the Committee on Ways and Means of a Special Tax Study Committee was announced.

Now, what is the significance of an advisory tax study committee, you may inquire. Where do they enter into the picture? Well, that is a mighty good question—and the answer is that they have not the slightest business in the enactment of tax legislation. That is the job of the Congress, its committees, and its employees. Of course, we want all the information we can get, in open hearings, but there is no place for individuals from industry or private law practice in the closed sessions of the Ways and Means Committee.

The appointment of Dr. Magill to head the tax advisory group is now the obvious step to obtain a mantle of academic and professional respectability with which to dress up the Republican design to reduce income taxes upon the rich and substitute a sales tax upon the poor. But it will take more sugar than Mr. J. Cheever Cowdin and all his National Association of Manufacturers can produce to sweeten the bitter pill of a sales tax for the American public to swallow.

It would have been more deceptive to have selected an advisory group whose sales-tax inclinations were not so well advertised. As the gentleman from Rhode Island [Mr. FORAND] so conclusively demonstrated last Thursday, this tax-study committee is preponderantly in favor of excise or sales taxes as a major source of Federal revenues.

Of course, there have been Republican advocates of sales taxation for years. Andy Mellon gave us a taste of reducing income taxes which later was considered to necessitate the temporary imposition of excise taxes. But throughout my career in Congress, I have fought against excise taxes and sales taxes at every turn. I know—as Dr. Magill and his group know—that sales taxes fall heaviest on those least able to pay. As recently as February 5, 1947, I said on the floor of the House that—

The wartime excise taxes borne by the consumer should be reduced at the earliest possible date in accordance with the pledge given the American people upon my motion and insistence at the time of their enactment.

Now, the Republican scheme is not only to make these taxes permanent, but to greatly broaden the excise-tax base and enact a Federal sales tax. The financial journals of Wall Street, who are the best judges of what Neighbor Magill is thinking, are in accord that his appointment underscores the trend toward a sales tax. And to remove any possible doubt, Mr. Speaker, that this impression might be erroneous, let us remember that Dr. Magill and Mr. Hanes, in testifying before our committee in support of H. R. 1, both favored the sales tax as an alternate source of revenue.

The Wall Street Journal for June 11, 1947, states:

The emphasis in Congress is shifting from tax relief to tax law revision, meaning redistribution of the tax burden.

And further:

Republican ideas are mirrored in the naming of Roswell Magill to head a Ways and Means Committee tax study group.

Mr. Magill, former Under Secretary of the Treasury, has been chairman of the privately financed committee on postwar tax study. He supported GOP plans for a 20 percent tax cut across the board. His tax study group recommends higher excises, and suggests the possibility of a 5 percent retail sales tax, along with other major revisions in the tax law that would immediately benefit stockholders, families with taxable incomes above the first surtax bracket, and businesses that encounter temporary financial hardships.

Mr. Speaker, under leave to extend my remarks I insert the article in my remarks at this point in the RECORD:

TAX REPORT—A SPECIAL SUMMARY AND FORECAST OF FEDERAL AND STATE TAX DEVELOPMENTS

Big budgets threaten to hamper tax reduction for at least 2 years.

Despite strenuous Republican trimming, it now appears that Federal spending in the 1948 fiscal year will not be less than $34,000,000,000 and may be closer to $35,000,000,000. Enthusiastic economy advocates hope to trim two or three billion dollars from this figure in the following fiscal period. This assumes no new large demands for foreign aid—and that is a big assumption. The 1949 budget will be written in the 1948 election year, and Republican leaders already are passing the word that they will be more generous next year in appropriating funds for reclamation projects and other domestic programs.

This means tax thinking will be overshadowed by budgets well in excess of $30,000,000,000 at least until June 30, 1949. The proposed 10.5 percent to 30 percent income tax cut, now on President Truman's desk, would reduce Federal revenues by $4,000,000,000, leaving only a modest surplus to trim the public debt and hedge against the possibility of lower revenues and international emergencies. The emphasis in Congress is shifting from tax relief to tax law revision, meaning redistribution of the tax burden.

Representative GEARHART is putting the finishing touches on an omnibus tax measure. It has developed into a much more ambitious piece of legislation than Mr. GEARHART expected. It proposes a nearly universal manufacturer's excise levy of 7 to 10 percent. This would make up revenues lost by a proposed increase in personal exemptions sufficient to excuse some 30,000,000 taxpayers from income taxes, Mr. GEARHART says.

This is a more radical shift than most Republicans favor. The Democrats already are up in arms, claiming it imposes greater burdens on low income earners. The Republicans generally favor an increase in excises, but hesitate to go as far as the Gearhart measure.

Republican ideas are mirrored in the naming of Roswell Magill to head a Ways and Means Committee tax study group.

Mr. Magill, former Under Secretary of the Treasury, has been chairman of the privately financed committee on post-war tax study. He supported GOP plans for a 20 percent income tax cut across the board. His tax study group recommends higher excises, and suggests the possibility of a 5 percent retail sales tax, along with other major revisions in the tax law that would immediately benefit stockholders, families with taxable incomes above the first surtax bracket, and businesses that encounter temporary financial hardships.

The Magill committee, however, parts company with Mr. GEARHART on personal income taxes. It recommends several sets of income tax schedules, all of which would impose a higher initial tax rate than that provided in this year's GOP tax bill. And it recommends no increase in exemptions.

Mr. Speaker, I have tried to expose the Republican tax-grab bill for the rich in its true light. It is obvious now and publicly admitted on Wall Street that Federal expenditures must remain high. So the answer to their tax burdens is to send their Wall Street lawyer, the New York banker, and the representative of the National Association of Manufacturers to sit in with the Committee on Ways and Means. There they are expected to study and advise the enactment of a sales tax to permit even greater income-tax cuts for the wealthy than provided by H. R. 1.

Mr. Speaker, on this ground alone the veto of H. R. 1 is more than justified. I have tried to point out the injustice of the Republican record on H. R. 1 and the program for a sales tax, which I shall oppose as long as I am able to speak. But there is another fallacy in Dr. Magill's approach to fiscal policy other than its manifest inequity. In his statement to the press following the organization meeting of his study committee, he said:

The problem of the Ways and Means Committee, as we understand it, is to devise a revenue system which contributes to the healthy functioning of the economy. * * * Some taxes are unstable in their revenue production, giving fat yields in times of great prosperity but meager yields when business activity falls even a little below its peak point.

Now, I think it fair to assume that Dr. Magill is speaking of the flexibility of revenues from the income tax when he stresses the importance of stability of the tax structure. This emphasis upon rigidity in Government revenues is a return to the economic philosophy of Adam Smith, the English economist of the eighteenth century. The stability in revenue was one of the canons of taxation proposed by Adam Smith. Of course, excise and sales taxes yield a more constant revenue than does the income tax, but it is now generally agreed

among fiscal experts that a flexible revenue system is to be desired. This makes it possible to increase revenue in periods of prosperity, when a surplus has a desirable economic effect. Furthermore, in periods of depression it reduces the tax burden and thus helps stimulate consumer purchasing power. While it is possible to vary tax rates to achieve the same results, it is quite clear, based on past experience, that Congress cannot always take action quickly enough to accomplish the change at the correct time. For this reason, most tax economists now agree that the tax structure should be designed in such a manner that the revenues will automatically increase in good times and decrease in bad times, without requiring action on the part of the Congress.

The least Dr. Magill can do, Mr. Speaker, if he is going to assume unto himself the responsibility for advising the Committee on Ways and Means, is to read something a bit more up to date than the Wealth of Nations, published by Adam Smith in 1776. This country, and thinking on what constitutes equitable and sound tax policy, have come a long way since then. I know the American people do not want to go back to the colonial days of excises and sales taxes, whatever Chairman KNUTSON, Dr. Magill, and Mr. Hanes may have up their sleeves.

H. R. 1, when considered by itself, is a tax bill designed to provide tax relief for the rich. Regardless of revenue requirements, the President would have had to abandon his conscience to sign this perverted legislation. When combined with the sales-tax drive now setting sail under Republican command, the result is a conspiracy to reduce income taxes upon the rich and to replace them with sales taxes upon the poor. Under such circumstances, there was no alternative to vetoing H. R. 1, and unless the House wants to endorse this scheme to put over a sales tax, it should vote to sustain the Presidential veto.

The President's Veto Message of H. R. 1

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. REED of New York. Mr. Speaker, when I listened to the reading of the President's veto message of the tax bill, H. R. 1, there swept across my mind the following words of Alexis de Tocqueville, which I quote as applicable to the veto message and the use to which it was proposed to be put:

When the chief magistrate enters the list (for reelection) he borrows the strength of the government for his purpose. The cares of government dwindle for him into second-rate importance, and the success of his election is his first concern. All public negotiations, as well as laws, are to him nothing more than electioneering schemes; places become the reward of services rendered, not to the nation but to its chief; and the influence of the government, if not injurious to the country, is at least no longer beneficial to the community for which it was created.

The President says:

The right kind of tax reduction at the right time is an objective to which I am deeply committed.

Evidently the right time for the President is 1948. Why is 1947 not the right time? Does the President believe that the present annual income payments can continue indefinitely at current levels, under the present oppressive rates. His own Secretary of the Treasury told our Ways and Means Committee that it takes at least 12 months before a tax bill can become effective. If the President wants to wait until a depression is upon us, before he acts, then he is adopting a "too little, too late policy." The American people want tax reduction now, not later. Canada is giving her citizens an income tax reduction effective July 1, 1947, not next year. Although it was admitted in Canada that there were substantial inflationary pressures pushing prices and cost up, nevertheless tax reduction is deemed essential in Canada to relieve the people of "painful wartime levels of income tax," and to remove "a serious impediment to a full working effort and a brake upon the drive and initiative of men and women in all trades and classes." The President also states that H. R. 1 fails to give relief where it is needed most. He complains that a family with earnings of $2,500 would receive an increase of only 1.2 percent in the take-home pay and a family with earnings of $50,000 would receive an increase of 62.3 percent. This fallacy was fully exploded when H. R. 1 was considered. Since taxes take only 3.8 percent of the take-home pay of a family with a $2,500 income, even a complete exemption would increase its take-home pay very little.

In the case of a man with a $50,000 income, taxes take approximately 48 percent of his take-home pay, so any reduction in tax increases his take-home pay much more than the man with a $2,500 income. This was also true under the Democratic act of 1945. The man with the larger income received a larger take-home pay than the man with a small income.

The President's message is politics in its crudest form.

Our Times, Our Responsibility

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. SAM RAYBURN, of Texas, at the annual dinner of the New Jersey Bar Association last Saturday evening:

Mr. Toastmaster, members of the bench and bar of New Jersey, your ladies and your guests, I want you to know that one of the reasons I am imposed upon you tonight is by the persistence of my good friend, PARNELL THOMAS; he wouldn't take "No" for an answer. I am honored, of course, that you have thought it worth while to ask me to come to you tonight and I am not displeased that such an amiable occasion as this has occurred.

But I am a bit uneasy tonight as I am going to tread on what some people say is dangerous ground. I plan to discuss a subject on which perhaps the leading expert in the House of Representatives of the Congress is one of your own. I, of course, mean CHARLES EATON, chairman of the House Committee on Foreign Affairs. All of you know that down in Washington we have a bipartisan foreign policy, that politics does truly stop at the water's edge. One of the architects of that policy is CHARLEY EATON.

I should like to talk to you tonight about world peace—about what the United States must do if we are to win the peace. I do not think it will be strange to you that, in a world with so much fear of the future and with so much economic want and insecurity in the present, I should come all the way from Washington to New Jersey to talk to you, not about labor bills or tax bills or the other immediate problems before the National Legislature, but about peace.

You and I have heard all our lives, from our boyhood on, that the Americans are a peace-loving people. That is true enough; but it is also true, I believe, that this virtue is not singly and solely resident in the citizens of the United States. All the people of the world have always wanted peace, they do so today and they always will. And yet one of the discouraging facts which I have had to accept during my lifetime is that this longing for peace by the people—and, yes, almost always by the government leaders of the world—is not enough. We still have wars.

I think we have wars because this desire for peace without more, without doing something, without affirmative action, not only does not prevent war; it is often so strong that it hampers, even paralyzes, intelligent preventive action until it is too late. There are, for instance, men today who are covering the length and breadth of America saying to our earnest and hopeful people, "You want peace; very well, I shall give you peace—all you have to do is follow me, believe in me, and that will be enough."

Some of these men know exactly what they are doing. Their allegiance is not, and never has been, to the United States. They believe in, they act for, a totalitarian doctrine which is espoused by a nation other than the United States. They are willing, consciously and clearly, to further the aims of that nation whether those aims agree with or are in direct conflict with the aims and aspirations of the United States and with its affirmative program for the peace of the world.

Others of these men are mountebanks; they are opportunists greedy for selfish power, ready and willing to be careless of the company they keep as they travel the road of their own petty ambitions. These are the fellow travelers—willing to sacrifice their country for their own prestige.

And there are other men who are not at all sure just what they want. Someone has called them the fellow wanderers. These travel aimlessly up and down the highways and the bypaths of the world's stream of history. They are the crystal gazers of the postwar world. Their crystal ball says that if they want something enough, without doing anything more, they will get it—even peace. And as they travel along the road to the future, if these fellow wanderers happen to fall in with the fellow travelers and with the other gang, the men who deliberately try to direct the traffic to totalitarianism, they are not too particular about associating with them. It never occurs to them that they

make strange bedfellows for they soon discover these are the men who tell them that they are right about that crystal ball. They say if this great Nation does nothing affirmative to get peace, nothing at all except to let other nations have their way, why, praise the Lord, there will be peace.

I feel sorry for these "fellow wanderers" until I see the harm that they do the United States by telling our people that "peace, it's wonderful, and you can have it free and for the asking." I am almost inclined to bitterness when I see how they are manipulated and used by hard-eyed, hard-headed men who know exactly what they are about. This does not mean that I would do anything to prevent their meanderings. The test of a theory, to paraphrase the late Justice Holmes, is its ability to get itself accepted in the free marketplace of ideas.

What has happened in the less than 2 years since World War II ended? There have been many heartbreaks and many frustrations in these 2 years. The great hopes which sprang from the signing at San Francisco of the United Nations Charter have not been advanced very far. There are an increasing number of thoughtful men who believe that the doctrine of power politics has once again come into its own. Certainly we cannot deny the enslavement of several of the smaller states and the domination of other satellite states by the use either of brute force or of the war of nerves. That same technique of the war of nerves which once raged so long in Europe from 1933 on until the Nazis were waging aggressive war against 11 nations is again being employed. If anything, its performance and execution is smoother even than the Nazi experiments.

Lock at the map of Europe today. A totalitarian puppet shoots down the planes of a friendly nation. In Hungary a head of government is driven into exile by the threat of a treason trial; it happened so fast that the totalitarian boss could exult that the plot was executed "before the United States could rub its eyes"—and he stated the fact correctly. In Bulgaria the leader of the opposition party was thrown into prison—he was not given the choice of exile. The sin of these two men was no more than that they looked westward with hopeful eyes. Poland, once led by the liberal Paderewski, has long been silent. The whispers spread that that great nation, Czechoslovakia, the home of such real democrats as Benes and the Masaryks, is next on the list. The largest political parties in France and Italy are Communist. Their present governments also look to the west, but I wonder how hopefully?

The whole map of Europe is changing before you can rub your eyes. Europe today is more susceptible to a war of nerves than in the heyday of Hitler. We talked glibly and knowingly of total war while we waged it. But only now are we beginning to see how really totally devastating that war was. The peoples of Europe, with their economy prostrate, with their social and political problems becoming more and more acute, are slowly sinking into the hopeless corrosion of despair. Their cities were bombed and shelled into rubble. But this bombing was not haphazard, it was coldly precise and scientific—its purpose was the destruction of factories, power plants, and transportation, and ultimately of the entire economy. It is a harsh but accurate tribute to our Air Forces that this policy was so successfully executed. Years of war also ruined many acres of tillable land; disuse and scorched-earth policies took a horrible toll.

Think of Europe not as a conglomeration of separate countries. Think of it, instead, as a mass of stricken people who have spent years at war and who 2 years later are even further from recovery than at war's end. It has been aptly said that the best Communist organizers are cold, hunger, and fear. This most efficient of all Communist cells is beginning to reap its reward. The father who watches his children die of malnutrition does not worry over the niceties of a political theory; the desperate youth beset by the stresses and strains of his lot with no prospect of improvement in the foreseeable future turns to anyone who offers hope, even if that hope be totalitarian violence.

What should the United States do? What can it do? Europe asks itself these same questions. As the London Economist, a well-informed and influential weekly, phrased it last month:

"The American's hand is all trumps; but will any of them ever be played? And for what purpose?"

I think we have already begun to answer the Economist's questions with what has come to be called the Truman doctrine in Greece. That policy must be extended to all of Europe; it must be done scientifically, hard-headedly, intelligently, but it must be extended and soon.

The policy toward Greece is not as new as the debate in Washington may have made some of you believe. Nor is it based exclusively on a negative anticommunism. It is simply the present-day extension of an American foreign policy which has existed from the earliest days of the Republic. It is a policy of sympathy with, and support of, peoples in quest of self-determination and freedom, and of nations striving to maintain their independence and free institutions against external aggressors. It descends in a direct line from the Monroe Doctrine. I have been told that President Monroe struck out Greece from his original message only because he thought it was beyond our capability at that time to protect nations outside of this hemisphere. It follows the open door in China, the self-deterr 'nation of Woodrow Wilson, the agreement at Yalta.

The judgment of Nuremberg has declared such acts of aggression an international crime. It has decreed that supremacy of law must be obeyed by individuals who act for nations, as well as by those nations. Only under law can peace endure and only if small nations are free from external aggression will peace endure. If there are any here who doubt that organized outside aggression is involved in the Greek situation I suggest that they take the time to read the majority report of the United Nations Commission which has recently finished its investigation of the Greek border incidents.

What is now under way in Greece is a portent of the shape of things to come in Europe. We Americans must face up to the fact that it is only the first item in the economic reconstruction of Europe. Without a free and stable Europe there can be neither peace nor civilization in the world. The United States has the sinews of strength. In cooperation with the United Nations it is up to us to prevent the impending collapse of western Europe.

Our experience of the past 2 years has taught us that pouring money into Europe merely to relieve distress is not enough. We must do it according to a blueprint of revival for the economy of Europe.

How will this program be organized? It is too early to give exact specifications. But it is already clear that aid on a country-to-country basis is not the way to do it. The entire fabric of European economy which has been dislocated for at least the past 15 years must be considered as a whole. The Secretary of State has emphasized that the countries of Europe must themselves take the initiative in drawing up a joint program; we cannot do it unilaterally. In his words, "this is the business of Europeans."

But it is possible to speculate even now on the broad outlines of such an integrated program. Our goal is to rebuild a self-supporting European economy. The first step should be to select those projects which strike directly at the bottlenecks blocking European trade and production. It is a commonplace that the coal of the Ruhr is one key to European prosperity. Only as the war recedes have we come to realize so clearly the vital function which the German economy has played in the past and must again do so in the future in the prosperity of Europe. There is no one here tonight, particularly among those of us who have lived through the two epochs of German aggression, who is not fearful of the revival of German industry. We just cannot afford to give Germany another chance at world domination; we have come to understand how readily the German mentality grasps at any opportunity. But we likewise cannot afford to let Europe stagnate, as it will if it is not bolstered by the coal and heavy industries of Germany. We can never relinquish our watch on the Rhine but the fact simply is that no longer can we leave Germany prostrate if there is to be any chance for Europe.

Another project which has high priority is the revival of European transportation. Anyone who has traveled along the Danubian plain can understand at a glance how important to transportation that river is. The railroads which were battered almost to extinction are also suffering from an almost complete dearth of rolling stock.

Despite our large food exports and the bumper American harvests since the war there is an acute shortage of food. America will not always have bumper crops and we cannot forever ship food to Europe. The acres of that continent must as quickly as possible have their over-all production increased. For this the farmers will need fertilizer, farm machinery and seed in large quantities.

Another project might well be currency reform. The American cigarette has, ironically enough, become the symbol of stability in the black markets of Europe for the simple reason that barter is today the accustomed means of trading. The nations have lost all faith in the currency of one another. Some method must be devised to finance intra-European trade on a stable and permanent basis.

The shape of this general program will probably show a change in the nature of our exports from consumer goods to heavy durable goods. We must, since we are humanitarians, continue for a while to feed Europe, but the emphasis sooner or later has to be placed on such things as steel and fertilizer and machinery if she is ever to rise to her feet.

I know that as I have talked to you tonight there is in your mind one question, Won't this cost a great deal of money? How much? The anwer is, Yes; of course, it will. I will not be less than candid. It will cost you, the taxpayers, a great deal of money.

I think it is a good investment. If we have learned nothing else during our lifetime, we should have learned—and I think most of us have—that just wishing for peace is not enough. We must work hard for it and we must pay for it. I am a Texan who knows the value of a dollar. From the time I was a boy I had to earn my own way, and I had to do it the hard way. There were no cushions for me. I am not its slave, but I do prize that dollar.

Whatever it costs, it will be little in comparison to World War II and practically nothing compared to World War III. After Pearl Harbor we spent $300,000,000,000. Vastly more important, we spent the lives of hundreds of thousands of our boys.

Our military strategists, the same men who led us to victory in World War II, have told me time and again that, if and when World War III comes, the first target will be the United States. They assure me the lessons of the past two wars have not been lost upon the military leaders of the world. The industrial resources and the productive know-how of the United States are to be destroyed as soon as war breaks out. Next time, if we are not lucky once again, the rubble will not be

in Berlin or Warsaw or Tokyo or Rotterdam. It will be Washington and Chicago, the aircraft plants of the west coast, the heavy industries of the Middle West, and the concentration of factories along the east coast.

This is the price we may well pay for failure now.

And so in the face of such a possible alternative I cannot help feel that what we spend now is the best investment we taxpayers will ever make. There is no man who can yet tell us with any degree of accuracy how much we will have to pay. Those who have been studying this rehabilitation have suggested that it will take many, many millions annually for the next several years if there is to be any real hope of making Europe self-sustaining.

There is clearly no other nation financially able to contribute a substantial part of that amount. I am personally convinced this means we must continue to carry heavy tax burdens for many years. World realities are rapidly making large tax reductions a hope for the future instead of the reality of the present.

I hope I have not unwittingly given the impression there is a choice. Perhaps some of you think there is, that once again we can withdraw into our isolationism, that we may if we wish concern ourselves only about domestic problems and let the rest of the world go hang. I wish it were as simple as that.

Let me talk to you for a moment solely in terms of enlightened selfishness, of intelligent conservatism. World War II has left us strong, the rest of the world weak. We are today the greatest creditor nation the world has ever known. But we cannot continue to be that great creditor nation unless we can put Europe in a position to pay for our goods. Since the war our exports abroad have risen terrifically. In 1946 we exported between fifteen and sixteen billion dollars of goods and services. It is estimated that during 1947 we will export even more, marking an all-time high. Before the war our exports were around $4,000,000,000 a year.

To show how much the world trade picture has changed, I cite you some figures on the exports of 33 countries. In June 1946, 42 percent of all this world trade consisted of exports from the United States. The comparable figure for our exports in 1936–38 was only 22 percent. At the same time our imports in June 1946 were 20 percent, as compared to 17 percent in 1936–38. The slow rate of increase of our imports as compared to the huge increase in our exports can mean only eventual disaster—unless we arrange for Europe to get dollar balances to pay for these exports.

It is difficult for anyone to comprehend just what $16,000,000,000 worth of goods means. Dean Acheson, our able Under Secretary of State who unfortunately will soon retire, recently described it as 1 month's work for each man and woman in the United States, 1 month's output from every farm, factory, and mine.

Unless we can find some way for increasing our imports, $8,000,000,000 in 1946, the countries of Europe will never find the dollar balances to pay us for our exports. When these exports dwindle the high national income we enjoy today will become a memory. Factories will close, the lists of our unemployed will grow and we will soon be faced at home with an economic situation resembling depression far more than the currently fashionable word "recession."

But there is no chance for Europe to pay us off by exporting to us until her economy gives her something to export. Her dollar balances are already dangerously low.

No, I do not think we have any real alternative.

This is the only path to peace. It is not a pleasant road, it is in truth a rocky one. I am sure there is no other. The soothsayers who are abroad in our land today would have you believe otherwise. Their way is the way of the wishing-well. All you have to do is do nothing, just let the totalitarians have their own way. I have told you that I despise this way of totalitarianism.

You and I know that the eyes of the peoples of stricken Europe are looking west. There is still hope in those eyes; not as much as during the war perhaps; but it is still there. We cannot fail them if only for the simple reason that in failing them we fail ourselves.

Relief for Flood Sufferers

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. SIMPSON of Illinois. Mr. Speaker, the speedy, emergency action of the House of Representatives yesterday in providing relief for sufferers from the current floods deserves much commendation. Especially grateful are the flood sufferers in Missouri, Iowa, and Illinois, where 24,000 persons have had to leave their homes and where 1,000,000 acres of land are inundated.

Yesterday's unanimous approval by the House of H. R. 3792, authorizing an appropriation of $15,000,000 for use of War Department engineers in repairing, restoring, and strengthening of levees and other flood-control works, climaxed a race against the rising floodwaters.

Within a few minutes after the House passed the authorizing legislation, it approved, upon motion of Chairman TABER, of New York, of the Appropriations Committee, an amendment to the pending deficiency appropriation bill to provide $12,000,000 immediately. Passage of the authorizing bill and follow-up appropriation occurred within 30 minutes.

Steps have been taken for expeditious action by the Senate, so that relief for the flood sufferers and the fight against the floods may go on with increased effort.

There have been 11 levee breaks in the Sny district of Pike, Adams, and Calhoun Counties of Illinois during the last few days. Five hundred men are working on the levee, piling bags of sand against the rising water. There have been many levee breaks on the Missouri River and also on the levees in southern Illinois.

Here is the chronology of speedy action by the Republican Congress in swinging to the relief of flood sufferers:

When the northern Illinois and Michigan floods occurred last spring, I asked the Army engineers how they were prepared in funds to cope with a major flood disaster which appeared to be in the offing. They told me they had no funds available.

On April 7 I introduced a bill to authorize $15,000,000 as precautionary action, and conferred with Speaker MARTIN and Majority Leader HALLECK; also Chairman DONDERO, of Michigan, of the House Public Works Committee.

Came the floods, taking their toll in lives and ruination of crops. Protective works sagged, and there were levee breaks. Emergency forces swung into action on the flood front.

Swift hearings were held by subcommittees of the House Public Works Committee last Tuesday. The committee, on Wednesday, approved, with amendments, H. R. 3792, and yesterday the House unanimously passed the bill and inserted the funds in the passing deficiency appropriation bill.

Flood sufferers especially, and the country generally, will appreciate this evidence that their Congress can and does act swiftly in an emergency. This action is in line with the record of the Republican Congress on legislation urgently requested by the people.

New Deal Fairy Tales

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial which appeared in the Wall Street Journal of June 16, 1947:

A FAIRY TALE FORMS

Very likely there is forming a new fairy tale that eventually will be accepted as history. In the next decade or two innocent youngsters and forgetful elders will be told that in the year 1947 there was in progress at Geneva, Switzerland, an international conference. It bade fair to open up the world channels of trade and increase prosperity. But at the crucial moment, the American Congress passed a wool tariff and that knocked the whole thing into a cocked hat.

It is only a few months ago that just such a distortion was being taught and accepted; a man with a beard persuaded the United States Senate to reject the League of Nations Covenant in 1919. This made the rest of the world so mad that in a few years peoples were tearing at each others' throats. It was the fault of the United States.

This newspaper has recorded its low opinion of the wisdom of raising wool tariffs. But one holding such an opinion does not need to lose all perspective as to the importance of the event.

Of course the wool action did not wreck the International Trade Conference; it was not an encouragement certainly but it did not wreck it. In articles which have appeared recently on this page Mr. Evans has told what makes the conference ineffective. It is the unwillingness of any of the nations assembled to give up its freedom of action, to surrender in any respect its sovereignty.

That sentiment was perfectly clear before a single delegate ever reached Geneva. The thing is implicit in the type of managed economies now so popular in Europe. What is being attempted in Great Britain and on the continent probably will not work at all. Certainly no signs of effectiveness have appeared. But it must be clear that even in the blueprint stage such schemes are not practical unless the managers have absolute authority within impregnable walls, authority to force compliance with their plans and directives internally and to shut out any external influence which might interfere with those plans. The managers must have absolute authority to control the movement of goods, funds, and people across their borders. They must always be able to lower the iron curtain.

Previous to 1914, when international trade flourished, nations did have an economic check on their freedom of action. That check was found in the gold standard. At any time any nation began to cut high jinks things began to happen to it as a result. The check was automatic.

There is no one now living who can remember when the gold standard was not being denounced because it did restrain freedom of action. We heard of mankind being crucified on a cross of gold and we heard fine words that finance should be the servant of man and not his master.

Well, the gold standard is gone—broken down, we hear. And now men are trying to find something to take its place. They set up an International Monetary Fund, and before it is well under way its managers predict trouble for it. Then they go to Geneva to talk of organizing free trade, apparently neglecting the fact that freedom and organization are antithetical. What they are really trying to do is to find some rules by which trade can proceed. But they can't do that either because no one wants to be bound by any rules, which is after all a very human failing.

There are two things necessary to trade. One is the desire of people to exchange goods, and that is present and always has been. The other is to find some common medium by which the exchanges can be effected. That is not present, but perhaps it would be sooner than anyone expected if only there were removed a lot of the controls and directives which prevent people from following their instincts.

Law Is a Good Profession

EXTENSION OF REMARKS
OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include the commencement address of my colleague, Hon. KARL STEFAN, delivered June 6, 1947, before the law class of the National University School of Law:

Chancelor Barse, Dean Wainwright, members of the board of trustees and the faculty, and the graduating class of 1947 of the School of Law of National University, humility vies with pride as I come to talk to you. No man of my time has had a greater opportunity. No man has been more eager to take advantage of what has been tendered him. We shall try to crowd into the few minutes we meet together the realistic implications of entering into a legal career in 1947.

A few short months ago, National University chose to confer upon me the honorary degree of doctor of laws even as, this year, the brilliant and efficient Parliamentarian of the House of Representatives, Mr. Lewis Deschler, has been accorded a similar distinction.

I know the excellent reputation and the proud tradition of National University's School of Law. Nebraska was but 2 years a State when this school was chartered. I am aware that Presidents Grant, Hayes, Garfield, Arthur, and Cleveland were ex officio chancelors of the university; and that Supreme Court Justices, Senators, judges of other high Federal courts, able members of the staff of the Attorney General of the United States, Judge Advocates General of the United States Army—and a large number of other illustrious men in the legal life of America served either on the university's board of trustees or in the classroom.

Yes, I know that from the small beginning in 1869 under Professor Wedgewood this university has truly become a national university—of the Nation, and for the Nation.

More than a score of professions have their practitioners among the membership of the House of Representatives. Yet, regardless of what activity each Member has pursued to earn his living prior to his election to Congress, he must essentially become in spirit a lawyer. No man can make laws without finally taking on the attitudes of a lawyer. It would not be possible to decide from year to year on the appropriations for the Federal judiciary without gaining a pretty thorough working knowledge of the rules and procedures of our Federal court system. Those of us who have been connected with the Inter-Parliamentary Union have had still further indoctrination into the law. In fact, those of us who have shared this latter experience have had on-the-spot teaching in comparative jurisprudence. We, too, have had the advantage of studying with competent professors.

So it is not as a layman speaking to professionals nor as an older man speaking to younger men who will follow a different profession in a different arena, but in attitude and spirit as a fellow man of law who has arrived at something like the same goal by a more devious route that I bring you my humble message of what I have perceived in my years in our common field.

In two verses of First Timothy—the twelfth verse of chapter 4 and the twelfth verse of chapter 6—there is to be found the best advice I know of for young lawyers just entering upon their careers. The elder Paul writes to the younger Timothy, saying:

"Let no man despise thy youth; but be thou an example of the believers, in word, in conversation, in charity, in spirit, in faith, in purity."

And:

"Fight the good fight * * * whereunto thou art also called and hast professed a good profession before many witnesses."

Law is, indeed, a good profession. It must be kept so. There lies your immediate responsibility. It is at once your duty and your responsibility to serve the American people as lawyers with unpretentious dignity and high integrity. The American people have a historic respect for lawyers. Because of this respect, the States under the Articles of Confederation sent 31 lawyers to the Constitutional Convention, which had a total membership of 55. Blackstone's Commentaries were taught by Chancelor Wythe in William and Mary College before the Declaration of Independence, and among the Wythe pupils were the first Chief Justice of the Supreme Court, John Marshall, and Presidents Thomas Jefferson and James Monroe.

Law is a good profession. The practitioner can, if he will, make it a noble profession. Throughout the nineteenth and well into the twentieth century the American lawyer occupied one of the highest positions of respect in every community in which he lived. Perhaps these lawyers did not all preside at trials, but they were familiarly and respectfully addressed as "judges." They were respected for their advice and counsel. They were honored because of their ceaseless and intelligent devotion to civic duty.

A change has been gradually taking place in the thinking of the American people. It may be this change was due to the increasing mechanization and urbanization of the United States. Perhaps this change was due to the identification of lawyers with the men in cases which they defended. The stepped-up intensity of litigation in a more complex society seems to have shifted the anger of the loser from the man who won to the man who helped the winner win. The uninformed, not knowing that, in many instances, when justice appeared to miscarry, the law—not the lawyer—was at fault, made no effort to amend the faulty statute, but instead heaped abuse on the lawyer. If they could not strike at the integrity of the lawyer as an individual, they assailed his profession.

Terms such as "shyster," "ambulance chaser," and "mouthpiece" gained currency.

How did the legal profession fight this trend? They did fight to regain what they feared they might lose—the respect of the American people. They instituted codes of ethics within the profession. They tried to see to it that interlopers who used their skill for selfish ends rather than to further the ends of justice were disbarred. They sought to protect as well as to serve the public to counter its rising misconception of their profession and their place in their Nation.

The measures employed by the legal profession in its own behalf were well taken. They were successful in combating the disorganized assaults against its integrity. Even the lax thinking of the "roaring twenties" and loose practices of the prohibition era were overcome by the efforts of lawyers to educate the American people that men of law should be respected.

But the waves of circumstance overthrew these excellent plans, and to some degree defeated temporarily the efforts to elevate the law practice to higher levels.

Totalitarian dogma became a stumbling block to human progress. This was no accident. The Japanese war lords had planned for 40 years to conquer the world. Their plots were written down in the Tanaka Memorial. Hitler schemed world conquest in his prison cell in the early twenties and arrogantly put his schemes in words in Mein Kampf. Lenin, after completing the blueprints of Karl Marx in 1919, looked across the Atlantic with greedy eyes—and where his eyes were turned his propagandists were not slow to follow.

The Third Internationale in a little more than a decade mobilized in America and established their Communist elite corps in the key cities of this country of the constitution. The new expeditionary force seized upon sectional differences and class irritations already in existence here to destroy by sundering. It gave its whole attention and force to the destruction of the basic American concept of law and order. Thus, when success was almost in the grasp of farvisioned men in the legal profession seeking to elevate the law in the estimation of their fellow Americans, an unfortunate historic development came about. Uninformed, inspired criticism of the law confronted the men of law with a far more vicious peril—a planned assault on a score of fronts.

You know the methods that have been used against law and order. They are the familiar ones that have been positively identified with totalitarianism—the "fifth column," boring from within, the Trojan horse. They embrace direct ridicule, and the planting in the press and on the radio of distrust of the men who make our laws, the men who interpret our laws, the men who practice law, and the men who enforce the law, courts included.

Since the early thirties there has been one paramount issue before us—the Constitution of the United States.

The question has not been merely "Shall we change the Constitution by amendment?" but "Shall we overthrow and abandon—or keep the Constitution?" "Shall we desert a government of laws for a government by men?"

At first, the constitutional wreckers worked underground. They took advantage of depression-bred dissatisfaction to smear the profession of the law and the men who were outstanding in the practice of the profession. They jeered at the machinery of law, calling it antiquated, a relic of the eight-

eenth century, slow, doddering, and unresponsive to the needs of the people. When the anticonstitutional faction deemed that they had sufficiently undermined our legal structure, they launched their first direct offensive. But when they were assailed, these cowardly, cunning subversionists rushed to seek haven in the very Constitution they reviled.

That offensive had as its objective the destruction of the effectiveness of the Supreme Court of the United States. At the same time, unfortunately, came the proposition to increase the number of men on the Supreme Court bench from 9 to 15. This proposal could have been, if accepted, the entering wedge by which the popular trust in the Federal judiciary could have been split asunder. But, this move met unexpected resistance. Members of Congress laid aside partisan differences and remembered only that they were Americans charged with the defense of the Constitution.

The battle was historic. I recommend to you thorough study of the intimate history of that great clash of concepts.

The results of that battle are still in evidence. The open attempt to sabotage our Government, as you know, failed. It was followed by attempted party ejections. Some of the survivors of that purge are in Congress today. I can assure you they have never forgotten the Constitution was then, and is now, the paramount American issue.

When the anticonstitutionalists failed in trying to pack the Supreme Court, and were ousted in the attendant party purge, they once more went underground. The mask had been stripped from their cunning and deliberate purpose. It was necessary for them temporarily to retire until other crises had pushed the affair of the Supreme Court far back in the public memory. The anticonstitutionalists knew that public respect for the profession of law was powerful enough to defeat their purposes. Therefore, for the time being, a direct encounter was avoided.

But that did not mean the foes of the Constitution were idle. They were merely licking their wounds and preparing for an assault on a different sector. The planned campaign in the press and over the radio against law and lawyers was resumed with redoubled fury. The second front of the anticonstitutionalists consisted in an effort to establish government by decree. Of course the more radical subversionists took full advantage of this. Between 1936 and 1940 approximately as many Executive orders were issued yearly as there were major laws passed by Congress. The excuse was advanced that legislation by the normal, constitutional, congressional method was too slow to meet emergencies, and that these Executive orders were critical stopgap measures. The trouble was that most of the stopgap measures managed to survive even the emergencies for which they were presumably invoked.

Congress has not supinely accepted this invasion of its constitutional functions. It has fought to keep its functions; and, in every battle—whether that battle has been a skirmish or a major engagement—has been supported at the polls by an aroused electorate. The American people have backed Congress. They know Congress is their special instrument of control over their Government. They know they must have a Congress for the enactment of laws as provided for in the Constitution. Without Congress, there would be only one law—the law of the strongest, the law of the jungle.

With Congress refusing to go along with manufactured trends, the anticonstitutionalists took still another route to gain their devious ends. While continuing unabated their campaign of smearing Congress through ridicule of the legislative body as a whole, and attacking individual Members, they have sought to bypass Congress by the expedient of ignoring or evading constitutional enactments of Congress. This particular type of attack has been especially used during the period beginning with Pearl Harbor and extending to the present time.

It is no mere coincidence that cartoons depicting your Representatives as blundering, venal morons have appeared almost daily in the newspapers. We on the Hill do not live in ivory towers. We must—and we do—expect plenty of criticism. We anticipate without fear or rancor fair, constructive criticism. But this bitter drive which is aimed at us by the subversionists does not consist of humor or of honest criticism. It is of a piece with the cruel propaganda with which Hitler drove members of the Reichstag to suicide, and eventually broke the German people's confidence in representative government in the early days of Nazi ascendancy.

Your Congress does not seek to still just criticism. Fair criticism is a purifying and clarifying agent. Malevolent criticism aimed at destruction of constitutional processes is the dangerous variety of criticism.

Just how has Congress been bypassed? In section 7, article I of the Constitution, there is this phrase: "All bills for raising revenue shall originate in the House of Representatives." Up to the advent of the Eightieth Congress, the manner in which earmarked funds were juggled within administrative agencies has been a national disgrace. Also, the practice according to which agencies have made original requests for appropriations purporting to be sufficient for the fiscal year, only to return later in the same fiscal year with pleas for supplemental appropriations has been reprehensible. Up to the Eightieth Congress, the spirit and the letter of appropriation acts passed by Congress have been violated. And this is but one of many instances of bypassing that have come to my attention in my special field of work in the Congress.

The outstanding area in which the Congress—the Senate in particular—has been bypassed is that of our foreign relations.

Section 2, article II of the Constitution says in part:

"He [the President] shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

Major international commitments were made in mid-Atlantic in the summer of 1941. Was the Senate advised or consulted? It has since been revealed that matters other than military agreements were discussed at Casa Blanca. Where can we find reference to such treaties? Quebec, Cairo, Teheran, Yalta, Potsdam—all these have been the scenes of meetings in which have been charted the future course, in war and peace, of the United States. Your future, and mine, if you please. When have two-thirds of the Senate agreed to the results of these meetings? History has written the answer to the questions I have just asked. Not once has the Senate been given the opportunity to exercise its constitutional rights in regard to treaties rising out of these secret deals under the cloak of top secrets.

The Eightieth Congress has temporarily checked the bypassing tactics of the anti-Constitutionalists. However, we are under no illusions. We have checked such tactics; but, we have not halted the movement against our Constitution. If it follows its long-established pattern, and its totalitarian adherents religiously cling to it; the movement will retire from public demonstration, gather additional forces and strike in another direction. The American people, their Congress and, in particular, young lawyers graduating this year from law schools all over the country must not relax their vigilance. Eternal vigilance is the price of your liberty.

The Bible is my Blackstone when I say in the words of the twenty-seventh verse of the third chapter of the Gospel according to St. Mark:

"No man can enter into a strong man's house and spoil his goods, except he will first bind the strong man; and then he will spoil his goods."

Members of this graduating class: Yours is not a prosaic world. Yours is a world of conflict, of challenge, of opportunity calling for courage. When you leave your classrooms, you will become a part of the conflict; the challenge will be yours. Your opportunity in this arena is as great as your courage. The gage is before you. Pick it up. You can have as powerful an influence in the affairs of this Republic today as the young lawyers of the Constitutional Convention did in 1787. You can spearhead the return of your profession to a place of respect among your fellow Americans higher that it has ever before occupied. You can lead in the defense of the Constitution itself, protecting your country against division from within, as our armed forces have protected it against attacks from without. A shattered world must be rebuilt. An arrested human progress must be resparked. A future must be molded into an edifice of righteousness and freedom. Your generation must provide the architects.

May this class never forget what President George Washington said in his farewell address: "This Government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers uniting securely with energy, and continuing within itself a provision for its own amendment, has a just claim to your confidence and support."

God strengthen each and every one of you to make your task one of high endeavor, great nobility and glorious achievement in the paramount human service of preserving liberty and faith in divine guidance.

We Have Got To Stop This Mad Talk of War

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. SABATH. Mr. Speaker, among many editorials and statements which have recently come to my attention, I have selected one for insertion in the RECORD which appeared in the June 15 issue of the Chicago Sun, entitled "What To Do With Russia." I consider it to be fair, straightforward, and unbiased, and on a par with the statements of Secretary of State Marshall and of that other great military genius, General Eisenhower.

The concluding paragraph of the editorial reads as follows:

We have got to stop this mad talk of war. We have got to stop pursuing policies which have meaning only in terms of war.

The whole article is one of sound advice, and I sincerely hope it will be read by the membership of the House and the people generally. The editorial follows:

WHAT TO DO WITH RUSSIA

The Tribune began its second century by asking whether it would not be a good idea

to declare war on Russia right now. "Possibly we ought to destroy the Stalin government while we can," said the venerable champion of isolation and imperialism. "It could be done within 48 hours with terrifying results. * * * Is it the thing to do? Have we the stomach for it? We have the means."

We were quite sure the Tribune would get around to this position in time. In one sense it is a useful development, for it brings into the open what some people have been saying in private and what others have been secretly thinking. Here is the doctrine of the preventive war—naked, brutal, amoral, unconscionable.

Well, let's think about the preventive war. The Tribune says the American people are unable to reflect "realistically" upon it. We hold the people in higher esteem. We think they are able to reflect and able to be "realistic." They also have a Christian conscience and a set of moral values which would make it impossible for them to wage unprovoked war.

That is what the warmongers forget. That is what others forget when they advocate an anti-Russian foreign policy which makes sense only on terms of a preventive war. The fact is that we are precluded from waging such a war so long as we make any pretense of moral conduct. Our policy, therefore, must be based on other premises.

All this has nothing to do with being pro-Russian or anti-Russian. It has nothing to do with communism or capitalism. It has nothing to do with one's approval or disapproval of the policy Russia pursues in eastern Europe. It is solely a matter of human conscience. This Nation overwhelmingly resents Soviet power politics and the attempt to fasten minority rule on satellite states. But that does not give us the moral justification for aggressive war, and without moral justification we are lost.

For those who are not impressed by moral considerations, strong reasons of expediency point in the same direction. Russia, once a firm peace settlement has been made, offers a vast market for American goods. The preventive war would destroy that market and create new relief demands, not only in Russia but probably in all Europe as well.

Let us try to think calmly about Russia. It is said that her aggressive intentions are proved by her present course in eastern Europe. But she can argue plausibly that her present course is dictated by self-defense. That does not make it right, but it makes it understandable. As Walter Lippmann has pointed out, the drive to install puppet governments probably reflects the coming withdrawal of Soviet troops, rather than any advance.

Or it is said that communism by definition seeks world control. True enough, orthodox Marxism does envision an ultimate world society ruled by associated Communist Parties. But Russia long ago subordinated that misty goal to her own national aspirations. It could not be achieved, in any case, without world revolution. And against world revolution there is only one defense—a state of political and economic welfare superior to any that communism can offer.

Our choice, then, is not between a preventive war and retirement into hemispheric isolation. The preventive war is out because we cannot justify it to the national conscience. Isolation is out because it would leave the world in chaos. We have really only one course to follow—the patient working out of a peace settlement by compromise; the steady strengthening of the United Nations; the pursuit everywhere of policies that will build up economic welfare while leaving political choices to the peoples concerned.

We have got to stop this mad talk of war. We have got to stop pursuing policies which have meaning only in terms of war.

Lynching

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. MILLER of California. Mr. Speaker, Richmond, Calif., one of the growing industrial centers on San Francisco Bay, has expressed itself quite positively on the matter of lynching.

I am in receipt of a letter signed by C. A. Pitchford, city clerk, Richmond, Calif., in which he officially informs me that at a regular meeting of the city council held on Monday, June 2, 1947, the following resolution was adopted and ordered transmitted to me:

Whereas the whole Nation has been shocked at the travesty of justice which took place recently in Greenville, S. C., where 28 defendants, most of whom admitted complicity in the crime, were acquitted by an all-white jury of the charge of lynching Willie Earle, a Negro being held for trial; and

Whereas the postwar period has witnessed a rising tide of lynchings throughout the South, and none of the guilty parties has been brought to justice; and

Whereas the moral leadership of the United States in world affairs is undermined by this situation prevailing in the United States; and

Whereas it is generally recognized that State laws and State courts in the South are not able to put an end to the disgrace of lynching; and the Greenville case is conclusive proof of this fact; and

Whereas for many years, legislation has been pending in Congress to provide for prosecution by the Federal Government in such cases, but this legislation has not yet been enacted due to the opposition of selfish interests which profit from fomenting race hatred; and

Whereas it is the opinion of this city council that the time has come for our country to prove to the world that we mean what we say when we speak of such things as equality, justice, and democracy: Therefore, be it

Resolved, That we hereby urge President Truman, Congressman George P. Miller, and Senators Sheridan Downey and William F. Knowland to exert the greatest possible effort to see that Federal antilynching legislation is passed by Congress at the earliest possible moment, and that copies of this resolution be sent to the above individuals and to the press.

Chicago Federation of Reform Synagogues Asks Enactment of Taft-Ellender-Wagner General Housing Bill, S. 866

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. SABATH. Mr. Speaker, last year the Senate passed the Wagner-Ellender-Taft general housing bill; but a small minority in the House Committee on Banking and Currency filibustered the bill to death on this side.

The Senate again has passed S. 866, a similar if somewhat weaker and less desirable measure, and again a small minority in the House Committee on Banking and Currency is holding up all action.

The country needs and demands this legislation. The real-estate industry is for it. Most builders support it. Above all, the people support it.

Housing and high prices, according to opinion polls, are the two greatest problems before the American people. It is our duty and our responsibility to do everything we can to encourage housing construction.

This bill is not a public housing measure. It is a measure designed to help the people to help themselves toward more and better homes at lower cost.

Significant indeed is a resolution in support of the Taft-Ellender-Wagner bill adopted by the Chicago Federation of Reform Synagogues, and transmitted to me by my friend, Rabbi Phineas Smoller. The federation is the Chicago branch of the Union of American Hebrew Congregations, and represents the views of 10,000 families in Cook County, and supports the bill to support family unity.

In accordance with leave granted me, I insert the text of the resolution in the RECORD at this point:

Whereas the Chicago Federation of Reform Synagogues, the local agency of the Union of American Hebrew Congregations, a religious body, in the traditions of our faith and practices looks upon the home as the foundation of our society and the cornerstone of man's moral and spiritual development; and

Whereas this moral and spiritual influence is seriously impaired without proper housing; and

Whereas there is now pending a bill in the Senate to deal favorably with the housing shortage on a national level which will create a permanent housing commission to advance the cause of providing more homes for our citizens; Therefore be it

Resolved, That the Chicago Federation of Reform Synagogues, the local agency of the Union of American Hebrew Congregations, urge its member congregations, their rabbis and lay leaders, to support the Taft-Ellender-Wagner bill (S. 866) and that public notice be made of our endorsement of this bill and that active steps be taken by our constituency to communicate this resolve to our Senators and Representatives; be it further

Resolved, That the Chicago Federation of Reform Synagogues should cooperate locally with other organizations in the effort to secure passage of this bill and implementation of its provisions.

Is "Umtee" the Answer?

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 9, 1947

Mr. SHORT. Mr. Speaker, under leave heretofore granted to extend my remarks I include the following article by Alexander Stewart, which appeared in the Christian Century of May 28, 1947:

IS "UMTEE" THE ANSWER?

(By Alexander Stewart)

Down at Fort Knox, Ky., the Army is conducting what it calls the "Universal Military Training Experimental Unit." In this unit are 664 young Americans who make up the most highly publicized military project since Bikini. It is a sort of "pilot plant" set up on the assumption that Congress will enact a universal military training law, as requested by the President. When I visited the unit to study it, I discovered that its officers, training cadre and men are convinced to a man that it will not be long before Congress enacts a law which will enlarge this "Umtee" program to national size. Because that may occur and because the story of this unit constitutes a very effective factor in making it possible, the Fort Knox project deserves to receive far more careful and critical attention than its public relations officers have so far given it.

My military training was received back in 1918. What I saw at Fort Knox was certainly a far cry from that. Service and ex-service men of the recent war also say that it is superior in many ways to any other military camp they have seen. In simple honesty, one must say that the glowing picture currently being painted for the public in the newspapers and movies is not much overcolored. They describe the varnished barracks, the single-tier cots with bed lamps, the reading room, the chintz curtains, and even the modernistic music room. The very smell of the Umtee barracks is different from that of any other barracks, as the commanding general reminded a group of us who interviewed him.

I

If we must have universal military training, then by all means this is the kind of camps we should have for it. Physically, the Fort Knox camp is well adapted to its purpose, as is the special service program planned for recreational and avocational activities. I was impressed with the high caliber of the officers and their supporting cadre of training assistants, as well as of the young men who are being trained. Brig. Gen. John M. Devine, who commands the unit, is one of the finest high ranking Army officers I have ever met. The two chaplains, Protestant and Catholic, have been doing exceptionally good work. The information and educational program of the unit has been carefully thought out. My visit convinced me that here is the best in military training camps.

But I am not convinced that even the best in military training camps is good for 17- and 18-year-old boys. I agree with the senior chaplain of one of our 6 Army commands, who said to me: "Nobody can tell me that there is not a vast difference between young men living together in an Army camp, no matter how fine it may be, and young men living at home where they have all the helpful influences of family, church, home town girl acquaintances and school friends. Army life is unnatural and abnormal. It removes a boy from the normal situations and contacts of life that are so important for his moral and spiritual well-being."

Before visiting the Umtee unit, I had read glowing accounts of barracks life there and wondered if they were not too good to be true. I read that there was very little swearing, practically no questionable stories and no gambling. I read that the MP's had no trouble with Umtees, that bartenders in Louisville were refusing to sell liquor to them, and that the churches in Louisville are favorably impressed with their attitude toward religion. I set out to get the facts.

I asked one of the MP's on duty at the post whether the Umtees were any better behaved than other trainees at the fort. "No better at all," he replied. "We have as much trouble with the Umtees as with the others. Some of them go to other areas of the fort to get beer or to gamble." An Umtee explained to me how he and his buddies managed to have their fun on week-end overnight passes to Louisville. "We are supposed to register at the USO or have some place to stay with approved friends," he said. "But that is easy. We register at the USO and then go where we want to and spend the night. Sometimes we take our UMT triangle off our arms and then we can get away with anything and nobody is the wiser. We resent being called the 'lace pantie brigade.'"

I asked one bartender if he knew an Umtee when he saw one. He replied: "As long as he looks old enough, I treat them all alike. I don't know one from the other." Another bartender said he had never even heard of Umtees. A third said that he thought their insignia was in the form of a triangle, but that was all he knew. If the bartenders had agreed to cooperate by not selling liquor to Umtees, these three evidently were not much impressed with the importance of the agreement.

II

The releases of the Umtee public relations office place considerable stress on the trainees' attitude toward the church. I learned that during the first 4 weeks of camp, each boy was required to attend church or to attend a lecture on morality on Sundays. The first Sunday, all but one boy elected to go to church. After the first 4 weeks the picture changed. One of the chaplains sadly admitted to me that his church attendance immediately dropped off from a high of 425 to 37. Since then, he said, it has shown some improvement, but it is still far below the attendance reached when presence was compulsory. Still the impression is abroad that church attendance is high. Where did that impression originate?

The front page of the April 5 issue of the UMT Pioneer, the weekly issued by the public relations office, carried a very impressive picture of a trainee worshiping in a church, presumably on Easter Sunday. The picture is captioned: "Indeed typical of the Experimental Unit's religious activity, 17-year-old trainee James Beasley of Fort Smith, Ark., is pictured worshiping in a church of his own choosing in the city of Louisville, Ky." It is an inspiring picture—until one learns that the man who worked on it spent 8 hours locating a church with a good window where the sun would stream in at the right time of day, finding Easter lilies 5 weeks before Easter and getting stands for them, selecting photogenic trainees, taking six of them to Louisville on a bus, picking out two girls with wholesomely pretty faces who would be in the picture but not detract from its theme—the trainee. That is how the picture was contrived. "The result has paid good dividends," said an officer who is in position to know.

III

But discount the hocus-pocus of the public relations men and get down to brass tacks. The assumption is that this Fort Knox experiment is a fair sample of what military training will be like if it is adopted on a universal scale. This assumption is false because what is being done here at the brigade level could not be even remotely approached on a national scale.

In the first place, all the present trainees were especially chosen. They are not a cross section of American youth; they are a hand-picked lot. The same is true of the officers and training cadre of noncommissioned men. Bear in mind too that this unit of 664 men has a staff of 75 officers, 3 warrant officers and 482 enlisted cadre—a total of 560 men to supervise and train 664. There are enough line officers and noncoms to staff an ordinary regiment, and almost enough public relations and special service personnel for an entire army corps. "This is an experiment under ideal conditions that could not possibly be duplicated on a national scale," one officer said, "either from the standpoint of personnel or that of cost."

Consider the question of cost—in dollars. The War Department's estimate, made in January 1947, is that "approximately 1,000,000 men would be trained each year." If these 1,000,000 boys were to be trained along the lines being followed at Fort Knox, 833,330 officers and cadre would be needed. Their salaries and perquisites, conservatively estimated, would be $3,750,000,000 a year. Selective service would have to be maintained to conscript the men. That would require $50,000,000 a year. Pay for draftees at $30 a month for 6 months would amount to another $600,000,000. Equipment and maintenance and the additional cost for the second 6 months would be $1,500,000,000 more. So the total for training alone, exclusive of all other military costs, would be over $6,000,000,000. Tell that to an economy-minded Congress!

The thinking of all the persons connected with the experiment at Fort Knox seems to center on three arguments, each of which is of doubtful validity. First, it is maintained that "UMT would shorten war." This point is brought forward in sublime indifference to the statement of Secretary of War Patterson, as reported in the Oakland (Calif.) Tribune for September 3, 1946, and the statement of General Marshall in his last biennial report, that it would take 6 months to a year to mobilize the boys who have had military training and have returned to civilian life. How would that shorten a war that will be fought, if it is fought at all, with atomic weapons and other instruments of mass destruction?

Second, it is constantly repeated that "UMT would save life." The best answer to that is an old one. The Army and Navy Journal declared in an editorial on April 24, 1920, that "one of the commonest and weakest arguments advanced in the universal-training cause is that preparedness saves the lives of men. That statement is true only to a limited extent. The men of the German Army at the outbreak of the war were prepared for warfare yet they were killed in appalling numbers. The original British Expeditionary Force was unquestionably better prepared than any army that ever left England to engage in war. Von Tirpitz said of the enlisted personnel of that force that they were all sergeants, by which he meant that they were the finest and most experienced type of soldier. Yet they, too, were killed to an extent that shocked the world."

A third argument is that "we must be strong so that the UN may be strong, since that world body is only as strong as its members." If this is true, then all the other members of the UN must also be strong. Military strength is always comparative. If we conscript millions, others will do the same and nothing will be gained but a greater certainty of war. The only realistic road to peace is through the international abolition of conscription and disarmament. That road we are closing to ourselves and to the world when we take the course forecast at Fort Knox. It is too easy to forget that the present Umtees are volunteers, but that the policy which this experiment is used to support is conscription. Conscription will not only bring the training officers up against a vastly more difficult psychological problem, but it will confront the other nations of the world with the threat of more irresponsible use of our military might.

IV

The Fort Knox experiment is obviously helping the Army to work out plans for future Umtee units, if there are any such. But its second purpose is to sell universal military training to Congress and the public. This second aim should be looked at carefully.

Congress and the Nation ought to realize that they are in danger of being sold a bill of goods which will not stand up under examination. The selling is being done by the most advanced public-relations techniques. A press release section has prepared a story on each trainee and cadre man, which has been sent to home-town newspapers in 46 States. A second story is now being prepared on each. I understand that additional personnel is being procured to furnish the War Department with feature stories. Already releases of national news value are channeled through Washington to the news services, mat services, magazines, newsreels, and radio.

But this is only a beginning. The weekly UMT Pioneer goes to the family of every trainee and cadre men, to the Army ground forces, the War Department, the various Army posts, and a large number of civilian organizations. A radio section is constantly kept busy making transcriptions for release to local radio stations throughout the United States. A photographic section with a staff of three keeps up the flow of still and motion pictures. A visitor's and speaker's office looks after guests and provides speakers and speakers' material. It has been officially stated that "it is contemplated that the War Department Bureau of Public Relations will have two speakers in each State carrying the ball for UMT." An official publication reveals that the public-relations men are especially concerned to impress women. It says: "It is recognized that women's interest groups, the largest resistance group in the country, must be approached with special technique. It may be possible to have a WAC officer, trained in public relations, as a member of this office."

The public-relations officers have also prepared for members of the President's committee on universal military training a booklet and a brochure showing the work and progress of the unit. They hope, and not without reason, that through the President's committee their work will be publicized in Congress and all over the country. I wonder if they will remember to remind the President's committee that 10,000 school superintendents and administrators recently approved a resolution which said: "We urge that the Federal Congress in developing a plan to meet the security needs of our Nation will, as a substitute for universal military training, use existing civilian institutions in promoting programs with our youth which will result in their improved physical and mental health, scientific knowledge, civic responsibility, technical skills, and the development of other attributes in them that will lend strength and stability to our Nation."

When Will Congress Act in the Alarming Air-Crash Scandal?

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. GILLIE. Mr. Speaker, I would like to present for the consideration of the Congress a statement prepared by Joseph Leib relative to the air-crash situation. Mr. Leib knows plenty about this matter for it was he who brought about the investigation of Army and Navy air crashes by the Senate War Investigating Committee some years ago. He was responsible also for the revamping and extension of the wartime Army and Navy Air Safety Bureaus. It was his findings and reports that caused the indictment of several airplane companies and through his efforts came the demand for better and safer aircraft for our armed forces.

On Sunday, June 15, 1947, President Truman appointed a special committee to investigate the dangerous growth of recent crashes. This committee would find it worth their effort if they would read the following story:

WHEN WILL CONGRESS ACT IN THE ALARMING AIR-CRASH SCANDAL?

(By J. H. Leib)

When is the Government going to stop using aviation as a bureaucratic guinea pig and bring about the long-needed revamping in the administration of air-safety regulations? New legislation is necessary and urgent.

Everyone in the aviation industry knows that the Civil Aeronautics Board is staffed with inexperienced, blundering, incompetent officials. Let's look over the Civil Aeronautics Board, consisting of five members:

What does Chairman James M. Landis know about aviation? Yes, he was once head of the Harvard Law School and later ran the Federal Security Exchange Commission, but he has had no training in aviation.

Iswald Ryan (vice chairman) is a nice fellow, but his qualifications are in the legal profession.

Harllee Branch: A former newspaperman and politician, but with no aviation experience.

Josh Lee: Former United States Senator who blindly supported the New Deal. Roosevelt was politically indebted to him and paid him off with an appointment to the Civil Aeronautics Board, but chances are he has never been inside of a plane.

Clarence M. Young: A former vice president of Pan American, but with no technical knowledge in aviation.

None are career men in aviation.

However, these officials make all rules and regulations in the administration of the airplane industry.

Furthermore, their subordinates are of little value to them simply because they are not the top men in the trade.

Aviation is a highly technical field as everyone knows—and persons with skill and brains are gobbled up by the industry where the bulging pay envelopes are assembled. Consequently, the Government takes the left-overs and unfortunately their advice and assistance is of little consequence.

Let me cite an example of the utter futility of the present set-up within the Civil Aeronautics Board in connection with the recent tragic air crash in Maryland and in other States.

The Safety Bureau, as it is now called, is solely responsible and directly under the Civil Aeronautics Board. All investigations and findings of air crashes are signed by the Board. The certificate of air worthiness given to each airship is made out under the authority of the Board. Minimum safety standards are also determined by this Board—and let me repeat these men have no technical knowledge of an airship.

Think of it.

The men I have listed above who make up the Civil Aeronautics Board must therefore rely on their underlings for all of their decisions, or yield to pressure from operating air-line executives or manufacturers whose basic desire is to sell their products—come what may.

Is there any wonder that the Civil Aeronautics Board is so helplessly frustrated in the face of so many startling air crashes?

In the Maryland crash of recent date Chairman Landis is personally conducting the investigation, and he has full authority to admit whatever evidence he may so desire.

In other words what Mr. Landis is doing (and he knows nothing about planes) is actually investigating himself and what a comic tragedy that is, for didn't Board Chairman Landis authorize the certificate of air worthiness that permitted this ill-fated plane to take off.

Would anyone be so foolish as to say that Chairman Landis and his Board members, in complete charge of all crash investigations, would place the blame on their own shoulders even if the facts, beyond all doubt, pointed in that direction? Of course not. Chairman Landis must invent a new scapegoat—dead pilots, passengers, and the weather can't talk back.

How can the Government get a true picture of a crash unless the investigation is conducted and headed by technical men?

If you were to build a hospital would you place a layman at the head of your surgical department? If you did you would find in a short time that you had a slaughter house on your hands and not a hospital.

President Truman and the Congress should act quickly and clean out the Civil Aeronautics Board and staff it with men who know what they are doing.

Finally, it might be well to explain the history of this amazing scandal.

Some years ago Senator McCARRAN of Nevada and Congressman LEA of California introduced identical bills calling for the establishment of an independent aviation authority to be made up of five officials. An important stipulation was that the appointees would be required to show approximately 5 years' experience in the field.

But along came Louis Brownlow and Clinton Hester so-called Government reorganization experts who had sold President Roosevelt on a bill of goods to make a guinea pig out of aviation. With the help of the White House Mr. Hester was able to induce Congressman LEA to revamp his bill to include an Administrator of Civil Aeronautics who would have policing and executive powers—and to eliminate the experience clause. This bill became law.

Hester immediately became Administrator and soon after a reorganization order came from President Roosevelt completely putting the whole works under the authority of the Secretary of Commerce, with the proviso that the Board should exercise its functions independently. The Safety Board was abolished and its functions were transferred to the jurisdiction of the Civil Aeronautics Board. The old Safety Board had 3 aviation experts who were of high caliber in their profession. When their jobs were abolished under the reorganization order they left the Government service because they would not take lesser jobs. The aviation world soon saw the ill effects of this action—and today it is becoming even more apparent.

In addition the office of Administrator of Civil Aeronautics was left directly under the Secretary of Commerce.

Bureaucracy took over and is rampant throughout the agency.

The wording of the law, giving the Civil Aeronautics Board independence from the authority of the Secretary of Commerce, has become a long-standing joke in official circles. In the name of logic, how can a bureau be independent within the same department, especially in the Government.

Well, what has developed is nothing less than a demoralization of the entire set-up, staffed with incompetent and carefree individuals in whose hands rest a great deal of the present aircraft tragedies.

Finally, it is interesting to note that President Truman's private plane (DC–6) is being equipped with the latest radar safety devices known to man, such as instruments to detect mountainous terrains, locate heart of electrical storms, and other dangerous objects, etc. Instruments are being added that will give the pilot flying height in all kinds of weather, including new radio equipment.

Certainly, the American public should be entitled to the same consideration and protection as is now being given to the President.

Why doesn't the Civil Aeronautics Board demand that all passenger planes be equipped with the same radar devices as are now being installed in the White House plane?

When will the Congress assert itself to its responsibility to the welfare and safety of the American people? Or is life so cheap to those who roost in the Washington tower of babel?

Action is needed now.

Lewis Deschler

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by George E. Reedy:

Today, I'd like to depart from the ordinary course of these broadcasts, to tell you about one of the most unusual men in Washington. He is a person whose name rarely, if ever, makes the headlines. Without him, however, our Government would break down in no time.

He is Lew Deschler, the Parliamentarian of the House of Representatives. Visitors to the Chamber may have noticed him. He is the tall, heavy-set man who stands just to the right of the Speaker, and is frequently seen in heated confabs with him.

The visitors usually don't know that Lew Deschler has been in those heated confabs with seven of the Speakers of the House. And it is not just the usual custom of a quick conference on legislation. For, without those confabs, it is doubtful if any bill could pass.

Lew Deschler is the official Parliamentarian of the House. That is a title, that may mean very little to the average person unfamiliar with the legislative process. But it is a job whose importance is impossible to overestimate.

The rules of the House are full of "booby" traps. There are points of order, points of privilege, precedents, and codicils that date back to the First Congress. Every one must be neatly filed in his mind and available for use at any moment.

The average legislator doesn't have time to even begin to learn all these things. He must depend upon the enclyopedic memory of Lew Deschler, and, since the time of Speaker Nicholas Longworth, his first boss, he has never failed them.

The supreme tribute was paid to him this year when the National University conferred on him the degree of doctor of laws. For years he had been the official Parliamentarian for Democratic Speakers. SAM RAYBURN relied upon him absolutely—and made no bones about it. Many thought that when the Republicans came in Lew would go out.

But one of the first edicts laid down by Republican Speaker JOSEPH MARTIN was that Lew Deschler was worth his pay and then some. MARTIN decided that in an issue so important Lew's experience was needed by either a Republican or a Democratic House.

He has never regretted that decision. Lew has stood alongside the new Speaker, and calmly laid down the rules of parliamentary law, just as he did with the Democrats before him. And in all his time, nobody has ever been able to criticize a single bill, as improperly passed.

I'm paying this tribute to him, not just because he is good, but because Lew is the symbol of the things that make the American system work. He is a demonstration that our Government is a Government of laws that are beyond petty politics.

His decisions on the way in which our basic rules of society are formulated, have never been questioned. He is the proof that our Government is something above the men that compose it—something that is logical, workable, and worth while.

The main thing, however, is that I believe that more people should know about Lew Deschler. For, as the man who supplies the grease that keeps the gears of our democracy running, he deserves the wholehearted respect of the people of our Nation.

The Transplantability of the TVA

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD an article entitled "The Transplantability of the TVA," written by Dr. C. Herman Pritchett and published in the Iowa Law Review for January 1947.

Dr. Herman Pritchett is a professor of political science at the University of Chicago. Following his academic training, he held a number of responsible positions with the Social Science Research Council, through which he had extensive opportunity to study the problems raised by the public authority type of organization. He spent a number of years with the TVA, studying its organization and operation at first hand. His book, The Tennessee Valley Authority: A Study in Public Administration, which appeared in 1943, is an authoritative statement on this subject. In his more recent article, The Transplantability of the TVA, he brings to bear on the Missouri River Basin his accumulated experience and knowledge, and has made a valuable contribution to this important problem.

I have received an estimate from the Public Printer that the cost of printing the article in the RECORD will be $195.25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TRANSPLANTABILITY OF THE TVA

(By C. Herman Pritchett)

Most people are now prepared to admit that the Tennessee Valley Authority has been a success. It is hard to dispute that since 1933 the whole face of the region in which the TVA operates has been changed for the better. The energies of its streams have been harnessed, and their destructive potentialities largely brought under control. A "Great Lakes of the South" has been created with tremendous possibilities for recreational development of the area. The immense amounts of power made available at low rates have been responsible for new industries, new patterns of rural living. Educational and demonstration activities have resulted in materially transforming an exploitative agricultural system into one which conserves and promotes both natural resources and human values.

From one point of view, indeed, the TVA may have been too successful. One might well ask, after watching the scores of bills which have been dropped into the congressional hopper since 1933 seeking the creation of similar regional authorities for almost every river valley in the United States, whether the authority device had not been oversold.[1] How many of these bills, one may wonder, have been based on a real understanding of the authority plan? To how many people is the TVA more than a slogan? It was against an unthinking overenthusiasm for transplantation of the Tennessee Valley formula to other areas that Secretary Ickes was fulminating in 1944 when he warned that problems of regional development could not be solved "merely by lighting a candle and intoning, 'TVA, TVA, TVA.'"

THE TVA IDEA

First of all, it is necessary to understand the basic elements in the authority device. David E. Lilienthal considers that there are three essentials in the TVA idea: "(1) A Federal autonomous agency, with authority to make its decisions in the region; (2) responsibility to deal with resources, as a unified whole, clearly fixed in the regional agency, not divided among several centralized Federal agencies; (3) a policy, fixed by law, that the Federal regional agency work cooperatively with and through local and State agencies."[2]

The authority thus differs in several important ways from the regular pattern of Federal departmental administration. The basis on which departments are normally established is that of major purpose or function. They are given a single major function to perform, and a wide jurisdiction in which to perform it. Thus the Forest Service is responsible for carrying out its program of forestry development and protection over the entire Nation. The jurisdiction of a Federal major-purpose organizational unit may, of course, be less than Nation-wide, as in the case of the Bureau of Reclamation which operates only in the arid western half of the country, or the Bonneville Power Administration, which carries on its power-distribution operations in the Columbia River region. But in such instances the program is still a single-purpose one, with no responsibility for or control over other governmental programs affecting the same area.

The result of the functional plan of organization is that in each geographical area such action programs as the Federal Government may determine to undertake are in the hands of separate Federal bureaus or agencies, each concentrating upon its own field of specialized interest and sharing no responsibility for the program or operations of its neighbors, with whom, in fact, its relations may be those of competition or rivalry rather than cooperation. The approach to regional problems is thus uncoordinated, piecemeal, and segmented.

It is precisely this characteristic of the Federal Government's action programs in the Missouri Valley, which have been entrusted to such bitter antagonists as the Army engineers and the Bureau of Reclamation, that has led to the demand for a Missouri Valley Authority. For the regional authority reverses the normal departmental pattern. It is a multiple-purpose agency with jurisdiction limited to a particular geographical area, within which it has broad powers to plan and operate a comprehensive and unified program of resource development. Instead of land and water and forests and minerals and transportation being split up among

[1] The recent proposals are compared in Greenleaf, What Kind of a "Valley Authority"?, infra, at p. 339. See also Clark, Proposed "Valley Authority" Legislation (1946), 40 Am. Pol. Sci. Rev., 62–70.

[2] TVA: Democracy on the March (1944), 153.

separate agencies, each jealous of its own domain, the authority can include and interrelate all these elements in its plans. Thus it avoids and ignores the lines which regular Federal agencies must draw. If there are conflicting claims, as for water use, they can be adjusted within the confines of a single agency which has a responsibility to the region as a whole, and do not become a bone of contention over which separate administrative agencies quarrel.

But it is not only the multiple-purpose omnicompetent quality of the regional authority which distinguishes it from the regular Government agency. Equally important is the fact that the control and direction of the authority are exercised within the region, in contrast to the normal Washington-dominated bureaus. It is true that regional or field offices are customarily maintained by Federal bureaus, and that these locally-situated officials may well appreciate the special problems of their regions and seek to adapt the general national policies of their bureaus to local needs. But these officials are responsible to a bureau chief in Washington, and he takes orders from his department head, so that final decisions may be made on the basis of paper knowledge and by officials motivated principally by a desire to maintain nationally uniform procedures and policies.

A centralized Federal bureau is also going to have to fight inherited routines and patterns of thought if it makes significant use of other Federal agencies and local government institutions in the various regional programs which it administers. In contrast, a regional authority set up as a corporate entity, outside the regular departmental system, has an unusual opportunity to plan a development program on the basis of regional needs. Its center of gravity lies within the area. Free from departmental jealousies, preconceptions, and administrative routine, it can develop an original approach to the satisfaction of regional needs, can bring a wide variety of functions within the control of a single operating organization, and can hope to secure the cooperation of other public agencies in its program.

Although not one of the characteristics listed above by Lilienthal as an essential value of the authority idea, the adaptability of the regional authority to the administration of self-supporting enterprise functions has been amply demonstrated by TVA experience. Free from the traditions, limitations, and timidities of normal departmental programs and methods, the TVA has been able to build up a gigantic power system, to plan and construct distribution lines, to work out policies on rates, and in general to conduct a large-scale business operation with a considerable measure of managerial freedom. It is difficult to see how a successful operation of this sort could be conducted under more constrained circumstances.[3]

Such freedom, of course, brings its responsibilities as well as its opportunities. As an autonomous financial unit, separate from any other Government agency, the authority is forced to stand on its own financial feet and make its own decisions as to rates and other financial matters with the knowledge that it is directly responsible to Congress and to the public for maintaining a satisfactory financial record. Because financial tests can be applied to a Government operation which proceeds under these circumstances—tests which are not relevant to ordinary Government-spending activities—a public authority can be released from some of the financial controls which have to be applied to regulation Government agencies.

Another aspect of the TVA's administrative freedom has been its exemption from the regular civil-service laws. Operating simply under a requirement to select its employees on the basis of merit and efficiency, the TVA has made what is in many respects the best record in effective and nonpolitical personnel administration ever achieved by a Government agency in this country.

[3] See Pritchett, The Tennessee Valley Authority: A Study in Public Administration (1943).

THE MVA PROPOSALS

The principal legislative proposals for establishing an MVA seek to follow the pattern developed in the Tennessee region in all these respects. S. 555, as introduced in the Seventy-ninth Congress by Senator MURRAY, provided for a unified approach to the planning, development, and control of the water resources of the Missouri Valley. It proposed to set up a single organization, which would see the whole valley as a single problem. No longer would separate departmental agencies be identified with separate sections of the valley, nor could the problems of the different sections be handled by the dubious method of establishing spheres of influence within which each agency would proceed according to its own predilections. The MVA would have to develop and place before Congress a plan which it could defend as constituting the most effective utilization and the fairest possible division of water resources among the various uses and sections that could be devised.

A unified approach would also be achieved in carrying out the plan as developed and approved, and in making the basic decisions with respect to water management and control. The unity typified by a single boss for a single valley might well be instrumental in fostering notions of cohesiveness and cooperation among the people of the different sections of the valley. The authority would furnish an object lesson in the values of taking a wider view, and supply a core around which larger regional loyalties could form. It would dramatize the fact that it is all one river, and that the factors which seem to divide the different sections of the valley are less significant than those which unite them.

The MVA plans have sought the goal of decentralized administration by such means as the provision in S. 555 requiring the MVA to "maintain its principal office at a convenient place in the territory in which its activities are conducted," working in and with the valley. The bill did not require that the three members of the MVA board should be residents of the area, an arrangement which would probably be undesirable since there is a national interest and responsibility involved. But it did set up an advisory committee to assist the board in the discharge of its duties, this committee to include nine persons resident in the area, three each representing the interests of agriculture, commerce, and labor. The committee was to meet in the area not less than once a year, and to receive the annual report of the board. The bill summarized the regional emphasis of the authority philosophy by directing the MVA to "utilize to the fullest possible extent the advice, assistance, and cooperation of the people of the region, and their public and private organizations—local and State. * * *."

Finally, S. 555 sought to give the MVA a degree of corporate administrative freedom sufficient to permit the effective handling of its enterprise functions and business responsibilities. It was not required to turn over all its revenues to the Treasury, but only the net proceeds from its operations after the deduction of all necessary expenses and the withholding of sums for operating capital and new construction. It was given the right to determine its own system of administrative accounts, permitted to have the final word with respect to expenditures questioned by the General Accounting Office, authorized to settle claims brought against it, and exempted from regular civil-service requirements.

The MVA plan has thus been founded on the proposition that the regional authority plan which has achieved such notable success in the Tennessee Valley can operate with equal effectiveness in the Missouri Valley. If this proposition is to be denied, it must be either on the ground that there were special circumstances in the TVA experience which enabled it to succeed there which are not present in the Missouri region, or conversely that duplicating the TVA in the Missouri Valley presents problems not previously met. Conclusions as to the transplantability of the TVA must take such considerations into account.

FACTORS FACILITATING TVA SUCCESS

The nontransferable factors which helped to promote TVA success are both personal and organizational in character. The influence of Pesident Roosevelt in the formative years of the TVA was incalculably great. It was his imagination which saw in Muscle Shoals not merely an opportunity for the Federal Government to do a kind turn for the people in one small section, but rather a chance to experiment with national planning for a complete river watershed on a scale that touches and gives life to all forms of human concerns. While his contacts with the Authority were intermittent, his interest and leadership constantly influenced the direction of the TVA program, dramatized its achievements, and heartened the organization to withstand the attacks made upon it.

Likewise the two great chairmen of the TVA Board, Arthur E. Morgan and David E. Lilienthal, though they proved to be mutually incompatible, made contributions of the greatest significance to the TVA. Morgan infused the organization with an idealism, a social consciousness, a resolute resistance to political influences. Lilienthal supplied a somewhat more practical and balanced idealism, a driving energy, an inventively fertile mind, and a compelling devotion to democratic and cooperative procedures. The MVA would be fortunate to find two such talents for its board of directors.

Time, place, and circumstance played an important role in the TVA record of achievement. The emergency conditions prevailing in 1933 had prepared the way for an experiment in planning, had made Congress willing to delegate unusual measures of responsibility to administrative agencies, and had relaxed the normal controls over expenditure of funds. Depression and poverty had dissolved the suspicions and the reluctance that might have been the regional reaction to the incursion of these Yankee-Greeks bearing gifts.

The TVA, with an area four-fifths the size of England stretched out through seven States and comprehending diverse conditions of climate, agriculture, economy, and social life, was nonetheless set in a relatively compact and manageable region, especially when compared with the sprawling mass of the Missouri Valley. In the Tennessee region comparatively few other Federal resource development agencies had established themselves on a firm basis. The Department of Agriculture was of course carrying on its agricultural and forestry programs there, and the Corps of Engineers was operating Wilson Dam, maintaining its navigation program, and getting the construction of Wheeler Dam under way. But there was no irrigation or reclamation work, no extensive Federal land holdings, few Indians. Thus the TVA's problem of working out its relations with other Federal agencies was a relatively uncomplicated one.

The fact that the TVA was the only regional authority on the scene likewise facilitated its operations. There was no problem of coordination with the possibly competing activities or demands of authorities in adjacent regions. Because of the fact that the TVA was the only one of its species, the President could spare the time necessary to advise on its policy or settle its internal disputes, Congress was willing to give it unusual privileges, and the departments did not object to yield-

ing some of their responsibilities to it. It had the advantages of being an only child.

FACTORS COMPLICATING MVA STATUS

A realistic appraisal of the factors relevant to the success of an MVA must immediately recognize that the political milieu is now much less favorable than that in which the TVA got its start. The political temper is, for the time being at least, unreceptive to plans for planning or increased governmental activity. There is no support from a dynamic President. The region involved is one which has been most vociferous in devotion to the neo-Republican doctrine of States' rights, and it has been easy to present the regional authority proposal as a threat to the existing Federal-State balance of power. The governors of the States in the area have sought to demonstrate that no change in prevailing patterns of Federal resource development programs is needed. The two Federal agencies most intimately concerned with water control in the area have concluded a treaty of alliance and mutual assistance aimed at preventing the establishment of an MVA.

Congress, moreover, is at present scarcely in the mood, even in the unlikely event that it would approve an MVA bill, to write into such legislation the types of freedom in program planning and in administration that aided so materially in the accomplishments of the TVA. Congress has, indeed, already passed the Government Corporation Control Act of 1945, under the restrictive provisions of which a corporate MVA would have to operate, so that much of the speed and flexibility of TVA administration would be simply unobtainable under present legislative standards.[4]

Apart from the changed political climate there are administrative considerations which would considerably complicate the operations of an MVA. It would be set down in a tremendous geographical area where many strong single-purpose Federal agencies, well-rooted in the region and strongly supported from Washington by department chiefs and influential Congressmen, are already operating. If a truly regional approach to the problems of resource development is to be worked out, the regional authority must mold these existing departmental programs into an integrated plan of operations. For this result a choice of tactics is available. As the saying goes, the MVA can either beat 'em or join 'em.

The former policy would require the ousting of these bureaus from the region, and assumption by the MVA of sole responsibility for administering the programs they now carry on—affecting reclamation, river development, navigation, power, the public lands, grazing, and other Federal-resource interests in the region. Such a step would probably have few advocates, not only because of its obvious political inexpediency, but also because of the scrapping of the special competence developed by the existing bureaus in their respective fields, and because of the challenge which such a regional subgovernment would constitute to the prevailing pattern of national administration.

But the policy of joining the MVA and the bureaus has its own drawbacks. Under such a plan, presumably the bureaus would continue with much the same functions, but would operate under the directives of the MVA in accordance with its over-all plan for the valley. This arrangement would make MVA principally a planning organization, its operating responsibilities perhaps being limited to the field of power distribution. Acting largely through others, would its program hit the Missouri Valley with the impact that was felt in the Tennessee Valley from the TVA program? And would these old, established agencies accept without a fight planning decisions of the MVA which might conflict with their own notions of river development?

The TVA experience demonstrates that it is possible for a regional agency to cooperate with single-purpose Federal bureaus, but there can be little doubt that such a program of cooperation would be harder to arrange under the conditions prevailing in the Missouri Valley. S. 555 appeared to leave the way open for the MVA to adopt either the solitary or the cooperative policy. By that bill the President was given power to transfer to the MVA all water-control projects in the valley. But on the other hand the Authority might, "if in its judgment the interests of economy and efficiency will be secured thereby," construct or operate any of the projects called for by the basic plan "through, or in conjunction with, other departments and agencies of the United States, or in conjunction with States or subdivisions or agencies thereof * * *." Thus the Authority could, if it chose, perform its channel-improvement work through the Army engineers, and carry on irrigation activities through the existing Bureau of Reclamation set-up.

Whether to beat 'em or to join 'em is not the only administrative dilemma posed by the MVA proposal. A problem which is perhaps even more difficult concerns the degree of independence from executive controls which the MVA can be permitted to enjoy. The TVA pattern calls for a status entirely outside the departmental system, control responsibilities being vested directly in the President. This characteristic has been regarded as one of the most important factors in preserving the regional integrity of the Authority and guaranteeing that regional considerations will dominate in the decisions of the agency. This is the heart of the decentralization—the grass-roots approach—about which Lilienthal has written so persuasively. Is there any reason why an MVA should not be given similar independence?

There is a reason why this suggestion tends to give pause to persons concerned with over-all Federal organization. The independence of the TVA could be dismissed as a special case, but if a second authority is set up on the same pattern, then it begins to become a habit—a habit which has some bad features. A regional authority free from departmental control either will or will not be effectively supervised by the President. If it is not supervised, then it constitutes an area of irresponsibility operating without executive control. It might be guided by pressures and opinions in the region, perhaps channeled through the advisory committee provided for by S. 555. But the authority would have a national as well as a regional responsibility. Congress might keep the MVA under its supervision, especially in connection with its budget and its major regional plans and projects, but administrative supervision and control are not tasks which Congress is fitted to perform.

On the other hand, if the President does undertake to discharge the responsibilities that fall upon him in connection with such an independent agency, the affairs of the MVA must compete with the thousands of other duties which make the Presidency the hopelessly overworked office that it now is. In the crowded budget of his time the President must find a few odd moments to consider the problems of a three-man board located, perhaps, in Omaha—not a fortunate situation for the development of effective administrative relationships.

If it is agreed that effective control by the President is impossible under such conditions, and if it is admitted that there must be some coordination of the work of an authority organized on a regional principle with the programs of the regular Federal operating departments across whose respective fields of jurisdiction it cuts, then some thought must be given to providing for such coordination at a level lower than that of the President's office. Particularly would this need seem to be urgent if additional authorities were set up, which might very well, in the pursuance of the interests of their respective regions, develop competitive or conflicting policies which would need prompt attention from a common superior. Former Secretary of the Interior Ickes took the position that in the absence of some central departmental control over regional authorities there would be "confusion and overlapping and headlong adventures in every direction without any central guidance or policy enforced upon all." His candidate for the agency to supply this central guidance was naturally the Department of the Interior. Others saw this suggestion as merely a tactic for capturing the entire development program.

Other suggestions have been heard that the head of a department not so directly concerned with operating programs in the watershed-development field, such as the Administrator of the Federal Works Agency, might be in a better position to serve as a neutral coordinator. Or possibly coordination through a single department head is too simple, and consideration should be given to a more complicated arrangement, under which various Federal agencies would assume coordinating responsibilities for one particular function in each watershed. For example, the Federal Power Commission might be given responsibility over power rates and accounting, while the authority agricultural program would be cleared with the Department of Agriculture.

DEPARTMENTAL REFORM AS AN ALTERNATIVE

The more closely this organizational problem is examined, the more it appears that there is no entirely satisfactory method of blending omnicompetent regional organizations in with single-purpose units organized on a national basis. It may well be concluded that the case for the independent regional authority rests not so much on its own inherent strength as on departmental failure to integrate developmental programs at the regional level. It is consequently of the highest importance that every encouragement be given to improving departmental achievements along this line. William Pincus has recently suggested the possibility of gathering together on a national scale the scattered functions and activities concerned with natural resources development around the nucleus of the primary tools which Congress placed in the hands of the TVA—water use and control and incidental power development—and placing them in a revamped or new Federal department. Such an organization, Pincus suggests, "might avoid the necessity for exposing this Nation to all the problems which the uncoordinated development of various regions would inevitably create in both the administrative and economic fields."[5]

Another suggestion along this same line comes from Charles McKinley, who proposes that existing Federal water and power agencies could be brought together in a reconstituted Department of the Interior, thus preserving the traditional functional pattern of national administration, but with the department so set up as to give "as large a degree of regional autonomy to its field representatives as the need for regional variation, celerity of design and construction, and efficient operation might require."[6] Even under this plan, however, he recognizes that related regional functions would still be in the charge of other departments, such as the Department of Agriculture, so that a consistent and comprehensive regional program would still need to be fused and put into

[4] See Pritchett, The Government Corporation Control Act of 1945 (1946), 40 Am. Pol. Sci. Rev., 495–509.

[5] Shall We Have More TVA's? (1945), 5 Pub. Admin. Rev., 148–152.

[6] Federal Field Integration and the Valley Authority (1946), 6 Pub. Admin. Rev., 380.

effect against the familiar jurisdictional obstacles to cooperative administrative operations. Some approximation to common regional boundaries and bureau and departmental field headquarters would also be required.

Departmental reorganizations of this more heroic sort will be correspondingly hard to engineer, so that attention must also be given to experience with various coordinative devices employed under existing departmental arrangements.[7] But until the tide for departmental reform begins to run more strongly than it has in the past, the temptation to use the short-cut to regional integration offered by the Valley Authority will remain a strong one. As one advocate of the device has said: "The Valley Authority reaches into Washington and puts a big piece of the whole Federal Government right down into each regional area." It is the most readily available and immediately promising method of breaking through the compartmentalization of Federal resource development programs and producing a unified, dynamic attack on regional problems.

There is a price to be paid, however, for its speed and its concentration. There is a real chance that regional autonomy will be achieved at the expense of national control. Regional concentration can develop into a narrow sectionalism. The administrative freedom claimed for a regional authority may extend so far as to undercut executive responsibility. Ways must be found to prevent the Valley Authority from developing the defects of its virtues, for these are the real limits on the transplantability of the TVA.

Firmness Begins To Pay

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by the distinguished columnist, Edgar Ansel Mowrer:

FIRMNESS BEGINS TO PAY

(By Edgar Ansel Mowrer)

The Truman-Marshall policy toward Russia is beginning to work. The proof is the frenzied anti-American squawks being heard from Moscow.

Alexander Werth, able correspondent of the Manchester Guardian in Russia, speaks of the "real ferociousness * * * presently reserved for the United States."

Why? Simply Washington is blocking Soviet plans—and successfully. As Mr. Werth describes it:

"The Soviet Union is expecting its influence to be felt abroad increasingly * * * above all in conceptions of the 'new democracy,' planned economy, and so on * * *.

"There is a feeling that America is trying to do Russia down wherever she can—in China, Korea, Japan, Iran, the Middle East, and Turkey."

Therefore, "all the big guns of Russian propaganda are being turned on America—radio, press, magazines, theater, cinema, and satirical journals. A paper like 'Krokodil' has in fact two main themes for its jokes or denunciations—inefficiency inside Russia and American 'democracy' and imperialism."

This is good news. Quite obviously American opposition to the unlimited spread of that minority blight the Russians miscall democracy, took Moscow by surprise.

At first they simply refused to believe it. Then they became shrilly indignant. Now they are girding up their loins for an ideological struggle which they foresee is likely to be decisive.

A preliminary to further expansion was making the present Russian camp impregnable to diplomatic offensives from the outside.

The first step was a new flock of purges inside the Soviet Union proper.

Top officials in allegedly "sovereign" Union Republics were replaced. Insidious individualism that had crept into certain collective farms was ruthlessly erased.

Discontent was partially met by scrambling. Whole European groups were scattered around Siberia. Asiatics were brought into Europe—like the "kalmuks" who allegedly replaced the exiled Poles around Lwow University.

From the new conquered territories incorporated into the Soviet Union all dangerous elements were brutally eliminated.

Dissatisfaction in the satellite countries was something else because—as Mark Ethridge stated upon his return from the Greek border—the majority of the Balkan citizens oppose the Soviet Union and look to the United States for aid and protection. But since Soviet troops must one day withdraw from these countries, Moscow intends to leave them in the hands of devoted subservient groups. This explains the Hungarian coup.

When Hungarian Communists accused Prime Minister Ferenc Nagy of participation in an antidemocratic plot, what they really meant was planning for a day when Hungary would no longer be one of Moscow's "little dogs."

At present the Russians allow the Czechoslovaks virtually complete control of their own affairs. But if the non-Communist majority in the Prague Parliament were to decide to act in opposition to Moscow, the numerous Communists within and the Russians without that country would doubtless take drastic steps to bring the rebellious Czechoslovaks to heel.

Communist threats that the Soviets will never make peace with the present Christian peoples—social democratic government of Austria—indicate another form of Soviet pressure.

Outside the satellite and occupied territories, where the Russian writ does not run, the situation is more complicated. Having had no personal contact with the Red Army and the Red police, Italians and French are more susceptible to Moscow's anti-American propaganda. Here too the new Soviet tactics are revealed by the useful Mr. Werth. He writes:

"The creation of wide 'popular fronts' in Europe against American 'imperialism' has, it is felt, a better chance than the creation of similar popular fronts had against Nazi Germany in 1934."

Maybe so. But forewarned is forearmed. Since the Soviet idea is Communist participation in governments outside Red Army control, clearly it should be American policy throughout Europe to show up the real aims of these Communist Parties—and strive for their complete elimination.

Hence the rightness of the new policy in Greece and Turkey and the need for further support of the non-Communist majorities in France and Italy.

Once the Communist tentacles have withered and dropped off and the Communist area has been stabilized, the way will be open for new, more successful negotiations with Moscow. Probably not until then.

[7] Id., at 383.

The Labor Policy of the Eightieth Congress

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Labor Policy of the Eightieth Congress," written by Reverend Father Benjamin L. Masse, and published in America for June 14, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LABOR POLICY OF THE EIGHTIETH CONGRESS

(By Benjamin L. Masse)

In another month or so Congress will pack its bags and start a welcome flight from the heat of Washington.

Most of the Republicans will leave with a sense of deep satisfaction, and if a few of them have their doubts, well, every party has it mavericks and why worry about them? The regulars did the job they were elected to do, didn't they? Or tried hard, anyway, and would have done it had not a Democratic President, who missed the meaning of last November's election, chanced to occupy the White House.

That meaning was clear enough. The electorate gave the Republicans a mandate to discipline labor, to reduce taxes, to cut Government spending to the bone. They wanted all the devils of the New Deal exorcised, and no more projects to make a sturdy people dependent on their easy-going Uncle Sam. As the majority report of the House Appropriations Committee put it, explaining a heavy slash in the Department of Agriculture's budget for fiscal 1948:

"As we give thought to such a problem as soil conservation and to the saving of the surface of our land from the influences of erosion, we also have the responsibility of pursuing those policies that will prevent the erosion of that rugged individual character which was made the American farmer the greatest producer of agricultural commodities in any time or generation in the world's history."

That's the spirit, say the Republicans. That's the sort of thing the people voted for last November and that is what we have done our best to give them—rigorous pruning of Federal expenditures, stiff labor laws, a healthy cut in personal-income taxes, no new programs, like health insurance and liberalization of the Social Security Act, to pamper and demoralize a rugged people.

To these sentiments a minority of Democrats, almost all from the South (which needed the New Deal so badly and profited so handsomely from it) utter a heartfelt "Amen."

Now the present writer wouldn't know what the voters wanted last November, or exactly what sort of mandate they gave the Republicans. There are so many voters, even in a country which does not take its off-year elections too strenuously, that even the experts have trouble reading the popular mind. Some say one thing and some say another; so that everybody ought to feel sorry for Messrs. Hannegan and Reese, the respective chairmen of the Democratic and Republican national committees, who must guess right or stand to lose their attractive jobs. Not to mention President Truman, of course, and Senator TAFT, and the dozen other prominent Republicans who, it goes

without saying, with the exception of Minnesota's youthful Harold Stassen, are not candidates for the Republican nomination in 1948.

Anyhow, most of my friends and acquaintances who voted Republican last fall really are not quite sure why they did so; except, naturally, like many other people, they were tired of wartime restrictions and very, very angry over the meat famine last summer. A few of them were disgusted, too, with our appeasement of the Russian dictator and thought the Republicans, despite our bipartisan approach to foreign affairs, might do better. But then this latter consideration has nothing to do with our domestic policy, which remains the only thing setting Republicans off from Democrats (from some Democrats, that is) and vice versa.

If an amateur can risk an opinion about this involved matter, I should like to suggest that the voters last fall gave nobody a mandate to do anything really drastic to organized labor. Some of them did, of course; businessmen who have never honestly accepted unionism and who donated generously to campaign funds; many farmers, especially commercial farmers, who live in fear lest their hired hands be organized; professional people and the comfortable upper middle class who share the economic outlook of conservative industry. Many others, it is true, felt that a few union abuses—jurisdictional strikes; certain types of secondary boycott; violations of the rights of rank and file members—called for legislative remedies. And probably a majority of the voters wanted some kind of machinery that would facilitate the settlement of disputes between labor and management and lessen the possibility of "paralysis" strikes. But it is certain that the public never voted for the Hartley bill; and very dubious that it wanted anything so stiff as the Taft bill.

Look at the record of State legislation over the past few years. Is or is it not politically significant that the frankly drastic laws have emanated mostly from States that are agricultural or lie south of the Mason-Dixon line? Here, for instance, is a list of States which have outlawed the closed shop, either by statute or by constitutional change: South Dakota, Alabama, Florida, North Carolina, Nebraska, Delaware, Georgia, Iowa, Texas, Virginia, and Tennessee. Now the total vote cast by these States in the 1944 Presidential election was 6,081,733, which was roughly one-eighth of all the votes cast. If the voters of the country want such legislation, if they gave a mandate to the Republicans in 1946, why haven't heavily populated and industrialized States like Massachusetts, New York, Pennsylvania, New Jersey, Ohio, Illinois and Michigan hopped on the anti-labor bandwagon? And haven't the politicians heard about the effort to ban the closed shop in California, which failed so dismally?

But let us put political considerations aside and consider a question of principle: has the labor policy of the Eightieth Congress reflected a proper concern for the welfare of the Nation's working people and an understanding of their present situation?

All during the lengthy debates in the House and Senate on the Hartley and Taft bills, not even the most anti-labor Congressman dared to suggest that unions were not helpful and necessary to the material welfare of American workers. The argument was that past Congresses had stacked the cards in favor of labor, that management had now become the underdog and that, consequently, justice called for a reduction in the power of national unions and their leaders. It was asserted, too, that unions, unlike corporations, were not subject to any legal restrictions, despite the fact that they exercised enormous power and could shut down entire industries and starve whole communities. This unrestricted power, it was claimed, had begotten such excesses against employers, the public, and even rank-and-file workers that Congress was now obliged to curb it. The general purpose, then, of the Hartley-Taft bill is to right the balance between labor and management by weakening unions, the supposition being that collective bargaining has failed and led to strikes because management is presently too feeble to uphold its side of the argument.

It should be admitted that some segments of organized labor have, indeed, been guilty of abuses not now covered by any law, and that there is no immediate hope of self-reform. Examples of such abuses are the jurisdictional strike and the secondary boycott to compel and employer to violate the law. There have been abuses, also, of the rights of union members which, under present law, can be corrected only with the greatest difficulty. The Congress has the right, then, and possibly the duty, to seek a legislative remedy for these abuses. No one can quarrel with that.

But most other abuses of labor, real of fanciful, are already covered by law. There is no State in the Union, for instance, which legally permits coercion of its citizens, and violence and racketeering, or which allows mobs to block public thoroughfares and the entrances of buildings. To correct such excesses no Federal law is needed, only the effective enforcement of local laws by State officials; and it has been mildly disconcerting these past months to see men who for years took their stand against the New Deal on the ground of States' rights suddenly rise in the Eightieth Congress and demand an extension of Federal activity in the matter of organized labor. Are they more bitterly opposed, one wonders, to organized labor than they are to growing centralization of power in Washington?

It is a long step, furthermore, from necessary reforms to legislation consciously designed to weaken organized labor in its legitimate activities. Where small businesses are concerned, unions are clearly stronger than employers, although even in this case the disparity is frequently not so great as is popularly imagined. There are a number of instances of small businesses banding together to deal as a unit with a strong union, and when this happens, the difference in strength largely disappears. Even when it remains, many small businesses are helped, not hurt, by a strong union. The union solves a serious problem which they have seldom been able to solve themselves—the problem of unfair, cutthroat competition. Where such competition plagues an industry, the union brings a measure of order and stability—to the benefit of all concerned, including the general public.

Where the unions face big business the advantage still lies with the corporate giants which dominate the American economy. The reason for the duration and partial success of last year's strikes was not the strength of the unions as contrasted with the weakness of corporate management, but the growing equality between the two groups. The unions are more nearly able than was formerly the case to stand toe to toe with management and slug it out. But the heavy battalions are still on the side of big business. The United Automobile Workers certainly could not stand, either now or in the near future, another long strike at General Motors, but GM probably could. We had industrial peace this spring largely because the unions, still licking their wounds from the 1946 battles, were happy to take the best offer they could get. Their case for wage increases was exceptionally good, but they lacked the economic power to make it prevail.

In all this facile talk about the huge power of labor and the relative weakness of industry, people overlook an obvious but tremendously significant fact, namely, that all during the time when the unions were supposed to be browbeating the corporations, American industry reported the lushest earnings in its history. At no time have most corporations been in a stronger financial position than they are right now—12 years after the passage of the hated Wagner Act. If we make it easier by law for employers to resist union demands and break strikes, will the cause of social justice be promoted?

That is our objective, after all. Of course, we want industrial peace too, but peace can never be our supreme goal. The reason was given long ago by St. Augustine, who said that peace is the work of justice. Let us not confuse peace with the mere absence of strife. There was no industrial warfare in Nazi Germany; there is none in Soviet Russia. But is that the kind of industrial peace we want here?

The right way to industrial peace lies partly through collective bargaining on a plane of equality and partnership, and partly through State programs which assist workers to satisfy needs that cannot be otherwise met. By this test, the labor policy of the present Congress has been gravely deficient. The Taft bill reflects more the class-conscious outlook of anti-labor employers than it does a concern with successful collective bargaining. And in no instance has the 80th Congress approved legislation aimed at helping American workers to meet their personal and family obligations. The minimum wage remains at 40 cents an hour; the Wagner-Ellender-Taft housing bill is moribund; nothing is being done about health insurance or necessary changes in the Social Security Act. The Labor Department has been starved for appropriations, with the result that child labor is on the increase and the National Labor Relations Board has a backlog of more than 5,000 cases. And so the dismal story goes.

Let us waive the question of political expediency. On the higher level of principle, the labor policy of the Eightieth Congress badly misses the goal. It will not foster social justice. And neither will it bring us industrial peace.

Reparations to Europe

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

REPARATIONS TO EUROPE

The above caption is borrowed from a cheery item in the current London Tribune, a weekly organ of the British Labor Party's extreme left wingers.

The Tribune breaks the glad news to its readers that President Truman and Secretary of State Marshall are planning to shovel a lot more money into Europe.

This money, the London weekly continues, will never have to be paid back, and will have to be distributed "without discrimination"—meaning to Russia and its satellites as well as to non-Communist countries.

Secretary Marshall has decided, it appears, that the United States for its own good "must pay reparations to Europe," just as if we had lost a war with Europe.

When you examine what the London Tribune is talking about, it begins to look as if we did indeed lose a war somewhere recently, though most of us still think we won one.

The subject so frankly discussed by the British leftist paper is the Truman-Marshall plan for the economic restoration of Europe, insofar as that plan has yet been revealed to the American people, who, as the Great Brain sees them, are too childish to be given bad news all in one dose.

When Mr. Truman called last March for $400,000,000 worth of loans to stop Russian communism in Greece and Turkey, it was delicately hinted that this might not be the last of such requests. That was an understatement if there ever was one.

It is now coming out gradually that Messrs. Truman and Marshall want to bribe all of western Europe not to go Red, and also want to pour more money and supplies into the Russian satellites and maybe Russia itself so as to cool off the Kremlin's present redhot hatred for us.

BIG MONEY FOR EUROPE

In return, the Truman-Marshall hope is that the western European nations at least, will get together in some sort of economic union. That would mean a knocking down of tariff barriers between these small countries, so that trade could be loosened up and recovery from the war's ravages be hastened.

This united states of Europe idea has looked good to us for a long time, it being well known that many of Europe's troubles and wars have sprung from its chronic division into a lot of little nations none of which is self-sufficient.

But it seems that the United States taxpayer is to finance the bulk of the show.

The cost will be considerable, as thus far estimated. Benjamin V. Cohen, veteran New Deal brain truster, guesses the bill will come to twenty-four billions (not millions), of which the United States would put up twelve to fifteen billions over the next 3 or 4 years. A British estimate sets the figure at twenty-five billions in 5 years, and gaily earmarks this entire sum for the United States taxpayer.

The theory underlying the plan is that, if we finance Europe back to solvency and productivity, communism will be stopped there and we'll also establish a lot of good customers for our own products.

This is a pretty theory; but will it work out that way?

DRAINING OUR OWN COUNTRY

What guaranty have we that the job will be finished in 3 or 4 years at a cost of only $25,000,000,000 or so? Can Messrs. Truman and Marshall assure us that our European beneficiaries won't just take to leaning on their shovels like so many prewar WPAers as long as Uncle Sam keeps dishing it out?

We should all realize, too, that it will not be money alone that we'll be shipping to Europe. It will be tractors, fertilizers, farm tools, railroad equipment, trucks, etc., etc., bought with the money we'll be "loaning" to Europe.

That means we shall be draining real wealth out of our own country—wealth of a kind which we could use, and of a kind that doesn't come back once you have parted with it in this fashion. How long can we stand such a drain without busting our own economy?

We should understand, too, that there will be no security for these "loans," and that many of the New Deal do-gooders and Red sympathizers who witched up UNRRA and similar activities will at least try to cut themselves in on this new peacetime lend-lease project.

All we have to say at this time on this subject is, thank heaven Congress has the last word in the matter; also, that we hope all United States taxpayers will give these "reparations to Europe" their most serious thought and their severest scrutiny.

Illinois—An Empire Within Itself

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. SABATH. Mr. Speaker, my attention has been called to an advertisement appearing in one of today's papers headed "Illinois—an empire within itself."

The advertisement carries a brief résumé of outstanding facts about the great State of Illinois, and while it does not and cannot list all the advantages that it possesses, nor all the bountiful blessings of the great city of Chicago, I take pleasure in inserting it in the RECORD feeling it may be of interest to many people:

ILLINOIS—AN EMPIRE WITHIN ITSELF

Illinois, broad Prairie State on the banks of the Great Lakes, endowed by nature with fertile plains and great natural resources. The ingenuity and perseverance of her people made her a leader in manufacturing, agriculture, and allied industries, transportation, mining.

Illinois, where Abraham Lincoln spent his young manhood in the practice of law, in Springfield, leaving to assume the leadership of his country in the War Between the States, returning only to find his final resting place in Oak Ridge Cemetery.

Illinois, in the Grain Belt that feeds the Nation. Since her early days, high in agricultural output, now ranking first in production of soybeans, second in corn, third in oats, near the top in hogs and dairy products.

Illinois, an important transportation center for the United States, Chicago is the largest rail center, the busiest long-flight airport city, and the fourth busiest Great Lakes port. This State, as a whole, is third in railroad-track mileage. The Wabash, Ohio, and Mississippi Rivers are much-traveled water routes.

Illinois, with a rich yield of minerals from her soil, more than half the State is underlaid with bituminous coal. First in production of peat, new oil pools are still being discovered and developed, and her sand and gravel business is second in the Nation.

Illinois, proud of Chicago, one of the biggest industrial centers of the world, whose business district was almost completely destroyed by the great fire of 1871, reputedly started by Mrs. O'Leary's cow kicking over a lantern. Chicago has rebuilt itself to become the largest city in the interior of the continent, second in the country, and third in the world.

Illinois, third in United States manufacturing, with Chicago first in slaughtering and meat packing, and, with its adjoining cities, second in iron and steel production.

Illinois, where public education was encouraged as early as 1787, now supports a State university, in addition to five teachers colleges and normal schools, and the University of Chicago is conducting an experiment in progressive education in higher institutions of learning.

When Illinois was first glimpsed by members of the expedition of Marquette and Joliet, as they made their hazardous way in canoes up the Illinois River, one of the explorers described it by saying, "We have glimpsed nothing like this land we enter for fertility of soil; its prairies and its woods; its cattle, elk, deer, wildcats, swan, ducks, parakeets, and even beaver." The people of Illinois have made full use of all these resources; the rich plains of Illinois (it is the third most level State in the Nation) were early put under the plow, making it the leading agricultural State in the Nation by 1870. Cyrus McCormick, seeing that the best market for his new reaper lay in the agricultural Middle West, located in Chicago, a forerunner of the industrialists who were to make Chicago a manufacturing and trading center of the Mississippi Valley and, indeed, of the whole world. Chicago's site on Lake Michigan and proximity to other water routes also contributed heavily to her phenomenal development to a leading world city from her incorporation in 1833 as a village of 150 people. We citizens of Illinois appreciate this opportunity afforded us by the Hecht Co. to say that our greatest desire is that the friendly spirit displayed by the people from all the distant sections of our country, and of all races and creeds, working together here in Washington in close cooperation, may be carried to the halls of the United Nations to help further peace and democracy throughout the world.

CALVIN JOHNSON,
President, Illinois State Society.

Popular Desire and Sound Economics Back Tax Cut

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. JENISON. Mr. Speaker, in view of the widespread concern over the fate of the tax-reduction bill passed by the Eightieth Congress, I am inserting herewith an editorial from the Danville (Ill.) Commercial-News. The sentiment expressed is representative of the thought of the district I have the honor to represent and reflects accurately, I believe, the feeling of the entire country.

The editorial, published under date of June 15, is as follows:

POPULAR DESIRE AND SOUND ECONOMICS BACK TAX CUT

This fiscal year, which closes at the end of the present month, will be the first since 1930 in which the Federal Government's income has equalled or exceeded its expenditures.

This is not due to any remarkable economy, however. The public is still paying taxes at nearly the wartime level. Congress has passed a bill which if it becomes law will help correct that situation and leave the people more of their own money to spend in their own way.

This surely seems sound and reasonable. Yet President Truman has opposed the tax cut, which ranges from 30 percent in the lowest bracket to 10.5 percent in the top bracket.

It is possible that the President will interpose a veto, and also possible that the necessary two-thirds vote required to override a veto could not be obtained in both Houses of Congress. Why should the Chief Executive be against the tax cut?

He has offered at least two reasons, both purporting to have an economic rather than a political basis. One is that by maintaining present tax rates a substantial surplus will be left in the next fiscal year to apply on reduction of the national debt.

If we also assume, as Mr. Truman most emphatically does, that his $37,500,000,000 budget cannot be cut, objection to tax cutting carries some weight. But the Republican

majority, with the aid of a number of economy-minded Democrats, aims at a substantial cut below that thirty-seven and one-half billion figure.

The Government spenders have raised a great outcry about that. Mr. Truman thus steps from the lofty pedestal of stern debt reduction and appears as an ally of the tax-eaters, who want to take 23 percent of the people's income.

The second argument Mr. Truman has advanced is that if more money is left in the pockets of the populace after the tax collector is through they will buy more goods, boost prices, promote inflation. On that score Chairman KNUTSON of the House Ways and Means Committee asks:

If there is merit in the President's contention, how does it come that he has repeatedly urged wage increases, which also give the wage earner more money to spend? Where is the difference?

Also, this should be remembered. Excessive taxation discourages risking money in new ventures which could increase taxable income. After World War I tax cuts were largely offset by this type of new yield.

The people want this tax reduction. With a greatly needed cut in Federal expenditures it should still leave money for debt reduction. The day of the Hopkins' theme, "spend and spend, tax and tax, elect and elect," is over.

Off the Record

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial by C. F. Byrns which appeared in the Southwest American of June 5, 1947, published at Fort Smith, Ark. I agree with Mr. Byrns that this curtailment is a mistake and I express the hope that the funds are restored.

OFF THE RECORD
(By C. F. Byrns)

The budget cutters in Congress are interfering seriously with some important things we are trying to do with forests in Arkansas.

If the appropriation bill goes through as recommended by the House Appropriations Committee, the Federal Forest Survey in northwest Arkansas will be stopped June 30, with only 10 out of 25 counties completed, and there will be no money to publish the results of the work already done.

Arkansas people interested in forests have been trying for a long time to get a thorough survey of forest resources in the countries north of the Arkansas River. Such surveys have been made south of the river in the pine areas, but the hardwood counties of north Arkansas have been neglected. A survey was started by the United States Forest Service several months ago. It was set up to cover virtually all north Arkansas west of the Mississippi River flood plain and embraces all the valuable forest lands north of the Arkansas River. The field work has been finished in six counties, Crawford, Franklin, Johnson, Pope, Van Buren, and Cleburne. It is expected that field work will be finished by June 30, end of this fiscal year, in White, Searcy, Boone, and Stone. Then it stops, with no compilation or publication of the information, unless something happens to provide more funds for survey work than the House committee has approved.

We need that survey especially just now. The State of Arkansas has provided a State appropriation of $525,000 a year for the 2 years beginning July 1 for fire protection. The forestry division of the resources and development commission will expand its fire protection program by about 800,000 acres in the coming year, all in north Arkansas. In the following year, it is expected that every acre of forest land in the State west of the Mississippi flood plain will be under intensive fire protection. That will be an achievement of first importance to our economy, now and hereafter. We seriously need a thorough survey of the forest resources of the north Arkansas country now without fire protection, as a measure of what we now have and a yardstick by which to gage future improvement.

The Forest Service appropriation is cut in other important respects. The Forest Products laboratory at Madison, Wis., for example, has has been an outstanding center of research in the use of wood products. About 70 percent of the tree is wasted under present methods of use. It is economically sound to spend money to find out how to save as much of it as possible and turn a waste product into a valuable asset, and to find out how to make better use of the parts of the tree now being saved. Yet the committee would cut the research appropriation by a third, from $1,555,000 a year to $1,000,000.

Funds for timber sales are likewise cut by the committee. And that means more than appears on the surface. In the Ozark National Forest, for example, timber sales during 1946 totaled 11,000,000 board feet with a value of $124,000. In 1946 the cut was 16,000,000 feet, valued at $223,000. In 1947 (fiscal year ending June 30) the cut will be about 18,000,000 board feet with a value of $240,000. In the coming year, plans were set up for cutting about 20,000,000 board feet with a value of about $335,000. Under the appropriation recommended by the committee, the cut in the Ozark Forest will not be expanded, but will be reduced to about 17,000,000 board feet. The cash return to the Treasury and to the counties where the forest is located (which get 25 percent of it) will be reduced accordingly, and the lumber sorely needed on the market will not be available.

It isn't good economy to trim down activities which preserve and develop natural resources on which the income of the people is based. Yet the present budget slashers are doing that in important instances.

Purchase of War Bonds by Franklin Delano Roosevelt

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 16 (legislative day of Monday, April 21), 1947

Mr. JOHNSTON of South Carolina. Mr. President, I ask that there be printed in the Appendix of the RECORD an article entitled "Truth Revealed—F. D. R. Bought Limit in Series E War Bonds," published in the Anderson (S. C.) Independent of June 13 last.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUTH REVEALED—F. D. R. BOUGHT LIMIT IN SERIES E WAR BONDS

International News Service in New York, at the request of the Independent, secured from the late President Roosevelt's law partner, Basil O'Connor, information concerning war bonds and Government securities owned by Mr. Roosevelt at the time of his death.

The erroneous impression had been created that President Roosevelt had purchased only one or two $50 war bonds.

The information supplied by Mr. O'Connor follows:

The papers of the estate of Franklin D. Roosevelt on file at the Surrogate's Court, Dutchess County, Poughkeepsie, N. Y., reveal that at the time of his death the late President Roosevelt owned the following United States Government securities:

Treasury bonds and notes: $10,000 United States Treasury 2⅞ percent, due 60–55; $11,000 United States Treasury 2½ percent, due 68–63; $40,000 United States Treasury 2½ percent, due 69–64; $25,000 United States Treasury 1¾ percent, due June 15, 1948; $15,000 United States Treasury 2 percent, due June 15, 1954; $5,000 United States Treasury 2 percent, due June 15, 1954; $10,000 United States Treasury tax saving notes, series C.

Savings bonds: $5,000 Series E Defense Savings bonds dated March 1, 1942 (in inter vivos trust); $500 series E Defense Savings bonds dated May 1, 1941; $50 series E War Savings bonds dated December 1, 1942; $25 series A Savings bonds dated March 1, 1935.

President Roosevelt each year purchased the full limit of series E bonds that he could buy under the law, and these were issued in the names of his grandchildren.

Migratory Farm Labor Bill

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mrs. DOUGLAS. Mr. Speaker, our agricultural economy today faces many problems. These problems are all serious, but among them are two which have confronted us for decades. These have not resulted from the recent war. They are not transitory.

I refer, first, to the problem of securing sufficient labor for the farmer, and, secondly, to the problem of insuring adequate living and working conditions to the workers.

In March of this year, the Federal Interagency Committee on Migrant Labor issued its report and recommendations. This report, entitled "Migrant Labor—a Human Problem," again brings into sharp focus the problems confronting agricultural migrants. It describes in sometimes shocking, but very illuminating terms, the conditions under which migratory laborers of today live.

But it indicates, too, the difficulty which perennially confronts our farmers—the difficulty of securing sufficient seasonal farm labor to meet their demands.

Accordingly, I have today introduced a bill to insure conditions that will make possible an adequate and continuing supply of labor for the production of agricultural commodities. It is designed to safeguard the working conditions of migratory farm workers.

Mr. Speaker, our agricultural economy demands large numbers of workers, migrating from place to place, to meet the seasonal demands of the Nation's farmers. Without their labor during peak seasons, crops are lost, and the investments of food producers and processors

are sacrificed. During the thirties, the chief characteristic of the migratory labor force was its abundance. The problem of securing workers in sufficient numbers to supply labor needs did not seriously confront the farmers of that era. But as World War II approached, there was an immediate transition from an abundance of farm labor to a shortage. As former agricultural migrants turned to defense and war industries, and to the armed services, agricultural employers faced a growing lack of workers. Accordingly, in the fall of 1942, the Government embarked upon a war-manpower program to recruit seasonal workers in areas of surplus, and to direct them to areas of need.

When the supply of domestic laborers proved inadequate, foreign workers were imported. Negotiations between our Government, and the Governments of Mexico, Jamaica, Barbados, the Bahamas, British Honduras, Canada, and Newfoundland ensued, and agreements providing certain minimum guarantees for the workers in return for their labor were concluded.

But, Mr. Speaker, this emergency no longer exists. Unemployment is on the upswing; the domestic farm labor force has undergone another transition, and is today of sufficient size to meet our demands.

Unemployed farm workers—American citizens—are unemployed, while we continue to import foreign nationals for available jobs.

Why does this paradoxical situation exist? Because of inadequate working, living, and transportation conditions for farm migrant labor.

The Interagency Committee clearly recognizes this. The report tells us that—

> Recruitment of migrant workers constitutes a unique problem. Recruitment is difficult because each employer must obtain workers who are fitting employment with him in between their last jobs and the jobs to which they are moving. Recruitment plans are further complicated by considerable haphazard and unsolicited migration. Large numbers of workers move on their own initiative without adequate information on which to base their decisions as to when or where to go.

Thus what the farmer clearly needs is a program that will provide certain working and living conditions and transportation that will facilitate bringing the number of workers he needs, to the place where he needs them, when he needs them. The bill I have introduced today will do just that. It will aid the farmer in securing an adequate labor supply.

Mr. Speaker, this bill aims at improving and safeguarding the working and living conditions of today's agricultural migrants. We are all aware of those conditions. The situation described so vividly by John Steinbeck over a decade ago in his great classic, The Grapes of Wrath, has not changed markedly. For housing, the migrants and their families turn in large part to tents, makeshift shelters, broken down one-room houses, converted chicken coops, deserted farm houses, long rows of one-room cabins. Medical care, except for the limited health services provided at Government-established camps, is almost nonexistent.

Migratory workers have more illness and less medical care than any other part of our population. Children grow up handicapped by lack of education. These children, "following the crops" with their families, are often deprived of even elementary school opportunities. Employment conditions are equally disturbing. The Bureau of Agricultural Economics estimates that 74 percent of the 550,000 hired farm workers employed on 3 or more farms during 1945 worked less than 75 days.

Mr. Speaker, these are the conditions which prevail today in the lives of our own migratory agricultural workers. It is significant, however, that foreign governments, in supplying their nationals for farmers of this country during the war, would not allow their people to accept employment under such circumstances. The foreign governments agreed to supply workers only if certain conditions pertained. These little Central American Republics have shown more initiative in preventing the exploitation of their migrant labor than we have in these United States. In the agreements concluded between our Government and foreign governments, we promised to observe certain stipulations. For example, the Mexican agreement, typical of the several foreign agreements negotiated, provided (1) that Mexican workers should be paid the prevailing wage for the work for which they were transported, with a minimum of 30 cents an hour or the equivalent under a piece-rate system; (2) that they should be guaranteed employment for at least 75 percent of work days during the contract period; (3) that transportation to the work area and return to the point of origin should be paid by the United States; (4) that the Mexican workers would be provided with sanitary housing; and (5) that they would receive the same health guaranties accorded domestic agricultural workers.

Mr. Speaker, on these grounds alone did the foreign governments agree to let us import their laborers. Yet at the same time domestic agricultural labor—our own fellow citizens, men and women who bear the proud name of American—were provided only with residence in labor camps and with some medical care. And even these benefits were not carried through in full. Housing was frequently denied since foreign workers often occupied the facilities. And medical care, because of lack of funds, was available only to those housed in the camps.

Mr. Speaker, this bill asks only that those conditions, services, and privileges afforded foreign workers during the war be extended to American agricultural migrant workers and that the locally prevailing rate of wages be paid as the minimum wage for these workers.

The interagency committee has gone somewhat further and recommended "that such State and Federal legislation be enacted and such administrative action taken as is necessary to give the same protection to migrant workers as is available to other workers."

This would necessitate the extension of the Fair Labor Standards Act, the Social Security Act, and the State workmen's compensation laws to cover migrant workers. While I do not question the virtue of such extension, I ask for no more in the bill introduced today than a bare minimum. The bill aims entirely at making a sufficient supply of labor available to the farmer, while granting to our own agricultural migrant workers the same guaranties offered foreign workers during the war.

This minimum bill which I am introducing today provides transportation, housing, health services, payments, and continuity of employment guaranties similar to those which we offered the imported migrant laborers.

Is it too much to offer the same living and working conditions which we guaranteed foreign labor to our own agricultural migrant workers?

Under the bill I have introduced today, the Secretary of Labor, is authorized to enter into cooperative agreements with the employers of agricultural labor. Under such agreements, the Government would render certain services to the employer, if the employer, in return, agrees to conform to certain conditions. In performing these services, the Secretary of Labor is authorized to utilize existing agencies which deal with comparable problems.

The Secretary is authorized to secure public transportation in order to assure a flow of labor to places where it is needed. He is further made responsible for the establishment of housing standards for agricultural migrant workers, and for the expansion of the present labor camps. And finally, the present tax-supported medical program is to be continued and expanded.

Mr. Speaker, the American farmer needs assistance in getting his crops harvested at the precise moment when they are ready to be harvested. I believe that most farmers want to recruit their labor on the basis of a sure, humane, and efficient system. After demonstrated coordinated Federal direction of agricultural migrant workers to the places where they are needed, we do not want to revert to the haphazard system under which crops spoiled in one place while agricultural migrant workers starved in another.

Let us help the American farmer harvest and market his potatoes, beets, corn, wheat, fruits, and produce without the tears and heartbreak that now stain so much of the clothes we wear and the food we eat.

Federal Aid for Schools

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. LANHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Atlanta Journal on the question of Federal aid for schools:

FEDERAL AID FOR SCHOOLS

The question of Federal aid for public schools is becoming larger, clearer, and more insistent in the present Congress. The House Subcommittee on Education has just concluded a series of hearings at which more than 60 witnesses from all parts of the coun-

try testified, the great majority urging the enactment of legislation for this purpose. A corresponding committee in the Senate has conducted similar hearings and is preparing a favorable report.

The Senate bill proposes up to $250,000,000 a year to be apportioned among the States, on a basis of their actual needs, for the improvement of school standards and services. Sponsored by Senator TAFT, it is a bipartisan measure, and seems eventually assured of a place on the calendar. The House bill, introduced by Representative MCCOWEN, Republican, of Ohio, is much the same in its broad features, but is expected to encounter shrewd tactics of delay from so-called economy-minded Members of that body. It is improbable, however, public sentiment being what it is, that such opposition can keep the bill from reaching the floor for a full and fair debate on its merits.

Public sentiment, and sober public judgment as well, is aroused as never before to the plight of America's public schools and to the necessity of Federal aid as the only way to anything like adequate relief. The States in which the crisis is most acute are those which already are spending the largest porportion of their incomes on public education. Their present economic level and taxable values simply cannot produce the revenue needed to give them good schools. Therefore, as a matter of common justice and for the sake of the country's general welfare, the economic power of the Nation as a whole should be drawn upon to help equalize public school opportunities. America as a whole will suffer so long as the children of any State or community are denied the minimum of their educational birthright.

Congress Fights Cancer

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. CANFIELD. Mr. Speaker, in 1945, shortly after Hiroshima, I wrote President Truman urging him to call a conference of medical and other experts to determine whether atomic energy could be used to combat cancer.

Today, I am glad to note a Board of Medical Review, appointed by the Atomic Energy Commission, has begun a week-long conference in the Capital on the relation of medical and biological sciences to the atomic energy program.

I supported in the last Congress legislation authorizing appropriations for cancer research. This failing, I was pleased to see our distinguished colleague, Mr. DIRKSEN, of Illinois, sponsor like legislation in the opening days of the Eightieth Congress. Last Friday, the Illinoisan followed through when he had the House Committee on Appropriations earmark $25,000,000 of the 1948 appropriation of the Atomic Energy Commission for cancer research. Our committee was unanimous.

George E. Reedy, Washington radio commentator, broadcasting over WOL Saturday, said quite properly that it was impossible to overestimate the value of the Dirksen proposal which is bound to be approved during the current week. Under leave to extend my remarks I include Mr. Reedy's broadcast:

Through the efforts of Representative EVERETT M. DIRKSEN, Washington's unofficial mayor, a new field of vastly important research has been opened. It is the possibility of using atomic energy to fight the dreaded scourge of cancer.

The research will be conducted by the Atomic Energy Commission, guardian of the secret of the Nation's powerful bomb. The funds will be $25,000,000, earmarked in the appropriation bill for the coming year, at DIRKSEN'S request.

It is impossible to overestimate the importance of this project. Up to this time, most of the popular thinking on atomic energy has centered around the bomb. The more important fact that it might be the weapon against cancer has been largely overlooked.

The disease has been one of the most dreaded afflictions of mankind since recorded history began. It was first named by Hippocrates, the founder of Greek medicine, before the birth of Christ. Until recently little more than the name was known about it.

Modern medical science has made tremendous advances in the past few years in combating it. However, the techniques are still comparatively primitive. The reliable weapon to rid the earth of this disease has still to be discovered.

And yet it is a problem so compelling that millions of hours and millions of dollars have been spent in the search of a cure. Every field of knowledge within the ken of man has been explored, as far as present resources go.

On the historic day in August 1945 when a mushrooming cloud of death suddenly formed over Hiroshima, the entire world was stunned. It knew that a weapon of destruction, comparable only to the plagues of biblical times, had been discovered.

Everywhere men suddenly found themselves walking under the fear of the shadow of death. This one fact was so oppressive, so ever present, that no one even bothered to read the fine print explaining that atomic energy had other uses beside war.

That was known, however, to the men who made the bomb. And so, when Congress passed the Atomic Energy Act, a very important section was written into the bill. It authorized research into the use of fissionable and radioactive materials—for health purposes.

That section, of course, had to be implemented with money to pay the expenses of the Commission. The proposal to grant the money, to start the research now, came from DIRKSEN. It is in the Independent Offices appropriation bill, to be debated next week.

There is little doubt that Congress will approve this section. For it offers the possibility of a coordinated research into cancer. As DIRKSEN pointed out in a recent speech on the subject, the trouble with most of the research, up to now, is that it has been hit or miss.

At last, we will have a Government agency with unlimited authority and ample funds to do the job. And while there is no assurance of immediate results, there is the hope that at last we are on the road to conquering one of our most relentless enemies.

Washington State Grange Opposes Senate Bill 110

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following analysis of Senate bill 110 by John L. King, radio and research director, Washington State Grange:

AN EVALUATION OF S. 110

The following statement is submitted concerning the Reed-Bulwinkle bill (S. 110). The committee draft of S. 110 was carefully examined to determine whether it contained the same objectionable features which were present in the Bulwinkle bill, which passed the House in the last session of Congress.

The conclusion, based upon an objective study of its provisions, is that it does. The passage of this bill would not only result in a break-down in the protection of the public against the price-fixing activities of the railroads, but would establish a precedent for the newspapers, medical associations and other industries which desire to escape the application of the antitrust laws.

There are certain fundamental evils in this bill or any other bill which grants a major industry immunity from the antitrust laws. No matter how many safeguards you include for the protection of the public, the evil is still there.

In the special number of the United States Chamber of Commerce publication, Governmental Affairs (March 13, 1947), it is said:

"For two generations, railroads have arrived at proposals for changes in rates and service through various conferences. Since shortly after World War I, the procedure of rate conferences has been under a plan advocated by shippers providing systematic published notices of all rate changes and opportunity for hearings on them. After the passage of the Motor Carrier Act in 1935, motor carriers adopted similar procedures.

"Prior to this decade, the legality or propriety of such procedures was not questioned. The Interstate Commerce Commission, charged with the duty of regulating domestic carriers (other than air lines) in the public interest, knew of and encouraged them and on at least one occasion, when the railroads applied for a rate increase, the Commission in effect told them to get together and work out some needed economies."

Now let us take a look at the record. As far back as 1897, in the case of *United States* v. *Trans-Missouri Freight Association;* and again, in the following year, in the case of *United States* v. *Joint Traffic Association*, the Supreme Court of the United States held that group action by the railroads in fixing noncompetitive rates was a violation of the Sherman Act and contrary to the basic public policy of free enterprise and independent initiative.

The conference method of fixing noncompetitive rates is nothing more nor less than price fixing. If the corner grocers or the farmers or the plumbers got together and decided that a reasonable price for certain commodities or certain work would be thus and so, those companies or individuals would be subject to prosecution under the Sherman Antitrust Act.

But the railroads have said, "We are different." They would have you believe that because of the hundreds of thousands of individual rates it is impossible for the carriers to operate without such a law.

Why is this so?

Under the Interstate Commerce Act each carrier (and, in the case of joint rates, the connecting carriers) is required to fix the rates it desires to charge, such rates becoming effective when filed with the Interstate Commerce Commission in accordance with the act. The published charges may be protested, and when a rate in force or proposed is found to be unjust or unreasonable or unduly discriminatory or otherwise unlawful, the Interstate Commerce Commission is charged with the duty "to determine the just and reasonable rate." As expressed by the Supreme Court, the Interstate Commerce

Act, provides "a zone of reasonableness" between the maximum, above which rates may be excessively high, and the minimum, below which the charges may be too low or noncompensatory; and it is the plan of the act that within these areas rates initiated by individual carriers or joint rates initiated by connecting carriers shall be adjusted by competitive conditions. *Interstate Commerce Commission* v. *Louisville & Nashville Railroad* (227 U. S. 88 (1912)); *Texas & Pacific Ry. Co.* v. *United States* (289 U. S. 627, 636 (1932)); *United States* v. *Chicago, Milwaukee, St. Paul & Pacific Ry. Co.* (294 U. S. 499, 505 (1934)); *State of Georgia* v. *Pennsylvania Railroad Co. et al.* (324 U. S. 439, 65 S. Ct. 716, 727 (1945)).

As stated by the Supreme Court in the Chicago, Milwaukee, St. Paul & Pacific case and in the Georgia case, within this "zone of reasonableness" the carrier is "free to adjust its charges for itself. And as stated by the Supreme Court in the Texas & Pacific Railway case, "As the carriers are in competition for the business they may, within the zone of reasonableness, prescribed by the statute, adjust their rates so as to obtain or retain the desired traffic for their own lines," it being the "theory of the act * * * that carriers in initiating rates may adjust them to competitive conditions."

S. 110 would reverse this long-established regulatory scheme by permitting the authorization of agreements setting up private rate-making organizations which, by concerted action, could fix the rates within the area now preesrved for the interplay of competition. The relief sought by the Government in its suit against the Association of American Railroads et al., and by the State of Georgia against the Pennsylvania Railroad et al., would preserve the scheme for the play within that area of competitive factors.

It should be here stated that the Government's suit does not seek to enjoin activities of so-called rate bureaus which are not unlawful or to stop them from performing functions properly designed to accomplish efficiency in rate publication and proper cooperative exchange of information. The suits do not seek to enjoin connecting carriers from freely collaborating in the establishment of joint rates in accordance with the Interstate Commerce Act, or to prevent individual or connecting carriers from initiating rates through rate bureau facilities, so long as such rates are not fixed on a noncompetitive basis and so long as individual or connecting roads are not bound to the views, conclusions, or action of the rate bureau or other roads or groups.

Section 6 of S. 110 provides:

"The Commission shall not approve under this section any agreement which establishes a procedure for the determination of any matter through joint consideration unless it finds or by condition requires that under the agreement there is or shall be accorded to each party the free and unrestrained right to act contrary to and independently of the initial determination or report, or any subsequent determination or report, arrived at through such procedure, and unless it finds or by condition requires that all carriers of the same class (as defined in paragraph (4) of this section) within the territorial and organizaitonal scope of such agreement shall be eligible to become and remain parties to the agreement upon application and payment of charges applicable to other parties of the same class. Nothing in this section and no approval of any agreement by the Commission under this section shall be so construed as in any manner to remove from the purview of the antitrust laws any restraint upon the right of independent action by means of boycott, duress, or intimidation."

This section does not overcome the objection that the bill does not, by its terms, guarantee a carrier the right of independent action. The right of a dissident carrier to take independent action in the face of the integrated structure of traffic associations, with their inherent power through collective economic pressure, is more apparent than real, in our opinion. Certainly, the activities of the associations in the past do not justify the hope which has been expressed that any individual carrier would retain the right to independent action.

Here, again, let us look at the record. Time and time again we have seen occasions when the Association of American Railroads, through its traffic committees, has impeded and prevented independent competitive action. In the first place, the system is, by its very nature, coercive from top to bottom, as must necessarily follow from the fact that each individual railroad is dependent upon other railroads for through and overhead traffic, which together constitute more than 50 percent of the total tonnage carried by any railroad. The interdependence of railroads indicated by this basic factor is increased by the highly complex financial and operating relationships between railroads and by the delicate essences of economic coercion implicit in any complex industrial relationship.

The history of the activities of the railroads shows that they have never hesitated to impose economic sanctions upon recalcitrant roads by forcing unfair divisions upon such roads and withholding overhead traffic from them.

Perhaps the most serious objection which we have to the Reed bill is that the implications of the price fixing, which would be sanctioned by Congress, extend far beyond the limits of the transportation industry. That is to say, there is a different situation in the transportation industry than that which would prevail in a more or less independent industry. The power to fix freight rates is, in effect, the power to fix prices of practically every basic industry in the country. Transportation costs are a major element in every industrial pricing system and the power to control the cost of transportation is largely the power to dictate initially the location of every industrial enterprise and subsequently the success or failure of those enterprises.

Factors, such as cost of replacement, overhead, volume, sales costs, etc., have little to do in the determination of rates. Railroads are more interested in maintaining preexisting price structures and traffic movements. This, in turn, is influenced by the number and kinds of carriers in competition with the railroads. It is only natural that the railroads desire a rigid price structure throughout the transportation field. That is why they were the leading proponents of the laws to regulate motor carriers and water carriers. The complexity of the rate structure of unregulated carriers made it impossible for the railroads to fix rigid noncompetitive rates.

Proponents of S. 110 will point out that section 4 of the bill provides that the Commission shall not approve any agreement between or among carriers of different classes unless it finds that such agreement is limited to matters relating to freight classifications or to transportation under joint rates or over through routes. * * *. This, they say, will prevent agreements among the different types of carriers. What they fail to mention is that one regulatory body is given the power to fix rates of all carriers. The implication is clear. The Commission in approving any particular agreement must consider those rates in relation to the rates submitted to it by other classes of carriers. This must of necessity be one of the basic issues in its consideration. The normal interplay of competition between different classes of carriers cannot exist as long as a single unit has the power to fix rates for all of them.

The ICC is given power to fix prices subject to certain limitations. One of the criteria set out in section 2 is that any agreement which it approves must not unduly restrain competition. However, in paragraph 9 of the bill it is stated that no agreement approved by the Commission shall be deemed a restraint of trade within the meaning of the antitrust laws. These paragraphs, considered in para materia reveal a perilous situation. In effect, Congress is saying to the Commission, "You may not approve any agreement in restraint of trade, but if you do, they shall not constitute a violation of the antitrust laws." More specifically, in paragraph 9 the Commission is given authority to approve time schedules. Under this authority it may say that X train shall leave at 12 noon and Y train will leave at 12 midnight. Competition between X and Y is not only restrained; it is completely eliminated. It is true that they may provide a more round-the-clock service, but there will be little incentive on the part of the railroads to provide new cars and those additional comforts and low-price meals to win passengers away from competitors, if schedules are fixed by the Commission and no competition exists.

If you think this is a fantastic possibility, look at the record in the Pullman case. There the railroads agreed among themselves not to put the newer types of railroad cars into operation.

The industrial basing point system and the noncompetitive freight-rate structure go hand in hand. Under the basing point system no account is taken of the relation of the particular plant from which the goods are actually shipped or the method of transportation employed. For example, just outside of the city of Laramie, Wyo., is a small town, Sinclair, which is the location of the refinery owned by the company of the same name. The refinery is located in the center of a large oil-producing field. You would expect the price of the gasoline to reflect the absence of transportation charges, but that is not the case. The price of gasoline in Sinclair was based on the rail price from Chicago, the nearest basing point.

These price-fixing schemes could not exist in a competitive system of determining transportation charges. The industrial basing point system must have a rigid freight-rate structure behind it.

The evils of the basing point system are well known. It has been employed historically to perpetuate the industrial concentration in certain areas of the country to the exclusion of new competitors in other areas. Discriminatory rate structures have been employed to suppress the rights of new industries both in the South and in the West. There are a number of examples of these discriminatory practices alleged in the complaints of *State of Georgia* v. *Pennsylvania Railroad* and *United States* v. *Association of American Railroads, et al.* An examination of the trial brief filed by the Government in the latter case is replete with illustrations of the practices to which we have referred.

Perhaps the most amusing anomaly of S. 110 is that apparently the same persons and political parties which protested vigorously in the recent election campaign against what it called tendencies toward regimentation and centralization of power in the Government at Washington are now engaging in one of the most effective and expensive lobbying campaigns to obtain the enactment of a law which, in our opinion, would set up just the sort of bureaucracy to which they recently objected. Of course, the stakes are high and they can afford to spend a good deal of money to accomplish their purpose.

As just one last thought, let us assume for a moment that the bill became a law and that Congress duly turned its supervision over to the Interstate Commerce Commission. Then, let us just suppose that an economy-minded Congress decided to reduce the appropriation of that agency. The hands of the Department of Justice would be tied, while the railroads of this country were run by the Association of American Railroads, a group whose membership does not contain a single representative of the public. It is not a pleasant thought.

JOHN L. KING,
Radio and Research Director,
Washington State Grange.

The Fight for the West

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. POULSON. Mr. Speaker, under permission to extend my remarks in the RECORD, I should like to include the following editorial taken from the Los Angeles Daily News of May 28, 1947:

THE FIGHT FOR THE WEST

If western rails are the West's arteries, then what the freight-car shortage amounts to is a kind of insidious arteriosclerosis.

That's why regular reports on the progress of this disease and efforts currently being made to cure it are in order.

Where matters stand to date is that the western congressional caucus is still holding a consultation and trying to determine what to do for the patient. Meanwhile, the patient has rallied slightly as the result of a radical transfusion of publicity. A few more freight cars have appeared recently on western lines. The arteries, however, are still restricted and the prognosis is doubtful until and unless Congress and the Interstate Commerce Commission can induce widespread changes in railroading practices.

Obviously the first change needed is for the ICC to exercise its wide powers, and to put an end to the hoarding of cars by eastern lines. Testimony of Walter R. Scott, executive vice president of the Kansas City Board of Trade, that western roads have on line 22,925 fewer boxcars than they own indicates not merely that western railroading is sick and undernourished. Also, such testimony does more than contradict the assertion of F. G. Gurley, Santa Fe president, that nobody is depriving western lines of their own freight cars.

Scott's claims suggest what the Daily News has contended all along, namely, that western industry itself remains weak and undernourished, that western economy generally is being held back from full development, because its main arteries of commerce—the railroads—are squeezed by eastern monopolistic practices and controls.

These restrictive effects have been produced in two ways. First, by the freight rate differential.

Despite the Supreme Court decision of May 12 upholding the ICC in lowering southern rates, freight tolls on the Pacific coast still are out of line with the rest of the Nation.

By the Supreme Court action, the eastern rate territory will pay more, the southern and western trunk regions less, while the Pacific West will continue to be charged rates 46 percent to 71 percent higher than all other areas.

If this represents, as the ICC claims, equalization of freight tariffs then maybe the term "equality" requires a new definition. For what the rate differential means, in concrete terms, is well described by Wendell Berge in his Economic Freedom for the West. Berge points out that the rate on work clothing, in carload lots, for 1,088 miles of eastern distance, is $18.40 per 1,000 pounds, whereas the rate for an identical 1,088 miles of western distance is $29.40 per 1,000 pounds.

Translated into producer-consumer terms, this means western industry and business suffer an enormous handicap. It means goods produced in the West and shipped outside must be sold at a higher retail price. It means, therefore, that the western producer's dollar won't produce as much as the eastern producer's dollar.

What's also evident is that under such conditions it's difficult for new western industry to burgeon. Berge calls the whole business "the slow poison of transport handicap."

The second ingredient of this poison is the freight-car shortage. Without cars on line, western roads can't serve western shippers. Western produce can't move in volume. Thus western farms are handicapped, the West's internal economy is weakened.

To get the western cars back on western lines. Scott has urged the ICC to enforce a per diem rental of $6.15 per day for off line cars. This higher, punitive charge, it is felt, will force eastern roads to return empties promptly to western owners where they can be used to move the produce of western farms and factories.

Certainly, getting freight cars for the West is the first objective. Beyond this objective, the West must fight to eliminate all its transport handicaps. By far the worst of these handicaps, from a long-range standpoint, is the rate differential.

The new bi-partisan unity of Western Congressman and Senators gives hope of forcing fundamental changes in discriminatory railroad practices. This unity also gives promise of other hopeful things such as the resumption of Federal work on western reclamation and power projects.

The fight for the West has just begun. It has been carried to Washington by southern California industrialists, for example, supporting the Kaiser Fontana application for RFC refinancing. It has been carried by Gov. Earl Warren, urging appropriations for Central Valley.

The freight car fight is a crucial part of this over-all campaign. It, too, must be won if the West is to realize its bright promise.—R. E. G. H.

Rent Control

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted by the General Assembly of the State of Rhode Island, urging that the Rent Control Act be continued so as to prevent inflationary rental prices. The resolution follows:

Resolution requesting the Senators and Representatives from Rhode Island in the Congress of the United States to insist upon and work for the right kind of rent control legislation to prevent inflationary prices when the Rent Control Act expires June 30, 1947

Whereas the Federal Rent Control Act expires June 30, 1947, and unless the present Rent Control Act is extended this largest item in family budgets would be placed on the list of inflationary prices; and

Whereas it is vitally essential to bring the people's case before Congress to act on this important legislative matter at once: Now, therefore, be it

Resolved, That the Senators and Representatives from Rhode Island in the Congress of the United States be requested to insist upon and work for the extension of the present rent control legislation to prevent inflationary prices when the Rent Control Act expires June 30, 1947; and the Secretary of State is hereby authorized and directed to transmit duly certified copies of this resolution to the Senators and Representatives from Rhode Island in Congress of the United States.

Air Accidents—DC–4 a Good Airplane

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. ENGLE of California. Mr. Speaker, this morning George Reedy, broadcasting over WOL, Mutual network, made one of the most sensible statements I have heard on the recent air crashes, especially with reference to the DC–4's involved in these accidents. He calls for a little coolness and less hysteria, and points out the magnificent record made by this airplane. Mr. Speaker, under leave to extend my remarks I wish to include a copy of that part of this morning's broadcast:

President Truman has taken swift steps, to meet the Nation-wide demands for action, on the recent tragic airline crashes. He has appointed a committee of "outstanding" aviation experts, to probe the situation to the bottom and find out what really is wrong.

The President's move was well balanced, and represented a rejection of many of the hysterical suggestions, with which he has been bombarded in the past 48-hours. These included a demand for the grounding of all DC–4's.

The committee will be headed by James M. Landis, chairman of the Civil Aeronautics Board, and a man thoroughly familiar with the problems of aviation. It's membership will include Brig. Gen. Milton W. Arnold, vice president of the Air Transport Association.

The reasoning behind the President's appointment of such a group is obvious. Their report is one in which the public will have confidence. And the past experience of the members is a guarantee that their recommendations will be well reasoned.

Calm and cool reasoning is something that is badly needed at the moment. The unfortunate fact is that every air accident is the occasion for screaming headlines, while the tremendous accomplishments in air safety are always buried on the back pages.

To complicate the picture at the moment is the coincidence that the recent crashes have involved one type of airplane. The fact that the three accidents bear no apparent relation to each other has been lost in the shuffle for front-page space.

This particular plane is the DC–4—the C–54 of World War II fame, which carried Army cargoes and passengers all over the world. It enjoyed the confidence of the men that flew it and rolled up an an impressive record for getting the goods where they were needed.

Now that it has been converted to peacetime use it is rendering the same service. For months the DC–4 has been carrying passengers all over the world on routine flights that excited no more comment than would a similar trip by any other transportation.

In fact, the DC–4 is the type of aircraft in which President Truman constantly travels. It is out of the question that his official family would permit him to place his life in jeopardy, by using any form of transportation which involved abnormal risk.

The President's board is one that can be relied upon to supply the answers to the questions that the public is asking. Composed of representatives of the industry, and of the Government agencies responsible for air safety, it has the ability to get all the facts.

Should there be a basic cause for the recent crashes, those causes can be determined and corrected. And in the present

state of the public mind, there is no doubt but that those causes will be laid bare, and action taken to end them.

Most of the wild speculation at the moment is futile, and will not help the situation. To condemn aviation before the full facts are known would mean the senseless hamstringing of one of America's most important and growing industries.

Agriculture Appropriations

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. McCORMACK. Mr. Speaker, when the agricultural appropriation bill was before the House every Democratic Member voted against the drastic cuts in our farm program. Once again the Democratic Party has demonstrated its interest in the American farmer. That the people of Oklahoma appreciate this interest is evidenced by a full page advertisement in the McCurtain Gazette, Idabel, Okla., under date of June 7, 1947. This advertisement which was sponsored by the agriculture division of the Idabel Chamber of Commerce, reads in part as follows:

An economy-minded but short-sighted Republican Congress is threatening to cut the United States Department of Agriculture appropriations by 32 percent or more, is about to scrap the program that has done more in the last 5 years than was done in 50 previous years to restore and maintain land fertility in America. That should not be permitted to happen, and farmers and businessmen in farm States should present a united front against such short-sighted action.

Action of the GOP-controlled House Appropriations Committee has already stopped all material purchase orders by the Production and Marketing Administration which assists farmers in the purchase of materials and in payments for soil-building practices, without which farmers alone cannot hope to carry on the soil and fertility building needed to insure nutrient-laden food for 130,000,000 Americans.

The drastic slash in Agriculture Department appropriations will practically scrap the Production and Marketing Administration, the Farm Home Management Administration (formerly Farm Security), crop support prices, and crop insurance, and will badly cripple the soil conservation and school-lunch programs.

The Production and Marketing Administration does not, like the former AAA, deal out money to farmers for reducing acreage of crops, but has as its functions the encouragement of farmers in practicing soil-building and soil-conserving practices on their land, without which the farmers could not carry on such an expensive program as is needed in counties like McCurtain.

Under this program more than 120,000 feet of terraces have been built in McCurtain County since January 1 this year with PMA aid, 2,500 tons of limestone have been spread on lime-depleted land, and 290 tons of phosphate have been distributed on crop and pasture land. Other functions of PMA have included assisting farmers in the purchase of legumes and grasses to restore depleted land and improve pastures from which the meat and milk we consume comes.

Under the pending bill the tenant-purchase plan, by which numerous McCurtain County tenants have purchased and made modern, well-equipped, food-producing farm homes with the help of loans obtained from the farm home management program, will be scrapped.

The school-lunch program needs no defense. It has replaced the cold-sandwich lunch school children formerly took to school with a hot, well-balanced lunch for children at midday when they need nourishing food to sustain them through the day.

Naturally these programs cost huge sums of money, but depleted land will cost us vastly more in future years in lost health and inability to grow crops when it may be too late to restore our soil to fertility.

Representative CARL ALBERT, our Congressman, a friend of the farmer, has committed himself to fight this cut in agricultural appropriations. Let us back him up by asking the support of all our other Representatives in Congress in opposing this move to rob future generations of the land needed to sustain them.

A Chance To Help

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Miami Daily News of June 10, 1947, which is one of the leading newspapers of the South:

A CHANCE TO HELP

Vanquished in his battle to induce Congress to make the terminal-leave bonds redeemable immediatelly, Representative DWIGHT L. ROGERS has introduced a bill which is designated to answer the claim that bond cashing would add to inflationary pressures. His bill, H. R. 3521, would make terminal-leave bonds negotiable, providing that "no person in possession of such a bond shall be considered to be a holder for valuable consideration unless he took it in consideration of the payment of an amount not less than the sum of the principal of such bond, plus the interest accrued on such bond to the last day of the month in which the bond was delivered to him."

This bill, now languishing in the House Committee on Armed Services, insures against such abuses as have occurred recently in which bonds were purchased from veterans at substantially less than face value. At the same time, the Government is protected from being called upon to make immediate expenditure for bond payments. The 5-year Government redemption clause remains unchanged. Since the bonds would necessarily be negotiated with either private persons or institutions, there would be no increase in the amount of money in public circulation.

There will be many veterans who will prefer to hold their bonds until maturity, using them as sound investments. But there are others in dire need of the money their bonds represent. These men are borrowing funds and paying high interest rates in order to meet current obligations. Representative ROGERS' proposal would assist this group.

With the House of Representatives still working on the April legislative calendar, and endeavoring to adjourn or recess on July 31, there is not too much hope that the Rogers bill will reach the floor. If it should be reported out in time for consideration, it will be a chance to help a large number of the veterans without upsetting the financial balance which the Congress is attempting to strike. The Daily News endorses this measure, and favors its prompt enactment.

Press Reports That Mundt Bill Is To Be Pigeonholed at Other End of the Capitol Are Denied—Foreign Relations Committee Has Already Appointed Subcommittee To Consider H. R. 3342—Decision To Provide a Carry-Over Appropriation for a Comprehensive United States Information Service Abroad Would Be Constructive Step but Congressional Safeguards Are Needed

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. MUNDT. Mr. Speaker, since some newspaper reports this morning contain accounts of decisions and programs being considered by the Republican policy committee of the other body of this Congress which erroneously convey the idea that the Upper Chamber of Congress might pigeonhole or sidetrack the Mundt bill to provide a United States Information Service abroad when it reaches that side of the Capitol, I take this opportunity of correcting those misconceptions and misinterpretations. In fact the decisions and proposals considered by the Republican policy committee at the other end of the Capitol are actually constructive steps to expedite action on H. R. 3342 and to prevent the program it proposes from being scuttled on July 1 should we fail to complete legislative consideration by both Houses of Congress before that time on this important matter.

NEWS RELEASE ON PIGEONHOLING STORY

Mr. Speaker, in order that the Members of the House and the country generally might have the correct picture of what actually transpired at the other end of the Capitol over the week end, I am inserting at this point in the RECORD a news release which I gave to the press and radio correspondents this noon shortly after talking with the distinguished senior Senator from Michigan [Mr. VANDENBERG]. Here is that statement:

After reading the AP story of this morning allegedly reporting decisions of the Republican policy committee of the Senate, I immediately called Senator VANDENBERG and asked him about the basis for this story. Senator VANDENBERG told me there was no desire or decision on the part of the Senate to pigeonhole the Mundt bill. He said that in fact he had already appointed a subcommittee of the Senate Foreign Relations Committee to go into the Mundt bill as soon as it arrives on the Senate side and to facilitate its consideration. The members of the subcommittee are Senator SMITH, of New Jersey, and Senator HATCH, of New Mexico, Senator VANDENBERG advised MUNDT.

Senator VANDENBERG further told me that paralleling this action there had been dis-

cussions by the Republican members of the Appropriations and policy committees on the Senate side about the possibility of approving a stopgap appropriation to maintain standby operations of the Benton office until the Senate had ample opportunity to determine what fundamental changes might be desired in the program before final action is taken on this question in this session of the Eightieth Congress or the next. Senator VANDENBERG assured me personally and emphatically that there is no intention on the part of the Senate Republicans to prejudice or prejudge the action of the House on this matter.

Later this afternoon, I was asked by several reporters whether I felt that the action and considerations discussed at the other end of the Capitol would facilitate or discourage passage of H. R. 3342 when it comes up for final action later this week. As a consequence of these queries, I gave the press and radio gallery the following subsequent statement about 3 o'clock this afternoon and for purposes of completing the record at this point I am also inserting that statement as a part of these remarks:

STATEMENT BY HON. KARL MUNDT, OF SOUTH DAKOTA, AUTHOR OF H. R. 3342

Asked to comment concerning the proposed action of the Senate Appropriations Committee to authorize a stopgap appropriation to continue operation of the Benton office until both Houses of Congress had finally disposed of his legislation authorizing its permanent operation and establishing standards and safeguards for its administration, Congressman MUNDT said, "I consider both the action of Senator VANDENBERG in appointing a subcommittee comprised of Senator SMITH, of New Jersey, and Senator HATCH, of New Mexico, to facilitate consideration of H. R. 3342 and the proposed effort of Senator BALL to provide a carry-over appropriation to maintain the operations of our United States Information Service abroad while Congress is deliberating its final decision on the program to be wise and helpful steps in the right direction.

Far from being maneuvers to sidetrack or pigeonhole the so-called Mundt bill when it reaches the Senate side, I consider these proposals as being constructive steps to help keep the Voice of America from dying at the very time we are trying to strengthen its tone and improve its accent through the enactment of H. R. 3342. The announcement by the Senate Republican policy and Appropriation members should help reduce opposition to this legislation in the House.

Mr. Speaker, it should again be pointed out to the Congress and the country that use of the phrase "Voice of America program" in connection with H. R. 3342 and with relationship to the prevailing program of United States information abroad refers to the entire, comprehensive and interlocking program of educational exchanges, information centers abroad, magazines such as Amerika in Russia, short-wave broadcasts, loan of United States Government specialists to render nonmilitary assistance and guidance abroad, and the other sections of H. R. 3342 and not simply to the short-wave broadcasts which form but a small portion of the prevailing and the proposed Voice of America program.

It should also be emphasized, Mr. Speaker, and in another part of the Appendix in today's RECORD it will be detailed by Mr. JUDD, of Minnesota, that were Congress simply to approve of carry-over or stop-gap appropriations alone or to continue our information program abroad by once again providing appropriations without benefit of substantive legislation we would be turning the State Department loose without restrictions and without congressional safeguards to continue virtually every aspect and phase of the program outlined in H. R. 3342 but which H. R. 3342 is designed to control, safeguard, guide, and direct by well over 20 Congressional directives not contained in the program now operating through action by the Appropriations Committee. Actually, sir, H. R. 3342 contains the provisions essential to the correction of the very ills and difficulties of which many Members of Congress have insistently complained.

Without the passage of H. R. 3342 we will once again find ourselves authorizing by appropriations only a blank check operation lacking such essentials as: loyalty checks, provisions against alien employment, machinery for deportation when required, the formula of reciprocity which requires the State Department to utilize that formula in working out exchange relations with other countries, the bi-partisan control board included in the Dirksen amendment, the provisions for utilizing private agencies wherever possible, the requirements that Congress be supplied with detailed semi-annual reports of what is being undertaken in this program and an evaluation of its results together with at least 15 other safeguards and protections which are incorporated in the basic language of H. R. 3342. In other words, by defeating or delaying passage of H. R. 3342, Congress would be but denying itself the regulatory machinery which is required to bring the Voice of America program under the control and purview of Congress.

The prudent and the practical thing for Congress to do, it appears, therefore, is to act affirmatively in support of H. R. 3342—amending it with additional safeguards if the majority of our members so desire—and thus provide the standards of administration and efficiency together with the safeguards and controls which many of us believe will be helpful in enabling us to get more for our money through this essential operation. Virtually the entire program has been operating with South American countries since 1938. Most of the program has been operating with the rest of the world through appropriations granted by the Appropriations Committee without substantive legislation and consequently without the safeguards and controls which H. R. 3342 provides. It would appear to be sensible and sound procedure, therefore, Mr. Speaker, for us to approve H. R. 3342 and thus to bring under congressional supervision and control a program so sound and so essential that with or without the passage of H. R. 3342 there seems to be general agreement that it must not be dropped or denied at this crucial juncture of world affairs.

Mr. Speaker, it may well be, as has been suggested by former President Hoover and by our distinguished leader on foreign affairs at the other end of the Capitol, who has brought new honor to Michigan by his forthright policies, that the United States has about reached the bottom of the apple barrel from the standpoint of our ability to render substantial additional foreign aid abroad. I certainly agree we must not jeopardize the solvency of America in our zeal to aid others. I favor making an inventory of what we have before making further large commitments to rehabilitate the economy or strengthen the defense of other countries.

But, Mr. Speaker, the more we are compelled to deny the requests for aid which come to us from abroad the more vitally we shall need the services of a comprehensive United States Information Service abroad to the end that our inability to extend greater help is not misinterpreted by them. We must not permit unfriendly nations to convince our friends abroad that it is mere callous indifference or selfish unconcern which compels us to deny their impassioned pleas for aid. We need our own information service abroad and our own comprehensive program for telling the true story of American purposes and problems so that those whom we must deny assistance can be made to understand the reasons for this situation. Surely we should not depend upon unfriendly voices and unfriendly information centers to explain the very legitimate and understandable reasons which require us to protect our own solvency and to deny foreign requests for aid which our financial structure will not support.

Mr. Speaker, it is fully as dangerous in times like these to demobilize our forces for peace as it would be to demobilize our armed forces charged with protecting our national security. Let us undertake to secure final action on H. R. 3342 as early this week as possible, and let us pass it with full confidence that in so doing we are equipping our State Department with the weapons it needs in order to wage successfully the all-important struggles for peace in which it and we and all the world are now engaged, and that in so doing we are placing this program under the control of Congress. Let us not be guilty of acting in such fashion that our efforts for peace will be too little and too late.

Statement by Hon. Otto E. Passman, Fifth Louisiana District, Before the Appropriations Committee

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. PASSMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement mad by me to the House Committee on Appropriations:

Mr. Chairman and gentlemen of the committee, you have been most kind in listening to me and several of my constituents from the Fifth Congressional District of Louisiana, who have appeared before your committee in the interest of adequate appropriations for several flood control projects in which we are vitally interested. A few days ago Mr. Fred Hudson, of my district, spoke specifically with reference to the

LAW LIBRARY
FEDERAL WORKS AGENCY

Tensas-Concordia project and the Red River backwater area. Only recently, a very able, efficient, and respected Director of Public Works from the State of Louisiana, Mr. DeWitt L. Pyburn, who, in the brief time available, portrayed the general flood control situation in the State of Louisiana, not only with reference to the Red River backwater area, but the Morganza project, and the other necessary projects underway and planned and the great necessity of providing funds for final planning so that the efforts of the State may be coordinated with the projects to be undertaken by the Federal Government in that area.

For some years it has been very apparent that there is a definite need of a long range well-planned bank stabilization program. As it is today, reduced appropriations hamper the work of the Army Engineers to the extent that the Mississippi River is gaining every year and makes it necessary to set back more main-line levees. May I point out one example of this:

In Tensas Parish opposite Lake Bruin there is a very critical situation that it may make it necessary to set-back the main-line levee that has been raised to 1941 grade and section. This set back will be over 21 miles in length and will cost approximately $7,000,000. The reason for this long set-back is that this levee will have to be removed beyond a large lake and will take in 37 percent or more of the area of Tensas Parish. These lands that will be thrown out are the most productive and highly improved lands in the Ouachita-Mississippi River Basin. Adequate funds at this time would save this rich agricultural country and no doubt its revetment can be done much cheaper than making this new set-back.

This is a critical situation and unless it is corrected within a very short time there is the danger of a crevasse that will flood the major portion of the Ouachita-Mississippi Basin, as well as many parishes south of this point to the Gulf of Mexico.

The comprehensive Mississippi project calls for the protection of the Red River backwater area. The Army engineers have found this project economically justified and practical and work is actually under way on this leveee system. The cut-offs that have been made north of Old River have shortened the main river 170 miles, thereby increasing the velocity of the river and causing much higher stages in the Red River backwater area than was experienced in previous years. Most of the other critical sections of the valley have received assistance and their projects are well advanced. I wish to point out to you that the Red River backwater area was practically the last project to get under way and that these people have suffered increasing flood heights annually, due to the completed works upstream.

This project should be advanced on the priority list so that the people in this section can receive the protection that has been due them for many, many years. It is not unusual for as much as 95 percent of the total area in Concordia Parish to be inundated at one time, with hundreds of thousands of acres of our richest farm land covered with from 1 to 9 feet of water and the loss to the citizens of this great parish goes into hundreds of thousands of dollars. They are a patient group, but their patience is about exhausted. They are entitled to relief and protection and I urge this committee to give special consideration to the Red River backwater area levee and, if at all possible, earmark a specific sum so that the work on the Red River backwater levee can be continued.

There is another project that affects this backwater area. This is a controlled structure in Old River, which will divorce the Mississippi from the Atchafalaya. This controlled structure will enable the flood heights to be controlled between these giant rivers and will afford the maximum protection to the backwater area. Pending the completion of this giant controlled structure, it is urged that the levee system that has already been inaugurated in the backwater area be completed at the earliest possible date. This project will in the end be an integral part and make a substantial contribution to the protection, not only of a portion of the Red River backwater area, but to the protection by control of the floodwaters in the Atchafalaya diversion and this entire area.

I wish to call the committee's attention to the fact that the people in the basin between the Ouachita and the Mississippi have provided funds in the amount of $3,100,000 for major drainage works. This program is under way, contractors are at work, but it is imperative that the Tensas Boeuf River, Bayou Macon project and the Lafourche project, which are the major outlets for this drainage, be improved as provided for by Congress, in order that these drainage projects may function properly. In other words, my people are trying to do something to help themselves and I think this is an outstanding example in the entire Mississippi Valley, where such a program has been started by local groups to utilize Federal projects, thereby improving their fertile agricultural lands.

The total Federal estimate on these four streams is $10,900,000. May I urge that you include in your recommendation to the Congress that an allotment of $2,500,000 be made annually to these projects until this work is completed.

Gentlemen of the committee, I respectfully submit on behalf of the people of my district and of my State that, where we are showing a disposition to tax ourselves and provide substantial sums of money, millions of dollars, to protect ourselves insofar as we may, we are entitled to all the more consideration at the hands of the Congress when we ask for Federal aid in this protection work against conditions which are brought about incident to the entire flood control project.

In conclusion, I should like to reiterate that the flood control problems as they exist in the lower parishes of my district, more expecially Concordia Parish, are man-made, which, of course, warrants the special consideration of the members of this committee.

Rivers Belong to the People

EXTENSION OF REMARKS

OF

HON. JOHN H. KERR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. KERR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Raleigh (N. C.) News and Observer of June 12, 1947:

RIVERS BELONG TO THE PEOPLE

If the American people as a whole had been as wise as Franklin Roosevelt, Al Smith, and Robert Wagner as far back as 1910, private interests would not have been permitted to control the power of the rivers for the profit of utility companies. This trio in the New York Legislature fought Morgan and other utility companies who sought to grab up the water power of New York State. As God made the rivers their power and usefulness should have been preserved for the benefit of all the people. The North Carolina rivers should not have been permitted to be monopolized by the Duke, Carolina, and other light and power companies. All natural resources should have been preserved for the common benefit of all the people.

It was not until George Norris and Franklin Roosevelt, with wise statesmanship, teamed up to keep Muscle Shoals and the Tennessee Valley from being exploited by private interests and private profits that the people awoke to the fact that their rivers and lands and other natural resources had been obtained by private companies for their exclusive use, and the public benefited only by paying prices which were often exorbitant.

When Roosevelt's utility regulation measures were introduced in Congress, the utility companies called one bill a death sentence to their companies. Experience has proved that Roosevelt was right. The legislation insured cheaper rates to the people and the companies have prospered and enlarged. Following the TVA development, which gave more and cheaper power, like organizations by the Government created industries and prosperity on the Pacific coast. Other like developments by Uncle Sam promised benefits to other sections in the Missouri Valley and other sections. It looks like the light and power forces are resolved to get back in the saddle.

The proposals to prevent flood destruction and produce power from the Roanoke and Yadkin Rivers in North Carolina are being fought by the big power companies. They wish either to prevent use for the public benefit or get control for their profit. The hearing in Washington proved that the Roanoke project is desired by nearly all the people in Virginia and North Carolina, but power companies in these States are fighting this most important and valuable proposal. In the hearing Louis Sutton showed that utility companies learned nothing from the wonderful TVA development. He told the committee, in 1947, after TVA had demonstrated that it was the most important development for the people that the like proposal on the Roanoke River was another TVA. He was right in this particular: It will benefit all the people, too long overcharged by power and light companies. The people in all sections prospered under the Roosevelt laws, followed in some States. Before the Federal legislation for rural electrification, few people living in the country had light or power. Before Uncle Sam began to build lines to afford these modern conveniences, the power companies compelled the farmers to pay for the cost of installation. When Uncle Sam began to construct lines, belatedly the power companies started what they should have begun long before, and began to construct rural lines of their own.

If this Congress listens to the pleas of power and light companies, which wish to monopolize the rivers for their enrichment, it will turn the clock back and advertise that it is the creature of big business.

The rivers belong to all the people. They should be retained by Uncle Sam within their banks to protect farmers from floods and the waters used to produce cheaper power and light for the benefit of the people. It would be disastrous to repudiate the Roosevelt policy as to natural resources.

The rivers belong to the people and should be utilized for their benefit.

The "Heartless" Taft Bill

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Congressman JOHN J. ROONEY at a rally held at Kings County Democratic headquarters, 4 Court Square, Brooklyn, N. Y., on June 11, 1947:

The "Heartless" Taft bill is a piece of legislative chicanery which, by its terms, denies the working men and women of America the basic right of organization for their mutual economic benefit. It is deliberately designed to lay low organized labor and decent living standards, and to turn the economic clock of the great majority of ur citizens far back. Under its terms working people will have fewer rights than they did a generation ago.

This hastily prepared and too hastily considered bill—the conference report of 73 pages was not made available to Members of the House by the Republican majority until 3 hours before it came up for action on the floor, and debate was limited to 1 hour—this bill not only destroys the rights and protections given to labor during the past 50 years, but deliberately takes the very laws intended for the protection of the laboring man of our Nation and turns those laws around and aims them at destroying organized labor.

We all know that this vicious and punitive bill is the brain-child of the National Association of Manufacturers and big business. It is in line with every move so far made by the Republican Party during the present Congress—and they are the sponsors of this Hartley-Taft bill—to make the rich richer and the poor poorer. They must take care of their big-money campaign contributors in the National Association of Manufacturers. Last fall these big boys refused to chip in until they were assured there would be drastic labor legislation.

Last November 5 was a sad day for the American people. Last November 5 was a tragic day for American labor. Last November 5 was the day organized labor threw into the discard the sage slogan of its great leader, Samuel Gompers, when he said: "Reward your friends and punish your enemies." Now, under the terms of the present bill a labor union is not only not permitted to advocate that labor reward its friends and defeat its enemies but even to publish a Congressman's voting record in its union paper.

Last November 5 organized labor in this State endorsed the candidacy of the junior Senator from New York, Senator IVES, and repudiated one of its truest friends, the great 10-year Governor of New York, Herbert H. Lehman. What a friend Senator IVES turned out to be. Judas Iscariot argues love of labor but puts his stamp of approval on company unions, strike-breaking, Government injunctions, elimination of the closed shop, and annihilation of other forms of union security. Many in organized labor contributed to the election of Republican majorities that assured the voters last fall that labor had nothing to fear from a Republican victory at the polls; that the Republicans wanted public office only to show their warm affection for the working people. Since then they have been busy as beavers removing restrictions from business and applying them to labor. Under their plan business gets less regulation and labor gets more. There will be just as many Federal restrictions as ever but they will be transferred from business to labor.

It is interesting to note that the Republicans in the House voted 217 to 12 in favor of the conference report on the Taft-Hartley bill. And in the Senate only two of the 51 majority party Senators voted against the Taft bill. Out of 295 Republican Senators and Congressmen, only 14 voted for labor. On the basis of this showing, the Republican Party is 95 percent against labor. In contrast, not a single Democrat from New York State voted for this antilabor legislation. Your all-Democratic Brooklyn delegation in the House, of which I am proud to be a member, voted solidly against the Hartley bill in April, and against the conference report on June 4.

A blind man can see that the real aim of the National Association of Manufacturers is to smash the American standard of living, break up labor unions, and thereby force wages down and wreck the working conditions of millions of people. Never in the history of its activity has the National Association of Manufacturers spoken for improvement of the living standards of working people. It has opposed the child-labor laws, it has fought minimum wages for women and minors employed in industry, it has done its best to wreck safety and industrial insurance legislation.

The Republican Charlie McCarthys of the National Association of Manufacturers have sure cooperated with their masters. They have ignored much-needed housing legislation and legislation for our war veterans like a pay car passes a bum. But they have a pending tax-reduction bill, under which taxpayers in the Nation's low-income groups can look forward to mightly little saving, while the high and mighty are due for the cream. Under it, the top 4 percent of the taxpayers get a 37 percent slice of the cut, while the bottom 53 percent receive only 27 percent of the tax cut. A man with a wife and two children who earns $2,500 a year will save $28.50 a year in taxes, while a man with a $300,000 income will save $37,430 a year, over a thousand times the poor man's $28.50 saving.

Oh, didn't the Republican Party fool the people last November 5. They promised that with a Republican Congress and abolition of OPA, prices would come down. That promise has not been realized—prices are higher than ever. Now, when your wife travels around to the various stores—grocery stores in particular—she often hears the expression, "No, no. I can't afford that. What else have you?" It isn't unusual these days to be unable to even afford hot dogs. They get as much as 69 cents a pound for them. You pay $10.50 for a pair of shoes that formerly sold for $6.45—shoes for work, mind you, not for promenading down Fulton Street.

Look what the National Association of Manufacturers-directed Republican majority did to the school-lunch program. All but 12 Republicans voted against the Democratic motion to recommit the bill so as to insert the usual full amount for the school-lunch program.

To get back to the Republican antilabor bill. The working people of this country have never had a great deal of security. They have never been able to look forward to old age without apprehension. The Eightieth Congress has done nothing to promote their security. On the contrary, all the legislation passed to date by this Republican Congress affecting working people has been injurious or nonbeneficial to them. How can they be contented when they know this? Yet the greatest bulwark against communism is a happy and contented people. Communism thrives on discontent, and I am afraid this measure will contribute to its spread.

For 14 years the Democratic Congress protected labor. As a consequence, when our country needed labor to supply the sinews of war, production attained such a speed that we became the wonder and envy of the world.

This one-sided bill will not promote labor-management peace. On the contrary, it will stimulate tremendous industrial strife and cause discontent and unhappiness among our working people. Does anyone with an ounce of common sense think that the longshoremen along Brooklyn's waterfront are willingly going back to their pay and working conditions of 25 years ago? This bill is saturated with subterfuge and legal technicality intended to destroy and confuse collective bargaining relations. In case there's any doubt about that, one of its authors, Congressman HARTLEY, said during its consideration on June 4, and I quote his exact words from page 6383 of the CONGRESSIONAL RECORD: "I think you are going to find there is more in this bill than may meet the eye and may have been heretofore presented to you."

Yes; there is more in this bill than meets the eye. It can only bring back the mistakes of 1929, the return of bread lines and apple stands. I cannot improve on the words of a Democratic colleague, Congressman LESINSKI, just a week ago today: "Already the first signs of recession are appearing. Business leaders have begun to dig economic storm cellars. No propaganda can convince the American people that we have ever been picketed into a recession or struck into a depression. The American people know that we are speculated into panics and profiteered into depressions. They will not long be deceived by the hollow slogan that labor has become too strong."

In conclusion, I sincerely trust that for the future of America and the welfare of our Nation our great President in his wisdom will veto this outrageous piece of legislative chicanery. No law that is unfair and discriminates against the individual citizen will ever succeed in free America. You cannot by a law such as this destroy man's God-given rights.

Ukuleles and Taxes

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Jefferson County Union, of Fort Atkinson, Wis., of June 11, 1947:

UKULELES AND TAXES

Probably you don't know it, but this is national Be Kind to Taxpayers Week. It's especially appropriate that this happy week should wind up with Father's Day next Sunday, especially in view of the fact that poor pappy usually winds up behind the eight ball.

Anyway, the Wisconsin State Chamber of Commerce thinks Be Kind to Taxpayers Week is a good idea, and for good reason, too. Mr. William J. Petersen, executive secretary of the State chamber, has written to Executive Secretary Ralph Ebbott, of the Fort Chamber, explaining why it's a good idea.

We have all been advocating reduction in Federal expenditures and economy in government. A fellow named Andy Anderson, a small businessman of Ada, Okla., now gives us a new approach to do something about it.

When Anderson learned that the Government was spending more money for its support than was being spent on food for 142,000,000 people in the United States, he got hot under the collar. He felt that it was time to do something about it, and that is exactly what he did.

He had heard about such special weeks as "be-kind-to-dogs week," so he felt it much more important to proclaim a national "be-kind-to-taxpayers week." His principal idea is to get people to spend 9 cents and 15 minutes in writing to their United States Senators and Representatives, urging their support for Federal budget cuts.

You will agree that if such a suggestion is carried out to any extent, it may do much to offset the bureaucrats' pressure campaign for continued high spending.

Probably you're somewhat puzzled by the difficulty of paring the nonessential timber from the Federal pay roll. You know a lot of people are engaged in some pretty silly tasks. Why doesn't the Government lop them off?

The difficulty is that these Federal parasites are voters, members of their families

are voters, their friends and neighbors are voters, the limited trade they serve are voters—and besides they probably do a couple of worth-while things that, in their own mind at least, justifies their existence.

Let's assume that you are 1 of 1,000 Federal employees in the fictitious Bureau of Ukulele Research. You have, let's assume, 37 relatives, none of whom want to feed you in case you lost your job, and 13 friends who don't want to loan you money under the same circumstances. If all your fellow workers are similarly situated, that's 50,000 voters who are working to keep you in office so they won't have to keep you.

Although ukulele playing is mostly a lost art, there are probably 50,000 ukulele players in the country who are interested in seeing their favorite hobby generously promoted. These 50,000 ukulele players have 50,000 wives who probably figure that it's better for the old man to spend his evenings fiddling around with a ukulele than fiddling around with that stray blond down in the next block. Furthermore, there's a neighbor on each side of each ukulele player who is probably interested in maintaining his hobby in the reasonable fear that if he gives up the comparatively quiet ukulele he may take up the saxophone.

That, unless our sixth-grade arithmetic teacher gave us a bum steer, adds up to 250,000 lively voters, all vitally interested in the preservation of the ukulele—and in preserving the jobs of the employees of the Bureau of Ukulele Research. Maybe this sounds pretty silly to you, but it isn't so silly to the squirming politician who very likely will lose 250,000 votes if he bombs the futile bureau out of existence.

The only answer to this dilemma, of course, is to follow Mr. Petersen's advice, and to exert so much pressure on the politician in the opposite direction that he will be ultimately convinced that he's going to lose more than 250,000 votes if he doesn't blast the Bureau of Ukulele Research out of existence.

The two Wisconsin Senators are ALEXANDER WILEY and JOSEPH MCCARTHY; the Second District Congressman is GLENN DAVIS, all of whom employ competent secretaries to read and register your applause and your boos. The post office will be very happy to sell you three 3-cent stamps.

Is your pen ready?

Michigan Leads Against Communists

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include therein an article from the Detroit Times of June 5, 1947, relative to a law passed by my State of Michigan to compel Communists to register.

During the early part of this year I introduced a bill in the House seeking a Federal law to accomplish the very same purpose. Michigan and her very alert and aggressive Governor is leading the Nation in an attempt to preserve this country from this insidious menace of communism.

I am proud of our Governor and the Michigan Legislature.

STATE TAKES LEAD

(By Albert Kaufman)

LANSING, June 5.—Michigan lawmakers led the Nation today in the fight against communism by passing a law requiring every individual Red who follows the Moscow party line to register with the State attorney general.

The law becomes official within a fortnight after the senate concurs in several amendments and Governor Sigler signs his name to the bill, backed solidly by the Republican Party and the administration.

Only three dissenting votes were cast in the house last night as the lawmakers wrote the first bill in the country bringing Communists under State control.

HEAVY PENALTIES

Laying down heavy penalties up to $5,000 fine or 5 years in jail, or both, for those who fail to comply, the bill requires:

The Communist Party to furnish the State with a list of its membership, activities, income, and expenditures.

All Communist newspapers, radio stations, or propaganda machines, incorporated or otherwise, which come under the control of a foreign power, to register with the attorney general.

All periodicals, books, pamphlets or other printed matter distributed in Michigan by foreign agents to carry on its masthead the legend:

"Published in compliance with the law of the State of Michigan governing the operation of foreign agencies."

COMMUNISTS DEFINED

The bill defines as Communists any individual, group, club, league, society, committee, association, or political party, or combination of individuals, subsidized by a foreign government, whose object is to control or overthrow the government.

As originally drafted in the senate, the bill imposed drastic penalties upon Communist-dominated labor unions.

But the house judiciary committee struck out a provision which would have deprived such unions of bargaining rights and tied up their funds until loyal elements regained control.

Upon the effective date of the bill, the attorney general will have the right to bring in any individual suspected of communistic leanings.

If after a hearing the charge is sustained, the attorney general is empowered to bring criminal charges against the accused.

CALLAHAN IS AUTHOR

The bill was introduced by Senator Matthew F. Callahan, Detroit Republican, after his investigation of American Youth for Democracy Clubs on Michigan college campuses.

Revealing the organizations as Communist fronts, Callahan's senate committee on subversive activities, succeeded in having them ousted from State-supported schools.

Because of its startling disclosures, the committee has since been given permanent status, with an unlimited appropriation to function until the start of the 1949 legislative session.

"Passage of my bill provides the necessary teeth to carry on our fight against the Communists," Callahan said last night.

Oil and Gas Division, Department of the Interior

EXTENSION OF REMARKS
OF
HON. HARRY R. SHEPPARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. SHEPPARD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

REDWOOD CITY, CALIF., *May 20, 1947.*

HON. HARRY R. SHEPPARD,
House of Representatives.

MY DEAR MR. SHEPPARD: I am addressing you today in the role of private citizen to do what I conceive to be my duty—namely, make to you the following brief statement with respect to the continued existence of the Oil and Gas Division of the Department of the Interior.

Throughout the war I served in Washington as Deputy Petroleum Administrator. For some months thereafter, at the request of the President, I continued here in order to organized the Oil and Gas Division of Interior—the office which is now being considered by your committee. It is this unique experience, together with my work in the oil industry over many years prior to the war, which leaves me possessed of certain knowledge that, in the public interest, causes me to communicate with you in this way.

I think there is no need to describe the nature of the Oil and Gas Division's functions. Mr. Max W. Ball, the present Director, and others I assume have supplied you with full information along these lines. What I want to do is to tell you briefly of the kind of governmental organization we had dealing with oil when I was called to Washington in May 1941—when the Nation faced the prospect of war.

There was then no Oil and Gas Division in Interior and no central office of any kind for the administration of oil affairs. There were some 28 different departments and agencies of the Federal Government concerning themselves with various phases of oil operation—independently one from the other. To anyone attempting to get an understanding of the oil position and to mobilize oil resources for war, there could scarcely have been a more discouraging prospect. To me, entering Government for the first time, it was well-nigh unbelievable that such confusion, organizational inadequacy, and ignorance of the basic facts could exist in the Government of these great United States. But it did.

It was as a body functioning without a coordinating brain. Many of the separate parts worked well enough, but, unrelated to the whole, even these made no sense in terms of the practical. Nowhere in the Federal Government could I learn either the extent of the oil requirements or of the oil resources of the Nation available to meet them.

In short, in May 1941 we were desperately unprepared. It was, with the organization then existing, a physical impossibility to function intelligently or effectively. Fortunately, we had a number of months in which to correct the condition before we were attacked. But, as one intimately familiar with our state of disorganization at that time, I dread to contemplate what would have been the result had we been attacked in May instead of December 1941.

In light of this experience in oil administration, I cannot in conscience remain silent when I see threatening a return to the same state of affairs which I have described to you. For it is just such a return to chaos which a denial of Interior's appropriation for a continuance of the Oil and Gas Division means—again only incoherent policy, unintelligent action, and ignorance with respect to basic facts can result. While I have no longer the responsibility of a Government official in this matter, I feel so strongly upon the subject that I have nevertheless come on from San Francisco to say these things to those Members of Congress who bear special responsibility in this relation. Finding the hearings closed, I communicate in this way.

Further do I want to emphasize that in respect of available oil resources we face a far more serious situation today than we did in 1941. Then, by the accident of good fortune, we had a healthy margin of reserve capacity to produce and refine crude oil—about 25 percent, or, roughly, 1,000,000 barrels

per day. Today we have no reserve capacity. At the same time, according to the military, our total requirements for oil should war be again upon us would be vastly more than in the last days of the war just ended. This time, then, we would have to face the physical fact that our present-day domestic capacity would be definitely short of meeting our needs by a large amount. I think this is a frightening prospect.

What may be the solution of the oil problem, looking to the security of the Nation in the days ahead, I do not profess to know. But this much is certain, the problem is real, it is of the greatest importance, and it must be dealt with. The Oil and Gas Division, if allowed to continue its work, will, I am sure, come forward with complete facts, properly digested, and finally with well-considered recommendations for the attention of Congress. Eliminate it and you have removed the only machinery for dealing in an organized and intelligent way with this situation.

The seriousness of the position is, I know, appreciated by the President and the Secretary of the Interior, but neither can deal singlehandedly with the problems involved. Obviously, they must have organization to carry on the necessary work. That is why the small staff of the Oil and Gas Division was recruited upon the termination of the Petroleum Administration for War. It represents a minimum with which anything worth while can be accomplished. Certainly, considering the proportions of the oil problem, the amount of the requested appropriation is of small consequence, and I would think that Congress, no less than the President and the Secretary of the Interior, would want at least this executive assistance in the discharge of its responsibility.

I reiterate—as a private citizen, but one who has had intimate contact with this problem in Government over some 5 years—it will be a tragic mistake if, in the uneasy world in which we live, the Congress should fail to appropriate the $245,000 which is required to continue the intensely important functions of the Oil and Gas Division.

Sincerely yours,

RALPH K. DAVIES.

Corporation Profits

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. ROBERTSON. Mr. Speaker, at this time when the Congress is confronted with cross-currents and charges—in some instances on the part of business itself against labor, and in many instances on the part of labor leadership against business—the public becomes somewhat bewildered because there is lacking facts on which to pass judgment.

The involved question of running a business large or small is never too generally understood by the public at large. Large figures are misleading unless they are counterbalanced by equally large figures, as is usually necessary. We have been led to believe that business both large and small is making the most unprecedented profits in the world. This is no doubt substantially true but we have never been given all of the facts associated with these large profits.

Probably in the final analysis the net profits of the average business, with few exceptions particularly in monopolistic types, are lower by far than they were in what we refer to as the normal years.

I include here an editorial taken from the Minneapolis Tribune of June 12, dealing with the question of corporation profits:

CORPORATION PROFITS

The profits of business have been the subject of much abuse by both organized labor seeking higher wages and consumers seeking lower prices.

Last year's profits have been estimated by the Department of Commerce at $12,000,000,000, of which about $5,000,000,000 were paid out in dividends.

A more comprehensive study of corporation finances, however, is given in a recent study by the Securities and Exchange Commission.

This study shows that last year more than $8,000,000,000 were put into inventories, largely because of the lack of balance in the supply of raw materials and parts. With sales to civilians increasing and credit business again established, the accounts and notes receivable went up more than $7,000,000,000. Despite the tax reduction which came last year for corporations, current debt was $2,000,000,000 higher than the previous year.

These items on the books absorbed a good part of the corporation funds.

In addition, the SEC report shows the corporations invested $5,000,000,000 last year in property for reconversion, modernization and additions to plants and equipment. This figure does not include the heavy outlay for plant maintenance and repairs, most of which was put off during the war. Such replacement is coming at prices much higher than the original costs on which the depreciation reserves of the firms usually are based.

The result has been that the $7,000,000,000 which appeared to be left from the estimated $12,000,000,000 in profits last year already have been eaten up by fixed and working assets.

What is more, $700,000,000 in additional net capital were raised by these companies last year by issuing long-term bonds, and $2,500,000,000 more were raised by long-term bank loans and new stock.

The big profits which appeared on paper last year, consequently, have been whittled pretty small.

This plowing back of business earnings and financing through stock sales is what is keeping industry going. It is what is making jobs for people.

So long as those who have money to invest can see hope of making a profit by making an investment, there will be hope for the national economy.

The Late David I. Walsh

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to the late former Senator David I. Walsh, by Robert L. Norton, appearing in the Boston Post of June 13, 1947:

THE LATE SENATOR DAVID I. WALSH

WASHINGTON, June 12.—There are many thousands of people who feel a sense of personal grief over the passing of former United States Senator David I. Walsh.

THIRD OF CENTURY

Among them is this writer, who mourns the loss of a friendship lasting more than a third of a century. It is only in the intimate aspects of life that one comes to know a man. "Dave" Walsh was a man.

Over a long period, in this business of observing and reporting life in America, we have known quite well, many so-called great men, including Presidents and others who have figured large in the public mind in their day.

Most of these men are forgotten by the succeeding generation. They had their day. ("All the world's a stage, and all the men and women merely players. They have their exits and their entrances, and one man in his time plays many parts.")

STRIKING CAREER

In his full life "Dave" played many parts. He had a striking career.

When I first met the Senator, his ambition was to get a place on the Democratic State ticket as a candidate for State auditor. He was a modest young man "from the sticks," who had served one term in the legislature, handsome figure and a natural orator.

PROBES GOP SCANDAL

He was first launched into public notice when employed as attorney in an investigation of vote buying by the Republican politico-textile machine in New Bedford.

The Republican oligarchy which had controlled the State since the Civil War, except when the Democratic Party had elected Russell, Douglas, and Foss, had become decadent and rotten with surfeit of power. It was beginning to break up and a new spirit of liberalism was taking hold with the advent of the magnetic and powerful Teddy Roosevelt.

The Democratic power was centered in Boston and deriving support from discontented workers in some of the industrial centers of the State. The mention of Walsh only brought sneers from the well-entrenched Democratic machine in Boston. He was a country boy.

Up to that time the Democrats had consistently supported Yankee Democrats for high office, men like Josiah Quincy for mayor and Russell and Charles G. Hamlin for governor.

The so-called new immigrant groups of newcomers had little representation and indifferent consideration, but their aspirations and place in the government of the State and in the business life of Massachusetts had some backing.

Thus it came about that Mr. Walsh was supported in his candidacy for the governorship in days when the faint-hearted in the Democratic Party would say, conscience of intolerance and racial discrimination: "You can't elect an Irish Catholic as Governor of Massachusetts."

But Walsh was elected Governor and United States Senator, and for more than a quarter of a century became the acknowledged Democratic leader of New England and its greatest vote getter. His election demonstrated for all time that intolerance, religious and racial prejudice did not operate in Massachusetts when the Democratic Party offered a man of the high caliber and integrity of "Dave" Walsh.

IN FINE SCHOOL

Walsh was brought up in the school of men like John Boyle O'Reilly, Patrick A. Collins, and Jeffrey Roche.

Mr. Walsh became a powerful national figure in the Democratic Party. He was a

middle-of-the-road conservative in his political philosophy, a strong supporter of advanced social legislation, but likewise an advocate of free enterprise and a champion of the business interests of New England.

The late Senator did not like Franklin Roosevelt personally, nor did he follow the New Deal in all its windings, particularly when Roosevelt sought to take over the Supreme Court. He had described Mr. Truman to us as a "mediocrity and a political accident."

Mr. Walsh was not always in tune with the predominating elements in his own party. Above everything he was an independent and he belonged with men like Borah, Norris, and La Follette in the United States Senate.

SAME HELPING HAND

The Senator had an old-fashioned courtliness of manner, a gentleman of the old school. He was generous in his sympathies and literally thousands, now living, can testify that he gave them a helping hand. He was a grand and considerate companion and loved the art of graceful living. He had marked intellectual attainments and was a welcome figure in academic circles.

There were many facets to his character and career which would be of fascinating interest, since he played a conspicuous part in public affairs during one of the most critical periods in American history.

But we think, by and large, that his greatest contribution was the enlargement of the spirit of tolerance in his native State of Massachusetts and living demonstration of the fact that integrity in public office is the first duty and obligation of those who are called to represent people in the government of this country, in whatever capacity.

"Dave" Walsh was the kind of a man who helped greatly to maintain our confidence in democratic processes and representative government.

Guam

EXTENSION OF REMARKS
OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. POULSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Washington Post of June 12, 1947, entitled "Governing Guam" and one from the New York Times of June 14, 1947, entitled "The Territory of Guam."

For some days now, the Territories Subcommittee of the House Public Lands Committee has been conducting hearings on a number of bills introduced into the Congress for the purpose of establishing democracy in Guam. Among the bills introduced are several which owe their origin to the good intentions of their authors who are concerned only with establishing an American form of government in an American dependency. Certain other bills are obviously inspired by the Navy Department and are designed to preserve for the Navy as much of its governing prerogatives in Guam as can be salvaged. Among the latter there is a bill presented to the committee jointly by the Departments of Navy and Interior with the alleged blessing of the State and War Departments.

On February 28, 1947, I was present at a session of the Hawaiian Legislature when it was addressed by the Secretary of the Interior on the general subject of statehood and democracy. In that address Mr. Krug strongly endorsed statehood for Hawaii and expounded on the need for extension of democracy into the far Pacific. Included in his address were some statements referring to Guam, Samoa, and the Pacific islands. He said in part, and I quote:

The inhabited Pacific islands which are, or may become, a continuing United States responsibility need civil administration and an immediate measure of self-government. The native populations of these islands have made great progress under naval administration. But now they are ready for the next step in the American tradition, which is civil political administration, responsible to the people who are governed.

On May 28, 1947, Mr. Krug appeared before the Territories Subcommittee in company with Mr. Sullivan, the Under Secretary of the Navy, and read a joint statement on the matter of government for Guam. At that time these gentlemen presented to the committee a proposed organic act for Guam which they stated had the approval of the Secretaries of State and War. That is the organic act which the Washington Post editorial says is defective in that it make no provision for grand jury proceedings or for trial by jury. That is the organic act which the Washington Post and the New York Times say does not measure up to the United Nations trusteeship agreement nor to our own principles and past performance in the administration of dependent Territories.

I, for one, am not surprised that the Navy should submit such a bill. I am surprised, however, to find the Interior and State Departments lending it their endorsement. I am especially disturbed about Mr. Krug, who, in spite of his statements before the Hawaiian Legislature and his other public utterances on the subject, now sponsors a bill which fails to provide for immediate transfer of Guam to civil administration. In fact, the measure which he now endorses is so drafted as to allow for the continuation of naval administration for an indefinite period of years, dependent on the discretion of the President.

The Navy-Interior measure for local self-government in Guam also contains advisory language pursuant to which the Governor of Guam can continue indefinitely to be a naval officer on active duty. It also contains language pursuant to which the heads of departments of the local government can be naval officers on active duty. In supplementation to this latter provision the proposed bill specifically denies the Legislature of Guam the right to be consulted in the appointment of the heads of the departments of the local government. In this respect it contravenes the very principles of our democracy and contradicts the specific provisions of the Federal Constitution, the various State constitutions, and the organic acts for the Virgin Islands, Puerto Rico, Alaska, and Hawaii.

The so-called bill of rights contained in this Navy-Interior bill as stated in the Washington Post editorial, fails to provide for jury trial and for grand-jury proceedings. To deny Guamanians these cornerstones of freedom is one thing, but to deny these rights to the many thousands of continental Americans resident on Guam is another. Jury trial should at least be optional on Guam. To deny it completed is inexcusable and in my opinion completely un-American.

The so-called bill of rights is glaringly deficient in another respect: nowhere therein is provision made guaranteeing equal protection of the laws in Guam. Why are not the residents of this American possession entitled to equal protection of the laws? I for one have difficulty in understanding why the Secretary of the Interior endorses a bill of this kind. I have heard him speak on the matter of extending democracy in the Pacific islands and I have listened to his speeches urging statehood for Hawaii. I must confess that I am completely confused by his apparent change of attitude.

The Navy-Interior sponsored bill is defective in other respects. There is no need for me to go on and bring them to attention in detail. I have no doubt that the Congress will utterly reject this compromise of the principles of democracy. I regret exceedingly that the Department of the Interior, which is responsible for the government of the non-self-governing Territories of Alaska, Hawaii, Puerto Rico, and the Virgin Islands should be so weak and so unconcerned in the matter of democratic government for the people of Guam. I am also disappointed to see that the bill produced by the Navy and Interior Departments has the endorsement of our State Department. How can we expect to encourage the establishment of democracy in foreign nations when our own State Department, which has the primary responsibility in this respect, itself endorses an undemocratic form of government for one of our own possessions?

[From the Washington Post of June 12, 1947]

GOVERNING GUAM

There is room, we think, for liberalization of the proposals now before Congress to establish an organic act for the Government of Guam. For half a century, ever since we acquired it from Spain in 1899, the island has been under the rule of the United States Navy. Whatever the benevolence of that rule, it cannot be said to have discharged the pledge made by President McKinley to "insure that full measure of individual rights and liberties which is the heritage of free peoples." Civil government, and an increasing measure of self-government, are essential implications of that pledge.

The proposed organic act on which the House Subcommittee on Territorial and Insular Possessions has just concluded hearings would establish civil government—but at some indefinite future time. Perhaps there is justification for continued naval rule—that is, rule under a naval officer appointed by the President to the governorship—until some of the more pressing problems of rehabilitation can be overcome. But the Guamanians ought to be assured that they will have a civil governor within 2 or 3 years at the outside. And their legislature ought to have power to confirm officials appointed by him. The proposed organic act is defective as well, it seems to us, in that it makes no provision for grand jury proceedings or for trial by jury—cornerstones of freedom. The Navy appears to fear that it could not effectively administer justice if the Guamanians had

these basic rights. Is not the fear itself an admission that naval rule is necessarily arbitrary?

What is now proposed for Guam measures up neither to the United Nations trusteeship agreement nor to our own principles and past performance in the administration of dependent Territories. We do not believe that essential military security need be any more affected by the extension of civil government and the progressive development of self-government in Guam than in Puerto Rico or Hawaii. Indeed, freedom is the tie that most effectively binds our dependencies to us. And the fostering of it is the American pattern that most enhances our stature in the eyes of the world.

[From New York Times of June 14, 1947]

THE TERRITORY OF GUAM

After 50 years of denial to the people of Guam of those basic human rights which the founders of the United States held to be self-evident, it now appears that something is to be done for these islanders by Congress. The war stirred interest in this forgotten bit of land that we acquired from Spain by the Treaty of Paris in 1898. Under pressure of this public interest Congress bestirred itself to hold hearings and make an inquiry into conditions there.

The House Public Lands Committee now has before it a bill submitted by the Navy and Interior Departments which would go at least part way to repair this long neglect. It would give the Guamanians citizenship, extend to them the protection of some of our Bill of Rights, and make other reforms. But it would not put the islanders under civilian administration. Nor would it provide for trial by jury. Rights and petitions for redress of grievances would go to the President, or to Congress, but would pass through the hands of the Governor of Guam, who would be the official complained against.

Guam is not a large island. Its war-scarred inhabitants—literally scarred, many of them, through 3 years of Japanese occupation and the severe fighting that accompanied the island's recapture—number only some 20,000 people. They are industrious, clean, happy, loyal, intelligent people. While there is public interest in the matter this would seem to be a good time for Congress to go all the way and give them that democratic government and those fundamental rights that have been too long denied them.

Tribute to General Eaker

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. CASE of South Dakota. Mr. Speaker, one of the great leaders of our Army Air Forces is retiring—Lt. Gen. Ira H. Eaker. He has been one of the most impressive, fair-minded, capable men ever to appear before the Appropriations Subcommittee for the War Department, a worthy associate of General Arnold and General Spaatz. Under permission heretofore granted, I place in the RECORD this tribute to General Eaker:

MISSION COMPLETED

(By Frederick H. Neely in Collier's magazine)

The day before, an Army bomber crashed on a lot in Brooklyn and its crew of four was consumed in the inevitable and immediate inferno that followed with that type of plane.

Now, here we were, strapped in the nose of a similar bomber on Washington's Bolling Field about to depart for New York. We don't think we betrayed any uneasiness, but the Army captain, who sat in the open-cockpit pilot's seat immediately behind our roofless bombardier compartment, suddenly halted the ground crew as it prepared to pull through the big wooden propellers and start the two 400-horsepower Libertys. Then he summoned the sergeant-mechanic from the rear cockpit and in a quiet but authoritative voice gave this order:

"If we have to bail out, you (meaning us in the nose) will go first the moment I give the signal. Do not jump out over the nose; you'll be chewed up by the props or hit the landing gear. Climb over us quickly—don't worry about stepping in our faces—slide along the top of the fuselage and drop off behind the wings. You (the sergeant) follow. You (the lieutenant and copilot on his right) go next. When all of you have left the ship, I'll take care of myself."

This was in 1925 and that captain was Ira C. Eaker. In a couple of days (June 15, actually) he'll hang up his Army blouse on which the three stars of a lieutenant general have blazed for nearly 4 years, close his desk in the Pentagon as Deputy Commanding General of the AAF, and drive out to Oregon with his wife, Ruth. He says he will hunt and fish and plant and harvest. His 30 years' service, 29 as an active pilot, are over. But a grateful people, by act of Congress, have ordained that he carry the permanent rank of major general.

Eaker was on the first hitch of duty in Washington in 1925 and he was hammering away at a new philosophy called air power, previously and sensationally launched by Gen. Billy Mitchell, but which no one took very seriously. (General Mitchell risked—even courted—martyrdom in his attempts to arouse a sleepy nation, and when he was scuttled after charging the Army with criminal negligence in handling the development of aviation, he retired to his estate in Virginia and followed the hounds until his death in 1936.)

Captain Eaker had nothing but his Army pay, but he cautiously risked the wrath of the high brass, then periodically refighting the Battle of Gettysburg, by continuing to preach the Mitchell gospel at every opportunity. He was an adroit supersalesman with a keen, natural gift for public relations in its original, pure definition. He knew he had a good product to sell, so he took the long, exhausting method of making friends for it and patiently demonstrating what his air service could do with the little it had then and prophesying how it could be developed into the greatest in the world.

Any writer who could command an inch of publication space received patient and honest assistance from him. He always was reachable. Soon the word got around among the Washington correspondents that this captain was a swell officer. Seemed to enjoy being called Ira rather than Captain, too. He'd give you anything, talk freely, trust you. To prove his point he'd take you up, and what a pilot.

Early in his Army life, Ira Eaker learned that one segment of the public suspects every military man of being a lobbyist for funds to pad his nest, improve his command and even of being willing to foment a real war—to win medals. He determined then and religiously followed a plan to mix with the people wherever he was stationed. He wanted their thoughts and he wanted them to have the product of the military mind, too. He participated in their civic activities and even went to school with them, first studying business law, then journalism.

Today he has a greater knowledge and understanding of the civilian attitude on war and preparedness than perhaps any other military man, and he can switch over to the civilian viewpoint quicker than he can change from uniform to mufti.

With his vision of America someday having a mighty air fleet (realized in the recent war when he alone commanded half a million American airmen in Europe), a more personally ambitious officer would not be leaving the service now, at only 51, but would hang around and await the impending retirement of his close friend, Gen. Carl Spaatz, AAF chief, with 37 years' service already chalked up. He would pull strings to head up the new and independent Air Force conceived in the Army-Navy unification plan and scheduled to be born later in the year.

But General Eaker's feelings on that point are positive and final. The new baby should be reared by the youngsters—air generals in their forties—who fought and beat the Luftwaffe and the Jap air force and who already are deep in development work on supersonic piloted planes, robots, and winged atomic weapons.

General Spaatz shares this viewpoint, too, and if the new Air Force is to come into being soon, he will stay in active service only long enough to derive the personal satisfaction of seeing his dreams, born when he sprouted wings in 1916, come true and then—go fishing. General Eaker's successor is Lt. Gen. Hoyt S. Vanderberg, 48, wartime commander of the famous Ninth Air Force, and nephew of Chairman ARTHUR H. VANDENBERG of the Senate Foreign Relations Committee.

The papers on June 15 doubtless will carry the story of General Eaker's retirement and they'll review his brilliant military record. It should be carefully digested by every soldier and every young man contemplating making the Army a career. Ira Eaker enlisted as a foot soldier for the other war, stayed in the service, reached three-star grade and retires a major general with 22 decorations and awards from 12 nations and many "firsts" in aviation development, five of which are permanent milestones in aviation history:

He was a pilot of the Army flight that made the first complete circuit of South America (1927) and the only airman to start and finish with the same plane. (His copilot was Muir S. Fairchild, now major general commanding the AAF Air University.) He was chief pilot of the Army Question Mark (1929), the first plane to fly continuously for more than 150 hours, by refueling in flight. (The commander of that operation was Major Spaatz.) He was the first to make a transcontinental blind flight (1936) entirely by instruments, and he did it in a single-seater fighter plane without seeing the ground except for landings for refueling. He was the first to invade Hitler's Fortress Europe (1942), leading the inaugural raid of B–17's on Rouen, France, though boss of the famous Eighth Bomber Command and then a brigadier general. He was the first to shuttle-bomb between Italy and Russia (1944), leading that flight also, though then a three-star general and commanding the Mediterranean Allied Air Forces.

General Eaker always thought first of his men during the peace years—he gets a lot of mail from them now, notably from the enlisted group—and he continued to think of them in war without compromising his plan for victory—no easy task. That is why he went out on the first all-American air assault on Hitler's Europe, and again led the first shuttle-bombing between Italy and Russia and return.

He claims he did this (by way of explaining why he risked his life when the general's job is behind the lines surveying the over-all results of his command) to obtain more direct and detailed knowledge on the problems to be met by his green youngsters than he could have received through staff reports. We just don't believe it. But we know that in personally making the kickoff and leading his team into action, he firmly established with his airmen the all-true legend that they

were not being ordered by the Old Man to do what he couldn't or wouldn't do.

Early in the life of the Eighth Bomber Command, when the supply of B–17's was pitifully low, losses were high and there was no fighter escort, General Eaker fought and won a battle with top policy makers for a limit to the number of combat missions his men should make over Germany. Once the number was completed—25 in the beginning, higher later when our losses dropped—the airmen never again were ordered into combat, and thousands of parents got their boys back because of this efficient and humanitarian Eaker policy. He gets a lot of mail from them, too.

Address of Edward F. Poss, Past Grand Worthy President of the Fraternal Order of Eagles

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks, I include a copy of the address made by Edward F. Poss, past grand worthy president of the Fraternal Order of Eagles, on Saturday afternoon, June 14, 1947.

Prior to the admission of Mr. Poss as grand worthy president of the Fraternal Order of Eagles, he gave of himself in behalf of the causes of this great order: Mothers' pensions, old-age pensions, and the teaching by positive example and precept, "If I cannot speak well of a man I will never speak evil of him."

This is almost the same example and precept as taught by the father of our country, George Washington, who, in a scrapbook in his adolescent years, wrote the words, "Speak not ill of the absent for it is unjust."

The address delivered on Flag Day at the tomb of the Unknown Soldier is just what Mr. Poss and his great organization lives. Mr. Poss, a close friend of Presidents and governors, paid first attention to the man who was down and out. Every man to him was the same. He truly lived up to the words of Kipling that one "could walk with kings and not lose the common touch." It is an unusual privilege for me to include this address from a truly fraternalist who lives it:

Comrades, we appear here this afternoon in the name of one and a quarter million members of the Fraternal Order of Eagles for a twofold purpose.

First, to express our sincere appreciation for the supreme sacrifice made by you in order that liberty and peace might be enjoyed by a free people. Second, that by the preservation of this liberty and freedom such organizations as the Fraternal Order of Eagles might be privileged to spread their gospel of love of God and fellowman. It would be presumptuous on our part to attempt to add to, or detract from any of the honor that is yours. Providence has provided everlasting happiness for the unselfish sacrifice of life for one's country.

It is our duty, however, as living Americans and fraternalists, through the opportunity given by a free Democracy to save and safeguard those freedoms made possible by your sacrifice. Our pledge to you, today, is to work ceaselessly to the end that these liberties shall endure, that the right of free worship and franchise, continue. Further, we shall work to the end that a greater opportunity be given for all men to enjoy the liberties of a free Nation, that selfishness and greed be driven from our borders, that the fear of sickness, fear of insecurity of employment, yes, fear itself, shall be taken from the hearts of men, and that there may be transplanted in their stead a new consciousness of our responsibility to God and neighbor. We further pledge that we shall strive always by education, leadership, and example to promote the ideals of peace. By earnest application of love and respect for our fellowmen we will endeavor to eliminate the vices of greed and avarice and educate humanity to understand that real happiness can only come from love and understanding. With these simple pledges on our lips, and in the name of all my brother Eagles who, like you, have made the supreme sacrifice for their country, I offer you this plaque as a gesture of love and everlasting gratitude and pray God that the day will be hastened when all the nations of the world will live in peace, one with another.

The South, Its Problems and Advancement

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I gave recently before the Federal Bar Association, in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE SOUTH, ITS PROBLEMS AND ADVANCEMENTS

You gentlemen, who spend a great portion of your time helping to unravel the legal problems in which humanity succeeds in entangling itself, appear to be taking a sort of busman's holiday in coming to listen to a discussion of the economic problems of the South. Perhaps you take a quiet satisfaction in the thought that here is a set of problems you are not called upon to solve. If so, I hope I can quickly disabuse you of that notion. It is easily demonstrable, I believe, that the problems relating to the South cannot be solved by the South alone, although we have and will make much headway, and that these problems deeply affect the lives of all the citizens of our country. No doubt you see evidence of the truth of this statement in your work.

The South is the Nation's biggest contradiction. It is rich in resources and people, but remains desperately poor when measured by per capita income. Potentially, the South leads in the welfare and wealth of its people; actually, it trails the other parts of the country. The late President Roosevelt called the South "America's No. 1 Economic Problem." All the problems have not been solved and may even become more severe as efforts are made to unriddle the economic puzzles which now exist. However, as one explores the contradictions of the South, he encounters possibilities which may make the region "America's No. 1 Economic Opportunity."

"What is the South?" Dr. Howard W. Odum, generally accepted as the preeminent authority of the region, says, "There is no longer any single entity which may be designated as 'the South.' More authentically, there is a Southeast, and a Southwest, comparable to four other major regions designated as the Northeast, the Northwest, the Middle States and the far West." In this discussion, however, I shall accept, with but one or two exceptions, the traditional 13 States of Virginia, North and South Carolina, Kentucky, Georgia, Alabama, Texas, Tennessee, Mississippi, Florida, Louisiana, Oklahoma, and Arkansas. At the last census, these 13 States contained over one-fourth of the Nation's population, or some 37,000,000 people. Within this number is more than one-half the country's total farm population. Two-thirds of the people of the South live in the country while in the rest of the Nation two-thirds of the people live in the cities. With this brief background, it is easy to understand that whatever affects the South should be of much concern to the rest of the Nation.

While we in the South recognize our problems, we are not afraid of them. We share the opinion as was stated recently by Gen. John C. Persons in a speech at the Birmingham Traffic and Transportation Club. He said, "The South has at last finished paying the price of the War Between the States. The carpetbag era is long since over. There is divided opinion as to whether we are being politically discriminated against. There is little question that there is still economic discrimination. Yet every day such barriers are being removed. And every day the South approaches more closely the status of full partnership in the affairs of the Nation."

As one reads this quote, he is reminded of the progress, the development, and the advancement of the South during the last 80 arduous years. The struggles of her brave and hospitable people, her patient wrestling with difficult problems, are a part of the achievement of our common country and constitute a noble portion of the strength and glory of the American democracy.

What are some of our present-day problems, and what are we doing about them? Let us look first at this region's agriculture. Until recent years the South had a one-crop economy, cotton. The invention of the cotton gin in 1793 was the compelling force in making cotton the foremost crop of this region. The demand abroad for this crop was in large part responsible for the institution of slavery, and though this was abolished as a result of the war between the North and South, cotton emerged stronger than ever. This despotic rule of one crop is largely responsible for the ruinous system of share tenancy and vicious credit which still exists on many of our farms, but to a lesser degree than before World War II. The one-crop system led to a progressive depletion of the soil in many areas, so that the old fields were abandoned and new lands planted farther westward. More and more fertilizer was required to maintain yield and often the small grower could not afford the required amount. Hence his yield grew less and less. Today cotton is still one of our most important crops. In fact it is the most important single farm enterprise in 10 Southern States. Thirteen million people still depend upon cotton for a livelihood and it bids fair to remain an essential part of our agricultural program. I say this because of the lessening of production and harvesting costs through mechanization and scientific farming, and the prospects through research for a more even competition with synthetic fibers. But this section no longer has all of its eggs in one basket. It is true that the boll weevil hastened crop diversification. Enterprise, Ala., has a monument to that insect on the main intersection of town, but diversification had begun before the advent of the destructive weevil.

Now the South is relying more and more upon a balanced agriculture. It is raising more of its foodstuffs, more livestock, more poultry. It has the greatest diversity of soils in the Nation. Alabama itself has 7 major types and almost 300 soil subtypes, thus the practice of diversification is made simpler. According to a southern newspaper (Richmond News Leader) the raising of cattle in the South increased 71 percent from 1930 to 1945, and hogs and pigs 65 percent. Sales of whole milk increased 128 percent, chickens 51 percent, and eggs 31 percent. New crops, such as soybeans, tung oil, and new kinds of hay, are produced, and more diversification of old crops is practiced. We in the South have discovered that steaks can be just as juicy and tender from southern cattle as from any other section of the country.

According to 1945 figures compiled by the Department of Agriculture, the five top sources of cash farm income from major agricultural products in the United States were in the order named: (1) cattle and calves, (2) milk, (3) hogs, (4) chickens and eggs, and (5) wheat. In sixth place were truck crops, and cotton and tobacco ranked seventh and eighth respectively. Corn was ninth and citrus fruits came tenth. With the exception of wheat, southern farmers are in as good a position as those of any other section for the production of any of these crops. As they continue to move toward a balanced agricultural economy, their pattern for the future will be placed upon proven sources of farm income.

Closely allied with farm diversification has been the progress in living and working conditions on southern farms. One measurement of farm modernization is central station electric service. When the REA program started 12 years ago, about one southern farm in 20 had electricity. Even now, when we have passed the half-way point nationally, the South has only a little better than one-third of its farms with power. However, remarkable progress has been made on a task which most analysts considered almost impossible. Power is coming to southern farms, and has already come to hundreds of thousands of them, on the basis of area coverage, that is, making power available for everyone in a given area, if anyone there can have it.

Most of the gain in farm power in the South can be traced directly or indirectly to the REA program. But that does not mean that electricity was provided by a magnanimous, charitable Government; quite the contrary. The power which has come to the South through the REA program has come because of the local efforts of southern people. They have banded together into cooperatives in areas where such self-help groups had never worked, never even been tried before. They created their own independent local businesses, and they ran them so efficiently that they are substantially ahead in amortizing the initial capital provided as a loan by REA. In the operation of their electric co-ops, the rural people of the South are learning and practicing economic democracy.

All over the South our people are learning how to use this new power for their own profit and comfort. The farmers are applying electricity to many chores, with a saving of time and money. And up to the present time the opportunities for putting this new power to use on the farm have scarcely been uncovered. These opportunities when developed may well lead to an even more diversified and sounder agriculture for the entire region. Just to mention one isolated case of what has already taken place, there is Forsyth County, in Georgia. This county has changed over from cotton land to poultry production since electricity came into the area. This change would have been impossible before the power lines connected these farms, because electricity has to be available to pump the enormous quantities of water necessary in a modern broiler factory and to provide light, heat, and power for a hundred other purposes in connection with this business.

Electricity is providing power for cotton gins, creameries, sweetpotato-curing houses, commercial dairies, rural machine shops, woodworking plants, and other community service establishments which are making rural communities of the South more stable and more livable.

But despite the progress of the last few years, there is still a tremendous electrification job to be done among us if all are to benefit from the use of this cheap power. In the Nation as a whole there are about two and one-half million farms still without electricity. Almost two-thirds of these are in the Southern States.

Another point that has a salient bearing on a balanced and stable agricultural economy is that of farm ownership. In June of 1937 the Congress passed the Bankhead-Jones Farm Tenant Act for the purpose of enabling more farmers to own their farms. While the recent war has had something to do with the trend toward an increase of farm ownership, it is believed that much impetus in this direction is due to the help given by the Bankhead-Jones Farm Tenant Act. The following facts are noteworthy. These figures cover Southern States (as listed under the census classification):

Total number of farmers:	
1945	2,732,964
1940	2,856,784
1935	3,262,383
Average acreage per farm:	
1945	133.2
1940	124.7
1935	110.8
Size of families:	
1945	4.2
1940	5.5
1935	4.9
Number of full owners (not renters):	
1945	1,395,745
1940	1,222,010
1935	1,235,403
Part owners (rent part and own part):	
1945	186,016
1940	209,548
1935	224,040
Number of tenants (including share croppers):	
1945	1,139,464
1940	1,412,791
1935	1,788,754
Share croppers only:	
1945	444,342
1940	538,299
1935	711,277

Thus, while it is true that the total number of farms has declined and the size of the farms has grown larger, the number of farm owners shows a substantial increase.

The entire Nation has realized the importance of southern forestry, but the South has begun to appreciate its favorable position even more during recent years. This area has 40 percent of the Nation's forests, covering 200,000,000 acres, despite the most wasteful cutting. And two-thirds of the South's total forest area is owned by small forest owners averaging 74 acres each. More than one-half of the second-growth saw timber in the Nation is in the South, and the self-seeded, quick-growing piney woods of the coastal plains are a rich source of pulp for paper manufacture, as well as of lumber, turpentine, and rosin. The southern mountains contain the only substantial reserve of old-growth hardwood timber in the United States.

The South needs technical assistance to aid the forestry owners in adopting good management practices. Adequate steps will add approximately $15,000,000 each year to the income of small woodland owners alone. The cost of a sound forestry program will be returned many times in added growth of forest products and improved living standards. Modern conservation methods, selective cutting, and forest planning will rebuild the timber crops and save the eroded hillsides as well.

It is realized that mechanization of crop production and harvesting will require fewer laborers than the old hand methods. This is particularly true of cotton. One way of using at least part of the 5,000,000 to 8,000,000 workers, which it is predicted will be no longer needed in cotton culture, is in the farm diversification which I have discussed. Of course, many of these people will migrate to other regions of our Nation and will constitute a resettlement and reemployment problem in those areas to which they go.

Another matter which imposes a problem to the South and which is joined to its industrial development is that of economic discrimination. This handicap is being overcome, but too slowly. A recent victory of substantial weight is the decision of the Supreme Court in upholding an Interstate Commerce Commission order raising certain freight rates 10 percent in Northeastern States and lowering them 10 percent in Southern States. This decision does not yet establish complete equality, but it is a step in the right direction. Some estimate that the South will still be at a 20-percent disadvantage. There has never been any justification for charging the Birmingham, Ala., shipper 40 percent more for the same product and the same distance than the shipper in the favored Northeast.

A further argument heard from many sides, and for which there is much to be said, is that the South is an economic colony of the North. The Report to the President on Economic Conditions of the South says that "There never has been enough capital and credit in the South to meet the needs of its farmers and its industry. Its people have been living so close to poverty that the South has found it almost impossible to scrape together enough capital to develop its natural resources for the benefit of its own citizens.

"Lacking capital of its own, the South has been forced to borrow from outside financiers, who have reaped a rich harvest in the form of interest and dividends. At the same time, it has had to hand over the control of much of its business and industry to investors from wealthier sections."

It is true that outside interests hold most of the South's public utilities, railroad systems, iron and coal resources, etc. It has been necessary to encourage investment from outside sources, but as freight rates are made more equitable, there is reason to hope that our own people will dare venture into industry developed with local capital, local management, and local pride.

The South is rich in minerals and all possibilities in this field have not yet been explored. It is estimated that the South has a fifth of the soft coal in the Nation and that less than 2 percent of its coal seams have been tapped. Over 50 percent of the Nation's marble comes from the South, nearly all the phosphate and sulfur, and about two-thirds of our domestically produced oil. Bauxite and many other valuable mineral resources abound in this region.

There are great resources of water power in the South. Based on 1945 figures, North Carolina, South Carolina, Georgia, and Alabama rank third, fourth, sixth, and ninth, respectively, among all the States in developed hydroelectric power. Transportation and communication facilities are above average.

The South experienced a substantial expansion of industry during the war, but unfortunately most of it was of a type not readily convertible to peacetime uses. However, in the peacetime development of atomic energy, the region should retain its lead. Another big wartime expansion which appears

to have a continued market with, of course, some ups and downs, is the production of aluminum, also located in the Tennessee Valley. In my opinion, the Tennessee Valley area is certain to become a major concentration of heavy and light metal-working industries. It is likely that the TVA will result in a further transformation of the Scuth from a primarily agricultural region to one of proper balance between agriculture and industry. Just as the South today leads in the manufacture of textile products, so will it assume its proper place in the manufacture of other finished products. It is significant that despite a 25-percent drop in power demand on TVA during the first several months after VJ-day, a new peak of 2,035,000 kilowatts was established shortly after the beginning of the present fiscal year.

Another major concern of the Nation at present, and a particularly acute problem of the South, has to do with the education of its youth. I have pointed out earlier in this discussion that the South is far poorer than other areas of this Nation, measured by cash incomes. To make a bad situation worse, the South has far more children to educate. With ten and one-half million children of school age, or more than a third of the Nation's total—10,682,253 out of 29,805,259, ages 5–17, census of 1940—the South had only 16½ percent of total income payments in 1940, and 19½ percent in 1945.

Comparison between the rural South and urban Northeast shows an even more striking disparity. With 4,250,000 of the Nation's children, about 14 percent of the total, the rural South has 2 percent of the Nation's income. The urban Northeast with only twice as many children receives 42 percent of the Nation's income, or 10 times as much per child.

One can well imagine the inequality in educational opportunities. And yet the rural South is the seedbed of the Nation. From it is recruited the men and women to sustain the population of the cities. Estimates are that the education of children who move to the cities when they become adults costs the rural South $250,000,000 annually. The rural South loses its entire investment in these migrants while the cities get this needed manpower free.

Something then must be done to equalize the educational burdens. Some States have taken measures to do this. My own State of Alabama has adopted a minimum program whereby every child, regardless of his locale, shares equally in State funds expended for education. I believe we shall have to follow a similar practice on a Nation-wide basis. This means Federal aid to general education. Unless there is a unified national attack on this problem the result to the Nation can well be calamitous.

I have attempted to discuss briefly with you some of the problems with which we from the South are confronted and some of the progress we have made in solving them. There are others, of course, which I have not mentioned. All are issues which must be solved largely by the South, but which, in the final analysis, are national in scope and of national concern.

In closing I wish to express optimism and at the same time utter a word of caution. I say optimism because, even though the 13 States still are below the national average in annual wages, it has shown an appreciable advance in general wage levels. This is true both agriculturally and industrially. The United States Department of Labor has released figures showing that from 1940 to 1944 the average farm income in the South increased from $582 to $1,708 per year; industrial wages rose from $1,016 to $1,798. The total 1945 average income was $797, and while this is still far too low, it is better than a prewar average of $371. This increased income, if sustained, will buy more washing machines, more radios, better homes, better health, and will provide many other comforts of life. It will afford at the same time greater markets to industrial products from all parts of the United States.

On the other hand it is too early for my region to become satisfied. I realize that some of the increased income is due to higher-than-average prices for farm products and wartime industrialization. Also there are many in our population who do not share in either the farm or industrial high income groups. We still have a long, hard road to travel before we equal the national average. We do have the resources, both human and physical, for an even more advanced South. To realize this goal we must work and plan intelligently. Let us face the future with faith and foresight. In doing so we are destined for a richer and fuller life.

Decentralization of Government

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. WILEY. Mr. President, ever since I came to the Senate I have been keenly interested in the problem of decentralization of Government. The purpose of my interest is, of course, to bring Government closer to the people, to bring Government officials closer to the problems which they are supposed to handle, to make for efficiency and economy in Government affairs.

The fact that America is now in the atomic age has reinforced my concern with the present overcentralized congestion of Federal Government activities here in Washington. I regard this as a tremendous danger to our national security.

Recently I conducted some correspondence with the Bureau of the Budget on this subject. I ask that this correspondence be printed in the Appendix of the RECORD, along with a statement which I recently made on the matter.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

MAY 10, 1947.

Hon. JAMES E. WEBB,
Director of the Bureau of the Budget,
Washington, D. C.

DEAR MR. WEBB: For some time I have contemplated the grave menace of our country's security resulting from overconcentration in Washington, D. C., of all major Federal activities. It seems to me that the time is long overdue for a program for progressive decentralization from the Nation's Capital of Government agencies.

This, as I see it, would bring about advantages not only to community life in the Capital but would also bring Federal agencies closer to the people in the grass roots and would be basically a national defense measure.

It seems that the wartime decentralization from Washington has been reversed with most agency units being returned to town.

I would very much appreciate your answer to these questions:

(a) Do you regard such decentralization as I have mentioned as advisable and feasible in the near future? Of course, I do not mean a decentralization of a hundred or thousand employees, but in terms of major fractions such as one-third or one-fourth of the total number of Government employees here at present.

(b) What would you regard as the steps and the means by which Congress might promote such decentralization, e. g., what form of legislation enacted, if any, would be required?

Any comments which you might care to make on this subject would be greatly appreciated. Moreover, I would appreciate your answers to the above matter at the earliest possible date at your convenience.

With every good wish, I am

Sincerely yours,

ALEXANDER WILEY.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., June 11, 1947.

Hon. ALEXANDER WILEY,
United States Senate.

DEAR SENATOR WILEY: Thank you for your letter of May 10, in which you express concern over the grave menace to our country's security resulting from overcentralization of Federal activities in the metropolitan area of Washington. As pointed out in your statement printed in the CONGRESSIONAL RECORD of May 19, this is a matter which has been brought into sharper focus by the possible advent of atomic warfare.

You are correct in your belief that it has been the President's policy to reverse the decentralization from Washington that was undertaken in the early days of the war. The reasons for this reversal, I believe, are sound. The decentralization program undertaken in 1942 was a temporary and emergency measure. It was designed to obtain release of 3,000,000 square feet of office space as quickly as possible by removing from Washington activities or units not as essential to control and execution of the war program as the new war agencies then being created. No effort was made permanently to adjust the legal and administrative problems involved in the decentralization. Administrative efficiency and economy both dictated the decision to return many of the decentralized activities to Washington. Where there is no demonstrable advantage to return, agencies will not be brought back. For example, the War Department's Office of Dependency Benefits, first located in Newark, N. J., is now permanently located in St. Louis, Mo., at the Army's records center.

Before attempting to answer the two questions which you have raised, I should like to indicate briefly the setting in which I see these questions and which basically determines the character of my reply. In sustaining Government as an operating entity during an emergency, the question of decentralization or dispersion of governmental agencies covers but one limited segment of the problem. The questions which you raised comprehend the formulation and execution of an over-all security program designed, in the light of available information, to sustain governmental machinery under a variety of possible conditions. I share your concern about this entire problem, and have the definite feeling that we do not yet possess the detailed studies, expert opinions, and the background of consideration which would make possible an informed answer even as regards the governmental decentralization phase. Expert counsel needs to be obtained on scientific developments (particularly in respect to potential weapons of all kinds), military strategy, civilian defense measures, public health, transportation, communications, and a number of other subjects. It occurs to me that the proposed National Security Resources Board, or such similar agency as the Congress may approve, might appropriately study this problem in its totality.

You asked whether I regard decentralization as advisable and feasible in the near future. I must answer in the negative.

First, neither office space nor residential housing adequate to the needs of a major decentralization could be quickly obtained; second, the opportunity given during the war years to study the immediate results of a limited decentralization program supports the conclusion that, from a management point of view, the executive establishment would lose rather than gain from any large-scale decentralization of the administrative offices now remaining in Washington. About 90 percent of all Federal employees already are located outside the metropolitan area of Washington. The existing system of local field offices, in immediate contact with the public and directly responsible for operations conducted in conformity with uniform policy directives from Washington headquarters, represents the kind of decentralization which has proven administratively most effective. Further, from the national security standpoint alone, if a potential enemy of the United States should develop atomic weapons, I would assume that they would be directed in succession against our major cities. Thus, it would seem that decentralization and dispersion would provide only a limited degree of security and that the whole program of locating Government activities would have to be planned from the specific standpoint of maintaining some central operating authority even though physical facilities in various parts of the country might be laid waste.

Your second question related to what steps Congress might take to promote decentralization. Washington has, of course, long been established by law as the seat of the Government, and numerous statutes provide for locating activities in the seat of the Government. I assume that permanent decentralization would be regarded as a breach of the spirit or possibly the letter of these laws, and that amendment of them would have to be considered. Apart from this rather technical question, in my opinion, Congress could best promote the possibilities of such decentralization by moving to a consideration of the broader problem of whether the organizational structure of our Government should be changed to meet either changing conditions of world peace or the needs of a war waged with atomic weapons.

I hope that these comments will be of some use to you. May I state again that my answers have been phrased in general terms because of my belief that the broad problems, of which decentralization of Government agencies may be but one part, should receive serious and continued attention. If not already called to your attention, you may be interested in the views on decentralization of the President's Advisory Committee on Universal Training, which appear on page 26 of the report, A Program for National Security.

Sincerely yours,

F. J. LAWTON,
Acting Director.

STATEMENT BY SENATOR WILEY ON THE BUREAU OF THE BUDGET'S VIEWS ON DECENTRALIZATION

I am grateful for the reply from the Acting Director of the Bureau of the Budget with regard to my comments on the need for Government decentralization.

I regret, however, that I cannot agree with his conclusions.

ANTIMANAGEMENT

In the first place, I do not believe that the interests of scientific management in the Government are served by centralizing a quarter of million or so Government workers in one city, Washington, D. C., rather than sending out a substantial portion of them to the field. Surely, efficient space consolidation of Federal agencies in the field would permit moving some Federal offices there without using up more private office building space. Surely, too, in this day of high-speed transportation, officials could be assembled together in Washington for conferences, if need be, very quickly without having to maintain permanent offices here.

UNITED STATES DEFENSE

In the second place, I do not believe that the national security is served by concentration of the Federal Government in Washington. One atomic bomb could wipe out the nerve center of American defense. It is a fact, of course, as the Acting Director states, that the other major cities of America would also become targets of attack in the event of atomic war. This, however, is not an argument against decentralization, as he says, but an argument for decentralization. Even an elementary knowledge of military strategy shows that dispersion of targets is preferable to having one concentrated target inviting enemy attack.

In the third place, I do not regard decentralization from Washington as violating the letter or the spirit of any law which establishes the seat of Government in Washington. The District of Columbia could still remain the actual capital, even though it could lose 100,000 or more of its Federal employees.

There is much too much buck passing of this problem of decentralization. Surely the central planning arm of the Government, the Bureau of the Budget, should assume responsibility if only in part, instead of waiting "to let George do it," whoever George might be. Every passing month in which no action is taken along this line of decentralization renders the situation more acute.

CAPITAL'S VIRTUES

From the standpoint of the virtues of this Capital City itself, we all take pride in the beauties of the Capital here. However, those beauties could even be more enjoyed if we did not have as many as 1,000,000 people jammed like sardines into one small area, the District of Columbia and its environs. It is ridiculous to assume that the Nation's Capital must necessarily be a swarming, jammed metropolis such as it is now. There would be better living here, better governing here, and better relations with the public if many of the Federal functions were moved out of Washington to areas most closely related to those functions.

I do not intend to drop this matter of decentralization but will pursue it with every resource at my command in the interest, as I see it, of the American public. Every congressional committee, I believe, should be alert to ways and means of encouraging maximum decentralization of Federal functions within its jurisdiction. This applies particularly, I submit, to the Senate and House Appropriations Committees.

I do not underestimate the difficulties of this problem. These difficulties should, however, challenge us rather than paralyze us from taking any constructive action.

The Tax Veto

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Tax Veto" from the New York Times of this morning.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TAX VETO

The responsibility always rests, or should rest, upon the President, in employing his veto power, to justify such action by reasoning which is so logical and so convincing as to be, to all intents and purposes, unanswerable. There are two reasons, moreover, why this generalization may be said to have applied with more than ordinary force in the case of H. R. 1, which President Truman refused to validate with his signature yesterday. In the first place, the determination of tax policy has always been regarded as peculiarly the domain of the legislative branch of the Government, not to be lightly set aside by the Executive. (This largely explains, no doubt, why yesterday's veto was only the second of its kind in the Nation's history.) In the second place, when taxes, going into the third postwar year, are still close to wartime peak levels, the burden of proof is not upon those who propose to reduce them, but upon the opponents of such a course.

Does the President's veto message justify his action when judged by these exacting requirements? In our opinion the answer is clearly in the negative. A convincing case might have been made for signing the measure with the reservation that he was doing so against his better judgment and on the understanding that if the budget surplus on which it was predicated failed to materialize Congress would be expected to provide the necessary revenues. But if an equally convincing case could be made for a veto, one will seek it in vain in yesterday's message. It is a truism in the legal profession that when a lawyer tries to prove too much it is a sign that either he is a bad lawyer or that he has a bad case. In yesterday's message the President, it seems to us, tried to prove too much. And since he has legal advisers around him of unquestionable competence, the conclusion would appear to be inescapable that he had a weak case.

The theme of Mr. Truman's veto message was that H. R. 1 represented "the wrong kind of tax reduction, at the wrong time." This is the wrong time for tax reduction, said he, for three reasons: (1) We are still in a transition period, in terms of the national finances, and the situation calls for "prudence and conservative management"; (2) the economy is already subject to inflationary pressures, and tax reduction would tend to increase them; and (3) if we are to "maintain the integrity of the national debt" we must reduce it by substantial amounts.

Mr. Truman is on sound ground when he calls for a conservative attitude toward the Nation's finances at this time. The Republican leadership, in its anxiety to make good a campaign pledge, has left itself open to the charge of patent overoptimism in a field in which overoptimism has no place; and its approach to the tax problem, as we have pointed out numerous times, has been a good deal less than orderly and consistent. Although it has been hoped that by mid-June the picture of prospective Federal income and outgo between now and June 30, 1948, would be fairly clear, developments in that respect have not fulfilled the more hopeful expectations. In recent weeks, for example, private estimates of the excess receipts over this period have ranged from as high as $10,000,000,000 to as low as $4,000,000,000. These figures, moreover, have included little or no allowance for the fact that the recent reorientation of the administration's foreign policy, with its emphasis on economic aid abroad, introduces a new element of uncertainty so far as the spending side of the budget is concerned.

But is this sufficient grounds on which to justify a veto of the proposed legislation? The best answer to that question, perhaps, is that no one has shown a greater awareness of all this than Senator GEORGE, who headed the Finance Committee when the Democrats were in control of Congress, and is recognized as the party's outstanding authority; yet Mr. GEORGE only a few days ago was reported to have urged the President against vetoing the bill.

Less convincing is the second of the President's reasons for his veto, the inflation argument. It is convincing enough as a matter of pure monetary theory. The trouble is that the administration has demonstrated in the past that its forecasts in the field of inflation and deflation and related matters have been highly undependable where they have not been highly political. It is difficult to take the inflation argument of an administration too seriously in the case of taxes, moreover, when that same administration ignores inflation of its wage policies and when one of its chief spokesmen has already gone on record against the tax reduction bill because deflation was in the offing, which, he pointed out, would mean a drop in the national income and hence in the yield of prevailing tax rates.

The third argument, that the national debt must be reduced by substantial amounts, would be impressive were it not for one fact. The authors of H. R. 1 have never said that the debt should not be reduced. On the contrary, their contention from the start has been that the fiscal outlook was such that the debt and taxes could be reduced by equal amounts. That premise may be wrong, but there can be no doubt that it is there and that it is a basic postulate among conservative Members of Congress who have supported the measure.

It is when the President sets out to show that this is not only the wrong time for tax reduction but that H. R. 1 represents the wrong kind of tax measure that he reveals the real measure of the weakness of his case. For this section descends to the plane of pure political demagogery.

One of the standard arguments advanced against an across-the-board reduction in taxes at this time is that such a reduction granted greater relief in the upper than in the lower brackets. The President not only employs this fallacious and mischievous argument but pushes it close to the reductio ad absurdum. Under the tax schedule proposed in H. R. 1, he declares, the average family with an income of $2,500 a year would receive an increase in its take-home pay of only 1.2 percent, whereas the average family with an income of $50,000 would enjoy an increase of 18.6 percent, and a $500,000-income family 62.3 percent.

Let us see what this means in terms of the actual tax figures in these three brackets. At the present time the $2,500 family is paying $95 a year in taxes, the $50,000 family $24,111, and the $500,000 family $406,600. Put another way, the Government takes 3.8 percent of the net income of the $2,500 family, leaving it 96.2 percent as take-home pay; it takes 48.2 percent of the income of the $50,000 family, leaving it 51.8 percent; and it takes 81.3 percent of the income in the case of the $500,000 family, which is permitted to take home 18.7 percent.

In other words, families in the upper brackets have been taxed at such high rates under wartime and postwar schedules that their actual income has fallen to a fraction of their nominal income. And now they find the President actually proposing to use this enormously deflated take-home pay as a statistical basis to prove that they would be treated with undue generosity under H. R. 1.

Perhaps the best way to sum up the President's veto message would be to say that he has taken the wrong course, for the wrong reasons.

German Foreign Trade

EXTENSION OF REMARKS
OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Our Interest in German Foreign Trade," delivered on June 13, 1947, by M. S. Szymczak, Director of the Economics Division of the Office of Military Government for Germany.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR INTEREST IN GERMAN FOREIGN TRADE

Recovery in Europe is lagging. Since VE-day, this country has provided billions of dollars of assistance to Europe. Still we find the Continent struggling with shortages of food, of fuel, of raw materials, of most of the essential ingredients for economic recovery and stability. Until Europe can export enough to pay its own way in the world, we shall find ourselves continually confronted with a hard choice: We must either provide further billions of assistance or see economic, social, and political disintegration in that vital area. We face exactly this problem in Germany; but, more importantly, our failure to handle it there on an adequate scale will seriously reduce the chances of our success in the rest of Europe. Other European countries are vitally dependent upon the renewed flow of supplies from Germany, first and foremost of coal. The reconstruction of the European economy is inseparable from the rehabilitation of Germany.

Before the war Germany, next to the United States and the United Kingdom, was the most important trading nation in the world. As late as 1937, despite efforts of the Nazi regime to make Germany independent of foreign supplies and markets, the country's foreign trade represented about 9 percent of the world's entire international commerce. Its exports reached $2,400,000,000 and its imports $2,200,000,000, equivalent at present prices to $4,000,000,000 in each direction. More than half of these exports and imports came from or went into those areas of prewar Germany that today constitute the American and British zones of occupation. About two-thirds of the imports were raw materials and semifinished goods needed for the operation of the German industrial system. Almost nine-tenths of the exports were finished industrial products. Germany provided a highly important market for many foreign countries, and its exports met essential needs in wide areas, especially in the rest of continental Europe.

In 1946, imports from other countries into the American and British zones of Germany totaled about $650,000,000. More than four-fifths of that amount represented foodstuffs needed to avert outright starvation among the German population. Only about one-tenth of the total consisted of raw materials for German industry, mainly American cotton and British wool. The importation of industrial materials thus was only a very small fraction of the quantity which the zones used to import before the war. Exports were equally small. They amounted to only some $150,000,000 and three-fourths of that sum was provided by coal exports from the Ruhr mines in the British zone. Most of the remainder was raw materials like lumber and hops. Exports of industrial goods were negligible.

As a result of this situation, the American and British occupation authorities had to finance an import surplus into their zones of occupation amounting to about $500,000,000 in 1946. Despite such a large outlay of money, the economic situation of the zones remained critical. Food imports were just sufficient to keep the ration of the average consumer around 1,550 calories per day, an amount one-fourth below the minimum standard set up by the United Nations Food and Agricultural Organization, and two-fifths below the quantity needed for the maintenance of an efficient labor force. The scarcity of imported raw materials was an important factor restricting the revival of industrial activity. Stagnation in German industry has prevented an adequate flow of German exports to pay for imports and to contribute to the recovery of other European countries.

In December 1946, the United States and the United Kingdom agreed upon a new German foreign trade program based upon an economic merger of the American and British zones of occupation. The two occupying powers set the goal of making the combined zones self-supporting within a period of 3 years by stimulating both imports and exports, and in the meantime agreed to share equally in financing the necessary import surplus. They set up a joint export-import agency and implemented their agreement a few days ago by establishing a German economic council. This council will be composed of representatives of the legislatures of the German states located in the combined zones. It will be assisted by an executive committee representing the governments of the German states, and by a number of executive directors, heading bizonal administrative departments. Through these organizations the population of the occupied zones will be mobilized for attaining the goals set by the agency. It was hoped that France and the Soviet Union would join in the agreement and thus reestablish the economic unity of Germany, which is indispensable for the eventual rehabilitation of the German economy and to which all four powers had agreed at the Potsdam conference of 1945. Unfortunately, the other occupying powers refused to join in the merger, and the American and British authorities had to proceed on their own, leaving the door open, however, for future adherence by the other two powers.

In meeting our share of the cost of supporting Germany during this interim period, we rely upon appropriations by the Congress to cover food requirements. Raw materials and equipment for industrial rehabilitation, on the other hand, are financed through credits from United States Government agencies. The Commodity Credit Corporation shipped $30,000,000 worth of surplus cotton into the American zone to be processed by German firms. The finished materials are exported to an extent sufficient to pay for the imported cotton and the remainder is either exported in order to pay for the importation of additional raw materials or is made available to the domestic German economy. The United States Commercial Co. agreed to finance similar shipments of raw materials for the ceramics, glass, chemical, toys, and other industries. At present, a second cotton credit of $20,000,000 is being negotiated with the Export-Import Bank of Washington and American cotton exporters.

The two occupying powers also have established a joint revolving fund of foreign exchange that can be used for importing other goods needed by German industries. The fund consists of the proceeds of exports from the combined zones in 1945 and 1946, insofar as they have not been used already for import payments, and of German external assets transferred to the two occupying powers by neutral countries. This provides the Joint Export-Import Agency with a nec-

essary working balance for priming the pump of German export industries.

The actual start of the foreign-trade drive has been somewhat delayed. For many months the unprecedented hardships of last winter disrupted transportation and production in Europe. The new export-import organizations had to be set up and proper rules of procedure established. The exact specifications for the export-import program, which had to be submitted to the Agency by the German authorities, often were found unworkable. Already, however, the Agency is approving export and import contracts at an accelerating rate. Moreover, the Agency has issued regulations facilitating the renewal of contacts between German and foreign businessmen. American and other businessmen now may visit Germany in substantial numbers, and after June 15 German exporters and foreign importers will be permitted to conclude contract negotiations by mail. The Agency, however, has to approve all import and export contracts, either at its headquarters or through one of its branches, and it is designated to receive all foreign-exchange proceeds from export shipments. These precautions are necessary in order to make sure that all export proceeds are mobilized for the payment of essential imports.

Our efforts to reconstruct German foreign trade would be greatly facilitated if Germany's economic unity were restored in accordance with the Potsdam agreement. Since the four zones are interdependent to a very high degree, full merger would make possible a much more efficient economic operation. If, however, the four powers cannot agree on the terms of unification, the American and British authorities will have to press forward in their efforts to put at least their area of occupation back on its own feet. This will require a reorientation of industrial production in the two zones and an increase in industrial activity above the level set by the four occupying powers about a year ago. In this framework the foreign-trade program will make a decisive contribution to the restoration of economic stability in Germany and thus in all of Europe.

Memorial Day Statement of Lt. Gen. James H. Doolittle

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. COOPER. Mr. President, I ask unanimous consent to have included in the Appendix of the RECORD a statement prepared by Lt. Gen. James H. Doolittle, president of the Air Force Association, for the Memorial Day service held at Union College, Barbourville, Ky., on May 30, 1947, and read in behalf of General Doolittle by Hon. T. C. Sizemore, group commander of the association for the southeastern Kentucky squadrons.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Today, 2 years after our second major war in 25 years, we pause as a nation to honor those who have died in the service of our country.

The military honor roll of the Second World War carries the names of 58,107 Air Force men who gave their lives or are forever missing in action. As the representative of the 87,000 Air Force Association members who also served with the Army Air Forces, I should like today to pay tribute to those men who helped America hold onto the freedom it has cherished for 170 years.

A more fitting memorial to them and to the thousands of others killed in the defense of the United States would be the positive assurance that never again would we permit this Nation to be as ill-prepared to defend its principles and its shores as it was in 1918 and again in 1941.

The Housing Problem

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. MORTON. Mr. Speaker, under leave to extend my remarks and include extraneous material, I invite the attention of the House to an editorial from the Washington Post of this date, reprinted below.

I consider the second paragraph of this editorial particularly appropriate. The problem of housing is perhaps the most important domestic issue facing us today. It is time to call a halt to bickering and buck passing in this urgent national problem. In my opinion, a complete and searching investigation offers the only foundation for a constructive program.

BALKY HOUSE

There is good reason for the rising public concern over the failure of Congress to do anything about housing. Millions of Americans are still struggling for a decent place in which to live. The shortage of housing is probably the most acute domestic problem that the war has left with us. It calls for a great national effort to plan and build the type of dwellings that the people want and need. But in place of such a national effort we are getting feverish activity on the part of a limited number of builders to reap a fortune out of overpriced houses that the people most in need of shelter cannot afford to buy. The result is certainly not a happy commentary on our democratic machinery for serving the national welfare.

Representative JAVITS seems to have concluded that the only hope of substituting an orderly and constructive program for the present floundering and confusion is to conduct a searching investigation into the problem in the next 6 months. Introducing a resolution to create a special House committee for that purpose, he expressed a belief that the vast majority of the American people are tired of labor, industry, and Government bickering about who is guilty in the case of the missing home. Perhaps this is the only means by which the House can be made to see its own responsibility in the matter.

Whatever may be said of the short-sighted policies of builders and organized building labor, the overshadowing fact is that Congress has not yet given us a national housing policy. It has not yet recognized good housing as one of the first essentials of our national health and welfare. Instead, Congress seems to be moving in the opposite direction. The rent control bill now taking final shape will take away restraints on commercial building and thus further diminish the volume of critical materials available for residential construction. At the same time the House Appropriations Committee has cut so deeply into the Federal housing subsidy fund as to disrupt even the existing arrangements which make the operation of low-rental public housing possible.

This attitude seems the more inexcusable because a well-balanced and forward-looking national housing policy is readily at hand in the Taft-Ellender-Wagner bill, which is also sponsored in the House by Representative JAVITS. It is said that Senator TAFT has promised to press the measure before the Senate and favorable action is anticipated. It is the House that is balking. Taking note of this situation, more than 30 organizations are sponsoring a Fight for Housing Day on June 25 to acquaint our legislators with the public demand. We wish them success, for we are convinced that no issue is of greater social and economic importance to the country than the proper use of our resources to provide decent homes for the people.

Tribute to Hon. Thomas Butler Pearce

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD a most appropriate and well-deserved tribute to the memory of the Honorable Thomas Butler Pearce, late of Columbia, S. C. The tribute was prepared under the direction of the South Carolina Research Planning and Development Board, of which Mr. Pearce was chairman, and was edited and prepared by former Senator Wilton Hall.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

Thomas Butler Pearce, of Columbia, S. C., who entered upon the great adventure on April 15, 1947, at the age of 59, was one of those South Carolina sons who could have said with becoming modesty that he lived—

"For the cause that lacks assistance, for the wrong that needs resistance,
For the future in the distance, and the good that I can do."

—*G. L. Banks.*

Born July 3, 1888, in Decatur, Ga., Tom Pearce removed to South Carolina as a youth of 12 and ever thereafter was a most devoted and loyal son of the State of his adoption.

Like so many successful leaders, he was initiated into business life as a newsboy, later entering his father's business and becoming an active leader in that organization before he turned the age of 20.

"Seest thou a man diligent in his business?" asked the Old Testament. "He shall stand before kings; he shall not stand before mean men." Diligent, progressive, and far-sighted in his own affairs, Mr. Pearce was endowed with both enthusiasm and vision to carry this same diligence early into a public career where he served the people of his State and Nation with unselfish distinction.

At the age of 28 he became State senator from Richland County, having been elected overwhelmingly by the people who knew him best and who were convinced that his aims were "Not of the letter, but of the spirit; for the letter killeth, but the spirit giveth life."

Where lesser men would have faltered at the double responsibilities of rigorous business and public life, the latter a labor of love and devotion to his State, Mr. Pearce met

every challenge and wore boldly the mantle of a liberal in the days when that word was descriptive of the enlightened, fair-minded, and conscientious men in public life.

He believed, with the poet:

"You cannot choose your battlefield,
The gods do that for you,
But you can plant a standard
Where a standard never flew."

—*Nathalia Crane.*

By his example Mr. Pearce helped to arouse a wider interest in government among men and women in all walks of life. By his deep devotion to his duties as a citizen he left a lasting mark upon the State. He lighted in many a heart the candle of understanding, the flame of desire for a grander, cleaner, and better South Carolina, a light that will endure for generations to come.

Mr. Pearce was of the conviction, in the dark days of the early 1930's, that men of thought should be up and stirring, sowing and seedling and clearing the way to a better day and a richer life for the people of his State and Nation. He helped to carry the banner of the reenergized Democratic Party at Chicago in 1932, and ever thereafter was a devoted and active adherent to those new departures in humanitarian thinking which pointed to improvement in the educational and economic status of his beloved South Carolina and our Nation as a whole.

As a candidate for governor, he made thousands of lifelong friends from the mountains to the sea. He conducted a dignified campaign, based on lofty principles. He fought a good fight as the champion of sound government and clean politics. In defeat he was gracious, turning without pause to serve his State in other important capacities to which he was summoned on the demand of its citizens.

Always interested in the problems of hydro-electric power, Mr. Pearce, as a Senator, worked for equalization and lowering of rates to the public and it was in recognition of this interest in full development of South Carolina's resources that he was named chairman of the State's gigantic Santee-Cooper power project when that undertaking became a reality. Here, as elsewhere, he again served his State well.

During the trying years of World War II, he served on the home front as first chairman of the Preparedness for Peace Commission. This able group laid the foundation for today's rapidly expanding industrial life in South Carolina. Once again he gave generously of his talents and means to another great program. It stands as an enduring monument to his life.

Mr. Pearce was of the conviction that man has no more right to consume happiness without producing it than he does to consume wealth without producing it, and he carried that thought over into the field of government.

When the South Carolina Research, Planning, and Development Board was created, it was only natural that Mr. Pearce should have been designated as chairman. He was at his best when promoting his beloved State's resources and potentialities. Lasting progress during the war, and in the post-war era, was made under his capable command as chairman. He was its guiding genius to the very end of his life.

A progressive business leader, a faithful and conscientious public servant, a devoted father and husband, and a Christian gentleman, Thomas Butler Pearce's passing from the South Carolina scene marks the departure of a friendly, human, and altogether admirable spirit which has gone to find

"Beyond the last horizon's rim,
Beyond adventure's farthest quest,
Somewhere they rise, serene and dim,
The happy, happy Hills Of Rest."

—*A. B. Paine.*

The Case Against Socialized Medicine

EXTENSION OF REMARKS
OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. GRANT of Indiana. Mr. Speaker, European collectivism is aggressive in every sphere of American life, but nowhere is it more threatening than in the national campaign to fasten upon us a system of socialized medicine.

This program did not originate in the United States, but in the secret councils of world communism. It would reduce our doctors, dentists, and nurses to Federal pay rollers, responsive first to a new Federal bureaucracy.

I offer as a part of my remarks a scholarly and comprehensive article published in the South Bend Tribune June 1, by Lawrence Sullivan, noted author and journalist, who has studied the development of American bureaucracy for more than 20 years. The article is as follows:

THE CASE AGAINST SOCIALIZED MEDICINE

(By Lawrence Sullivan)

In a special message on May 19 President Truman recommended, for the fourth time in the space of 2 years, that Congress enact at once a comprehensive national program of compulsory health insurance. Next day the detailed bill (S. 1320) was introduced simultaneously in both the House and Senate.

The program contemplates an addition pay-roll tax amounting to 3½ percent of all wages and salaries, over and above existing social-security and unemployment taxes. These taxes would be allocated by the Treasury to a new Personal Health Services Fund in the Federal Security Agency. Thereafter all approved medical, hospital, and dental bills of "covered" citizens would be paid by the Government. At the outset, the program would cover an estimated 85 percent of the United States population, including families of all wage earners.

Participation in the plan through fixed pay-roll deductions every pay day would be compulsory. No employed person could escape the proposed health tax.

The Personal Health Services Fund would be administered under supervision of a new five-man Federal board, only two of whom need be physicians.

The bill is now before the Senate Labor Committee, of which Senator ROBERT A. TAFT, of Ohio, is chairman. Because of the crowded Senate calendar, no legislation is in prospect this session.

COMMUNIST ORIGINS

The campaign for socialized medicine in the United States stems directly from Kremlin communism. Louis F. Budenz, former editor of the Communist Daily Worker in New York, and one-time Communist central committee member for the United States, relates in his recent memoirs that Dmitri Manuilsky, secretary of the Communist International, first urged compulsory social insurance as a segment of the world revolution program in 1930. Addressing the sixteenth party congress in Moscow, Manuilsky said:

"In the United States, for instance, the Communists must launch a powerful movement for social insurance. They must place themselves at the head of this movement and lead it to victory."

Manuilsky added that the purpose of this campaign in the United States was to "strengthen the sections of the Comintern organization."

In another passage, Editor Budenz describes Manuilsky as a powerful figure in the Kremlin—one who "was and had always been Stalin's right hand in handling the international apparatus. He had been made secretary of the Communist International when Stalin wanted most to clear it of all his opponents. And he had led the big crusade against the United States, caricaturing it as the chief enemy of the peoples of the world * * *."

Health insurance became a major objective of the International Labor Office as early as 1927, when a model sickness insurance program was formulated at Geneva. Moscow adopted this Geneva draft as a pivotal item in the Communist world program. This was the real beginning of the international movement for socialized medicine, as now embodied in the Beveridge cradle-to-grave proposals in Britain and the Wagner-Murray-Dingell bill in the United States.

The direct connection between the ILO world program and the Wagner-Murray-Dingell bill, again before Congress, is found in the fact that Arthur T. Altmeyer, chairman of the Social Security Board; Isadore Falk, Director of Research for the Social Security Board; Wilbur Cohen, Assistant Director of Research in SSB, and Carter Goodrich, formerly a SSB research worker under Falk, were at various times the United States delegates to the ILO conferences which framed the International Medical Code. Testimony before the Senate Labor Committee last year identified Mr. Falk as the key draftsman of the Wagner-Murray-Dingell bill.

PLAN APPLIED IN RUSSIA

Russia was the first nation to apply the ILO program for socialized medicine. How closely the Russian experience to date parallels the Wagner-Murray-Dingell program for the United States was traced out before the Senate Labor Committee last year in the statement of Dr. Carl H. Gellenthien, of Valmora, N. Mex. A careful study of the Russian administrative plan led him, the witness said, to the conclusion that the Wagner-Murray-Dingell bill embodied substantially the same program for the American application of socialized medicine.

"That is precisely the plan now proposed for the United States," Dr. Gellenthien told the committee. "As in Russia today, there would be administrative zones and districts, each under the general supervision of some federally-appointed, or federally-approved, regional supervisor. Patients would be certified for this treatment or that, according to the findings and conclusions of some local administrative bureaucrat, who may or may not be a doctor. Note that under the Russian plan, as it has unfolded, the district inspections and certifications are made, not by the public health organizations, but by 'the Social Insurance Committees of the trade unions.'

"In my view we need look no further for evidence that this legislation embodies proposals which find no roots in the soil of free America. The program did not originate in America, but in Communistic Russia. It was imported in full growth and development, not by the men and women of the medical profession, who have built up in this country the finest system of medical care ever known anywhere in the world, but by a small group within the Government who seek to impose a foreign ideology on our American traditions.

"Communist medicine is not for free America."

DOCTORS OPPOSE SOCIALIZED MEDICINE

The American Medical Association reports that approximately 95 percent of all registered physicians in the United States oppose socialized medicine. But when the AMA set out a decade ago to resist the program,

the Department of Justice cracked down, in 1937–40, with an antitrust suit which, carried to the Supreme Court, forced virtual abandonment of organized resistance.

Soon thereafter, the torch of opposition was taken up by the National Physicians Committee for the Extension of Medical Service, a Nation-wide group of physicians, surgeons, dentists, and nurses, dedicated to voluntary efforts in defense of free medicine. For 8 years, this group has been the spearhead of an intensive campaign of public education to awaken America to the true implications of political medicine.

Congressman ARTHUR L. MILLER, of Nebraska, himself a physician, is one of the Nation's most militant opponents of the ILO medical program. As Congressman-Doctor MILLER once told the Labor Committee:

"This bill would introduce a new character on the scene—Uncle Sam, M. D. * * * In every country where fascism, nazism, or socialism prevails, there is socialized medicine."

About the same conclusion was expressed in the final report of the Canadian Royal Commission on Social Security, as submitted to Parliament at Ottawa in 1943.

Socialized medicine in Germany had developed a gigantic nation-wide bureaucracy which reached every family in the land. As the Canadian Royal Commission's report put it—

"During the early years of Hitler's regime, the government's medical program was looked upon by many observers as one of the greatest props of the totalitarian state."

A NEW DEAL PROGRAM

The original version of the Wagner-Murray-Dingell bill was sponsored by Senator ROBERT F. WAGNER, of New York, Senator JAMES E. MURRAY, of Montana, and Representative JOHN D. DINGELL, of Michigan. The revised version now is formally sponsored also by Senators CLAUDE PEPPER, GLEN H. TAYLOR of Idaho, and J. HOWARD MCGRATH of Rhode Island.

In the House it also commands the enthusiastic support of Representative VITO MARCANTONIO, of New York.

During her crowded years as White House hostess, Mrs. Franklin D. Roosevelt was a leader in the Washington inner circle of bureaucratic officialdom which pulled the strings on many fronts for socialized medicine. Today, she supports the movement with equal ardor in her newspaper and magazine writing.

Many officials on the Federal pay roll spend much of their time in speaking and writing for the Wagner-Murray-Dingell bill. Some of those who have been identified in such activities during the last 2 years are in the Social Security Board, United States Public Health Service, Children's Bureau, Office of Education, Department of Agriculture, and the Indian Service.

A recent congressional inquiry disclosed that perhaps $500,000 a year in departmental funds is spent entirely for the salaries and traveling expenses of Federal pay rollers engaged principally in advocating socialized medicine before teachers, writers, editors, women's clubs, farm cooperatives, and local discussion clubs.

One of the most incisive reports on socialized medicine submitted before the Senate hearings last year was that of William Logan Martin, of Birmingham, Ala., chairman of a special committee appointed by the American Bar Association to inquire into the legal aspects of the proposal.

"My personal conclusion, Senator," said Mr. Martin, "is that it is probably the most extensive undertaking ever made by Congress beyond the limits of the Constitution of this country. I cannot conceive that a bill which goes so far as this into the intimate details of the lives of American citizens can be justified under the Constitution of the United States."

PART OF A WORLD PLAN

Viewed in its broad international aspects, the world movement for socialized medicine is but another facet of Marxian socialism. While it is yet fashionable in some quarters of the United States to mark a distinction between communism and socialism, particularly in details of organization and procedure, the fact remains that in all points of practical application communism and socialism are but opposite sides of the same debased coin of Marxism. Both are expressions of Godless, materialistic statism. Both submerge religious inspiration and discipline, and thus snuff out the deepest motivations of individual character and achievement. Both glorify the all-powerful state as the owner of all wealth, the manager of all production, the giver of all good things.

What, for example, is the real difference between the doctrine which demands nationalization of the coal mines, the railroads, or the steamship lines in Britain, and that which demands the nationalization of all medicine and dentistry in Russia?

It has been characteristic of all such movements, in all ages, that they are masked initially as great humanitarian endeavors—steps toward the "more abundant life," as it were. But always behind the gentle mask of do-good, history at last has revealed the ugly gargoyles of power-grasping dictatorship.

And over the top layer of the all-pervasive bureaucracy there sits, finally, the head man. History once called him Caesar, then Il Duce, later der Fuehrer, presently Generalissimo or Marshall. The title is not important, but the pattern of tyrannical bureaucracy is always the same. Then liberty is dead and the long darkness of despotism is upon the land.

Never do these great humanitarian undertakings come upon a people in their final revolting form. As Edmund Burke once put it:

"Men have been sometimes led by degrees, sometimes hurried into things of which, if they could have seen the whole together, they never would have permitted the most remote approach."

That's why the beginnings of socialized medicine in the United States come as a challenge to every defender of freedom and every lover of liberty.

A NEW BUREAUCRACY

Under socialized medicine in Germany before the war there was one civilian clerical worker in the medical service for every 100 insured population. The same degree of bureaucratic expansion in the United States of America would mean another 1,200,000 payrollers added to the Government civil service lists, merely to do the record keeping for 120,000,000 insured population under socialized medicine. And this, of course, does not include the necessary professional payrollers, such as doctors, dentists, nurses, anesthetists, laboratory technicians, and dietitians. In all, our American bureaucracy in socialized medicine easily would run to 1,500,000 men and women—exclusive of the 16,000 already engaged in other phases of social security administration.

Can anyone guess how much that would cost? With such overhead in administrative costs, would the quality of the medical services be improved?

There is no case in history where socialized medicine has paid its own way, over the long pull, with the special taxes collected. In Germany, Russia, and Austria the special taxes soon were found insufficient to cover costs. Gradually, parts of the program were eased over onto the general budget. At length, in both Germany and Russia, every pretense of paying with special taxes was abandoned, and the whole operation transplanted directly to the general budget.

Such are the devices of aggressive communism—to deceive the people with promises of self-liquidating projects. Anything to get the new bureaucracy entrenched. Once established, the bureau's annual appropriations are diverted to propaganda for more power, more money, more authority over the daily lives of the people.

Hence the urgent call of American citizenship today to stand firm against every encroachment of collectivism, under whatever appealing guise of something-for-nothing. No one can afford to wait until his own ox is being gored. Marxism advances simultaneously on many fronts.

Little encroachments on many fronts ultimately will be consolidated under the unmasked head man.

That's the real meaning of what Dmitri Manuilsky told the Sixteenth Communist Congress in Moscow in 1930, when he said:

"In the United States, for instance, the Communists must launch a powerful movement for social insurance. They must place themselves at the head of this movement and lead it to victory."

William Bernard Barry

MEMORIAL ADDRESS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 19, 1947

On the life, character, and public service of Hon. WILLIAM BERNARD BARRY, late a Representative from the State of New York.

Mr. KEOGH. Mr. Speaker, the untimely passing of our late colleague, WILLIAM B. BARRY, was a great loss to the Nation, to the State of New York, and to the district which he so ably represented.

I have lost a close and dear friend.

The ties of friendship that were to grow stronger through the years had their inception during our college days at New York University where we were not only classmates but members of the same fraternity—Theta Chi. Through the years of personal friendship that were to follow, as well as a close professional and political association, I came to know BILL'S strong will and determination particularly with respect to the causes in which he believed and which he sought to advance. He possessed great courage and ability and the qualities that make for a true statesman.

In 1933 he was appointed a member of the district attorney's staff in Queens County, N. Y., and in 1934 he became a special United States attorney. From 1930 to 1935 he was a member of the Democratic executive committee of Queens County. At a special election held on November 5, 1935, he was elected to the Seventy-fourth Congress and served continuously until the time of his death. During his congressional career, he was ever conscious of the responsibility that had been placed upon him and ever seeking to protect the best interests of the people he represented.

BILL BARRY'S generous spirit, friendliness, and kindliness made him a true friend and earned for him the affectionate regard of all who were privileged to enjoy his friendship.

To the members of his family whom I have known for many years, the burden of his loss has been very great and deeply felt, for BILL was a devoted husband, father, and son. To his gracious and

capable wife and to his young son, Brian, and daughter, Jane, he has left the consolation and the heritage of a respected name and the exemplary record of a lifetime devoted to public service.

Perhaps the sentiments of his legion of friends might best be expressed in the immortal words of Earl Lytton:

Ay, there are some good things in life
That fall not away with the rest.
And, of all best things upon earth, I hold
That a faithful friend is the best.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. HOMER R. JONES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. JONES of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include herewith a copy of an article published recently in the Seattle (Wash.) Daily Times written by a prominent Honolulu newspaperman, Riley H. Allen, and pertinent to the subject of Hawaiian statehood. It is as follows:

HAWAIIAN STATEHOOD FOES ONLY A SHRINKING MINORITY

(By Riley H. Allen)

(Riley H. Allen, editor of the Honolulu Star-Bulletin and well known in Seattle and the Pacific Northwest, wrote the following in response to a request from the Seattle Times that he explain the apparently conflicting reports brought home by visitors to the islands concerning the attitude of Hawaiians themselves to the question of statehood.)

HONOLULU.—Hawaii has been working for statehood for more than half a century. Even before this group of islands, 2,100 miles off the California coast, became a Territory of the United States, there was an active statehood movement under way.

Hawaii consented and indeed sought annexation to the United States, following the revolution of 1893 which overthrew the Hawaiian monarchy, on the definite belief that the status of a Territory would, in the reasonably near future, develop into that of a State. Unfortunately, conditions calling for statehood that might have been written into the Annexation Act were not made formally a part of the record of Congress and the executive departments.

But the implied promise of statehood for Hawaii certainly figured in a juncture which has been at least as important to continental United States as to Hawaii. During all these years since annexation in August 1898 the people of Hawaii have looked forward to statehood.

There was some opposition to it in the past and you can find here and there men and women who will express either opposition or skepticism. But they are in the minority—an increasingly smaller minority. By every test, from formal vote at a plebiscite to any number of informal votes and actions of individuals and organizations, the great majority of Hawaii's people want statehood and believe we are entitled to it.

Every congressional study, every Department of the Interior study, made on the subject of statehood has helped to move that goal nearer. Today it is believed that, if a plebiscite were held, the vote would be almost 5 to 1 in favor of statehood—and one witness before the most recent congressional committee which came to Hawaii to study statehood said confidently that the vote would be 10 to 1 for statehood.

The status of the issue now is this: In early 1946 a committee of the National House of Representatives came to Hawaii to investigate statehood, returned and made to the House a strongly favorable report. For various reasons, chiefly that the House in the spring and summer of 1946 had before it a great deal of pressing legislation, no action was taken by Congress. Early in 1947 the Lower House of the new Congress took up statehood and at the same time Secretary of the Interior J. A. Krug and other Department of the Interior officials, with two Congressmen, came to the Pacific to make investigations of their own.

Specifically, they were interested in knowing whether statehood for Hawaii would complicate the admittedly difficult issue of the future government of Pacific islands taken from Japan. They returned to Washington with the statement, backed by no less an authority than Gen. Douglas MacArthur at Tokyo, that statehood for Hawaii, far from complicating the Pacific islands pacture, would be helpful to the United States. It would, said the general, again demonstrate that the United States carries into practice its principles of democracy of government laid down in the Constitution and voiced by its public men and others.

The House Committee on Public Lands, which under the reorganization of Congress had become the committee dealing with Pacific islands, held extensive hearings at Washington a few weeks ago. Many witnesses testified to the political, economic, educational and social development of Hawaii and to the loyalty of the Hawaiian people (without regard to race), as amply demonstrated before, during, and after World War II.

The House committee voted unanimously to report the bill out for immediate action. This means that for the first time in our existence as a territory the issue of statehood will come to the floor of Congress.

The support which Hawaiian statehood has received, on the mainland, outside of Congress, is extremely gratifying. We have a Washington statehood office. It is operated under authority of the territorial government. I have just had a letter from its executive secretary, telling me that he has clippings from editorials of representative newspapers in no less than 43 States. The very great majority—indeed the overwhelming majority—of these editorials are friendly to statehood and a large proportion of that number urge action by this Congress.

So far as I know, not one substantial element in our national population opposes statehood for the territory. We have had endorsements—resolutions favoring statehood—from more national and regional organizations than I can list, these including business, educational, patriotic, civic, and organized labor groups. Chambers of Commerce all over the country have approved statehood for the territory. There are statehood planks in both the Republican and Democratic national platforms.

No section of our Nation should be more sympathetic with statehood for Hawaii than the Pacific Northwest—the State of Washington, the city of Seattle. Washington's own record in the pioneer days of struggle toward statehood should give to every Washingtonian an intense feeling of comradeship for our fight now.

Not only that—in those early pioneer days, there were men from the then little-known Sandwich Islands who helped in the movement first to set up Territorial government for Washington and later to gain statehood. There have long been contacts and connections between the Hawaiian Islands and Puget Sound's chief cities—business, civic, and social connections.

It is fairly easy to hear, in Hawaii, some of the whispers of opposition to statehood. They often come from men in established businesses, who think and say, "Well, we are getting along pretty well under the Territory now. Why make the change?" They come sometimes from the people who have a fear—exaggerated though it may be—that "some day we may be living under a Japanese governor." They come, too, from people who resent any change and who have little confidence in local self-government.

I have heard these sidewalk and sideboard skeptics ever since I have been in the islands. I cannot help but be reminded of some of the Seattle skeptics who used to declare that the Queen City would never have a population of 300,000 people—that it was already collapsing after the Alaska boom—and that everything was wrong in government and rapidly going wrong in business.

But that isn't the prevailing spirit in Hawaii today. In fact, never before in the more than 36 years I have lived here have we had so much new business, so many new businesses, so many young men—most of them tempered in the toughening years of World War II—setting up for themselves with confidence in this Territory and future State.

Personally I have no fear for the political or economic future of Hawaii—though I freely admit we have some tough problems to meet and solve.

Government Economy

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. ALBERT. Mr. Speaker, under leave granted me, I am inserting a copy of an editorial printed in the Daily Ardmoreite under date of June 13, 1947, which reads as follows:

DISCRETION NEEDED

Without doubt many economies should be made in the operation of Federal Government.

Many of the reduced appropriations which Congress has forced on the agencies, bureaus, and departments are wholly commendable. But the rule is not infallible. The cuts have to be made with some discretion.

Glaring instances of mistakenness are the curtailment of soil conservation activities and the closing down of innumerable Indian schools.

Both of these cuts have struck close to home here.

Carter Seminary, an Indian school of high reputation and long career of adequate and able performance of duty, faces a dark future—its doors are closed and when the doors closed educational opportunities for a large number of young Indian girls were closed.

The task of redeeming worn and eroded earth had but made a start when the chop in the funds for this work was ordered. The cessation of the activities will probably result in the loss, in a very short time, of what little gains have been made in the work.

Yes; economy is all very well in government but like the case of the individual the cuts made have to be applied with discretion. Chopping the line across the board won't always work.

Taft-Ellender-Wagner Housing Bill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. KENNEDY. Mr. Speaker, I am placing in the Appendix of the RECORD two letters received by me, calling for the enactment of the Taft-Ellender-Wagner housing bill. In the last 2 months, nearly every veterans' post in my district, and hundreds of people, have written me demanding that this vital legislation be passed.

This Congress must act favorably, and act soon on this bill if we are to get any great amount of homes built in this country in the next few years, at prices veterans and others can afford to pay.

NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE, BOSTON BRANCH,
Boston, Mass., June 10, 1947.

Resolution urging the Congress of the United States to enact at this session of the Congress a National Housing Commission Act popularly known as the Taft-Ellender-Wagner Act

Whereas the democratic goal for a sound society is a decent home for every family; and

Whereas eight lives have been lost in the past year in our immediate community because of the substandard housing facilities available to Negroes in this area; and

Whereas it is becoming more difficult for an increasing number of our citizens to secure adequate fire-insurance protection; and

Whereas the present outlook for a solution to adequate housing nationally is jeopardized by the opposition lobby composed of the National Association of Real Estate Boards, the Home and Property Owners Foundation, and the National Association of Home Builders; and

Whereas Negro Americans will suffer disproportionately in our national housing program unless the racial relations section is maintained on its present level; and

Whereas the passage of the Taft-Ellender-Wagner bill, S. 866, now before Congress, is of utmost importance if we are to avoid a continuing crisis in housing; and

Whereas the passage of this bill will insure a long-range housing program with Government aid to spur building of low-rent and slum-clearance projects: Therefore be it

Resolved, That 550 members of the National Association for the Advancement of Colored People, Boston Branch, assembled, reaffirms its support of housing bill S. 866 (H. R. 2523); be it further

Resolved, H. R. 2523 is of such paramount importance to the citizens of the Commonwealth of Massachusetts that immediate action by the Congress of the United States is essential, and failure of passage prior to the adjournment of Congress will have a disastrous effect upon the lives, morals, and health of the citizens of the Commonwealth. The passage of this bill will, in large measure, insure the citizens of this Commonwealth adequate housing. The President of the United States, the congressional representatives from the Commonwealth of Massachusetts to the Congress are therefore urged to request its immediate consideration and passage; be it finally

Resolved, That we urge your wholehearted support on the retention of the racial relations section of our national housing program on its present level of operation.

OAK SQUARE-BRIGHTON
POST, NO. 2022,
VETERANS OF FOREIGN WARS,
Brighton, Mass., June 10, 1947.

Hon. JOHN F. KENNEDY,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN KENNEDY: This post congratulates you upon your forthright position on the Wagner-Ellender-Taft bill. Though men in public life and private industry are aware of the thorny problem existing in present housing conditions, very few have acknowledged it or manifested a willingness to solve it, whereas you have taken the initiative and sought to find a solution to this prevailing and most unfortunate situation.

The members of Oak Square-Brighton VFW Post 2022 and its auxiliary unanimously pledge their support to you in your endeavor to put through the enactment of the Wagner-Ellender-Taft bill, or a modification thereof.

Sincerely yours,

THOMAS C. QUINN,
Commander.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CROW
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. CROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my own statement on universal military training.

STATEMENT OF WILLIAM J. CROW, MEMBER OF CONGRESS FROM THE TWENTY-THIRD DISTRICT OF PENNSYLVANIA

I am disturbed by the statements that have appeared in the newspapers to the effect that I am absolutely opposed to universal military training. That is not a correct statement of the facts. I am not opposed to military training, but I am not in favor of the bill as it has been proposed by President Truman and as approved by his self-appointed Commission to study this matter.

I am a graduate of Pennsylvania Military College and have been a member of the Reserve Officers Association since 1925, and I am still a colonel in the Ordnance Reserve. I know the value of some military training, however, I doubt the value of taking all of our boys out of schools and sending them into extensive camps all over the country for periods of 6 months or 1 year. This training will be forgotten within a short time, and if and when we have another war the same boys would have to be given their training all over again. The only ones who would be of any value to the Army would be the ones who had just finished their training, and they still would have to receive additional combat training with their weapons. If there is no war within the next 5 years the training would be of little value to millions of boys.

The total cost of operating all of the camps would be exorbitant and the results obtained would be questionable. In President Truman's address to Congress on universal military training he stated that it would not be necessary for a boy to be trained as a professional soldier, but he added that "when he finshes the training he will be proficient in the use of his arms." That, to me, makes a professional soldier. For that reason I believe that the only training required would be the basic training in the school of the soldier and during the last war the men received only 13 weeks basic training. They would receive much more training than given during the war under this plan. The same thing would happen in the next war, if we have one, that happened during the last war in regard to assignment of personnel. I had been trained as an infantry soldier since 1918 and received my training regularly with the Reserve, but when my orders came to report for duty I was detailed as an ordnance officer, which required that I attend a school at Aberdeen to learn what an ordnance officer was required to know and do. I assure you that I had to learn the hard way with the Ordnance overseas. The same thing would be done with soldiers who were proficient with their weapons—they would be used for another job rather than for the one they were trained to perform. That is the way things are done in our Armed Services.

My idea of the proper way to train our boys is to require that all of our high schools install military training in their junior and senior classes, the training being for 2 to 4 hours a week. I have been interested to find that the high schools in Washington, D. C., already have military training and I have found many high schools with the same military training installed on a volunteer basis. I recently talked with one of the boys from the Anacostia High School. He said that the system works fine and that the boys who were taking the training liked it very much. Recently, the high schools of Washington held a drill competition at the Griffith Stadium and the people of Washington had an opportunity to view the results of this training.

The advantages of this type of training would be the great savings in cost of the operation of the training and the fact that the education of the boys will not be disturbed. The boys would remain at home, and I am sure this would please a large number of mothers who hate to think of their boys as cannon fodder. The Government could furnish the equipment, uniforms, and instructors needed to carry out the program. Today, in Washington, if the school is large enough, the Army furnishes an officer, even to a colonel of Infantry to handle the training, together with personnel to aid in carrying out the program. My suggestion is that the Reserve Officer unit instructor that is available to each Army district in the United States and the Naval Reserve personnel be placed in charge of all the training in their area and that they supplement the program with Reserve officers from their district as instructors at the high schools, the officers being paid only for the days spent in training the students. We already have this supervisory personnel available to handle the program and the cost would not be so greatly increased to carry out my program in the schools. I might add that I recently visited Omaha, Nebr., and while there, I met a lieutenant colonel of the Army who was in charge of the training in the Omaha high schools. He informed me that the boys liked their training very much and were getting a lot out of the program.

In answer to the question of who will be required to take the basic training in the schools, I would say that all physically qualified boys should take the training and the only excuse for not taking it would be a valid doctor's certificate, probably made by the school doctor. Only boys whose health might be impaired should be excused.

There will be some boys quitting school before they enter high school, and I recommend that these boys be required to enter the Regular Army for 1 year so that they will have some training. The War Department could get a report from each and every school board now set up to see that all boys receive their proper training. It may be better to have a report from the county school superintendent of all the schools in his district to show that every physically fit boy is trained in

some manner. This reporting body is already available and it would not require a large group of personnel to supervise this program. One other advantage I believe would ensue from this program, and that is more of our boys would continue their schooling rather than go into the Regular Army, and we would find that we were developing better educated boys with a high-school education. There would be quite a number going into the Regular Army and that would assist the Army in keeping up its personnel without conscription during peacetime.

We have developed the following so far:

1. All boys in junior and senior year of high school would receive 2 to 4 hours of military training each week.

2. The training would be given at home with the boys eating and living in their own homes, which would be a large savings to our almost bankrupt Government. The Army, Navy, etc., would supply equipment and uniforms required.

3. The training to be given would be given under the supervision of unit instructors of the Reserve officers, using the local Reserve officers for instructors in the high schools of their district.

4. The boys who do not attend high school through their junior and senior years would be required to enter the Regular Army for 1 year's training.

5. The check on the students and reports to be given to the War Department, Navy Department, etc., would be the responsibility of the county school superintendent or of each separate school board. This would eliminate the large number of personnel that would be required to administer the universal military-training program.

To carry out the program further, I would recommend that all colleges be required to install Reserve officers training to make sure that we have many men trained to fill the necessary officer positions in the Army, Navy, etc., if an emergency should arise. The Reserve officers of the last war were a great help to the Regular Army officers in getting the men trained and manning the important positions overseas. I, personally, was in a headquarters where the Regular Army officers made up only 1 percent of the officers of the headquarters. The balance were either Reserve officers, National Guard officers, or Army of the United States officers. The same condition existed in all headquarters, except some of the higher headquarters, where the Regular Army officers generally were about 15 and 20 percent of the total number of officers.

Some colleges still have their military training for officers and all colleges should be required to set up the same ROTC training.

The Citizens Military Training Corps is being planned at the present time and I feel that some of the good boys could be given some additional summer training in this manner. My idea being that the men who make the better record in their training in the schools be selected by the instructors and recommended for this additional training with the CMTC.

I personally believe that a plan of this kind could be worked out so that the education of our boys and young men will not be interrupted and we will continue to have well educated young men coming on, and men who have had sufficient training to meet any emergency.

Some people have a great fear of the use of the atomic bomb. I do not have that same fear. During the last war, Hitler had plenty of poison gas, but did he use it? No, he was afraid to use it for he knew that we had sufficient to wipe his people off the map. The same will be true with the atomic bomb—all people will be afraid to use it, if we keep enough bombs on hand to blow them off the map and enough bombers available to hit any part of the world within a few hours. I, personally, believe that the atomic-bomb scare is being used to try to push through the larger plan of universal military training which will cost several billion dollars every year and that is only an estimate. I am quite sure that a deficit appropriation would be required to carry out the full program as set up.

I have not discussed training for girls because I believe they can be trained for use in clerical work in headquarters as we did during the last war and I do not believe military training at the present time is necessary or essential.

I hope that this clears up my position on universal military training. I am in favor of military training for our boys in a modified form of universal military training.

Accounting Practices of Shipyards Holding Government Contracts for Ship Construction

EXTENSION OF REMARKS

OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. McCONNELL. Mr. Speaker, in 1946 the Merchant Marine and Fisheries Committee of the House, of which I was a member, conducted an investigation in connection with the accounting practices of certain shipyards holding contracts for construction of vessels for the account of the Government. During the course of this testimony a representative of the Comptroller General of the United States made the general statement to the effect that many of the shipyards engaged in this work kept two sets of books and stated specifically: "The set of records which they maintained for their own account was accurate, but the set of records that they maintained for the Government's account was not so accurate." The implication of these remarks is obvious. Subsequently, the same witness, upon being questioned, testified that his general remarks applied specifically to the Sun Shipbuilding & Dry Dock Co., of Chester, Pa.

At the request of the representatives of that company the Comptroller General made a detailed investigation of the books and records of Sun Shipbuilding & Dry Dock Co. and ascertained that his representative's testimony as to that company was wholly inaccurate. On September 26, 1946, the Comptroller General wrote a letter to that effect addressed to our honorable colleague, SCHUYLER OTIS BLAND, who was then chairman of the Merchant Marine and Fisheries Committee. In that letter Comptroller General Warren suggested to Judge Bland that the letter should be inserted in the record of the committee's proceedings in order to correct an injustice.

Unfortunately no further proceedings of the committee have been had and it is questionable whether or not Comptroller General Warren's letter will be published as a part of those proceedings. Therefore, in order to correct the unfortunate error made in the testimony of the Comptroller General's representative before the investigating committee, and further that the splendid record of this company and its contribution to the war effort may stand unimpugned, I include with these remarks a copy of Comptroller General Warren's letter of September 26, 1946, which is as follows:

COMPTROLLER GENERAL,
OF THE UNITED STATES,
Washington, September 26, 1946.

HON. SCHUYLER OTIS BLAND,
Chairman, Committee on
Merchant Marine and Fisheries,
House of Representatives.

MY DEAR MR. CHAIRMAN: At the hearing before your committee on July 17, 1946, on accounting practices in the War Shipping Administration and United States Maritime Commission, as disclosed by my audit reports for the fiscal years 1943 and 1944, Mr. Arthur P. Erb appeared and testified as a representative of the General Accounting Office. Under questioning by committee members and counsel, Mr. Erb made certain statements of which the following excerpts are representative:

"Mr. BONNER. Then the shipyard had to keep a record of what they did on the ship.

"Mr. ERB. Yes, but they were to maintain a set of records for the benefit of the Maritime Commission or War Shipping Administration for their account. In addition they maintained a set of records for their own account. The set of records which they maintained for their own account was accurate, but the set of records that they maintained for the Government's account was not so accurate.

* * * * * *

"Mr. COLES. May I carry further Mr. Bradley's question? You stated that the shipyard operator kept two sets of records. One he kept in accordance with his own private procedures, and they were accurate; the other he kept in accordance with procedures prescribed by the Maritime Commission and War Shipping Administration, and they were inaccurate. Is that correct?

"Mr. ERB. That is right.

"Mr. WEICHEL. Would that mean two sets of books covering the same thing, which were not alike?

"Mr. ERB. Yes, sir.

* * * * * *

"Mr. COLES. To get back to the two types of books kept by contractors, let us go to construction contracts, and let us take the example of the Sun Shipyard you mentioned. In their two sets of books was there reflection of differing amounts owed by the Government to the shipyard?

"Mr. ERB. Well, for example, they would charge an item against ship construction in their private books which the Government would simply disallow on the Government books. There would be charges primarily along this line, that we could not determine the cost by contract. They could determine the cost by hull. The lumping together of their hull costs against the contract cost would not always bring out a reflective figure, and we were unable to reconcile the sets of books, on those particular items." (Hearings, pt. 1, pp. 65, 66, 67, 72.)

Mr. John G. Pew, president of the Sun Shipbuilding & Drydock Co., has protested to me that such statements of Mr. Erb imply that his company was guilty of falsifying its records. I understand that Mr. Pew has also conferred with Mr. Erb and Mr. Marvin J. Coles, general counsel for your committee, concerning the statements. At his request, I have had the matter examined into thoroughly.

While Mr. Erb insists that there was no thought in his mind of any wrong-doing on the part of the Sun Shipbuilding & Dry Dock Co. or other contractors with respect to their record-keeping, he does concede that it was incorrect to say that the contractors kept two sets of books, one more accurate than the other. Mr. Erb explains that the point he was attempting to make

was that certain contractors had complete records of their costs in performing Government contracts, but that the information required and received by the Maritime Commission from the contractors in support of their claims for payments by the Government under such contracts was less complete.

However, on their face the quoted statements of Mr. Erb do imply questionable practices on the part of the contractors. Since such statements are admittedly inaccurate, I feel that the record should be corrected so that no unjust inferences will be drawn in the case of the Sun Shipbuilding & Dry Dock Co., or any other contractor.

Therefore, I will appreciate it if you will cause this letter to be inserted in the record of your committee's proceedings and included with any further published report of your hearings on this subject.

Sincerely yours,

LINDSAY C. WARREN,
Comptroller General of the United States.

The Stratton Bill

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. MASON. Mr. Speaker, there are about 1,000,000 refugees or displaced persons now under the care of the United States and Great Britain. About four-fifths of them are Poles, White Russians, and Ukrainians, practically all of them refusing to be repatriated because of their opposition to communism and to the regimes now governing their countries. There is no room for them in the economy of the countries where they are now living, and they wouldn't want to work with their old enemies anyway, even if they could.

We are now paying out about $150,000,000 a year to support these people. When the International Refugee Organization is set up and operating under the United Nations, our share will be smaller, but it will still be more than the $75,000,000 which is our direct contribution to that organization, because our occupation forces will still be confronted by these people in our zones. General McNarney has said that their presence accounts for a noticeable proportion of the troop strength we are compelled to maintain in occupied areas.

Perhaps, Mr. Speaker, we should stress the point that H. R. 2910 is a temporary measure, and is strictly limited in its provisions and application. It sets no precedent for further immigration. It does not attempt to change the quota system in any way. It does not make any permanent changes, in principle or otherwise, in our immigration laws. It preserves all of the screening devices we have so carefully built up over so long a period.

Mr. Speaker, complicating this problem of the displaced persons in connection with our immigration laws, and making it vitally necessary that something should be done to relieve the impossible situation that confronts us, is the Executive order issued by the President last December. In carrying out that Presidential order the State Department and the Justice Department assigned to the displaced persons 90 percent of the total quotas of the various countries from which these displaced persons come. This allows only 10 percent of present quotas for the regular visa applicants, therefore, very few regular visa applicants can come in. Since the greater part of our European emigrants today consist of parents and relatives of naturalized American citizens already here, the President's order prevents families from becoming reunited, thus working a hardship upon many American citizens. The President's order upset the regular established procedure for issuing visas, a procedure that had been in effect for over 20 years. Under that procedure all persons applying for visas were listed and the quota filled from that list, the names taken in the order of application.

The passage of the Stratton bill would do away with or replace the Executive order that now operates. If H. R. 2910 becomes law, there would be no further need of the Executive order, because 100,000 of these displaced persons would come in each year for 4 years under the terms of the bill, and in that way, the entire quota would again be available for regular visa immigrants.

In conclusion, Mr. Speaker, I urge favorable action on H. R. 2910 for the following reasons:

First. It will greatly reduce the cost to us of taking care of these people.

Second. It will give the unfortunate people themselves a chance to start life anew and work out their own salvation.

Third. It will bring into this country the kind of people, by and large, that we need as citizens—people having the qualities that are necessary and desirable in a democracy.

Fourth. It provides that we shall assume only our fair share of the burden and the responsibility that rests upon the Allied Nations in connection with these displaced persons.

Fifth. It provides for very careful screening, and preserves the immigration standards contained in our regular quota laws.

Sixth. It is the just, the humane, the Christian, the right thing for us to do.

Mr. Speaker, under leave to revise and extend my remarks, I include the following editorial from the Alton (Ill.) Evening Telegraph of June 1, 1947.

THE STRATTON BILL

Illinois can take pride in the knowledge that one of her Congressmen has assumed leadership in the fight to do something about the displaced persons of Europe. Republican Congressman-at-Large WILLIAM STRATTON, author of the bill to admit 400,000 of the homeless and suffering refugees of Europe, is courageously bucking a dismaying combination of apathy, provincialism, and xenophobia.

Opposition to Mr. STRATTON's bill consists mainly of the same worn-out arguments that have always been marshaled against immigration to the United States. The fear that immigrants will take jobs away from Americans was being voiced almost 100 years ago, when many Europeans fled to this country following the social upheaval that began in 1848. Yet, the immigrants of a century ago fathered some of the most distinguished families of America; their contributions to this country could not be cataloged in less than a thick volume. Those who did not achieve eminence helped in the less spectacular but useful tasks of building our railroads, spreading our frontiers, and industrializing our cities. We would, today, be a poorer Nation if the arguments now being put forward against Mr. STRATTON's bill had prevailed 100 years ago.

There are little more than a million of these people who have been left in temporary camps by the dislocations of Hitler's war. Many other nations are ready to take their share if America will lead the way. Our immigration quota act provides for the admission of 154,000 persons annually to this country, but in the past 10 years only 294,630 have come in under the quota provisions, less than one-fifth the conservative figure set by Congress.

Rather than flood the country with immigrants, Mr. STRATTON's bill would give entry to less than half the number entitled to receive it under the quota system. The bill would retain the present requirements for immigration, and would bar those who fail to meet the physical and mental health standards that have always been used.

Opposition to the bill is formidable, but it has been endorsed by virtually every major church organization in the Nation. Mr. STRATTON, himself, sums up an eloquent plea for its enactment: "Granting refuge to the displaced will be a reaffirmation of a great and noble American tradition. This country, which was founded and built by immigrants, will remain as a symbol of its early beginnings—an asylum for the oppressed."

Causes of the High Cost of Living

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Tuesday, June 17 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Edson B. Smith, financial writer of the Boston Herald, on some of the factors which cause the high cost of living at the present time. I think the article can appropriately be read in connection with the conference report on the wool bill, which I understand is soon to come before the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDSON B. SMITH SAYS

The worst offenders in the price rise have been agricultural products. In considerable degree the rise in prices of farm products has been caused by Government buying. Even this spring the Government has been buying potatoes and eggs, not because the Government has any use for potatoes and eggs, but merely to keep up the price.

Every housewife in America is interested in the high price of food. The number of persons who know or care what a steam boiler or a freight car costs is relatively limited. To talk about business concerns being responsible for the high cost of living when the

Government itself deliberately holds the price of food at artificial levels is ridiculous. If the Government really wants prices to come down, why does it not stop its absurd buying program for farm products?

This farm-buying program is done under authority of a law which runs until the end of 1948. Moreover, not only does this law penalize every buyer of food but it costs the Government hundreds of millions of dollars annually.

If Congress really is serious in its desire to stop wasting the taxpayers' money, here is one place to wield the ax.

Taxes and Government Expenditures

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial published in the Oakland (Calif.) Observer of June 7, 1947:

Perhaps in the spirit of a gag, one Andy Anderson of Ada, Okla., plain American citizen, proclaimed "National be kind to taxpayers week, June 8 to 14." But, as A. C. Hardison, Santa Paula agriculturalist and president of the California Taxpayers' Association, points out, it is far from a joke. In fact, Mr. Hardson declares, with ample supporting data, unless all agencies of government immediately begin reducing their demands upon the taxpayers of the country, we are all going to be sunk. However, the evidence is all the other way as to the trend in governmental expenditures. From every bureau and division, whether Federal, State, or local, the story is the same. More and still more money must be wrung from the incomes of the people to support the extravagant and inflationary basis upon which these agencies have pyramided their expenditures. President Truman has let it be known that he will probably veto the $4,000,000,000 slash in the Federal income tax. Governor Warren indicates that he will sign the record-breaking $645,000,000 State budget. Alameda County officials and employees are demanding up to 25 percent increases in salaries. The city employees of Oakland are marshaling their forces for a 25 percent increase in pay. It is the same story all down the line. As Hardison point out, taxes in California took more than $4,000,000,000 from the people of California last year, or nearly one-third of our $14,500,000,000 revenue. Government spending during the 1946-47 fiscal year is expected to take $50,000,000,000 from the people of the country, or nearly one-fifth more than the $41,000,000,000 they are expected to spend for food during the same period. "How long can the people support these peak Government expenditures and continue to maintain the free American way of life?" demands the president of the Taxpayers' Association.

"I have been reading your editorials on high taxation and soaring costs of government, but what can we do about it?" asks one worried county official. "How can we get along under our present salary schedules in the face of the high cost of living?" demands a city employee. A State assemblyman insists that the legislature has no alternative but to pass the huge, inflated State budget, because the people, themselves, voted most of the major items.

Now that brings us right down to the thesis of this editorial. Who are the real taxpayers—and who are the first and worst sufferers from the inordinate tax demands by Government? Why, the answer is as plain as the ink on the bills for the cost of living—the people at large are the first and the worst sufferers from the tax burden. Many people go to the polls and vote for this or that measure increasing the cost of government or fastening a heavy bonded indebtedness upon the body politic, imagining that only the rich, the banks, the insurance companies or Big Business, so called, will have to pay the cost thereof. But, they overlook that business passes along its taxes to the consumer in increased prices, so that in the end the general public pays the piper—hence our present exorbitant cost of living. Labor unions have a slogan: "We vote for all bond issues—they make jobs for labor." This cynical attitude is matched by the slogan of the labor leaders, who say that every advance in the cost of living must be matched by a corresponding increase in pay for labor. They are, however, no different from the jurists, who say that high-class attorneys are now earning $25,000 to $35,000 a year, whereas $15,000 used to be considered good, so our salaries must be upped to somewhere near comparable to the earnings of the leaders in private practice.

The answer is that we must become more conscious of the fact that everyone is paying taxes. There is no place for Government to obtain the funds to pay the cost of operation save from the pockets of the people. If the wage-earner became conscious of the fact that every time Government costs increase the buying power of his pay check becomes smaller, it would not be long before the pendulum would swing the other way. The budget-making period is now drawing close for local governmental agencies. The demands upon them are going to be beyond all previous records. Get behind your officials to fight off these demands.

Income Tax Reduction

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. FOOTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include in the Appendix my statement concerning H. R. 1:

In vetoing H. R. 1, calling for reduction in individual income taxes, the President has over-ridden the substantial majority of the House made up of Members of both parties and has also failed to respond to the wishes of the majority of the people of this country. There is a maxim of the law that "Time is of the essence." We have seen it in operation twice within the past few days. Secretary of Agriculture Anderson said it was not the time to decontrol sugar for the housewives, but did so 4 days later. The President says it is the wrong time for tax reduction. He will change his mind next year undoubtedly. He also says that with the present huge public debt tax reduction is not in order. If we must wait until the country is out of debt, many of us will never see tax-reduction day. As stated in today's editorial of the New York Times, "Perhaps the best way to sum up the President's veto message would be to say that he has taken the wrong course, for the wrong reasons."

American Aid Extended to 59 Countries

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of June 1, 1947:

AMERICAN AID EXTENDED TO 59 COUNTRIES—SURVEY SHOWS MORE THAN TWENTY BILLION IN TECHNICAL AND ECONOMIC ASSISTANCE HAS GONE ABROAD IN 2 YEARS

(By Garnett D. Horner)

Fifty-nine countries are benefiting from United States economic and technical assistance extended since the end of fighting in World War II.

The money spent and committed in this tremendous program to help rehabilitate a war-torn world amounts to more than $20,000,000,000.

This includes nearly $12,000,000,000 in loans, direct grants and relief expenditures, lend-lease and surplus-property credits and expenditures on cultural and technical cooperation projects, plus this country's $2,700,000,000 contribution to UNRRA and $5,925,000,000 subscriptions to the World Bank and monetary fund.

So far, American economic aid to other nations has been on a "piece-meal basis," without any guiding over-all program, Secretary of State Marshall is changing this. He emphasized in a speech at Harvard University last week that future American assistance "should provide a cure rather than a mere palliative" for economic deterioration abroad.

SURVEY SUMMARIZED

General Marshall invited European countries to get together and work out a joint program of what is required to put them on their feet economically, promising United States support "so far as it may be practical." It is clear future needs will involve many more billions of dollars. General Marshall has a new policy-planning staff developing estimates of what more the United States may be able to do.

In the meantime, the State Department's Division of Historical Policy Research recently completed a country-by-country survey of the economic and technical aid supplied or authorized for other countries since mid-1945. It did not attempt any definite over-all tabulation, because of such hard-to-figure items as the value of fixed war installations turned over to other nations and the American share of UNRRA supplies in some cases.

Here is a summary of the survey's findings for each country, supplemented in some cases by material from other sources:

Albania: United States share of UNRRA supplies from June 30, 1945, to June 30, 1946, was $13,052,284. Additional $27,450,000 allotted by UNRRA in July 1946.

HIGHWAY FOR CANADA

Australia: Lend-lease shipments since VJ-day estimated at $17,500,000. Fixed war installations, costing $37,394,000, including 30 airports and 11 seaports, transferred through last June 30.

Belgium: Has received $100,000,000 Export-Import Bank loan. Lend-lease aid from VJ-day through last September 30 aggregated $68,000,000. Surplus property costing $380,000,000 transferred for $54,000,000. Two airports and 39 other fixed war installations transferred.

Canada: Alaska Highway, which cost United States $138,312,166, turned over to Canada April 1, 1946.

Czechoslovakia: Export-Import Bank credits of $22,000,000 and surplus property credit of $9,304,694. Also benefited from UNRRA.

Denmark: Export-Import Bank credit of $20,000,000, plus nearly $20,000,000 in surplus property credits.

SHIPS FOR FRANCE

Finland: Export-Import Bank credits aggregating $77,500,000, plus $15,000,000 credit for purchase of surplus property. Also benefited from UNRRA.

France: Export-Import Bank credits amounting to $1,200,000,000, plus $720,000,000 surplus property credit, and additional credit for purchase of 75 Liberty ships. Many fixed war installations transferred.

Great Britain: Loan by special act of Congress of $3,750,000,000, plus $650,000,000 credit for surplus property and lend-lease settlement. Approximately 800 fixed war installations transferred.

Greece: To get $250,000,000 economic and military assistance under special Greek-Turkish aid program, plus share in post-UNRRA $350,000,000 relief program. Export-Import Bank loan of $25,000,000, surplus property credit of $45,000,000 and another $45,000,000 credit for purchase of ships have been made available. Lend-lease aid amounted to $75,000,000 as of last June 30. Also benefited from UNRRA.

DIRECT AID FOR ITALY

Iceland: 27 fixed war installations, costing $65,000,000, including 3 airfields, transferred as of last June 30.

Italy: Received $140,000,000 in direct relief administered by Foreign Economic Administration. Export-Import Bank loans and earmarked credits aggregate $130,000,000. Surplus property credit of $10,000,000 available. Total of $258,000,000 credited to Italy for lira used by American troops in Italy under special financial agreement. To share in new $350,000,000 relief program.

Netherlands: Export-Import Bank credits aggregate $263,000,000 plus $20,000,000 surplus property credit. Lend-lease shipments from VJ-day to last June 30 amounted to $50,000,000. Eighty-four fixed war installations, valued at $44,384,624, transferred.

New Zealand: Surplus property credit of $5,500,000. Twenty-two war installations, costing $207,069 transferred.

Norway: $50,000,000 Export-Import Bank credit. More than $6,500,000 in lend-lease supplies shipped since VJ-day.

Poland: Export-Import Bank credit of $40,000,000 plus $50,000,000 surplus property credit. Benefited from UNRRA. May share in $350,000,000 relief program.

Portugal: War Department and Civil Aeronautics Administration have trained Portuguese personnel in weather-observation techniques, operation of communications equipment and other air navigational aids. Airports in Azores returned to Portuguese control.

LEND-LEASE FOR SOVIET

Spain: Air strips in Spanish West African colony of Rio de Oro, built under 1945 agreement, transferred to Spain at price of $136,697, which was 56 percent of declared cost.

Soviet Union: Approximately $250,000,000 in pipe line lend-lease supplies, to be paid for in 22 annual installments beginning in 1954. Benefited from UNRRA.

Yugoslavia: Received much help through UNRRA.

Burma: Has received approximately $11,000,000 worth of lend-lease transportation equipment.

Egypt: Airport built near Cairo during the war transferred to Egypt as part of $11,800,000 surplus property deal.

Ethiopia: $3,000,000, Export-Import Bank, and $1,000,000 surplus property credits. Benefited from UNRRA.

India: To retain more than $50,000,000 of proceeds from sale of suplus war property in India. Many war installations, including 62 airports, transferred.

Iran: $25,000,000 surplus-property credit; is negotiating for another $30,000,000. Lend-lease aid in 1946 fiscal year amounted to nearly $5,000,000. Many war installations transferred.

THE TURKISH LOAN

Iraq: Approximately $41,000 in educational aid.

Lebanon: More than $90,000 in educational aid.

Liberia: United States building $20,000,000 airport at Monrovia, and operating 5-year sanitation program involving expenditure of $200,000 a year.

Syria: More than $10,000 in educational aid.

Saudi Arabia: $10,000,000 Export-Import Bank loan, plus $2,000,000 surplus-property credit. Airbase at Dhahran transferred.

Turkey: To get $150,000,000 from $400,000,000 Greek-Turkish aid program. Has been granted previously $40,000,000 Export-Import Bank credit, plus $10,000,000 surplus-property credit and additional $5,000,000 credit for purchase of ships. Educational aid amounts to $65,000.

Yemen: $1,000,000 surplus-property credit.

China: Export-Import Bank credits total $82,793,750 so far. Lend-lease aid after VJ-day amounted to about $700,000,000. Surplus property costing originally about $900,000,000 sold to China for $210,000,000, under complicated payment formula. Big beneficiary under UNRRA. To share in new $350,000,000 relief program.

Philippine Republic: Special aid authorized by Congress amounts to $695,000,000, including $400,000,000 to pay private war damage claims.

Austria: War Department has shipped about $60,000,000 worth of civilian supplies to Austria. Export-Import Bank granted $1,000,000 loan. Surplus-property credits amount to $2,000,000. Benefited also from UNRRA.

Germany: War Department has furnished more than $400,000,000 worth of civilian supplies.

Hungary: Has used half of $30,000,000 surplus property credit; remainder suspended last week following pro-Communist government changes. Fate of $7,000,000 Export-Import Bank credit uncertain. Benefited from UNRRA.

Japan: War Department has provided $267,000,000 worth of civilian supplies.

Korea: More than $37,000,000 in civilian supplies shipped by War Department through March. Army is handling $25,000,000 surplus property credit. Benefited from UNRRA.

Argentina: $193,000 Export-Import Bank credit extended to Argentine firm for purchase of harbor barges here. United States expenditures on cultural and technical cooperation amount to about $104,000 for 1946 and 1947 fiscal years.

Bolivia: Cultural and technical projects, $245,000.

Brazil: Export-Import Bank credits of $70,000,000. Cultural and technical projects amount to $680,000. Several air bases transferred to Brazilian control.

Chile: Export-Import Bank credits, $42,000,000; cultural and technical projects, $195,000.

Colombia: $517,800 Export-Import Bank credit. Cultural and technical projects, $342,000.

Costa Rica: Approximately $1,300,000 spent for building parts of Inter-American Highway in Costa Rica. Cultural and technical projects, $240,000.

Cuba: Cultural and technical projects, $190,000.

Dominican Republic: Cultural and technical projects, $75,000.

CREDITS FOR MEXICO

Ecuador: Export-Import Bank credit of $1,000,000. Cultural and technical projects, $288,000. American-built air base at Salinas and military base in Galapagos turned over to Ecuador.

El Salvador: $167,500 spent on building parts of Inter-American Highway in El Salvador; $160,000 on cultural and technical projects.

Guatemala: Inter-American Highway expenditures, $232,700; cultural and technical projects, $425,000.

Haiti: Cultural and technical projects, $83,000.

Honduras: Inter-American Highway expenditures, $354,500; cultural and technical projects, $63,000 naval base, Puerto Castilla, turned over with American-built installations.

Mexico: Export-Import Bank credits total $87,000,000, including $50,000,000 authorized during recent visit of President Aleman, which also resulted in $50,000,000 currency stabilization agreement. More than $574,000 spent on cultural and technical projects.

OTHER OUTLAYS

Nicaragua: Inter-American Highway and Rama Road expenditures $1,250,000; cultural and technical projects, $180,000.

Panama: Inter-American Highway expenditures, $13,000; cultural and technical projects, $34,000. Ninety-eight defense sites returned to Panama.

Paraguay: Cultural and technical projects, $38,000.

Peru: Export-Import Bank loan, $450,000; cultural and technical projects, $470,000. Air base at Talara, costing $2,000,000, turned over to Peru.

Uruguay: Surplus property credit, $666,666; cultural and technical projects, $67,000.

Venezuela: Cultural and technical projects, $144,000.

The United States also is contributing to cooperative health and sanitation projects in many Latin-American countries on a long-term basis, with figures on expenditures not broken down for the 2-year period covered in this survey.

Our Seagoing Future

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. WEICHEL. Mr. Speaker, there are many obstacles that beset the American merchant marine in world-wide competition, and I am including a timely editorial from the Washington Times-Herald which well describes part of the difficulties:

OUR SEAGOING FUTURE

Perhaps the above caption should be, "Have we a seagoing future?"

The latest of the Nation's shipping strikes began yesterday, with heads of five maritime unions ordering about 20,000 of their men to park on the ships until ordered off by the owners, so that the affair could be called a lock-out.

What started this tie-up, expected to affect about 1,100 vessels, was the expiration yesterday of three of the unions' contracts with the ship owners, plus the unions' desire for a 40-hour week as against the present 48, welfare funds, severance pay, longer vacations, and 15- to 20-percent wage increases.

SHIPS TIED UP ONCE MORE

We wouldn't attempt to predict when this second merchant marine tie-up in less than 8 months will come unscrambled. What we're wondering about is the long-range effect these things will have on the United States as a nation with a lot of freight ships carrying their fair share of the world's ocean commerce.

Our boys aren't paid pauper wages, for all the yelling their union leaders do. Here is a table of comparative monthly wages for able seamen and chief cooks on the vessels of various nations, recently issued by the National Federation of American Shipping:

	Basic		Estimated total	
	Able seaman	Chief cook	Able seaman	Chief cook
United States	$172.50	$205	$265	$310
Canada	150.00	180	170	200
United Kingdom	96.00	110	103	117
Holland	74.00	93	80	100
France	79.00	94	92	107
Greece	112.00	144	117	150
Yugoslavia	84.00	89	87	92
Denmark	85.00	98	90	103
Sweden	84.00	95	105	115

Basic pay is what a sailor makes without any trimmings. His total earnings include basic pay plus what he makes for overtime, etc.

From the above table it will be seen that foreign able seamen's estimated total earnings average only 39.8 percent of United States seamen's totals, while foreign chief cooks do only 39.7 percent as well as our cooks.

There seems to be next to no prospect that our boys will ever consent to wage reductions, so that United States shipping costs can be brought down to somewhere near the levels of British, Danish, French, etc., cost. Incidentally, our boys' wages have gone up some 120 percent since 1940.

As the other maritime nations get more ships, we shall be less and less able to compete with them for the world's seagoing freight trade on a straight-out basis.

Yet if we let our merchant marine go to ruin, we'll cripple one of our most important muscles for the next war.

So it looks as if the good old American taxpayer must expect big Government subsidies for the merchant marine from here on. There appears to be no other way to keep this essential institution afloat and at the same time keep the sailors loaded up with the more abundant life.

The Maritime Strike

EXTENSION OF REMARKS
OF
HON. HORACE SEELY-BROWN, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. SEELY-BROWN. Mr. Speaker, at 1 minute after midnight yesterday morning thousands of maritime workers went on strike. As a result, shipping in all American ports is practically at a standstill.

The issues between the seamen and the operators of the ships involve wages, hours of work, vacations, and similar matters. At this time I do not care to comment about the relative merits of the controversy, but I do feel it incumbent upon me to urge that the parties involved settle their differences promptly, or that they continue to operate the ships pending a settlement.

As a member of the Committee on Merchant Marine and Fisheries, I have learned in recent months that the American Merchant Marine, because of its high cost of operation, is dependent upon governmental aid and protection for its continued success. Our Government has spent many millions of the taxpayer's dollars during the past decade to build this American merchant marine. This aid has been of assistance not only to the owners and operators of the ships but also to the men who sail these ships. It seems unfortunate to me that both of these groups after seeking governmental aid should destroy the results of that assistance through another prolonged maritime strike, and in my opinion the result of this strike would be to nullify to a large extent the assistance furnished by the Government at such high cost.

Accordingly I feel that unless the operators and the seafarers reconcile their differences promptly they must expect to experience difficulty in their future requests for continued and increased governmental assistance.

Is the State Department, Like the Communists, Allergic to Free News Coverage?

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. BUFFETT. Mr. Speaker, not long ago the Communists alibied their opposition to free news coverage with the claim that American news reporting was biased and distorted. Recent actions of the State Department might indicate that they hold views not unlike the Russians in this respect.

The Kiplinger Washington Letter of June 14 reveals some information about secret seminars being held by the State Department from which all news reporters are carefully excluded.

However, the most complete exposé of this secret indoctrination was carried in the Wall Street Journal of June 9, as follows:

PIN ON A BADGE, TAKE VOW OF SILENCE—LEARN OUR FOREIGN POLICY—TO SPREAD "INFORMATION," STATE DEPARTMENT SHUTS OUT PRESS, TALKS TO CLUB, CHURCH FOLK

(By Vermont Royster)

WASHINGTON.—The State Department is unlimbering its biggest propaganda guns in support of its foreign policy.

The diplomats are holding a series of "off the record," unpublicized conferences in Washington and elsewhere about the country, with representatives of women's clubs, church groups, fraternal organizations, and independent voters' leagues. In these sessions, top officials of the State Department have set out to sell the Truman "Stop Russia" Doctrine and gather aid for other phases of the administration's foreign program.

A direct appeal is being made to these organization representatives to go home and make sure the State Department's views are known within the groups they represent.

The latest, and to date the biggest, of these conferenes was held here this week end. It was attended by approximately 250 "delegates" representing organizations with total membership estimated by a State Department official at 75,000,000.

NOT ENOUGH PUBLICITY

These delegates were told by a Department representative that the conference was called because the Department could not get out enough information on foreign policy through the usual publicity channels. Newspaper reporters were excluded from the meetings.

During the course of 3 days of meetings the delegates were told:

The United States must be prepared to give economic, as well as political, assistance where needed in the world. The Truman Doctrine is simply an extension of the Monroe Doctrine and the only logical course America's foreign policy can follow.

The public should support the State Department's effort to educate the rest of the world in the American way of life through pamphlets and radio. (Congress is still considering whether this effort deserves funds.)

The State Department has an obligation to see that the people "understand" foreign policy. The usual press and radio information channels need to be supplemented by direct contact between the policy makers and representatives of "leading organizations."

The public should be taught to understand the benefits of a "liberal" trade policy.

More people should join organizations interested in foreign policy. They and their organizations should work with the proper legislative representatives to see that the United States follows a sound foreign program.

The delegates should return home and "work through the organization to which you belong" to insure that the country does have this "sound foreign policy."

The official purpose of the conferences is to help the public participate in the formation of foreign policy. But all of the discussions were on policy matters already settled, so far as the State Department is concerned, and major emphasis was placed on getting the delegates acquainted with the official State Department views.

THE KEY POW-WOW

Apparently the key meeting was a session on "citizen participation in foreign affairs." It was at this meeting that the delegates were told of the Department's difficulties in getting their views on foreign problems understood by the public. The delegates were asked to cooperate in this effort.

Citizen participation, apparently, did not include the press. Newsmen who applied for permission to attend the discussions were turned down. One who slipped in without a guest badge was ejected.

Speakers at the sessions included Secretary of State Marshall, Dean Rusk of the Office of Special Political Affairs, Loy W. Henderson of the Department's Far Eastern Division, and William Benton, Assistant Secretary of State for Public Affairs. Mr. Benton spoke on the need for an international information program. Francis H. Russell, Director of Public Affairs, presided.

SENATOR VANDENBERG DECLINES

Republican Senator ARTHUR H. VANDENBERG was invited to address the delegates, but declined.

Visual explanations of the administration's foreign policy, including movies, were used to supplement the oral discussions. A wealth of booklets and pamphlets explaining foreign policy in simple language was distributed among the delegates.

The week-end conference was part of a general program planned by the State Department for the education of the public on

foreign problems. It is being handled by the Division of Public Affairs under Mr. Russell.

This Division has set up a series of committees, each headed by a State Department official, to deal directly with the various private organizations. One official handles women's groups, another veterans' organizations, another church societies, still another fraternal organizations, and so on.

SECRETARY MARSHALL'S EXPLANATION

Explaining the meetings, Secretary Marshall told delegates the purpose was to give out "accurate and timely information" regarding foreign affairs.

"I hope these meetings will result in subsequent programs," the Secretary said, "which will explain to a far wider audience the complexities of charting the Nation's course in world affairs."

Apparently, great effort was made to give the meetings an air of importance and the delegates a feeling of being on the inside. Admission was by special invitation only, and each delegate was issued a badge and an identification card. These were carefully checked.

Although all the speeches seemed to repeat recent public statements of Secretary Marshall and other top officials, with little new added, the delegates were warned that all discussions were off the record.

Delegates reported most of the emphasis in the conference discussions was placed on the so-called Truman doctrine and the need for the United States to use its economic resources abroad. The delegates were told that no one, not even President Truman, could say yet that the need for United States financial assistance abroad is over.

One speaker appealed for assistance in the State Department's information program. The Department, he said, needs to distribute a greater quantity of concise and simple explanations of foreign policy and the State Department's program. In addition, he said the Department would like to get together the best editorial opinion on the administration's foreign policy and see that it is widely distributed. The Department, he added, is at present handicapped by a lack of funds.

A wide range of organizations was included in the conference guest list. Here are a few: The League of Women Voters, the Southern Council on International Relations, B'nai B'rith, American Friends Service Committee, Muncie (Ind.) Community Discussion Council, National Conference of Christians and Jews, National Council of Negro Women, Southern Baptist Public Affairs Committee, Junior Leagues of America, National Society of the Daughters of the American Revolution, and the Girl Scouts.

The Late Honorable Fred Bradley

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. WEICHEL. Mr. Speaker, I include a resolution received from the Oyster Institute of North America paying tribute to the late Honorable Fred Bradley, chairman of the Committee on Merchant Marine and Fisheries:

Whereas Almighty God has taken from his work the Honorable Fred Bradley, Congressman from Michigan, who was chairman of the House Committee on Merchant Marine and Fisheries; and

Whereas Congressman Bradley, throughout his long career in Congress, has loyally served the best interests of the fishing industries and the Nation; Therefore, be it

Resolved, That we of the National Shellfisheries Association and the Oyster Growers and Dealers Association of North America, in convention assembled, hereby record our deep sense of loss in his untimely death, and extend our profound sympathy to his family and colleagues.

Naval Air Transport Service

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. HARLESS of Arizona. Mr. Speaker, while Congress is making tremendous cuts in the expenses of Government, it is important to remember that we will seriously affect the future defense of our country if we eliminate some essential functions of the Army and Navy.

The Naval Air Transport Service is one of those functions which should be maintained as an effective operation. If we could be positive that there would be no future wars, this service might be discontinued without fear. However, we have no such assurance, and all indications are to the effect that we might soon be faced with an emergency greater than the last war. The Naval Air Transport Service proved to be of unlimited value throughout World War II.

At the present time some 5,000 officers and enlisted men are carrying on a skeleton service. During the war a world-wide service was operated by some 50,000 officers and men. This small group that is retained in NATS is the essential experts and administrative personnel required to keep this organization intact. They carry on the basic operations of this service. To further reduce the personnel of this agency would seriously cripple the entire organization. To eliminate or lessen the present operating efficiency of NATS would be a serious blow to a quick mobilization in the event of war. It would be impossible to carry on a war without the Naval Transport Service. It is a necessary arm of our national defense. It is just as important for the Navy to have a transport service as it is for the Army to have its ATC.

The expeditious handling of manpower and highly critical material was a primary fact in winning World War II. NATS will be of even greater importance in the next war.

During the last war we had 3,000,000 men in the Navy. It has been estimated that 10 percent of the entire Navy personnel was in transit. In other words, we had 300,000 men who were not being used because they were being moved from one place to the other. By the use of the air-transport service this number could have been reduced to probably one-tenth of that amount. Then, too many of these men were spares, which were sorely needed at critical points. The NATS made it possible to transfer highly trained personnel from one point to another in a minimum of time.

It will be of greater importance in future wars to minimize the loss of manpower, especially technical and expert personnel, and the only way we can bring about such a saving would be through the use of a service similar to that rendered by NATS.

Not only is it important to save in manpower, but it is equally important to hasten aviation spares and parts to critical areas. In the recent war NATS made it possible to repair damaged equipment in a minimum of time. Surface transportation is often too slow for supply purposes, especially in handling highly critical replacements.

A nucleus of transport organization in time of peace will insure the continued operation of this service during time of war. We must familiarize the pilots with the routes, procedures, weather, and so forth. A trained operating organization cannot be gathered together over night. For a safe and efficient utilization of NATS for the Navy, it is essential that we keep intact the present minimum organization, which is now carrying on for NATS.

NATS will insure a continued familiarization with flight-control and space-control procedures, and hence will accomplish the desired result for future emergency with less expense of men and materials.

We cannot expect to start from zero again. We will not have a breathing spell if another war should start. Not only from the point of view of maintaining this operation for emergency's sake would it be worthwhile to want this organization at its present operating minimum, but it is important for safety's sake to keep this compact, trained group intact.

The history of NATS indicates the safety record became more desirable with the development and the training of the personnel of the organization.

During the first year of NATS, there were 25.0 passenger fatalities for 100,000,000 passenger-miles compared with 1.7 for the same number of passenger-miles for commercial air lines.

The safety record of NATS improved until 1946 it was 1.8 for NATS and 1.6 for commercial. Experience and familiarization with operations brought about this fine safety record.

I sincerely hope that the Congress and the Navy will realize the great value of NATS in the defense of our country and will maintain this organization as a strong and healthy operation.

A Well-Deserved Tribute

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. LEONARD W. HALL. Mr. Speaker, under leave to extend, it gives me personal pleasure and large satisfaction

to include a well-deserved tribute to our colleague, Hon. RALPH A. GAMBLE, of Westchester County, appearing in the Reporter-Dispatch, published at White Plains, N. Y., under date of June 14 last.

This editorial, with its appropriate heading, gives credit where credit is due. We all know down here of the outstanding work that RALPH GAMBLE has done in helping finally to achieve the end of sugar rationing for the American home.

The editorial in full follows:

HOUSEWIFE'S FRIEND

We consider that the housewives of Westchester, along with the rest of the country, owe a substantial debt of gratitude to Representative RALPH A. GAMBLE, of Larchmont, and we suggest that in propriety they should let him know they are appreciative of what he has done for them.

Over the past year the Representative from New York's Twenty-eighth District has been studying the sugar supply and associated factors of international distribution. Last fall he came to the conclusion that sugar rationing for the American home was largely a hang-over from wartime. He made his attempt then, but failed.

Then this week he obtained other information. As a member of influence of the House Committee on Banking and Currency, he introduced a resolution on Tuesday to end sugar rationing insofar as the American family consumption at home is concerned. It went through the committee overwhelmingly and would undoubtedly have found an equally prompt and impressive reaction in the House at large, as well as in the Senate. It is doubtful if President Truman would have vetoed it.

However, the Department of Agriculture, aware that Mr. GAMBLE and his committee had incontrovertible facts on their side, decided to jump the gun and secure the credit for the administration. That was why the announcement came so unexpectedly from Secretary Anderson on Wednesday afternoon.

We doubt that any observant American will be deceived by Anderson's tactics. For our part, we give credit to Congressman GAMBLE and we believe Westchester housewives will agree with us that—pardon, please—it was very sweet of him.

Veto of the Tax Bill

EXTENSION OF REMARKS
OF
HON. ROBERT L. DOUGHTON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. DOUGHTON. Mr. Speaker, I have had greater difficulty in reaching a decision as to what I should do about the vote that is soon to be taken on the question of overriding or sustaining the President's veto of the tax bill than any vote I have had the responsibility of casting since I have been a Member of Congress.

As is well known to every Member of the House I opposed, as vigorously as I could, the tax bill when it was reported out of the committee and when it was before the House, for reasons then stated. When the bill went to the other body it was amended so as to not become effective until July 1, 1947, instead of January 1, 1947, as provided in the House bill. Also, other amendments, not so important, were adopted in the Senate. When the bill went to conference and the Senate amendment fixing the effective date as of July 1 was agreed to, I considered the bill was only half as bad as when it passed the House and then, as I understood, the estimate of Treasury receipts for 1948, as well as 1947, had been raised above the January 1947 estimate by two and one-half or three billion dollars for 1948, I signed the conference report and voted for its adoption in the House. Later I learned that the Treasury had not changed its estimate of revenue receipts for 1948 but still adhered to its January 1 estimate and only the staff of the joint committee had changed its 1948 estimate.

While the House has made considerable reduction in the President's budget, in the appropriation bills that have passed, few of these appropriation bills have been acted upon by the Senate and it now appears likely that a part of the cuts made by the House will be restored in the Senate. It is, therefore, impossible for anyone to tell just how much saving will be effected when the appropriation bills are all acted upon. Moreover, there is so much uncertainty at the present, not only as to the cuts that will be made in the President's budget but as to revenue receipts for 1948—with strikes in many directions darkening the economic horizon and especially the threat of a coal strike after July 1, when the Government returns the mines to the operators, with its serious economic consequences—I have decided it would be safer and wiser to defer tax reduction until we can see better what our appropriations, our foreign commitments, and our revenue receipts are likely to be. We are faced also with the possibility, if not the probability, that the Congress will undertake heavy commitments—reaching into the billions—for relief and rehabilitation purposes in Europe, as well as large expenditures in fighting communism.

I am as anxious as anyone to see the heavy load carried by Federal taxpayers lightened as soon as it can be done upon a sound basis, but above all, we should be certain that, before tax reduction, the budget would be balanced and its balance maintained and at least a reasonable or substantial payment upon the Federal debt made. At the present moment we cannot be certain that we can balance the budget for 1948, make a reasonable payment on the debt and make the tax cuts provided in the bill which has been vetoed.

So, in my humble opinion, it would be better for our committee to go ahead with its study of the entire tax problem, as it is now doing, with the objective of tax reduction as far as feasible and the revision of our present tax laws, giving careful study not only to changes or reduction in individual income taxes, but also corporation taxes, excise taxes, estate taxes, capital gains taxes and other forms or types of Federal taxes. Moreover, there is one other important change in our present tax laws that I feel should have special treatment. That is the gross inequity and injustice existing between community-property States and non-community-property States. This inequity should certainly be removed at the earliest moment possible and I have decided I will never vote for another general tax bill that does not correct this manifest injustice.

Moreover, I feel that the President knows more about our fiscal affairs and probable future financial obligations, both foreign and domestic, than is known by me and for these reasons, and others which I have not the time to mention, I have decided I will not vote to override the President's veto of the tax bill.

Plight of the Navaho Indians

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article appearing in the Arizona Republic of June 1, 1947:

PLIGHT OF THE NAVAHO INDIANS

Many a Navaho family faces starvation by winter.

America's largest of Indian tribes, which in numbers has multiplied nearly nine times since it signed a peace treaty with the United States Government 79 years ago, today is reaching the end of the trail on its own reservation.

The future of thousands of its people must of economic necessity lie elsewhere.

For in the earth-colored, igloo-like hogans, in isolated reaches of that part of the 25,000 square miles which sprawl across the great plateau country of northeastern Arizona, poverty is beginning to exist today such as never before known by the Navaho.

Next week, or next month—surely by winter they say here—there will be hunger. First among the old folks. Then, it is feared, among the children.

In a nation which today is setting food production records to assure the welfare of foreign countries which yesterday were its enemies, some of its own people swiftly are approaching a crisis that for many may mean death.

What is the answer?

Neither Indian nor white man can provide it here. And both are looking anxiously toward Washington where Congress proposes a cut of $10,000,000 in requests of the Indian Office.

Education and health still are for the Navaho mountainous problems.

He carefully explained that when the tribe's delegation found sympathetic listeners among Government leaders in Washington, D. C., more than a year ago.

Then last September when J. A. Krug, Interior Secretary, became in 78 years of Navaho history the first man who rules their welfare in Washington to come to their stamping ground for an actual look at their problems, tribal leaders repeated desperate pleas for more schools and more hospitals.

Yet today those problems remain the same.

And gripping many of these first Americans who still live in ignorance and squalor is that new and more terrible fear, hunger.

Sun and wind has seared the land. The sheep are disappearing. Lucrative wartime jobs off the reservation are gone. The Navaho boys are back from the war, and no

longer do the Government allotment checks arrive. The demand is dwindling for silver and turquoise jewelry and fine rugs fashioned by these men and women with crude tools.

In seeking an education for his children, it isn't that the Navaho is asking something to which he is not entitled. On the contrary, the United States Government owes the Navaho millions of dollars in unmet treaty promises of educational facilities.

Uncle Sam prides himself on meeting treaty obligations with other nations. But over the past 75 years more than 37,000 Navaho have been deprived of school facilities, though in 1868 the Government contracted with these Indians by treaty to provide a school and teacher for every 30 children between 6 and 16 who can be induced or compelled to attend school.

Today there are twice as many Navaho boys and girls for whom no educational facilities are available as there were Navaho people in the entire tribe in 1868.

What have been the Government's accomplishments since the treaty of 1868?

By 1932 the Navaho Tribe had grown from the estimated 7,000 in 1868 to a population of 41,689. Of 11,741 children, 6 to 16, there were 5,719 in school.

Uncle Sam bestirred himself to build 50 day schools in widely separated sections of the reservation at a cost of millions. Many have been closed for lack of water, lack of teachers, lack of funds, or because they were run down.

In 1946, when the population had soared to more than 55,000 and there were some 16,500 children, 6 to 16, only 5,000 were in schools.

The Navaho claims today that 391,000 pupil-years of schools have been lost to the tribe, and at an average cost of $100 per pupil per year (a figure too low for present-day cost of education); this would amount to more than $39,000,000.

It isn't that Navaho boys and girls don't want to go to school, though there was a time when that may have been the case. Everyone on the reservation admits today the youngsters are crying for education. Schools still operating in recent years have turned away hundreds of boys and girls at the start of each school year for lack of facilities. Boarding schools are jam-packed, yet some of the Navaho families may have to get their children into such schools this fall if they are to exist through the winter.

Today 80 percent of the Navahos are illiterate. Most speak no English. There are school facilities for no more than 5,000 of the 21,000 or more school-age children.

Navaho sheep, mainstay of the reservation's economy, have been reduced in a decade from 1,000,000 to 350,000. The per capita Navaho income in 1940 was only one-tenth the national average. Wartime income provided temporary relief, but the situation now is worse than ever before.

The health situation is critical. Venereal diseases spread like a plague during the war. The Navaho tuberculosis rate is 14 times the national average. Infant mortality is more than six times the national average. Hospital and medical facilities are woefully inadequate.

The reservation cannot produce enough food for its population, and other sources of income aren't making up the difference. Direct relief has been limited to $5 per month per person—and Government funds for that purpose were depleted May 1.

Of course, the situation in which the Navaho finds himself today actually has no direct relation to the present proposed cut in Bureau funds.

But such a cut can only help to hasten the cold days next winter when many a Navaho faces starvation.

It would be unfair to blame all the Navaho troubles on sheep reduction—the program initiated by the Indian Bureau in 1934 to save the overgrazed range and improve the poor breed of sheep by slashing by two-thirds the sheep population.

But that struck the Navaho economy a blow from which it could not recover. Still, the range is so depleted that nature might have killed those sheep if man had not done so.

Yet the program, however good its intentions, obviously has failed to accomplish them.

Drought has worked against the plan. Water holes are dry. Wind whips sand into dunes where once there was browse for the sheep. So now the Navaho is left with few sheep and little good range.

Merely adding to Indian Bureau funds will not necessarily get the Navaho out of his critical situation.

Boarding schools are an economic necessity, for the Navaho must be educated. More hospitals, more doctors, and especially more field nurses must be provided if these Indians are to survive.

Yet even the money to make all of that possible likely would not assure the Navaho survival on his own reservation. James M. Stewart, reservation superintendent, says development of irrigation for farm projects and bringing in small industries would help.

But even Stewart admits that full development of reservation resources as they are known today can enable only 35,000 of the tribe's estimated 60,000 people to exist above a subsistence level. Stewart says the Navaho must be taught that their future lies off the reservation.

Taft-Hartley Labor Bill

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Alfred Friendly, from the Washington Post of June 15 and 16, 1947:

[From the Washington Post of June 15, 1947]

LABOR-MANAGEMENT'S STAKE IN TAFT BILL IS BURIED IN A WELTER OF TECHNICALITIES

(By Alfred Friendly)

Can the Taft-Hartley bill be taken at its face value?

Will it accomplish its publicly stated aims, which are for the most part beyond challenge? Will it provide equality in bargaining between union and management? Will it stop jurisdictional strikes, paralyzing national emergencies, union coercion and irresponsibility, unfair union practices?

Or does it contain, in its 73 enormously complicated pages, provisions which will unwisely and unjustly weaken union strength? Will it hamstring the administration of the Wagner Act to the point where it becomes useless? Does it provide antilabor employers with all the ammunition they need to destroy unions?

Both types of allegations are made. The answer to the controversy, if there is an answer, will not come from broad, generalized statements, either of pious aims or frenzied name calling. It depends on a detailed analysis of some 40 or 50 major provisions in the new bill.

The objections to the bill do not center on its avowed aims, most of which are unimpeachable. They are directed, rather, to technical provisions in the measure on procedure and administration, and to complicated legal points affecting the operation of collective bargaining and the status of unions.

Below are summarized some, although by no means all, of the principal provisions which give rise to the controversy. Unfortunately, most of them are technical. But they are the heart and essence of the bill, whether for good or evil.

The arguments against the bill were culled from statements in Congress, by unions and officials of Government, and private agencies. They are presented in the left-hand column. The replies to these criticisms were obtained in part from an interview with Gerard V. Reilly, former member of the National Labor Relations Board and special counsel to the Senate Labor Committee, and in part from official statements of Senate and House conference managers. They appear in the right-hand column.

OUTLAW STRIKES AND INJUNCTIONS

1. Secondary boycotts: All forms of secondary boycotts are made illegal. These are strikes, or refusals to handle goods, by workers who seek to make an employer, not their own, recognize a union or grant some other concession. In other words, workers cannot strike against employer A to force a concession from employer B, who deals with employer A.

Under this provision, unions could no longer refuse to handle scab products or those made under sweatshop conditions. The Clayton and Norris-LaGuardia Acts, as interpreted by the Supreme Court, hold that it is lawful for workers to refuse to handle goods, if the purpose of their boycott is to force the maker of those goods pay better wages, bargain with their union, etc.

This provision would upset that principle. There could be no boycott, however legitimate were the primary aims of the boycotting union. The provision restores the doctrine of the famous Bedford Cut Stone and Duplex cases, which the Norris-LaGuardia Act corrected. In the Duplex case, with Holmes and Brandeis dissenting, the Supreme Court held that machinists, their union threatened by the low wages in one nonunion printing-machinery plant, were breaking the law when they refused to install that machinery after it was sold.

The provision also renders unions which conduct a boycott subject to damage suits from anyone who was injured by it. It may, indeed, make the union subject to triple damages under the Sherman Antitrust Act, contrary to the professed intent of

Under the Wagner Act, an employer has no option in the matter of recognizing and bargaining with a union, but to accept the choice of his own employees. This has resulted in the paradox of an employer, who has complied with the law, seeing his markets shut off by unions which have failed to organize his plant.

For example, suppose that employees of manufacturer A vote against union X. Members of that union, who are employed by contractor B, who handles manufacturer A's products, refuse to install them. To retain his market, manufacturer A must recognize union X, contrary to his own employees' wishes and therefore contrary to the law.

It may be noted that State labor laws exempt an employer from anti-injunction laws when, if the employer were unable to get an injunction against a boycott, he would be forced to recognize the boycotting union in violation of his employees' wishes and hence in violation of the State labor law.

the Clayton Act, which was to exempt unions from just such suits.

2. "Featherbedding": It is an unfair labor practice for unions to force, or attempt to force, an employer to pay any money, in the nature of an exaction, for services which are not performed.

The provision attempts only to stop practices such as those of the musicians' union, which exacts wages for stand-by musicians who do not work. But it is so drafted that it might prohibit unions from even asking for contract clauses providing such things as the employment of safety inspectors, rest periods, vacation time and a guaranteed minimum number of hours' pay per week, regardless of whether the time was worked.

Senator TAFT, Republican, Ohio, told the Senate that the bill has no such intent, and that the contract provisions above would not be exactions. Nevertheless, this section may well be used to hinder unions from blocking a speed-up.

For example, suppose an employer proposes to have a job done by a crew of 8 men, which customarily had been done by 10. He may claim that the extra two do not perform services. Union efforts to retain them may thus be considered as attempts to exact pay for work not performed.

In general, the effect of the provision seems to be to saddle on the workers the economic hazards of industries with intermittent type operations.

Senator TAFT's statement that the section is not intended to prevent a union from seeking legitimate contract provisions for the purposes mentioned in the opposite column is a part of the bill's legislative history. The construction he placed on the intent of the provision is binding on the NLRB and the courts. It would be absurd to place a contrary construction on it to prevent legitimate union practices.

The purpose and only effect of the provision, in the light of its legislative history, is to prevent an employer from being forced to pay money to a union—in order to keep labor peace—to compensate men whom he has refused to employ because they were in excess of his needs.

3. Cooling-off periods: It is an unfair labor practice to strike within a period of 60 days before the expiration of a collective-bargaining contract.

During this period the employer could, with relative impunity, indulge in provocative antiunion activity, for the union's hands are tied. The penalty against an employer for such provocation would be only a cease-and-desist order from the NLRB. But if the union struck, it could be enjoined, and the strikers would lose their status under the law—a much more severe punishment.

If an employer does attempt such provocation, he could not, under the "clean hands" doctrine, obtain an injunction against his workers striking. He himself, meantime, would be liable to penalties for committing an unfair labor practice.

4. Injunctions: The NLRB may seek from a Federal court an injunction against any person committing an unfair labor practice. It is required to seek an injunction when it finds workers engaged in a secondary boycott or strikes to force union recognition contrary to or in the absence of an NLRB certification. It is also required in some cases to seek an injunction against jurisdictional strikes.

It is not true in any real sense to say that the Taft-Hartley bill rejects a House-sponsored (and Senate-defeated) proposal to give private employers the right to seek injunctions against these types of strikes. For the section forces the NLRB, whether or not it feels this is the right way to settle the dispute, to apply for an injunction once a showing is made that such a strike, or a strike campaign, exists.

In seeking an injunction, the NLRB would not be acting in the traditional sense of an "impartial Government agency," for it would have no discretion in the matter.

The effect is that the private employer would be more liable to get the injunction he desires, when a branch of the Government asks for it, than if he were allowed to apply for it himself.

Because of the enormous benefit which an injunction gives employers, many will be likely to charge that every strike against them involves a secondary boycott angle. They need only show that "an object"—not necessarily the principal one—of a strike is to apply a boycott. If they can make such a showing, the NLRB is obliged to seek an injunction.

The bill does prevent a private employer from going into court and making a one-sided complaint, claiming that he is the victim of a boycott or jurisdictional dispute or other illegal strike, and thereby obtaining an injunction.

A regional officer of the NLRB must first investigate both sides of the case. He is directed to apply for an injunction only when he is convinced that a real dispute of this nature exists.

Since the employer would know from the union what demands he must grant to get his men back to work, and since the NLRB could check on the demands, there would be no mystery on what all the objectives of the strike were.

An employer could not make a phony charge, to the effect that he was confronted with an illegal strike, hold water.

5. "National emergency" strikes: If a dispute threatens to cause a strike in an entire industry, or substantial part of it, which would endanger the national health and safety, the Attorney General can obtain an injunction against it to be in force for 80 days.

Under this provision, the court might well break a strike and its orders could certainly weaken the union involved. But unlike the plant seizure provision of the Smith-Connally Act, there are no corresponding penalties or losses on the companies involved.

The effect of the provision might well be to encourage stubbornness by employers in big disputes. If they refuse to make concessions to the union, they can count on having the Government weaken the union, if not, in fact, break a threatened strike.

There were no penalties or losses to the employer under the Smith-Connally Act, because the Government operated the seized plants for the interests of its owners, and turned over the profits to them.

UNION SECURITY

6. Union-shop elections: Before workers can obtain a union-shop contract with their employer, the union shop must be favored in a secret ballot by a majority of all employees eligible to vote. (A union-shop contract requires a worker to become a union member, as a condition of holding his job, within 30 days or more after he is employed.)

The requirement that the vote must be a majority of all eligible employees makes the union shop much harder to obtain. Hitherto, in almost all types of elections and plebiscites, the principle has been that the issue shall be decided by a majority of all persons who voted, not of all who were eligible to vote.

In the best of circumstances, in all elections, a great number of eligible voters do not cast a ballot. By the new requirement, each person who abstains from voting is automatically and actually voting against the union shop.

An election under NLRB auspices, unlike a public election, is held on the premises of the plant and during working hours. Under such circumstances, 90 percent of the employees vote. Therefore this provision does not impose an undue burden on the union. (In 1946, 83 percent of eligible workers cast valid votes in NLRB elections. EDITOR'S note.)

7. Discharges in a union shop: Even though there is a union shop contract, the employer is not required to discharge a worker whom the union has ousted from membership or refused to admit, unless the grounds were that the worker did not pay his dues.

The provision weakens, if not destroys, the main purpose of a union shop, which is to give a union security of status. For if a worker is expelled from a union because of disruptive tactics, dishonesty, improper conduct, Communist Party membership, or even because he was discovered to be a company spy, he may still be retained in his job, free to continue his objectionable and trouble-making activities.

The union's power to discipline its members, and throw out those who breed trouble between it and the employer, is critically undermined.

The provision has the effect of reducing a union shop agreement to nothing more than a dues-collecting de-

It is not desirable to give a union disciplinary powers which may cost a worker his job. Though in some instances workers are expelled from unions for legitimate and proper reasons, evidence before the congressional labor committees, indicated that unions were abusing the union shop procedure. They ousted workers who belonged to insurgent factions; Communist leaders expelled the most vigorous and effective anti-Communists, etc.

A famous case is that in which a union ousted from membership a worker who refused to perjure himself by testifying in the union's behalf, in a court case. Unless there were the protection of this provision, a

vice. It would yield the union no more benefits than could be obtained from an agreement for the company to check off union dues from the wages of all employees.

worker so expelled from a union would also lose his job in a union shop plant.

8. Priority of State laws: Despite permission in the bill for the union shop, State laws which forbid this and other forms of union security shall supersede the Federal law in their jurisdictions.

Eleven States have enacted laws prohibiting the union shop. Bills to this effect are pending in the legislatures of nine more. These laws are inconsistent with the present Wagner Act, but their validity has not yet been decided in the Supreme Court.

Under the bill, these State laws would be recognized and made valid, thus diluting the effect of the permission in the Federal law by from one-fourth to one-third, and even more in the future.

It is notable that the bill provides that in all respects it shall supersede conflicting provisions in State laws. But in this one instance there is an exception: more restrictive provisions relating to the union shop in State laws shall override the Federal law.

The provision does no more than continue the legislative history of the Wagner Act. The congressional committees which reported out the original law in 1935 expressly stated that it tolerated compulsory membership agreements only to the extent that they were legal under State laws.

9. Discharge "for cause": No employer need reinstate, nor pay back wages, to a worker whom he has fired "for cause."

The NLRB has held to this policy, provided that the firing was really for cause and not for union activity. But the way in which this right has been written into the new bill suggests that the employer may be able to practice antiunion subterfuges more easily.

The bill appears to say that if the employer fires a worker for union activity, but contends that the discharge was for cause, and is able to show that the worker committed some infraction of the rules, or is able to find some other charge against him — both things easy to do—the discharged worker has no recourse.

Union sources feel that this provision nullifies the Wagner Act protection against discriminatory firings.

The provision makes no change in existing law. It simply makes it mandatory on the NLRB to continue to recognize bona fide firings for cause. It does not permit pretext discharges.

As the report of the House managers of the bill makes clear, the provision was inserted to prevent recurrences of a situation such as that in the Wyman-Gordon case. There a circuit court of appeals held that a majority of the NLRB had ignored a true defense that a worker had been discharged for cause.

10. Severance out of craft units: If a majority of any true craft in a plant votes to be represented separately in collective bargaining, the NLRB must certify its union as its bargaining agent.

For more than a decade, the NLRB has busied itself with determining, for each individual case, what union—whether craft or industrial (plant-wide)—is the proper bargaining agent. The new provision removes much of the NLRB's discretion.

Whatever the NLRB's ideas on how worker democracy and collective bargaining are best served, any craft group, by majority vote, can sever itself out of a plant-wide union and bargain for itself.

This is considered certain to upset a great number of long-standing and successful bargaining relationships in big American industries. As might be expected, because of the difference in the organizational basis of their unions, the AFL favors the provision for the most part and the CIO objects to it bitterly.

The provision restores an NLRB interpretation applied to this section some years ago during the chairmanship of J. Warren Madden. It abrogates a subsequent rule that once a determination is made regarding the proper bargaining unit for a company, that decision holds forever.

It still leaves the NLRB free to use other tests as to the appropriateness of a bargaining unit in craft versus plant-wide controversies.

11. Free speech: No expression of views, argument, or opinion may be used as evidence of an unfair labor practice if it contains no threat or promise of benefit.

The purpose of this provision is to prevent an employer's remarks, providing they are not threatening to the union, from constituting in themselves an unfair labor practice. But its effect is to bar those remarks from being used as evidence, showing motive, in connection with some other unfair labor practice charge.

Thus, if an employer declares that he objects to John Doe because of his union activities, and next day fires John Doe, the NLRB cannot use the employer's hostile remark as evidence of motive in determining whether the firing was an unfair labor practice.

This accords an employer greater protection than he would have in a court of law. There, if a man were on trial for murder, his previous expressions of hostility to the victim could be used as part of a chain of evidence to demonstrate motive for the murder.

The argument in the opposite column ignores the fact that all that is prevented from being used as evidence are "views, argument or opinion." It does not exclude other statements, directions, or instructions that an employer may issue.

The NLRB and the courts may still decide—as is proper—where opinion stops and where a reflection of intent begins. A reflection of intent would be admissible as evidence in an unfair labor practice case, it is believed.

Even in a murder case, an expression of political views or opinion, however hostile, would be inadmissible as evidence.

OBSTACLES TO UNION OPERATION

12. Communist officers: The NLRB cannot certify or handle the case of any union until there is filed with it an affidavit from every officer of the local union, and of its parent organization, certifying that he is not a Communist, Communist sympathizer, or supporter of an organization which believes in the overthrow of the Government by force or illegal means.

The effect of this provision is that a union with one or more Communist officers will be stopped from all operations until it can purge itself. Desirable as this result may be, it may have disastrous results on precisely those unions which are fighting hardest to rid themselves of Communist officers.

While they are engaged in a factional fight, trying to oust the Communist gang, the non-Communist leaders are exposed to employer attack. They cannot carry on bargaining relations which would strengthen them and therefore help accomplish the very aim sought by this provision.

The case of Walter Reuther, vigorously anti-Communist president of the CIO auto workers, is in point. Until he can get rid of Communist factions in his union—a very difficult thing to do—General Motors, which loses no love on him, can refuse to bargain with him, thus virtually destroying his power in the union.

One reason why anti-Communists have such difficulty in obtaining, by democratic methods, the ouster of Communists is that the latter rarely admit their affiliation or beliefs. If they now refuse to execute an affidavit, the rank and file would have a clean-cut issue on which to make a choice in a factional dispute.

This sort of situation is particularly applicable to the CIO auto workers.

If a Communist officer makes a false oath in his affidavit, the risk of penalty is on him alone; the union, meantime, is free to go ahead with its collective-bargaining processes.

13. Registration statements: The NLRB cannot certify a union, or handle a case for it, until the union can show that it has filed with the Secretary of Labor a very detailed set of financial and organizational statements and has furnished copies of them to each of its members.

The statements and their filing with the Labor Department are not particularly onerous requirements, since many unions already prepare such documents. But it will probably always be possible for an employer who does not wish to bargain with the union to show that some one of a union's many thousands of members has failed to receive copies of the reports. The provision would

Presumably the statements would be printed in quantity. A good-faith failure to send a copy to a member would easily and quickly be corrected. If an employer should resort to this kind of dilatory tactics, the union need only give a copy of its report to each member whom the employer produces with the claim that he did not get a copy.

permit endless delay and disruption of collective bargaining as long as any employer wanted such delay and disruption.

14. Step-by-step organization: In deciding what unit is appropriate for collective bargaining, the NLRB may not consider as the controlling factor the extent of union organization.

It has been NLRB practice to grant certification to a group, representing a reasonably recognizable and appropriate subdivision or branch office of a Nation-wide company, which was organized and ready to bargain responsibly. This permitted bargaining to begin for segments of employees where otherwise it might have been prevented, or long delayed, while awaiting the complete organization of the whole enterprise.

The new provision appears to forbid such certification of smaller units, one by one, as they become organized. This is in remarkable contrast to several other sections of the bill which encourage smaller units and discourage larger ones. Note, for example, the craft union provision, No. 10 above. Similarly, the bill encourages separate organization of professional employees and permits guards to bargain only if they are in a union distinct from that of the rank and file.

The provision does not prevent the NLRB from saying that it is not necessary to organize an entire company system, if a particular plant or office is an appropriate bargaining unit by itself.

The purpose of the language is to prevent the NLRB from falling back upon the extent of organization theory as the justifying factor when all other tests show that the unit is so fragmentary that it is clearly not appropriate.

Since 1944 the NLRB has abandoned the extent of organization doctrine as the sole test.

(The pros and cons of four other important provisions of the Taft-Hartley bill will be presented in tomorrow's Washington Post.)

[From the Washington Post of June 16, 1947]

LABOR BILL EFFECTS DEBATED FURTHER—PRO AND CON ARGUMENTS ARE PRESENTED ON UNION ELECTIONS, POLITICAL ACTIVITY

(This is the second of two articles)

What effects will the necessarily technical provisions of the Taft-Hartley labor bill have on collective bargaining and on labor-management relations.

Will they, as proponents of the legislation contend, simply implement and effectuate the avowed aims of the bill—aims which for the most part are beyond challege? Or, as critics of the bill insist, are the provisions so drafted as to make administration of the proposed law unworkable and to deny unions aid and protection?

The pros and cons of this argument, as they apply to 14 major provisions of the bill, were presented in section II of yesterday's Post. Below are similar discussions of four more sections.

The arguments against the provisions, as expressed by the bill's opponents, are presented in the left-hand column. The replies to these objections, as stated by the congressional supporters of the bill, appear in the right-hand column.

NLRB PROCEDURE

15. Preelections: The NLRB is no longer authorized to hold elections prior to a formal hearing on the representative case.

Where no substantial issue was involved, NLRB practice was to hold an election, certify a union if it won the election, and let it proceed with collective bargaining. Later, if any minor issues on representation still remained in dispute, it would hold a hearing. Usually the issues did not remain in dispute; in only about 15 percent of these cases was it necessary to hold a later hearing.

The procedure contributed significantly to facilitating an early beginning of collective bargaining. It would be forbidden by the new bill, at exactly the time when the bill adds severalfold to other NLRB burdens.

The NLRB is still permitted to hold elections without hearings if both sides agree. But where the employer has insisted on hearings and the NLRB denied them until after the elections, experience has revealed that the whole proceedings were tainted with unnecessary controversy.

In practice, the preelection plan did not expedite matters, because postelection hearings frequently revealed that substantial issues had been overlooked.

16. Employment of economists and arbitrators: The NLRB is forbidden to employ economic analysts, or to turn over to arbitrators decisions on jurisdictional disputes.

The bill requires the NLRB to determine what are "excessive" union initiation fees, and to decide all jurisdictional disputes. Both of these issues usually involve difficult economic questions, yet the NLRB is denied the technical help to be had from its own economists.

Further, in jurisdictional disputes, a decision means that one union must lose in an issue usually very vital to its existence. From the point of view of satisfactory future working relationships on other matters between that union and the NLRB, it would be much better if an arbitrator, and not the NLRB, did the deciding.

Finally, and most important, an arbitrator's decision has a degree of legal finality which no NLRB decision enjoys, particularly as the new bill amends NLRB authority. An arbitrator's award would be likely to put an end there and then, to a jurisdictional dispute. An NLRB award means only that the case will be fought out up through the courts, with the NLRB's findings and procedure subject to challenge. In effect, the case will be tried all over again.

The general purpose of the bill is to make the NLRB behave like a court. There is nothing in the bill to prevent either side from putting on economists as expert witnesses, but the board, like a court, should act on the record, not on the secret advice of its staff members.

In deciding appropriate bargaining unit cases, the NLRB has already had ample experience in what amount to jurisdictional disputes. The new provision merely makes these decisions binding on unions as well as on employers.

Finally, there is a very serious question of delegating NLRB authority to a private individual employed as an arbitrator.

17. Abolition of Review Division: To NLRB trial examiner's report may be reviewed, or an opinion drafted on the case, by anyone except board members or their personal legal assistants.

This provision abolishes the NLRB Review Division, which went over the trial examiners' cases and submitted reports to the board. The provision may mean, therefore, that each of the five board members must review all of the cases, or set up his own legal staff. Each staff must be large enough to study, separately, all of the cases.

The board is already a year behind on its docket, and now will be deprived of one of its agencies to facilitate and speed up its work. Instead it will be forced to adopt an even more time-consuming procedure.

The purpose is to place greater responsibility on board members for the performance of their judicial duties. Since they would be relieved, under the bill, from all responsibility for the supervision of field activities and investigation of complaints, the members, with the aid of their law clerks, should be able to give greater individual analysis to controversial cases.

Hitherto, instead of the divergent views of different members being reflected in each decision, the NLRB determinations have been a product of the corporate personality of the Review Division. To that extent, the congressional purpose of having the law administered by several members, rather than by one administrator, has been frustrated.

MISCELLANEOUS

18. Political activity: Both unions and corporations are forbidden to make contributions or expenditures in national election campaigns, including primaries, caucuses, and conventions.

Although purporting to be even-handed in its effect on both employers and workers, the prohibition is likely to weigh more heavily on unions, since corporation officers and owner groups are usually able to finance personal contributions out of their own incomes much more easily than union officers and members.

Further, there is a serious question affecting freedom of the press. Some 95 percent of union papers are paid for out of union funds, rather than from subscriptions paid directly and specifically for the paper by the member. Under the provision, these union papers could not make any political expression during an election campaign.

But the union officer has more opportunity to pass the hat among members than a corporation officer has among stockholders.

The real purpose of the provision is to prevent corporate and union trust funds, obtained for other purposes, from being diverted.

The breadth of the provision's application is limited, like that of the Hatch and Corrupt Practices Acts, by constitutional guaranties of free speech, press, and assembly.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over station WNBF on June 14, 1947:

Dear friends of the Triple Cities and my congressional district, this is an eleventh-hour reminder of our date tomorrow. The place is Ross Park, Binghamton, the time 2 o'clock in the afternoon, and the occasion Townsend Day. I will have a message of great importance which I want you to hear. Don't let me down and don't forget. See you at Ross Park tomorrow at two.

A few days ago I received a telegram from a fire chief in one of our small communities asking me to request a fire apparatus used at the Binghamton Medical Depot from the War Department. This particular place is very much in need of adequate fire protection. American homes are in jeopardy without it.

Imagine my surprise to find out that there is a waiting list of over 1,700 applicants for surplus fire equipment here in the United States, but that, in spite of this demand, 700 fire engines are to be shipped immediately to the Pacific.

There may be good reason for the American Army to requisition these 700 pieces. I do not challenge them on this. But they cannot be needed over in Japan any more than we need them here in our own land. I think the War Department ought to go 50–50 at least on any supplies it may be sending out of the country. Certainly the American people deserve first consideration on this vital surplus war material.

Nobody will argue with the statement that the United States generally has the best fire protection in the world. But we have had some black eyes lately. Our record has slipped. The Atlanta and Chicago hotel fires just recently showed that something is bad. Maybe it was lack of fire-fighting equipment, maybe faulty construction, but it adds up to the same.

However, the outlying towns and communities in our section—and, I suppose, all over the Nation—are vulnerable to fire. It goes without saying, therefore, that we can't afford to let all our fire apparatus go out of the country while we are left unprotected here.

And while we're on this subject, isn't it about time we began to take some notice of just how much material, equipment, food, clothing, machinery, and everything else are going out of the country? We know the amount is tremendous, but I think we have the right to know how much.

You folks are familiar with my record on and my attitude toward this whole program of helping unfortunate peoples across the seas. I have voted consistently to succor the needy, care for the sick, to rush food and necessities to all areas devastated by war and famine. I believe in the words of the Scriptures which tell us to feed the hungry, clothe the naked, and give shelter to the homeless.

No one can say the American people have let the rest of the world down. In fact, we can only hope if the day ever comes we are as unfortunate as some we are now aiding that we will receive half the consideration that is now being given to others.

The point I am making, however, is that there is a limit to everything. We can play the good Samaratin until doomsday, and while such behavior is fine, nevertheless, the time will come—yes, it may be here now—when the nations we are now helping will expect us to keep right on giving them the world.

Certainly, the great sums of money and credit we have already advanced other nations are enough to set them all up nicely. We ought to begin thinking of our own people just a little bit.

The questions we should ask ourselves might be: How much food, shelter, and clothing are necessary to take care of millions of Americans who may not be enjoying the standard of living they once did? How many jobs will we need to abolish unemployment in this country? How much more food, clothing, materials, and machinery can we spare for overseas before the well runs dry? What kind of a priority can we guarantee American citizens on the necessities of life in cases where they are desperate?

Let's find the answers to these questions. If we're going to blot out communism, we've got to eliminate the hunger, want, fear, and misery that have always produced it wherever that malignant growth appears.

America must triumph over the people's enemies. The future is bright and promising with the advent of such a victory.

Dead Lines for Mr. Truman

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hartford Daily Courant of Monday, June 16, 1947:

DEAD LINES FOR MR. TRUMAN

If we may adapt and expand the slogan of a few months ago advertising a motion picture, we would say President Truman is back and Congress has him—that is, has him on the spot. The dead line is at hand for the President to act on the tax-reduction and labor-regulation bills. If he should approve both of them, he would share with the Republican-controlled Congress whatever blame or credit may result from the conditions the laws would produce. Incidentally, all the talk in and out of Congress about vetoes would make the speculators on the President's mind look foolish.

If either or both bills are vetoed, Mr. Truman will assign reasons for his action. What those reasons may be no one knows. But we may be certain that they will not be the major considerations. Mr. Truman will not tell Congress he has taken into account political reasons. He won't need to. Congress and the country know that both measures contain political dynamite. The little taxpayers would like that 30 percent reduction in their withholding tax. It would help out take-home pay. And we suspect they are less concerned about paying off the public debt than with keeping out of debt themselves. The tax reductions graduated in favor of the lower income brackets wiped out the early argument as to the injustice of a 20-percent across-the-board cut.

The labor bill may not be perfect in every respect, but the allegation by union leaders that Congress held no mandate for its action reveals gross ignorance of the last Congressional campaign. Even most of the timid candidates admitted something ought to be done. Senator IVES, of New York, was forthright enough to tell just what he thought ought to be written into law, and in large measure the present bill lines up with his ideas. Whether or not the vociferous labor leaders accurately represent a majority of their own members in their unrestrained and unfair attacks, a big bloc of votes, normally Democratic in recent Presidential elections, may be lost by signing the measure. And disapproval might alienate a still larger number, according to the polls of public sentiment. When Mr. Truman casts up the balance sheet, these items will be on it, and will carry more weight than the merits or defects of the legislation. All of which adds up to the fact that something can be said in support of the idea of a single term for the President. And at the moment it seems that Mr. Truman's honeymoon with the Eightieth Congress is about over. At least a veto of either bill will end it.

An Ounce of "Spizzerinktum" Is Worth a Pound of Legal Action

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, I have never advocated the policy or the practice of one's taking the law into his own hands. But some forms of New Deal regimentation have driven our people almost to the point of desperation. When people become desperate, they sometimes take the law into their own hands.

Without condoning or approving such action as a general policy, for I believe in law and order, the freedom-loving American people are inclined to say occasionally, "We have had enough."

Our veterans, with their youthful enthusiasm to see right prevail, occasionally rebel against un-American New Deal regimentation, Executive orders, bureaucratic edicts, and regulations. They want their rights and privileges protected by law. But when New Deal obnoxious bureaucratic impediments get in their way, these young fellows are inclined to push them aside and demand their rights, regardless of OPA and other such dictatorial and un-American agencies.

The following is an article appearing in a recent issue of one of the Tulsa, Okla., newspapers, which shows that one red-blooded American, an ex-GI, had his patience exhausted in dealing with OPA rent control, and more or less took the law in his own hands, in desperation. He apparently decided that an ounce of "spizzerinktum" is worth a pound of legal action.

I quote the article:

BEACHHEAD ON DARLINGTON—YOUNG MATTHEWS MOVES INTO HIS HOUSE

Denver Lee Matthews, Tulsa veteran, made a civilian beachhead Tuesday afternoon, and

today it appeared he was well on his way to holding it.

Matthews is the ex-GI who came home 2 years ago and bought a little white house with blue shutters at 1311 South Darlington Avenue, but couldn't get possession because a tenant refused to be ousted.

He went through the OPA, justice court, common pleas court, and finally to the supreme court, as the tenant appealed. Last June 1 he was running low on funds and couldn't collect rent because the matter was in litigation, so he made a gentleman's agreement with the tenants, Mr. and Mrs. Carl A. Wendt, to give them a year's lease, if they agreed to surrender the house on June 1 of this year.

The Wendts agreed, so the Matthews continued living in cramped quarters and dreaming about the day they could not only own their home, but live in it as well.

When June 1 came the Wendts did not move. They still couldn't find a house.

It looked like the young couple would have to start through the courts again, and this might take more than a year.

But before any action was instituted, the Wendts complained that the hot water heater was on the blink.

Matthews, a building engineer who knows about heaters, took it home and made the repairs.

Tuesday afternoon he took it back. With him he took some friends, who helped load the Matthews' furniture—and the hot water heater—on a truck. He gained entrance with the heater and then his buddies moved in the furniture.

The Wendts meanwhile were considerably put out, and Wendt consulted the county attorney's office.

County Attorney Elmer Adams decided today that he didn't think Wendt had much of a trespassing case against Matthews, and said he didn't contemplate filing such a charge.

At mid-morning Wendt had called a moving van.

With Mrs. Matthews settled in the spare bedroom, and the kiddies playing in the yard, Matthews was holding his beachhead, having decided that maybe an ounce of "spizzerinktum" is worth a pound of legal action.

Destruction of Potatoes

EXTENSION OF REMARKS
OF
HON. FRED E. BUSBEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. BUSBEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago Daily News on the destruction of potatoes:

PRESS DID DUTY IN PICTURING DESTRUCTION OF POTATOES

We don't happen to know the editor of Business Week, but in a recent issue he worked himself into a fine dither because the newspapers have published pictures of surplus potatoes being destroyed by the Government.

To use his own words, "If we were given the job of promotion manager for the Communist Party in the United States of America, we doubt if we could possibly dream up a neater piece of business for our side than that portrayed in the center of this page."

Business Week's editor then laments that readers were left with the clear and dramatically underlined impression that while Europe cries out with hunger, we destroy fine foodstuffs in order to keep up the price.

Well, isn't that so?

REFUSED BY UNRRA

UNRRA officials have explained that while they knew last January that a surplus of 20,000,000 bushels of potatoes was available, the idea of shipping them to needy countries was impracticable.

They say potatoes must be shipped in refrigerated vessels or dehydrated; that shipping space can be better used for more nutritional foods; that the cost of preparing and shipping dehydrated potatoes would be five times the cost of sending other foods of equal caloric value.

Business Week indicts the newspapers for not telling that side of the story when the now famous potato picture was published.

Actually, they did publish these facts as soon as the Department of Agriculture, stung by public criticism, got around to explaining why the potatoes had been consigned to the dump heap.

But some other facts still remain unexplained:

1. Why did the Department of Agriculture wait so long before offering surplus potatoes to public institutions and welfare agencies?

2. What answer can the Department make to the charge by the Mobile (Ala.) Register that the same county in which these potatoes were destroyed has been ignored in its appeal for surplus potatoes to be used to feed people on its welfare rolls?

3. Could surplus potatoes have been saved for use in manufacture of flour to be sent abroad as a substitute for the exportation of relief grain?

4. Why are we importing potatoes from Canada if we had a 20,000,000-bushel surplus at the beginning of this year?

The Richmond News-Leader recently quoted the Virginia State Restaurant Association as saying that "Richmond housewives are buying Canadian-grown potatoes at double the price they would be charged for those grown in Virginia because the United States Government destroyed a considerable portion of the potato crops in this and neighboring States."

5. Why is our Government spending $80,000,000 to support the price of potatoes at the same time President Truman says prices are too high and taxes cannot be reduced?

TIME TO GET EXCITED

Contrary to the editor of Business Week, we believe the newspapers performed a distinct public service in publishing pictures of crop destruction. As a direct result, some facts, little understood, have been brought to light. Others will be unearthed as the investigation proceeds.

When potatoes must be rushed from Canada at fancy prices to meet a shortage within 30 miles of farms where the Government is destroying home-grown potatoes, the press and the public should get excited.

Basic difficulty of the whole situation is, of course, the continuance of Government price support, which was originally adopted to stimulate production of crops needed for the war effort.

Under this act, the Government must buy farmers' produce if the market falls below 90 percent of parity.

Parity is Government "gobbledygook" for the theoretically ideal condition that exists when the price the farmer gets for his produce keeps his purchasing power as high as it was in the favorable base period from 1909 to 1914.

The price-support measure served its purpose during the war, but today, as Business Week points out, it encourages excess production of the wrong things and retards the adjustment of farm production to the facts of economic life.

Although it continues in effect until December 31, 1948, the program should be abandoned at the earliest moment the Government can do so without breaking its pledge to the farmers.

But, as in practically every other phase of Government, the bureaucrats let out loud and anguished cries whenever Congress trims any of their "essential" functions.

THE PUBLIC PAYS THE BILL

Most disturbing is the people's lethargy toward saving their own money.

It is their taxes that pay for surplus potatoes and the Government inspectors who destroy them.

It is their money that pays for well-intentioned but utterly useless activities of Government that easily could be abandoned.

Yet the general public is neither clamoring for tax reduction nor economy.

We know a good many men who wouldn't leave more than a 10-cent tip for the waitress but who are hell-bent for spending billions abroad to win friends and influence people.

Henry Wallace is one of them.

When he was Vice President of these United States, Henry once gave the Wallace cook a Senate inkwell for Christmas.

These personally penurious, global-spending folk choose to ignore the fact that unless we maintain a solvent government and an expanding economy at home, the time will come when we will be unable to assist anyone.

DUTY IS: TELL FACTS

In chastising the newspapers for publishing the potato picture, the editor of Business Week suggests that "it would be hard to conjure up a more damning portrayal of hopeless confusion and frustration in our own house."

We quite agree. But our duty, as we see it, is to lay the facts on the line, whether they are palatable or not.

In what other way could some of our utterly fantastic policies be investigated and corrected?

When the newspapers start pulling their punches, God help the taxpayer.

JOHN S. KNIGHT.

Idaho Tax Bill

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. SANBORN. Mr. Speaker, I urge those who feel that this is not the time to reduce taxes to listen while I read an item clipped from the Idaho Daily Statesman of last Wednesday, June 11. I want you to keep in mind that Idaho has a population of only approximately 500,000 people and that she ranks high as an agricultural State and also has extensive mining operations. Her potatoes are famous and are a handsome crop, but note how they size up beside her tax bill:

IDAHO TAX BILL FOUND FOURTH OF TOTAL VALUE—$102,057,853 SAID TO BE MORE THAN FOOD BILL FOR YEAR 1946

Idaho tax bill last year, amounting to $102,057,853, was a fourth the total assessed value of the State, and more than Idaho's food bill, Executive Secretary Max Yost, of the Associated Taxpayers of Idaho, said Tuesday.

Yost said the figures also amounted to three-fourths the State's realized net farm income and three times the value of Idaho's mining production.

The figures included Federal, State, and local taxes and were compiled by the Associated Taxpayers and the Idaho State Chamber of Commerce, Yost said. Federal taxes for 1946 were estimated at $63,294,880, while State and local taxes amounted to $38,762,973.

"Between 1940 and 1946 Federal taxes paid by Idahoans increased 938.29 percent," Yost said. "State taxes increased 48.38 percent during the same years, and local taxes were upped 32.87 percent."

During the years 1940 to 1946 only three classes of taxes were reduced, the figures showed. Property taxes decreased 15.73 percent; county school taxes were lowered 2.84 percent; and irrigation-district taxes dropped 29.39 percent. State increases included excise tax, 74.54 percent, to lead the list. Smaller increases, however, were shown in taxes for school and highway districts, cities, and counties. License fees increased 15.12 percent.

Yost estimated that a 100-car train of Idaho's famous potatoes, shipped each day of the year, which would be the average total crop for the State, would pay only one-third of Idaho's tax bill.

Veto of the Tax Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. BRYSON. Mr. Speaker, when the tax bill was before the House some 2½ months ago I voted against the measure mainly for the following reasons:

I felt and still feel that in view of our unprecedented national debt we must make every effort to at least begin payments on the same. It was necessary to incur this debt in order to prosecute the war. Under present world conditions we must continue to obligate ourselves in order to preserve a free world. I, of course, am supporting every cut in public expenditures which does not seriously impair our national security. I intend to vote for tax reductions in the proper form and at the proper time.

As pointed out in the President's veto message, the present bill does not give reductions in taxes where they are so badly needed. In my judgment, the exemptions in Federal taxes should be raised so as to exclude individuals in the lower income brackets. The families with low incomes are having extreme difficulties in keeping their heads above water. Families in the higher income brackets are groaning under tax burdens but at least are able to make ends meet.

The take-home pay of those in the higher income brackets is increased under the terms of the present bill; while the take-home pay of those in the lower income range is scarcely affected at all by this bill. In view of all the circumstances I intend to vote to sustain the President's veto, hoping that soon conditions will justify tax reductions and that the majority party now in control of Congress will present an equitable plan of tax reduction, giving greater consideration to those of lower incomes.

California's Veterans' Problems Assume National Importance

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. McDONOUGH. Mr. Speaker, the State of California has experienced an unprecedented migration of people who have come into the State to settle there. California has welcomed this increase in population, and industry, commerce, and agriculture have expanded to provide jobs and homes and food for these people. Problems which grew out of the shortages of the war have become more critical due to the increased population, but California has met the challenge and vigorously attacked the housing and material shortages, and has accepted the additional drain on State and county hospitals, institutions, schools, and other facilities.

A large part of this increased population are veterans of the last war who have chosen to make California their home. Many of these men suffered injury or illness during their service in the armed forces, and many find it necessary to look to Veterans' Administration facilities for treatment or hospitalization. These facilities are wholly inadequate because of the influx of veterans, and additional hospital facilities are urgently needed.

The Veterans' Administration bases its budget estimates for hospital construction and administrative costs on the estimated veteran population of the various States. Its Washington headquarters insists that California's veteran population does not exceed 890,000, and bases estimates on this figure in spite of the fact that branch 12 of the Veterans' Administration, with headquarters in San Francisco, has estimated that approximately 750,000 veterans entered military service from California and that the present number of World War II veterans in California has reached approximately 1,170,000.

If the figures estimated by the San Francisco office of the Veterans' Administration are correct, then California veterans are not receiving the consideration to which they are entitled from the Veterans' Administration.

The following resolution was adopted by the Veterans' Board of the State of California, Department of Veterans' Affairs, urging that steps be taken to establish the true veteran population so that there will be a fair allocation of construction and administrative funds for Veterans' Administration facilities in California. I agree with this resolution and urge the Members of the House to take action to establish the true veteran population of California.

"Whereas California has had a tremendous influx of World War II veterans who enlisted in the military service from other States but who have come to this State to live; and

"Whereas branch 12 of the Veterans' Administration, with headquarters in San Francisco, has estimated that approximately 750,000 veterans entered military service from California, but that the present number of World War II veterans in California is approximately 1,170,000; and

"Whereas these estimates have not been accepted by officials of the Veterans' Administration in Washington, in view of a press release emanating from the Washington headquarters in which the World War II veteran population in California is estimated at 890,000: Now, therefore, be it

"*Resolved*, That the California Veterans' Board hereby declares its concern with the apparent lack of realization on the part of the Veterans' Administration in Washington as to the extent of the veteran migration to California, this situation being particularly serious in view of the fact that budget estimates of the Veterans' Administration for hospital construction and administrative costs are based on the estimated veteran population of the various States; and be it further

"*Resolved*, That the Administrator of Veterans' Affairs, and the Congress of the United States be hereby requested to take the necessary steps to establish the true veteran population of California as the basis of allocating construction and administrative funds, so that California will not be discriminated against because of the influx of veterans to the State."

I, Antoinette Acalinovich, Secretary of the California Veterans' Board, Department of Veterans' Affairs of the State of California, do hereby certify that the above and foregoing resolution was adopted at a regular meeting of the California Veterans' Board held in Redding, Calif., on May 24, 1947.

ANTOINETTE ACALINOVICH,
Secretary of the California Veterans' Board.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. ROONEY. Mr. Speaker, under the permission granted me by the House, I include the following address of the Honorable ROBERT F. WAGNER, senior Sentor from New York, which was delivered by his son, the Honorable Robert F. Wagner, Jr., at an antilabor bill rally held under the auspices of the Democratic County Committee of Kings County, in Brooklyn, on Wednesday evening, June 11:

My friends: Columnists, radio commentators, and political dopesters are enjoying a field day speculating over whether President Truman will sign or veto the labor bill. Much of what is written and talked about is interesting and educational but there is really no basis for speculation. The President will veto the bill.

He will veto it because he recognizes it for what it is—class legislation. He will veto it because instead of solving the real problems that do exist in the field of industrial relations it will create a great number of new and more complicated problems. He will veto it because it will create a body of law

which will interfere in a most direct way with average American citizens' economic and political freedom.

The President will veto this bill because he doesn't want to see created in this land of ours an era of lawlessness like that experienced under national prohibition. He will veto it because he is consistent. He has demonstrated this consistency in regard to labor relations in two messages on the state of the Union, and in his veto of the Case antilabor bill of last year.

He will veto it because he understands and is practiced in the principles of democracy, and like Franklin D. Roosevelt before him will not let the little fellow down. He will veto it because he wants to preserve and strengthen the power of the party that did so much to extend political democracy in America and during the last decade did so much to extend the ramparts of democracy into our industrial and economic life.

Let's not fool ourselves for even a moment. The labor relations bill passed by Congress, camouflaged as it is, is political legislation pure and simple. Its whole design, its whole purpose is one of effectively disfranchising and weakening the political power and influence of the wage and salary classes in our society.

"Labor has become too strong—it is demanding too much—it is trying to tell management how to run things. Labor has government under its control. Labor has to be taught its place. Just wait until we have them where we want them." You have heard such statements. It is that kind of thinking which was behind the bill now on the President's desk. It was out of such twisted, revengeful, and class-conscious reasoning that the Machiavellian plan was formulated by which labor could be destroyed by loving it to death.

It was a simple plan. Amend the Wagner Act—after all any act in effect 10 years needs amending—equalize it—clarify it, legally—give the individual worker his right to a job and his freedom from a union, if he wants it—make the union and its officials responsible for its acts—protect the union members from its leaders.

Young progressive-looking men who knew what was good for labor and wanted to help labor were assigned the task of selling this product. They were allowed to attack the reactionary proposals of some of their leaders and party stalwarts—in the beginning. They were even permitted to introduce moderate proposals and criticize amendments they would later accept. In the end they apologized that legislation was compromise and perfection couldn't be expected, and that if it doesn't work they would be the first to amend it.

A great effort was made all along to make it appear that the legislation was moderate. The bill as reported to the Senate by the Committee on Labor and Public Welfare was compared to the Hartley bill and called mild. In spite of being toughened up on the Senate floor they persisted in describing it as mild. When the conference committee finished with it Senator TAFT said it was the Senate bill with only three important concessions made to the House version of the bill. But Congressman HARTLEY told the House: "I think you are going to find there is more in this bill than may meet the eye." As a matter of fact, the bill as passed by the Senate contained 36 concessions to the House bill, by actual count, and each change made the bill worse.

Let me give you a few illustrations of what the Republicans think they can kid the public into believing are mild changes, and at the same time let me show you by a few examples what Mr. HARTLEY meant when he said the legislation contained more than may meet the eye.

The definition of "employer" was changed from "any person acting in the interest of an employer, directly or indirectly" to "any person acting as an agent of an employer directly or indirectly." Not much of a change in terms of words but what it does is to make it practically impossible from here on out to pin an unfair-labor practice on an employer, because specific proof will have to be adduced showing that an employer authorized his supervisory employee to commit an unfair-labor practice. Yet this same supervisory employee is excluded from the coverage of the labor act on the premise that supervisors are part of management and act for management. This definition of the employer will also make it impossible for the Board to proceed against so-called citizens committees and vigilante groups who, according to LaFollette Civil Liberties Committee were criminally active in aiding and abetting employers in their antiunion activities.

Another simple change was made by the conference committee in the language relating to the test to be used in determining the legality of certain practices of labor unions. They merely changed the language "the purpose thereof" to "where an object thereof." The average workingman, perhaps even the average lawyer might not even notice such a minor change in language, but some very sharp and clever lawyers worked on this bill, and by this minor change these so-called friends of labor have succeeded in outlawing any strike by labor, if, incidentally, one or any object flowing from their activities is prohibited under the unfair-labor union practices section of the bill. It's the same thing as if a man was to be charged with housebreaking because he entered a burning house to save a child without being lawfully admitted.

The conference included in the bill a provision limiting the National Labor Relations Board's power to order reinstatement of a discharged employee or the payment of back pay, if an employee "was suspended of discharged for cause." This provision would greatly hinder the National Labor Relations Board in the prevention of unfair labor practices on the part of employers. The effect of it is to permit an employer to escape liability for having discharged an employee for any union activity merely if other frivolous grounds existed which would also justify the employee's discharge. Since an employer can always find some reason for justifying a discharge, this provision will make meaningless and unenforceable the chief purpose of the National Labor Relations Act—the protection afforded workers under the act against discrimination because of their union activities.

Clever and insidious as are these tricky little legalisms with which this bill is studded, the administrative restrictions and the new and revised procedures required to be followed in connection with matters before the Labor Board present perhaps grave threats to labor's rights than do the straightforward provisions clearly disestablishing labor's hard-earned rights and penalizing its slightest deviation from the law.

Any jurisdictional dispute that isn't settled within 10 days the Board itself must settle. Most jurisdictional disputes arise because of a change in technology and an equitable settlement ofttimes requires an engineering and economic analysis. The Board will be so busy trying to settle such disputes that they will have no time to spend on other cases before the Board or vice versa. In either event cases will keep piling up and the settlement of them will be prolonged beyond endurance.

The financial statements and detailed explanations required to be submitted by every union and local regarding its organization and operations will not only make it almost impossible for a great number of unions to comply, even with the best intentions, but it is highly inconceivable that a corporation lawyer who doesn't like a union wont charge noncompliance. The result again will be more hearings and more investigations—this time into all the details of a labor union operations.

Just to make sure, apparently, that the Board cannot expedite the settlement of cases pending before it, the bill before the President prevents the Board from using such proven and well adapted short cut procedures as prehearing elections and cross checks to speed noncontroversial cases and representation disputes in small units. The inevitable effect of all this and numerous new provisions in the bill will let loose an avalanche of litigation at the very time when the country's labor relations call for stability and certainty. Issues which are the proper subject of conference and adjustment between parties will give rise to protracted lawsuits before the Board and in the courts. Several years must elapse before anyone can know the complete significance of the new law, or how to govern their conduct thereunder.

Most important, perhaps, the use of the Board's processes is made so cumbersome for labor organizations that many are likely to return to the use of the old-fashioned strike weapon, rather than to ask the Board to conduct an election for investigation of an unfair labor practice.

Add up all this litigation, delay, reshuffling to the outlawing of the closed shop and the restrictions surrounding the union shop. On top of this put its encouragement to the placing by the employers of spies, agents' provocators, and general troublemakers within the union, the stimulation and encouragement given to the formation of company unions, the stringent restrictions on the right to strike, to organize, and to sell the idea and benefits of unionism and I just don't know how unions can legally function in our society.

Yet all through the discussion of the labor bill—and it was a long one and has been a continuing one—not a single Senator, and as far as I know not a single witness appearing before a committee attacked the idea of labor unionism. They are all for it, but.

Think of what this bill does to the free labor movement in America, examine the Republican platform of 1944 and the speeches of the Republican nominee for President in support of the National Labor Relations Act. Recall the pledges of some leading New York State Republicans last year on the question of labor relations and you can appreciate the duplicity of the Republican Party and its downright underhandedness and dishonesty.

In spite of the fact that some Republicans, especially some New York Republicans, are already apologizing for this bill as being a mandate of the people for some labor legislation—although you will search in vain for any promises to support legislation of the nature of the Taft-Hartley bill—the Republicans have shown their cowardness and what they already fear, no doubt, will be just retribution for their duplicity by attempting through this legislation to silence the voice of labor. Accordingly, they have included a provision which would prevent any expenditure or contribution by a labor organization for any political purpose whatsoever that had to do with the election of a Federal officeholder. Senator TAFT admitted, for instance, that this provision would prevent an editorial criticizing his vote for this bill by a union newspaper. Yet, when he was questioned by Senator MURRAY about the great corporation that controls a string of newspapers in his State and actively participates in political campaigns, Senator TAFT could only reply that if he was their attorney he would advise them to be careful.

The inclusion of this provision, it seems to me, is an eloquent commentary on what the Republican sponsors and their fellow draftsmen have so much trust in and seem

so subject to: money. They cannot, thank God, as yet, outlaw the thought and actions of freemen.

The Republicans may, if they succeed in overriding the President's veto, force labor back to the wall and cause it to suffer grave injury; but they will not destroy it unless they succeed in destroying along with it the freedom of all men. For a free labor movement is an integral a part of our cherished freedom as is freedom of speech itself.

Because the Democratic Party has always recognized this it will lead freedom-loving people back into ways which are America.

James Guilfoyle

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include an excellent tribute to my old and valued friend, James Guilfoyle, outstanding veteran newspaperman, which recently appeared in the Worcester Gazette, Worcester, Mass.

I have known Mr. Guilfoyle for many years. He has been an unusual figure in the public and newspaper life of Massachusetts. Of amiable personality, he is warmly regarded by all those who ever came in contact with him. His friends are legion and come from every rank and station in life.

Possessed of a brilliant, penetrating mind, his ready grasp of public questions and his accurate discernments of issues and complex situations marked him clearly and indelibly as a leading news commentator and analyst. His service to the great publication with which he was associated has been conspicuous and invaluable indeed, but the value of his contributions to the enlightenment and guidance of the general public is inestimable.

As this article indicates, Mr. Guilfoyle, because of his retirement, will sever formal connections with his newspaper. But he is still vigorous of mind and spirit, and I sincerely trust that his great talents will continue to be employed in some public field. In paying him this humble tribute, I wish to congratulate him upon his splendid career and extend my very best wishes for his future health, success, and happiness.

The article follows:

ENDS LONG CAREER AS NEWSPAPERMAN—JAMES H. GUILFOYLE RETIRES AFTER 39 YEARS OF SERVICE AS NEWS WRITER

James H. Guilfoyle, political reporter for the Evening Gazette and one of New England's best-known newspapermen, retired today after a long and varied career which began in Spencer in 1908 and has continued uninterrupted to this day. He retired on half pay.

Guilfoyle, or "Gil," as he was known by thousands throughout New England, stepped aside after a long career in which he was recognized as a top-flight political writer. He merited the recognition by a thorough knowledge of the subject, unswerving fealty to facts, a vigorous writing style, and an unbelievable capacity for work.

He was never happier than when he was poised before a typewriter with a good story on his mind.

His enthusiasm for his work was as red hot in these latter years as when he began work in 1908 for the Telegram as a county agent in Spencer.

He frequently said, and still does, that "for me there is only one way of making a living—as a newspaperman."

REAL NEWSPAPERMAN

He was a real newspaperman in every sense of the word. He could turn his hand to every type story, and frequently did. He wrote two columns in the Evening Gazette, Among the Folks and Heard at the State House, which were widely read. For a time, too, he was night editor of the Telegram.

His memory was well above average. At a convention, national or State, or a political rally, where, in the course of a night, he met hundreds of acquaintances, he was able to recall next day whatever newsworthy facts they confided in him and to quote the speakers practically word for word.

His ability to write reams of copy from a few notes was a never-ending surprise to his fellow workers.

And he had few equals and no superiors at dictating a story, say from city hall or the State house, to a rewrite man in the Gazette office. The rewrite man simply took the story, word for word, as "Gil" gave it. Sometimes he dictated for as long as two hours without interruption.

WROTE BOOK ON CURLEY

Besides providing his paper with expert and full coverage of political matters, "Gil" was a contributor to scores of magazines and wrote a book On the Trail of the Forgotten Man, a journal of a tour across the United States by James M. Curley, speaking in behalf of the candidacy of the late President Roosevelt.

He was in much demand as a speaker throughout Worcester County.

From the Spencer office of the Telegram Guilfoyle was transferred to the Fitchburg office in 1910 and he remained there 10 years. In 1920 he joined the city staff of the Telegram as a reporter, covering a variety of assignments, but most frequently politics. He was city editor of the Telegram for several years, but much preferred to write and left this position to go to Boston where he covered the State house for these papers.

In 1932 he joined the Gazette.

His love for his work made Guilfoyle's job practically a 24-hour-a-day position. He circulated wherever politicians gathered, and he knew the hideaways and nonlisted telephone numbers of the most important of them.

COVERED CONVENTIONS

His acquaintance with the high and mighty and the little guys of politics enabled him to get the story, more often than not, of what transpired at closed and secret meetings.

He was assigned to attend all political conventions, State and National, for many years. He added much to his stature by his coverage of these events and gained contacts which later proved invaluable.

He reported the famous McAdoo-Smith struggle in New York in 1924 when the Democrats compromised on John W. Davis. He was in Houston, Tex., when Smith was nominated by the Democrats in 1928; in Chicago when Hoover was nominated in 1932; and again in the same year, when Roosevelt was nominated by the Democrats. He was at Cleveland when Alf Landon was nominated in 1936. His last national convention was in Philadelphia in 1940 when Willkie was nominated.

He met the biggest politically during his stay with these papers, and he liked to recall them from time to time, in print, as they impressed him. He liked Governor Ely for his human qualities, Governor Saltonstall for his sincerity, Al Smith for his humor, Gaspar Bacon for his warmth and friendship and Willkie for his power to inspire.

POLITICIANS SOUGHT COUNSEL

The aspiring young politican invariably sought out "Gil" for counsel regarding conduct of a campaign and the oldtimer was never too busy to accommodate them regardless of the candidate's party affiliation. Officeholders of many years consulted him on policy.

After working hours were ended, if they ever ended for Guilfoyle, he could be seen on the street or in a restaurant in a huddle with somebody in public life, no doubt acquiring the inside on the latest political maneuver.

Democrats and Republicans summoned him frequently to write campaign speeches for them and many speeches which brought down the house at rallies in the city and county came from his typewriter.

HELPED MANY YOUNG MEN

But "Gil" was reluctant to reveal himself as a ghost writer.

Because of the position he occupied and the esteem in which he was held by officeholders, "Gil" was able to give a helping hand to many deserving young men and women who needed extra help to acquire a job. He went to bat for thousands, and he rarely struck out.

He was discerning at judging both the character of aspiring officeholders and causes and could spot a phony a block away.

Election night at these newspaper offices will not be the same without "Gil" in the picture, a grin on his face, cigar in his mouth, and a blase exterior concealing his inner tenseness at this dramatic moment. He loved election night.

He liked the hustle and bustle of it, the excitement, the glamour. He liked to be the first to scan the early returns and interpret them. He liked to hurry to a phone and talk with headquarters of the candidates. He liked to click out first, second, and third leads.

Nobody who has given as much time to politics and election nights in a newspaper office as "Gil" will be able to detach himself completely from a mode of life he followed to the hilt for more than three decades.

It's more than likely "Gil," even though retired, will shuffle into the office on the next election night. It's practically certain.

Politics and newspapers are in his blood.

Communists on the Federal Pay Roll

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. ALLEN of Illinois. Mr. Speaker, the present Democratic administration is paying the salaries of thousands of Communists. At the same time the services of an estimated 700,000 loyal Government employees are scheduled for termination during the next fiscal year. I think that every Member of Congress agrees that all surplus Government personnel should be eliminated from the pay roll immediately; but in making these

cuts, the last Communist should go before the first loyal American. I would like to suggest a plan whereby this might be achieved.

On March 22, the President issued an order which we were told would get rid of Communists on the Federal pay roll. But not one Communist has yet been fired, and furthermore, not one Communist ever will be fired under the President's order. Why not? Because there are so many loopholes in the order that none but the most out-spoken Communists can be touched. Therefore, we, the Congress, must act to get rid of these fifth-columnists before they become even more firmly entrenched in the Federal bureaus.

The Civil Service Commission has the names of thousands of disloyal Government employees. The Federal Bureau of Investigation and the Un-American Activities Committee also have exhaustive files on Communists occupying important positions in the executive departments. Why not start by firing them?

Southern States Industrial Council Urges Congress To Override President's Veto of Labor Bill, if President Vetoes It

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following is a letter which I received a few days ago from the president of the Southern States Industrial Council.

The Southern States Industrial Council is composed of some of the leading industrialists of all of the Southern States, including those States which we frequently refer to as the solid South.

It will be noted that this group insists that, if the President should veto the Taft-Hartley labor bill, which has passed both the House and the Senate by overwhelming majorities, the veto be overridden by our vote.

The Hartley bill as it originally passed the House was voted upon by 415 out of the 435 Members of the House of Representatives. Three hundred and seven voted for its passage and one hundred and eight voted in the negative. More Democrats voted for its passage than there were Democrats who voted against its adoption. The same was true of the Republican Members of the House. This demonstrated that the measure was popularly demanded and the vote was not a partisan vote. Most of the Representatives in Congress from the solid South voted for this measure.

When the bill came back to the House from the Senate, it was known as the Taft-Hartley bill and was considered a less drastic measure. The conferees of the two Houses redrafted the measure. The report of the conferees and their redraft was overwhelmingly approved by the Members of both Houses. As finally submitted by the conferees, 320 House Members voted for its final enactment and only 79 voted in the negative. Again there were many more Democrats who voted in the affirmative than there were Democrats who voted in the negative. Again the solid South showed it was predominately in favor of the Taft-Hartley bill as finally submitted by the conferees of the two Houses of Congress.

In the first instance, the Hartley bill passed the House by a vote of almost 3 to 1. The conference report and final draft was adopted by more than 4 to 1. Hence, if the President should veto the bill, and if the Members of the House vote consistently, the President's veto will be overwhelmingly overridden by the House. The same is true in the Senate, based upon the Senate's decisive vote on the conference report.

The following is the letter above referred to, which I received from the president of the Southern States Industrial Council, dated June 9, 1947, urging that Congress override the President's veto of the Taft-Hartley bill if the President should veto it:

Hon. GEORGE B. SCHWABE,
Member of Congress, House Office Building, Washington, D. C.

MY DEAR MR. SCHWABE: "The closed shop, the union shop, or any system of organizing that is not entirely free and open will never be wholeheartedly accepted by free-thinking people for the simple reason that such monstrosities stand in defiance of our American way of life."

The foregoing statement is taken from an editorial in the May issue of the Railroad Workers Journal, official organ of the Railroad Yardmasters of America. It expresses in plain language the attitude of free workingmen toward the abuses that have been premeditatedly planned and enforced under the Wagner Act—many of which will be corrected if H. R. 3020 becomes law.

I want to thank and congratulate you for your support of this measure. It is evident that the Congress is aware that citizens generally—even a large percentage of union members and sympathizers—are determined that something must be done—now—to protect the Nation against the outrageous conduct of men who have no public responsibility and no regard for the public welfare.

The bill approved by the House and Senate will do much to insure the rights of both labor and management. The act cannot be criticized as punitive, unless it be punitive to protect the rights of the many against the abuses of the few. In truth, Congress has leaned backward to escape such censure.

In making an estimate of the situation, I am at a loss to find a reason for disapproval of the proposed law. Its need is so plain, and the ills it will remedy so apparent, that the measure has received the practically unanimous endorsement of all citizens—except the leaders of organized labor. Certainly, this is no political question. It is much bigger than that, as shown by the nonpartisan vote the measure received in both Houses of Congress. And, yet, the daily press is filled with rumors, statements, and predictions of a Presidential veto.

I hope this will not occur. However, should the President take that course, it is my respectful insistence that the measure should be enacted over his veto, however reluctant you would ordinarily be to take such a step. The considerations which actuated you in your support of the bill have not changed one iota; and if there is a veto, I urge that you maintain your position and vote to enact the measure into law.

Respectfully yours,
REMMIE L. ARNOLD,
President.

Death Ends Notable Career

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial concerning the death of the Honorable David I. Walsh, former United States Senator from the Commonwealth of Massachusetts, which appeared in the Evening Tribune, Lawrence, Mass., on Friday, June 13, 1947:

DEATH ENDS NOTABLE CAREER

In the death Wednesday of Hon. David I. Walsh, former United States Senator, Governor, and Lieutenant Governor, Massachusetts has lost one of its most distinguished citizens and sincere sorrow over his passing is widespread among the Bay State people he represented most capably and conscientiously in those high offices during the greater part of the past 35 years. His record has been outstanding and merits a prominent place in the history of the State and those who have served it best.

Nowhere in the Commonwealth is there greater and more sincere regret than in Lawrence, because ex-Senator Walsh was something in the nature of a popular idol here, having won the respect, admiration, and support of a large majority of the residents of this city early in his career and having held their high regard right to the end. From the time that he first ran for lieutenant governor far back in 1911, there was magic in his name on the ballot for Lawrence voters and invariably he rolled up huge pluralities here. Time after time his vote here not only far exceeded the totals of his opponents but topped all candidates in the other contests by wide margins, with the result that his high and prolonged popularity has been unmatched in local annals. Even when engulfed in the Republican landslide and overwhelmingly defeated for reelection by United States Senator HENRY CABOT LODGE last November, although ex-Senator Walsh's usual heavy local majority was reduced considerably, nevertheless he carried Lawrence by 4,650 votes.

For his part, the deceased was duly appreciative of the good will of Lawrence people toward him and evidenced his gratitude on every possible occasion. His affection for this city and its residents became so great that he always was happy to come here to be among his good friends and invariably accepted local invitations, even though the trip often involved personal inconvenience and sacrifice.

An extraordinary example of the inspiring bond between the former Senator and this city was provided on the occasion of the grand Fourth of July celebration here in 1942. It was such a notable event that the people of Lawrence wanted him for the orator of the day and Mr. Walsh gladly accepted the honor, even though it meant a tiring journey from Washington, D. C., and valuable time taken from his important official duties in that trying period of World War II. Somewhat late in arriving, he was placed in a car at the head of the official parade at the junction of Broadway and Essex Street and the ovation tendered to him by the dense throngs of spectators all along the main business thoroughfare was comparable to that usually tendered a conquering hero on his return from the wars. That evidenced the high spot the deceased held in the hearts of Lawrencians and it thrilled and touched the recipient, who declared afterward that

it was the finest, most heart-warming tribute ever tendered to him.

An ovation of that sort was merited not only here but in every Massachusetts community, because of the high type of service given by Mr. Walsh successively as lieutenant governor, Governor and United States Senator. His actions were motivated at all times by the best interests of the people, the State, and Nation. He was a great Democrat, but not a rubber-stamp one. The deceased went along with his party when he felt it was right, but could and did show his independence and courage by taking a counter stand on other occasions. That was frequently evidenced during the New Deal administration.

Opponents and critics often called ex-Senator Walsh an isolationist before Pearl Harbor, but the latter was following a course then that was approved by the great body of average Americans. He believed in avoiding involvement in foreign national difficulties, but also in keeping America strong and as Senate chairman of the powerful Naval Affairs Committee was an outstanding factor in creating the great United States Navy that played such a vital part in the ultimate victory in World War II. History undoubtedly will record ex-Senator Walsh's valuable contribution to the winning of the second global conflict as the premier achievement in a notable career replete with outstanding accomplishments. Death has closed a busy life and he has gone on to a heavenly reward richly earned by superlative public service to his fellow men.

"This Is Your Hour, My Country"

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Monday, June 16, 1947

Mr. PLUMLEY. Mr. Speaker, my attention has been called to a poem appearing in the Rotarian magazine for December 1946 written by Arthur Wallace Peach, recognized as one of the outstanding poets of this day and generation.

I believe the poem should have a larger reading public than its publication in the Rotarian offers; so, under permission heretofore granted, I am including it as an extension of my remarks. I most heartily share the sentiments it expresses. It follows:

THIS IS YOUR HOUR, MY COUNTRY

This is your hour, my country,
To answer, not ask,
To speak, not listen,
To lead, not follow.
This is your hour of might,
The might of your arms and your faith—
Out of the ages at last a word
Mankind can hear and believe,
Pledged by white crosses that mark
The far ways of your armies,
By the brave and lost
In the lonely seas
Whose tides shall forever
Hold them in slumber.
This is your hour, my country,
That comes not again;
Fail, and a symbol fades;
Fail, and a dawn grows dark.
This is your hour of destiny,
My country!

—*Arthur Wallace Peach.*

Making Democracy Work

EXTENSION OF REMARKS
OF
HON. JOHN W. FLANNAGAN, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered at Emory and Henry College on June 6, 1947:

Mr. President, members of the class of 1948, I have come to talk over with you this morning the problem that weighs so heavily upon the hearts and minds of all true believers in the democratic way of life, making democracy work here in the land of its birth.

Before I enter upon a discussion of the problem, the solution of which holds, I fervently believe, the future hope of mankind, permit me first to make a few preliminary observations.

Whether some of us realize it or not, we have been ushered into a new world, and while it is a world more or less of our own making, it is, at present, a confused world, a divided world, and a world, I am afraid, we are ill-prepared to enter.

This new world in which we now find ourselves was not created overnight, nor is it a result of the war, though the war did speed up its creation. Its genesis stems back to the beginning of the technological age that culminated, during the war, in the splitting of the atom. And I am constrained to believe the reason we are ill-prepared for the new world in which we now find ourselves is that our moral development—our code of living, both individually and as a Nation—has not kept pace with our technological development.

Now, my young friends, whether we want to become a part of this new world or not, technology has made us a part, and there is nothing left for us to do but assume our rightful place in the new world order.

I know to those in this land of plenty who, are full of greed and self-interest and who lack vision, isolationism has a strong appeal. Blinded by greed and self-interest, they are unable, through their distorted vision, to see that such a short-sighted course will lead, sooner or later, to grief. Assuming that we could, by such a policy, create an American oasis in the desert of the world, do they not realize that sooner or later the ill-clad, the hungry, the starving, the distressed, the desperate, will gang up on us and break into our green pastures? And then what? Why, America, to people of today, the land of plenty may well become to the people of tomorrow a part of the world desert.

If we leave out all humanitarian considerations and consider the problem from cold, calculating logic, we cannot, even if disposed, shirk our responsibility of world leadership If we do, the time will surely come when we will find that our failure to provide leadership that will enable the peoples of the world to acquire freedom and equality and to climb to higher economic, political, and spiritual levels will result in our falling back to their level. It is no more possible for the world today to live half freemen and half slaves, half naked and hungry, and half clothed and fed, half Christian and half pagan, than it was in the days of our forefathers for Americans to live half freemen and half slaves.

Now, as I said, this new world in which we find ourselves is a divided world, and there is no use in deluding ourselves as to the seriousness of the division. Today two roads lie ahead—the democratic road and the totalitarian road—the one leading to Christianity, freedom, and equality; the other to paganism, slavery, and bondage.

Democracy, my young friends, is a Christian concept. If you forget everything else I say here this morning, do not forget, I beseech you, that the basic principle of democracy—the dignity of man—is the outgrowth of the Christian concept of the individual. Hence, in a democracy, the people are supreme and the government is only the chosen agent of the people.

Totalitarianism, on the other hand, is a pagan concept. Its basic principle—the dignity of the state—is the outgrowth of the pagan philosophy that "the king can do no wrong"; that "might makes right." Hence, in a totalitarian state, whether Fascist or Communist, you will find the state supreme and the people cringing vassals of a dictatorial, ruthless government.

The development of the state under the Christian concept has been a long, costly process, and did not reach its full flowering until the birth of this Republic. Over the centuries philosophers and publicists dreamed of, and men fought for, a government more responsive to the needs and development of man. None of these philosophers and publicists, however, fully envisioned the state based upon the Christian concept of the individual. Plato, for instance, only partially envisioned democracy when he described it as "dispensing equality to equals and unequals alike." Yes; democracy is equality, but it is more. Henry only partially envisioned democracy when, his whole being in rebellion against tyranny and usurpation, he cried out, "Give me liberty or give me death!" Yes; democracy is liberty, but it is more. Not until the immortal Jefferson, who, envisioning the true Christian concept of man's dignity, brought the thoughts of Plato and Henry together in that ever-living pronouncement "all men are created free and equal" was the true concept of democracy born.

I have defined the democratic state and the totalitarian state in order to impress upon you the division that exists in the world today. This division—we should be realists and face the facts—is an irreconcilable division. You can no more amalgamate democracy and totalitarianism, you can no more reconcile democracy and totalitarianism, you can no more compromise democracy and totalitarianism than you can amalgamate or reconcile or compromise good and evil, and our policy in meeting the conflict should not be to temporize, to reconcile, to compromise, but to stand firm for our sacred, God-given principles of Christian democracy.

Now, democracy is not automatically safeguarded. Vigilance is still the price of democratic government. And in standing for the sacred principles of democracy we should not only take every necessary means to suppress totalitarianism here in America, but we should go to the rescue of free men in every part of the world. While I know we cannot suppress totalitarianism by force, we may be driven, as a protective measure, until the United Nations become strong enough to function efficiently and effectively, to check its spread by force. To those who say that such a course leads to war, I answer, I do not know, but I do know that any other course leads to the destruction of democracy. And between war and the preservation of democracy, let it be known, once and for all, that the free men and women of America stand for democracy.

It would be bad enough to find ourselves in this new world, for which we are so ill prepared, if all nations were cooperating in bringing about the needed adjustments and corrections; but to find ourselves in a new world divided into two irreconcilable groups, makes it imperative, if we are to assume a leadership that will be respected and followed, for us to forthwith make all adjustments in our democratic machinery here at

home so it will serve the needs of our people in the new world technology has ushered us into and thus demonstrate to the world that free men are capable of self-government. And, so my young friends, I want to talk over with you this morning the problem of making democracy work here at home, believing if we can do this our democratic torch will finally illuminate the world, and thus bring about the solution of many, if not all, of the world problems.

Now, in spite of all our material progress and, I believe too we have made great spiritual progress, every one but the moral myopic knows that there is something wrong with our new world right here in America. Our democracy has gotten our of gear. It simply is not clicking as it should.

While the prying eye of science has penetrated into the secret recesses of nature and unloosed her most powerful, potent, and destructive force, atomic energy, have we developed to the point morally of knowing how to use it?

While science and invention have brought to the home many labor-saving devices, many conveniences, thus reducing the drudgery of the home work and providing more time for home building and pleasure, having discovered the way of making home life more agreeable and pleasant, can we say that we have developed morally to the point of adjusting our home life to our new environment?

The development of the machine has brought about mass production, which, in turn, makes it possible to work less and produce more, but has the moral development of our industrial-labor relations kept pace with the machine?

Foreign doctrines, philosophies, isms, and ideologies foreign to every concept of democracy and Christianity are not only being freely advocated, but are attracting the attention, yea, are being countenanced, by some of our would-be statesmen, labor leaders, teachers, and preachers. In the light of this, do you not wonder at times if our democratic and spiritual development has been all that it should have been?

Here in a land rich in natural resources, with a productive capacity far in excess of the needs of our people, we find insecurity, poverty and distress, greed and avarice, thirst for power, and a loss of the proper sense of human values rampant amongst us. It is the city slums—cesspools of disease and crime; the struggling share croppers and tenants; the neglected aged and infirm; the ill-clad, ill-fed, uneducated millions of boys and girls; the lack of proper medical care and hospitalization for the poor and downtrodden; the home life that breeds delinquency; and a complacent ministry that produces Communists and Fascists and other enemies of our Government and causes honest, though misguided, men and women to wonder if, after all, democracy is the Christian concept of government. And added to these causes is the eternal conflict between capital and labor to secure the advantage, and the autocratic city, county, and State bosses who, due to lack of interest of free men and women in elections, are ofttimes able to thwart the will of the people.

Now, let us pause and reason together for just a few minutes.

To begin, let me call your attention to the fact that in our technological development, our scientists and inventors followed basic, fundamental principles. Sticking to fundamental principles, they simply brought the machine up-to-date. Oh, I know, that many of the new machines seem to be new creations, but the more you delve into them the more you become convinced that the thing that makes them click is the same old fundamental principle. Let me give you a simple, down-to-earth illustration, that tells you better than I can explain to you, what I am trying to get over. Back in 1834 a Virginian, Cyrus McCormick by name, invented a great piece of farm machinery, the reaper, which, at the time it was first put on the market, served the purpose for which it was made. When our population was small, and our wheat production correspondingly small, it was able to harvest our wheat crop. But suppose we had to harvest our 1947 wheat crop with the 1834 model McCormick reaper. It could not be done. Now, basically, the McCormick reaper has not been changed. Sticking to the basic principle that made it click back in 1834, it has, from time to time, been modernized in order to meet present-day demands.

Now, if our scientists and inventors had sense enough to realize that the only way they could work out our technological problems was by sticking to basic and fundamental principles, are we going to admit that we do not have sense enough to realize that the only way we can work out our religious, social, economic, and governmental problems is by sticking to basic and fundamental principles? It is passing strange to me that we seem to have common sense enough to stick to fundamental and basic principles in working out our technological developments, and then think we can take short cuts and follow false gods in solving our religious, social, economic, and governmental problems.

Oh, some may sneer at the teachings of the Great Book, but, remember, we get in trouble every time we depart from the basic teachings of the Lowly Nazarene.

Oh, some may sneer at the democratic philosophy of government as set forth in the Declaration of Independence, the Constitution, and the Bill of Rights, but, remember, we get into trouble every time we depart from the basic principles of these great declarations of government.

Paul, the great teacher and philosopher, in writing to the Ephesians, among other things, admonished them to "hold fast that which is good." Sounder advice was never given. In these vexatious, troublesome days when the whole world is in confusion and we are struggling to adjust our society to the new world into which we have been thrust, it would be well for us to adopt as our motto the advice given by Paul to the Ephesians, "hold fast that which is good."

Now, let me specifically discuss some of our pressing problems that will have to be solved, and correctly solved, if democracy works here in the land of its birth.

First, I want to talk over with you the home, the church, and the school.

The home, the church, the school, the tripod upon which our Government rests, are badly in need of adjustments and repairs if they are to continue to serve in the future, as in the past, as instruments to keep democracy upon the true and straight course.

Now, I believe in the separation of the church and the state and the home. I do not want to see the church running the state any more than I want to see the state running the church, and I do not want to see either church or state policing or regulating our home life. But believing these things does not keep me from knowing that there cannot be such a thing as a lasting democratic government unless that government rests upon the solid foundations of Christianity, education, and a strong, clean home life. So long, and no longer, as our Government is anchored to this great tripod of democracy, which in turn shapes and directs our policies of state, will we be able to solve our domestic problems and be immune to all attacks marshaled against us by the totalitarians, or any other enemies of freedom, liberty, equality, enlightenment, and Christianity.

We cannot close our eyes to the fact that religion in America is not as militant as it should be, that too many of our children are receiving scant and poor educational training, and that our home life has degenerated.

The truth is our sense of true values has become distorted. Why, we spend a billion dollars more per year for tobacco than we do for public education, and our liquor bill is three times as much as we pay for public education including our State universities and colleges. Our women pay as much for cosmetics as all of us pay for religion. School teachers receive on the average less than a good ditch digger, and preachers less than the collectors of our garbage.

This distorted sense of values is now being reflected back into the American home, which, remember, is the keystone in our tripod foundation. Last year for every three marriages we had one divorce, and this year it is estimated that the ratio will be 40 percent instead of last year's 33⅓ percent. And in many of the homes that are still being held together, what is happening to the children? Why, juvenile delinquency, if not already, is fast becoming our No. 1 problem.

Now, my friends, remember this, education and religion directly affect the home, and anything that affects the home, affects democracy. In the long run our Nation will be exactly what the American home is. If the American home is strong and orderly, we will have a strong and orderly Nation; if the American home is thrifty and productive, we will have a thrifty and productive Nation; if the American home is clean and healthy and pure, we will have a clean, healthy and pure Nation; if the American home is an intelligent, educated home, we will have an intelligent and educated Nation; and if the American home is a Christian home, we will have a Christian Nation.

My young friends, unless we keep the home, the church and the school working efficiently and effectively, we cannot hope to keep democracy working efficiently and effectively.

Let us take up next for a few minutes our system of free enterprise.

The economic system devised by the founders of this Republic is known as the system of free enterprise. Now the free enterprise system does not simply mean that the enterprise is free; it also means that those who work for the enterprise are likewise free. This system didn't just happen. It is the natural outgrowth of our system of government, whose basic principles are freedom and equality, just as religious freedom, political freedom, and freedom of the press, are natural outgrowths of the system. It is inconceivable that freemen who believe in equality of opportunity could have worked out any other economic system. And yet, although our economic system in a little over a century and one-half has made this Republic the greatest, strongest country in the world, and at the same time given our people the highest standard of living ever attained by a people in the history of the world, our system is under attack, not only from without, but from within.

I admonish you to hold fast to our system of free enterprise because it is the democratic way. When you shackle the system to just that extent you shackle freedom. When you shackle the system to just that extent you shackle equality of opportunity. Now to make democracy work what we need to do is to expand freedom, not shackle it, expand equality of opportunity, not shackle it.

Now, at this point I want to briefly discuss our industrial-labor relations.

Our industrial-labor relations, so closely related to our free-enterprise system that what affects one affects the other, are, I am afraid, in a chaotic condition. Technology, initially, of course, brought about most of the confusion as it not only displaced men, but forced men to change from one type of work to another. And into the confusion stepped the Communists to sow seeds of dissension; the labor racketeers who seemingly thought that the more trouble they raised, the greater their position in the labor movement became; the laissez faire industrialists

who still consider labor as a chattel; and finally the Congress to pass legislation in an effort to stabilize industrial-labor relations, which laws, every fair-minded man will have to concede, have been poorly administered. Well, to be perfectly frank with you, due to the poor administration of the labor laws, I do not know which one of these four factors did the most harm. I do know, however, that before we succeed in bringing about peaceful industrial-labor relations, we will have to get rid of the Communists, the labor racketeers, the laissez faire industrialists, and the Congress will have to rewrite the labor laws in such a way as to give fair and equal treatment to both labor and industry and at the same time see that the public is protected. And, above all, the labor laws will have to be fairly and honestly administered.

Now, the thing that will destroy our system of free enterprise quicker than anything else is for capital and labor to continue at war to secure the advantage, thus forcing the Government to step in and put the system in a strait-jacket by stringent regulatory laws. These laissez faire capitalists who still consider labor a chattel, and these labor racketeers, who regard neither the rights of labor nor the public, will have to be weeded out if the system survives.

In working out our industrial-labor relations, if we will only stick to the true concept of democracy, freedom, and equality, we will have no trouble. Remember this: No matter which side has been guilty of excessive abuses, you cannot correct those abuses by punitive legislation. And sometimes here of late I wonder if some of our statesmen are not more interested in working out a veto than they are in working out fair and just labor laws.

Collective bargaining, under rules and regulations fair to both sides, should enable free men to sit around the table and work out their own problems. If this method is given a fair and honest trial and fails, then I see no other way than to set up an impartial tribunal to hear and determine industrial-labor disputes.

Certainly, if democracy is to function efficiently while preserving freedom and equality, we have got to work out some system whereby work stoppage, which is ruinous alike to capital, labor, and the public, will be prevented.

Let me mention another thing that has no place in a government that believes in freedom and equality.

Monopoly, in any form, by any group, is foreign to all principles of democracy, and if we make democracy work we will have to guard against all monopolies, whether industrial monopolies, public-service monopolies, agricultural monopolies, or labor monopolies. Monopolies, the creatures of greed and thirst for power, are incompatible with our system of free enterprise in a competitive market. And yet, as strange as it may sound, ofttimes the very ones who clamor the loudest for the preservation of our free competitive system of enterprise, are the ones that deal in monopolistic practices. And, in this connection, let me call your attention to another thing that disturbs all thoughtful persons. Blocs or pressure groups, closely allied to monopolies in that both groups seek to obtain the advantage, have no place in a democratic government. When you begin to operate through the bloc system the first thing you know we will block all democratic processes.

Those, my young friends, who believe in monopolies and blocs, do not believe in freedom, nor do they believe in equality. They seek to shackle freedom so the other fellow will not have an equal opportunity.

Now a few words as to our social programs that so many self-sufficient people seem to question.

In order to bring the benefits and blessings of government to all the people our social programs should be extended. Do not be deterred from standing back of our social programs on the false theory that in so doing you are promoting paternalism. While we should all stand firm against a paternalistic government, we should all stand equally as firm for a fair, just, and humane government. Now our social programs, my young friends, are good old democratic programs handed down to us by the founding fathers. They are simply modernized versions of the old democratic pioneer neighborhood spirit of all hands pitching in and helping out the neighbor in need or distress. Democracy, the government of, by and for the people, if given free expression, will ever be administered in such a way as to keep alive that spirit by promoting the welfare and happiness of all the people. Now all thoughtful people know that no particular governmental program works to the advantage of all groups. It takes many programs to bring the benefits and blessings of government to all segments of our people. Some programs will, of necessity, be of advantage to one group and at the same time work a hardship upon another group.

For instance, the tariff laws work to the advantage of the industrial group as it gives them protection against competing goods, wares, and merchandise from other countries, and to the disadvantage of the consuming group, in that it ofttimes forces them to pay higher prices. On the other hand, some of our social programs, such as old-age assistance, aid to the handicapped, housing, education, medical aid, and hospitalization, while extending benefits to the lower-income groups, impose in the way of additional taxes, hardships upon the higher income groups. But in extending the benefits of government to all the people in an effort to promote their welfare and happiness we find in the long run things level off and even up in such a way that the burdens and benefits are pretty well distributed. And this is as it should be, because the benefits and burdens of government, like the snows of heaven, should fall upon all classes alike.

My young friends, if we make democracy work, instead of curtailing our social programs, we should extend them.

Now, there is one thing a democracy cannot countenance and survive, and that thing is autocracy.

The architects of our Republic, as evidenced by the long recitation of abuses and usurpations set forth in their declaration of freedom and independence, knew from sad experience that autocracy at the top spells servitude and vassalism at the bottom. And so, in shaping and forming the fabric of our Republic, they guarded against autocratic power by dividing governmental power into three separate and distinct, though coordinate branches, the executive, the judicial, and the legislative, and placing in the hands of freemen a free ballot to be exercised in a free election. This spreading of power, in order to keep it from becoming autocratic, was no easy task. We had the privileged class then as now that fought the dissemination of power, and who used every effort and artifice to establish a government in this country in which the organized chosen few at the top could control the disorganized many at the bottom. And although some 170 years of this Republic have come and gone, the political descendants of autocracy are still with us, and in some places in control, as witness many of our State, county, and municipal governments where these autocratic leaders, while decrying the organization of farmers and workers, have organized to the nth degree, and wield an authority over the people in their respective States, counties, and municipalities more dangerous and destructive to free government than that of any labor leader that has as yet appeared upon the scene. And yet these State, county, and municipal autocrats, who are so callous of the rights of others, are frequently the loudest in their denunciation of those who have followed their despotic example to impose their will upon others, and like the Pharisees of old, are frequently heard in public places passionately thanking God that they are not like their impish prototypes. Another strange thing about these State, county, and municipal autocrats, they are usually the ones who complain most bitterly against Federal autocracy and union autocracy. Seemingly they think autocracy is all right if they are the autocrats, but a dangerous thing in the hands of others. Now remember this, no man ever has, and no man ever will, reach that state of perfection whereby he is capable of wielding autocratic power.

My young friends, when a few autocrats in any State, in any county, in any municipality, can say who can and who cannot hold judicial, legislative, and executive positions; when a few autocrats in any union can say who can and who cannot work, democracy in that State, in that county, in that municipality, in that union, has been crushed, and to that extent American democracy has been undermined.

Autocracy, the enemy of freedom, and liberty, and equality, has no place in a democracy, and should be suppressed every time it appears in our Government, local, State, or Federal, or in any of our political, labor, industrial, or social organizations. It is the one thing a free people, if they expect to retain their freedom, cannot countenance in any shape, form, or fashion.

And lastly let me briefly discuss with you democracy's ammunition.

A free, untrammeled ballot is democracy's life blood. And only by keeping the life blood pure and freely flowing through the body politic can we hope to keep our democratic institutions functioning in an orderly, democratic way. If democracy fails it will be because the people fail to use the ballot in time to cure the threatening abuses.

Most of our present governmental troubles, if not all, are either directly, or indirectly, traceable to the indifference of our people to use the greatest defense weapon to be found in democracy's armory, the ballot. This is the one weapon that everyone interested in the preservation of democracy should be trained in the use of, because it is the most potent, the most powerful, weapon known to the defenders of freedom, and liberty, and equality. And it is the one weapon the enemies of democracy fear most. And because the enemies of true democracy fear the ballot they have in every conceivable way, tried to circumscribe its use. In some places the circumscribing is attempted through the use of the taxing power, as if one dollar and a half were the proper yardstick by which to measure the qualifications of freemen to participate in the affairs of a free Government. In other places we find the circumscribing devise educational qualifications or complicated registration. Whatever the device, the object is to restrict the electorate, on the theory that the autocrats, ever on the alert, will be able to qualify those upon whom they can depend and see that they are at the polls on election day doing the bidding of their masters.

My young friends, one of the most sickening things to me in connection with the last war was the fact that many of the young men who were considered qualified to fight and die for democracy were not considered qualified, for one whimsical reason or another, to participate through the ballot in the affairs of the Government they were called upon to fight and die for.

The circumscribing of the ballot, I am afraid, has created a general apathy among our people with respect to affairs of government. No true American can look into the situation without becoming alarmed. Here in America, the greatest democracy in the world, and with the best educated and qualified electorate in the world, we find the proportion of citizens who take the trouble to

qualify themselves to vote, and then go ahead and vote, is the lowest among the real democracies. In Canada, for instance, the proportion that vote is twice as large as in America. Of our 140,000,000 population only 35,000,000, or 25 percent, participated in the general election of 1946. Of our 140,000,000 population in 1946 the Bureau of the Census reports that in round numbers 92,000,000 were 21 years of age or older. Hence, out of a potential voting strength of 92,000,000, only 35,000,000, or 38 percent, voted. Polls taken during recent years reveal some alarming facts. For instance, one poll showed that one-third of all citizens with college training did not know the number of years for which a Representative is elected. Other polls showed that in January of last year 31 percent of the voters did not know that elections would be held in November; that only 4 out of 10 voters can name both Senators from their own State; and that only one-half can give the name of the Representative in Congress from their own district. And in a poll taken in January 1945, 2 months after the election, only 68 percent of all voters could name the Vice President who, of course, is no other than our President today.

Now, the autocrats cannot be held entirely responsible for this deplorable state of affairs. Some of the blame should be placed upon our colleges and schools in not placing more emphasis upon affairs of state. While we cannot get politics mixed up with our schools, we can, and should, teach our system of government, stressing the fact that it is a Government of the people, by the people, and for the people, and that the only way the system can be maintained is for the people to keep informed and actively participate, through the ballot, in the affairs of their Government. If democracy is a good thing, and the only way we can protect it is through the ballot, surely there is something lacking in a school system that does not train our boys and girls in the use of the only weapon by which democracy can be defended.

In a few years, my young friends, to you and the other young men and women in America will fall the task of making democracy work. I know you will gladly assume the task and acquit yourselves like true Americans.

If I may be so bold as to pass on to you a few suggestions they would be these: Stick to the basic principles of freedom and equality; ever guard the foundation stones, the home, the church, the school; preserve our system of free enterprise; put an end to monopolies; extend our social programs; get rid of autocracy wherever found; and awaken our people to the responsibilities of government so they will actively participate, through the ballot, in all affairs of state.

Do these things and democracy will work, and work in such a way that it will not only serve the needs of our people here in the land of its birth, but it will be embraced by the other peoples of the world.

Withdrawing Farm Aid

EXTENSION OF REMARKS

OF

HON. MONROE M. REDDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. REDDEN. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Western Carolina Tribune, Hendersonville, N. C., of Thursday, June 12, 1947:

WITHDRAWING FARM AID

It is the habit of the American people to swing to the right and left to extreme extents, one trying to correct or cripple what another has done. With Congress in its endeavor to reduce expenses and relieve people of taxes, one wonders where it will strike next in its economy program.

Noting the severe slashes made in the effort to help those in the low-income brackets of farmers who were without credit, we consulted the records of the Farmers Home Administration of Henderson County to see what this organization had done since it was established a few years ago to help many just off relief to get a better foothold in the matter of producing food for their own families and helping feed a starving world.

Since 1938, 45 farm loans have been made on a low-interest 40-years-to-pay plan. These loans for buying farms, remodeling homes, developing land, etc., totaled $170,014, and although they had 40 years to pay off, 15 have already paid out in full, $104,191 having been repaid; $12,000 has been paid before due and not a single purchaser is in arrears. That's a remarkable record toward rehabilitation. Seven loans have been made to veterans.

Four hundred and seven families since 1935 have borrowed for seeds, fertilizers, farm equipment, livestock, etc., some on a 1-year and some on a 5-year basis.

All these families have had guidance on the farm and guidance and teaching in their homes. One hundred and ninety have repaid in full, are on their feet, and find no longer need to borrow from Uncle Sam, who came to their aid when they seemingly didn't have other credit. Losses have been surprisingly few with only 15 borrowers for seeds, fartilizers, etc., having been classed as uncollectable.

President Truman recommended ninety millions for operating loans but the House has reduced this to sixty millions. He recommended twenty-five millions for farm ownership and repairs to those of low farm incomes and to the veterans, but the House eliminated this altogether. The President's recommendation of thirty million for administrative purposes was cut to eighteen millions. This has resulted in curtailment of personnel to the extent that the home supervisors in North Carolina have been given notice of the discontinuance of their services. The farm supervisors also suffered in this 46-percent reduction in personnel, counties have been consolidated, and the supervisors will become, in large measure, collecting agencies. Transylvania County will be combined with Henderson as a means of introducing retrenchment in expenses.

It seems to be false economy in times like this with underproduction of foodstuffs and prices high to curtail those agencies which work for higher production.

Export of Gasoline to Russia

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. POULSON. Mr. Speaker, do you realize that you here in the East and the Midwest will be rationing gasoline within the very near future?

Do you know that the very gasoline which you will not get is being loaded in 12 Russian tankers in Los Angeles harbor at this moment?

Do you realize that these same 12 tankers are the tankers which Russia obtained from us on the lend-lease program and now refuses to return to us?

Secretary of the Interior Krug has today called an emergency session of eight Cabinet members to deal with this problem.

The administration had better stop worrying about Henry Wallace, the Voice of America, and world trade and start thinking about these United States. We are repeating the same thing we did before the last war, when we shipped steel and oil to Japan. The administration should act now through an Executive order, and Congress should immediately follow through with laws to control these exports.

It is true that Russia is buying on an open market, but that is because we do not have tankers in which to ship the oil to the Gulf and the east coasts, nor do we have a proper distribution of railroad tank cars in which to ship it.

This is another result of the car shortage attributable to the bad management of railroad-car distribution, so ably exposed by the Los Angeles Daily News.

I am inserting in the RECORD the following news item by Mr. Ray Richards, correspondent for the Hearst publications in Washington:

EXPORT OF GASOLINE TO RUSSIA

(By Ray Richards)

WASHINGTON, June 16.—American oil and gasoline by the shipload was about to move to Russia today while the worst petroleum shortage in history gripped the United States.

As a final irony, 12 tankers now beginning to load more than 600,000 barrels of oil and gasoline at Los Angeles harbor for Vladivostok are American-owned lend-lease vessels which Russia has refused to return.

Lack of tankers for coastal transport is one of the main causes for the shortage.

Demand for quick action to stop the shipments to Russia came from Congressmen as Interior Secretary Krug called eight Cabinet members to an emergency session tomorrow to deal with the problem.

Krug forecast restoration of wartime export controls by declaring "the United States had better keep all the oil and gasoline it has."

Seizure of the vessels at Los Angeles was urged by Representative DEWEY SHORT, Missouri Republican, member of the House Armed Services Committee.

The committee has just reported favorably to the House a bill extending for another year the present Export Control Act, which expires July 1.

The committee's chairman, Representative WALTER G. ANDREWS, New York Republican, pointed out that even under the present act the Commerce Department has 2 weeks to restore petroleum export control, suspended by Executive order shortly after the war ended.

"If the emergency is as acute as Secretary Krug says, those west coast ships should not even start loading," ANDREWS said. "Congress is certain to continue the export-control law, if only to conserve our defense materials in these critical times."

Russia has been buying the oil and gasoline on the open California market through its trading company, AMTORG.

In the absence of American restrictions, no one in Washington knew just how much of the precious fuel Russia intends to take from the United States during the annual summer purchasing season.

But last year Russia took 2,500,000 barrels of American fuel, including 150,000 barrels of aviation gasoline.

Since then she has stepped up her efforts for a vast population and economic development in northeast Siberia, near Alaska, where the Russian Army and Black Sea fleet held their first maneuvers in history this spring.

Ships now preparing to load at San Pedro, port of Los Angeles, are the *Emba, Krasnia Armia, Tagenrog, Elbras, Maikop* and *Belgorod*.

All are of 50,000-barrel capacity except the *Tagenrog*, which carries 65,000 barrels.

Six additional tankers of at least equal capacity are reported on the way to load fuel for Siberia.

Some are former Union Oil Co. tankers. All are the property of the United States, merely lent to Russia for the late war, Maritime Commission officials said today.

Moscow has ignored several State Department requests that the ships be returned.

"We have the moral and legal right to seize them," Short said. "The emergency justifies it."

The proposal for reestablishment of petroleum export controls is to be made at tomorrow's meeting of high Government officials by Francis T. McIntyre, Chief of the Commerce Department's Export Control Section.

The White House will be represented by Presidential Adviser John R. Steelman.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. FRANK B. KEEFE
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. KEEFE. Mr. Speaker, the Chilton Times-Journal, a weekly newspaper published at Chilton, Wis., and edited by Mr. William J. McHale, clearly stated the issue with respect to the Taft-Hartley labor bill. Because of the convincing character of this editorial, I believe it should be brought to the attention of the people of America. The editorial follows:

THE LABOR BILL

A compromise labor bill, which received overwhelming majorities in both the Senate and House, is now before President Truman for his acceptance or rejection. And leaders in Washington who follow legislative matters closely won't be surprised if the President vetoes the measure.

To most people on the sidelines, who are not concerned with special favors for either labor or management, a veto of the measure will be regarded as unfortunate. In fact, if the bill were to be considered strictly on its merits—and not on the political repercussions that signing or vetoing it will produce—there can be little doubt that Mr. Truman would sign it. While the top labor leaders are yelling themselves hoarse calling it a slave bill, those same men know that it places them under needed restraints of law in the public interest, even as all the rest of us are under the restraints of law of various kinds.

Few bills of a controversial nature have been passed by Congress in recent years in which the Members of that body were so much in harmony after all the bitter debate. It was passed by the House by a vote of 320 to 79, and in the Senate by 54 to 17. The Republicans in the House cast 217 votes for the bill and 12 against. The Democrats cast 103 votes for it and 66 against. The opposition party, it may be seen from these figures, voted nearly 2 to 1 for it. In the Senate 37 Republicans voted for the bill and two against, while the Democrats divided 17 for and 15 against.

Adding up the figures, it will be found that in both Houses of Congress 374 Members were for the measure and 96 against it. That means that of the total Members of Congress who were recorded on this measure 79½ percent were for the bill. That was how the Congress stood after listening to weeks of bitter debate and outrageous charges and threats by the labor moguls.

Does anyone in his senses believe that 79½ percent of the Members of Congress, made up of opposing parties, would clamp down the yoke of a slave law on their fellow countrymen?

The compromise labor law takes away no legitimate right from laboring men. It does place responsibility on them, as all who exercise power should expect to bear corresponding responsibility. The restraints which the bill imposes on labor leaders are intended to keep them from excesses, in the interest of the public welfare. Labor continues to have the right to bargain collectively and to strike, except when a strike would paralyze the Nation. Certainly, such strikes cannot be permitted any more than civil war can be permitted.

The labor bill was written to curb abuses and the boys who rode high, wide, and handsome during the years of labor license have themselves to blame for it. By failure to sign this bill adopted by almost four-fifths of the elected representatives of the people, President Truman will render a disservice to his country.

Will Truman Follow the Congress or the Communists on the Labor Bill?

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. McDONOUGH. Mr. Speaker, before midnight on Friday, June 20, President Truman must decide to either sign or allow the labor bill to become law or veto it. If he signs it, he will reveal the courage and determination that many thousands throughout the Nation believe he possesses. He will place himself in the same class with Ramadier, Premier of France, who successfully defied and resisted the Communist labor threat in France, when such action took more courage than it will take to defy them in this country.

If he allows it to become law without his signature, he will be taking passive action, with the hope of giving the impression that he couldn't do anything else under the circumstances, with several Nation-wide strikes facing him.

If he vetoes it, and this is the big question, he will be capitulating to the demands and threats of the Communist Party and to the warnings and appeals of autocratic and dominating labor leaders, and against the best interests of the rank and file of labor union members and the millions of wage earners in the Nation.

William Z. Foster, chairman of the Communist Party in the United States of America, demanded that the President veto the labor bill in a recent radio broadcast in New York City. He practically said, "Veto the bill or else," and he further demanded that Truman, as head of the Democratic Party, mobilize his party to sustain his veto.

The strange anomaly of Foster's demand upon the President is the following statement from the minority report of the Education and Labor Committee, which reads as follows:

This bill is aimed at the heart of American industrial democracy. If it is permitted to hit that target, the working people of this country will not soon recover their status as free men. The Fascists and Communists learned early that a strong trade-union movement was inconsistent with their objectives and an obstacle to the achievement of those objectives. As a means of securing power, the Fascists and the Communists destroyed the labor movement in other countries, because they recognized that trade-unions were a citadel of democracy which they must batter down in order to achieve their evil purposes.

If the bill will give the Communists the weapons to destroy the labor unions, why should William Foster, the head of the Communist Party, be opposed to it?

Will the President of the United States yield to the Communists or will he assume the dignity and authority of his office and support the American wage earner and protect the general welfare of the Nation?

We shall soon know the answer.

Separation of Church and State

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 17, 1947

Mr. ARNOLD. Mr. Speaker, increased interest in national affairs has given impetus to expression on the part of individuals, and groups, as never before, to exert influence for and against certain legislation.

The national assembly of the Presbyterian Church, the other day, endorsed the Wagner-Ellender-Taft bill, known as the W-E-T bill.

Last night's Evening Star contained an article by David Lawrence criticizing a Catholic organization for attempting to meddle with labor legislation.

Such efforts on the part of religious organizations are an encroachment upon the principle established by our forefathers, and on which this Nation was founded, that of the complete separation of church and state.

Following is the article by David Lawrence, referred to:

CATHOLIC UNIT'S STAND ON LABOR BILL VIEWED AS CHURCH IN POLITICS

(By David Lawrence)

An amazing statement has just been issued by the social action department of the National Catholic Welfare Conference—amazing because it is a partisan attack on the labor relations bill now before President Truman for approval or disapproval.

To mix the church with politics in America has long been looked upon with disfavor by laymen of all denominations. For an influential national organization of Catholics to issue a statement which, in effect, applies pressure on the President to veto the pending labor bill gives the impression that all Catholics perhaps think the same way about it or that at least one official agency of the Catholic Church in America endorses the views expressed by a Protestant group—the social research department of the Federal Council of the Churches of Christ in America—because it appeared to be going beyond the application of moral influence to economic questions. Now a Catholic agency comes in for criticism because the principle in both cases is the same. Religious groups which involve themselves in partisan political and economic issues serve only to weaken the rightful influence of the churches on individuals.

CONFIDENCE HELD WEAKENED

When a statement is made, for instance, by a church group that taxes the credulity of observers, it necessarily tends to weaken confidence in such a church group's impartiality or objectivity. Thus the Catholic social action department says:

"The Taft-Hartley bill does little or nothing to encourage labor-management cooperation. On the contrary it approaches the complicated problem from a narrow and excessively legalistic point of view."

Who is to say that treating management and unions alike will not bring labor-management cooperation? Anyone who is familiar with the text of the proposed law knows, moreover, that it is no more legalistic than the original Wagner Act, whose phrases have been the basis of thousands of rulings and decisions already in which hair-splitting equivocal rulings have been made by the Labor Board affecting the employer.

The social action department did not protest against the enactment of the original Wagner law and certainly has not called for its repeal or revision so that employers and unions would be treated alike. The statement just issued goes further in denouncing the present bill than most critics outside the labor-union movement have gone. Indeed, it reads as if it were prepared by a labor-union leader and does not give any impression of awareness of the abuses that have led up to the passage by both Houses of Congress of a law to correct such abuses.

BARGAINING ARGUMENT IS HIT

"The bill," says the statement, "is an open invitation to management to have recourse to the courts and to the Labor Board at almost every turn and thus to sidetrack or evade the normal processes of collective bargaining."

Such a claim is wholly unrealistic because a careful reading of the bill will show that, unlike the Wagner Act, it not only puts on employers an obligation to bargain collectively but spells out the meaning of that obligation.

But in any event it is not the function of a church unit at a national headquarters, using the name "Catholic," to enter into a detailed discussion of the merits of highly technical legal provisions and to urge, in effect, on the President of the United States that the Catholic voters share or might share these views and that hence Mr. Truman might better heed the advice given or perhaps lose some of the Catholic votes.

This sort of statement by the Catholic group is an interjection into politics which thoughtful Catholic leaders may not wish to approve. A repudiation of the statement issued by the social action department would seem to be called for or at least the definition of a limited authority behind the issuance of the highly controversial pronouncement.

The province of all the churches of all denominations is to exert an influence for individual honesty and self-restraint endeavoring to make laymen responsive to spiritual interest so that they themselves will be fair and objective both in the writing of laws and in taking rightful political action.

There is not the slightest objection to the expression of views by individual clergymen on public questions when they are plainly acting as individual citizens. But for any church unit, functioning as an institution, to mix in as a pressure group on specific laws in the economic or political field is to involve America in unfortunate controversies where the influence of the churches will be weakened instead of strengthened.

Veto of Tax-Reduction Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. KEATING. Mr. Speaker, in his veto of the tax-reduction bill, President Truman took a step with but a single parallel in legislative history. The only other Chief Executive who saw fit thus to thwart the will of Congress regarding a tax measure was President Roosevelt, who in 1943 vetoed the revenue bill of 1943, giving rise to the resignation of the majority leader of the Senate and his now famous peroration of February 23, 1944, wherein he exhorted his colleagues in these words:

Let me say in conclusion that, if the Congress of the United States has any self-respect yet left, it will override the veto of the President and enact this tax bill into law, his objections to the contrary notwithstanding.

It is noteworthy that the present Chief Executive joined with his colleague, the majority leader, in overriding the President's veto by the overwhelming vote of 72 to 14.

As a member of the Committee on the Judiciary, I have been interested in making some study of the history and use of the veto, which has now had its latest expression in the action of the President yesterday, attempting to frustrate the will of the Congress and the clearly expressed desires of the vast bulk of harassed and oppressed taxpayers of the Nation.

The framers of our Constitution in their convention of 1787 debated long and vigorously the question whether any power should be vested in the executive branch to overrule the legislative branch. Out of the political persecution which our forefathers had suffered in the Old World came the doctrine of the separation of powers of the three branches of government—legislative, executive, and judiciary. It was only as a gesture of appeasement and against the arguments of such stalwarts as Benjamin Franklin, Roger Sherman, and Pierce Butler that the so-called Williamson Compromise was reluctantly accepted 5 days before the session concluded, which is now embodied in article I, section 7, of the Constitution.

The chief argument of the advocates of the veto power was that a similar executive veto exercisable by the King of England had not been used at all in 4 years. Thus they have concluded that in the future it would be used by the executive, at most, sparingly.

The best evidence of this interpretation arises from the fact that eight Presidents—John Adams, Thomas Jefferson, John Quincy Adams, Martin Van Buren, William Henry Harrison, Zachary Taylor, Millard Fillmore, and James A. Garfield—never employed either the regular or the pocket veto. Up to the final session of the Seventy-eighth Congress there had been 1,759 vetoes. Of these, President Roosevelt contributed 629, or more than 35 percent.

During the last half century, to which my study has been devoted, about 90 percent of the bills vetoed have been private bills for the relief of individuals, corporations, or localities. Many of these no doubt furnished desirable instances of a proper check on possible legislative excesses.

It has only been in the last 15 years that the veto may be said to have blossomed into full flower. Often now it only arouses passing notice when an Executive thus employs his high office to defeat the expressed will of the majority. I do not say that he should never do that. I would not remove the Presidential power of veto from our Constitution. I do, however, contend that its use as envisioned by the framers of our Constitution has deteriorated in many instances into abuse. No more pointed illustrations could be presented than the action taken by the late President Roosevelt on the Revenue Act of 1943 and now, by our present Chief Executive with relation to the tax-reduction bill which was approved so overwhelmingly in both of the legislative bodies.

The encroachment of the judiciary upon legislative functions has been the subject of much unfavorable comment. Let us hope that it will not be necessary for us to suffer the persecutions which gave rise to the origin of the doctrine of separation of powers to bring us to the realization that this doctrine is sound and in the best interests of good government. Let us say, in the words of Senator BARKLEY, still echoing through these corridors, "If the Congress of the United States has any self-respect yet left, override the veto of the President and enact this tax bill into law, his objections to the contrary notwithstanding."

Flag Day Address

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me at Clinton, Mass., on June 15, 1947:

Brothers, fellow Americans, and friends, I am highly honored today to attend these most appropriate exercises which our Clinton Lodge of the Benevolent and Protective

Order of Elks has arranged to celebrate Flag Day. Our membership and community as well as the State and Nation are still suffering poignant grief and sorrow over the loss of our great veteran patriot statesman, Brother David I. Walsh, whose great contributions to the country, whose sterling patriotism and unwavering Americanism during a lifetime of labor for the common people represented and symbolized the highest principles and noblest ideals which our sacred national anthem stands for and which Elkdom stands for. We may well dedicate ourselves today to the high purpose of seeking in our own lives and conduct to exemplify his devoted service to God and country, and to be inspired by the fine example which he set to serve our America with renewed steadfastness and zeal.

This is the one hundred and seventieth birthday of the American flag which was formally adopted by the Continental Congress June 14, 1777, at the very time when that gallant band of early American founders and patriots was fighting to establish our glorious Republic.

The Stars and Stripes, the symbol of our national strength and unity, the symbol of freedom and justice for all, is to us the most beautiful, the finest, and the noblest flag on earth. Throughout a long history of shifting vicissitudes, through gladness and sorrow, through fortune and misfortune, through bitter sacrifice and triumphant joy, through the darkness of depression and through the brightness of prosperity and happiness, in war and in peace, that flag has always inspired us and has never known lasting defeat.

It has waved over the ramparts at Valley Forge, from the hardy topmasts of John Paul Jones, John Barry, and Admiral Dewey, over the hills of Cuba and tropical islands, over the trees of the Argonne and the trenches of Belleau Woods. It has been planted in the soil of Bataan, where it now waves again in all its glory. It has roared through the skyways and over the oceans of all the world, on the fleeting wings of thousands of aircraft bearing our brave heroes to battle for freedom's cause. It has flown over our great naval fleets, over our heroic marines and gallant soldiers who gained so many glorious victories for our cause.

Yes, my friends; our flag has been planted on the stony crests at Iwo Jima to inspire our boys to new deeds of bravery, seldom equaled, and certainly never excelled, in the history of any people. Wherever that flag has gone, wherever it is flown, wherever it lifts up the spirit of the weak and the oppressed, wherever it awakens unsurpassed gallantry, our hearts and our hopes, our aspirations and our zeal for victory and enduring peace have followed it.

Red for the dauntless courage of our sons and our people, blue for their loyalty to our institutions, and white for the unsullied purity of our high purpose to keep our country free from the stains of foreign aggression and domestic corruption, Old Glory has in truth symbolized, as it has always sought to protect, "life, liberty, and the pursuit of happiness."

The flag has a very deep meaning to all true Americans because they know that for them it stands for and represents great political ideals in this sorry world, ideals which best recognize and secure the worth and dignity of the individual citizen. Under our flag, sanctified by the blood, the devotion and the sacrifices of so many of our country men and women of this and every other generation since it was first flung to the breeze of heaven, every person in this great land has received a far greater measure of freedom and equal opportunity under the law than has ever been enjoyed by the people of any nation. Under our flag, and in the spirit of those who died for it, just as in this great American organization, there are no distinctions of class, color or creed, and we will not tolerate such distinctions in this country of free individual citizens.

Remember, my friends, we are citizens—each possessed in his own right to all the benefits and blessings made possible by our unequaled Constitution. We are not subjects or vassals of any tyrant. We are not puppets of any totalitarian dictator who would crush the individuality of human beings under the heel of ruthless domination. We are not the slaves of alien ideologies who are herded like cattle into the indistinguishable mass of the superstate where people have no rights or property they can truly call their own, not even the right to speak their own minds, not even the meager clothes they wear on their backs. We are free Americans acknowledged to possess souls, and beings, and individualities of our own. Under our Government and our way of life, so long as we obey the law, we are free to aspire to and reach, if we can by use of our own abilities and talents, the highest goals of human achievement permitted to any other citizen of the land.

The American flag is the symbol of this freedom. The American way of life is the way of democracy and justice under law for all the people and we intend to preserve that freedom and that way of life in the name of all those who through the ages have laid down their lives, as so many of our boys so recently have done, in order that America may live to confer these matchless blessings upon our posterity and the world.

On this day of commemoration, therefore, as we solemnly repledge our allegiance to our glorious national emblem, let us rededicate ourselves to greater, more determined service, if that be possible, to the noble cause it represents. Let us reconsecrate our lives, our fortunes, and our sacred honor, as others have done before, to the protection and furtherance of that democracy which has sustained our people in contentment and happiness for so many years. Let this stirring occasion be a time when we publicly redeclare our firm and unflinching faith in our American institutions, our confidence in our form of government and our free economic system under sound forward-looking leaders to solve the difficult problems of the future, as America has always sought to solve its problems, with just consideration of each and every group of our people.

Let us keep in mind that in the past our Nation has met and conquered apparently insuperable obstacles and that we can and will meet and overcome them again.

The most vital thing for the American people to remember in this challenging postwar period is that we must never lose faith in ourselves and our precious institutions. Gigantic as they are and will be, the problems of the future, financial, social, economic, and political must be approached with reliance in the fundamental principles of American democracy.

We should never forget the sacrifices of the millions of our young men who have given of their youth, strength, and indomitable spirit to save the country in this desperate crisis. As long as they and their near and dear ones shall live, we must make sure that our Government in behalf of all the American people will discharge in fullest measure the great debt we owe them which truly cannot be measured in material values.

Secondly, let us do our utmost to make sure that the peace and freedom they fought and died for may be achieved through the cooperation of all nations of good faith and good will so that the curse of war may be banished from the earth.

Thirdly, let us be certain at all times that our Nation is adequately protected not only as against military aggression but also as against the inroads and penetration of those most unwelcome and undesirable ideas and forms of political and economic dictatorships that in recent years have swept over Europe and Asia. We must make democracy a living, vital force that will abundantly serve all the needs of our people regardless of section, class, color, creed, or station in life.

Fourthly, let us be determined that no subversive groups here or abroad will ever be allowed to tear down the American flag and raise in its stead the international banner of rebellion, revolution, and class warfare. Let me especially remind those of the young generation that has borne so gallantly the heaviest burdens of the war and who have to bear with equal, if a different kind of, courage the very heavy burdens of post-war America, that eternal vigilance is the price of liberty. Watch it carefully, guard it continuously, cherish it dearly, and preserve it at any cost. Because the lessons of history plainly show that when personal liberty is lost, when freedom is crushed, when despotism and tryranny come, that that day will mark the end of our American democracy—the end of representative, constitutional government.

Americans all—let us go forward to fulfill our great destiny of freedom and justice. With Old Glory flying as high and as proudly as ever, loyal and united in spirit and purpose, let us face the problems of the present and future with confidence and courage. Let us vow to preserve and protect our national emblem and all it stands for, "one nation indivisible with liberty and justice for all."

No Tax Relief

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 18 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Tax Relief," published in the Pittsburgh Post-Gazette of June 17, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO TAX RELIEF

President Truman's veto of the tax bill dashes hope of an income-tax reduction at this session of Congress. The veto could be overridden in the House, which passed the final bill 220 to 99, but the Senate never mustered a two-thirds vote in favor of the bill and can be expected to sustain the veto.

The veto comes as no surprise. It is wholly consistent with the position Mr. Truman took in his state of the Union and budget messages in January.

Now, as then, the President feels that in a time of high employment and national income, and in the face of great expenditures at home and abroad, tax revenues should be sustained at levels to meet current expenses and leave a surplus for debt retirement.

Certainly the situation has not changed for the better since January. To meet the challenge of communism, Mr. Truman has advocated expensive defense measures at home and has called for funds to implement foreign policy abroad.

Committed to debt retirement and to heavy spending in the interest of national security, Mr. Truman could not consistently approve a reduction of $3,840,000,000 in national revenue.

Failure to obtain a tax reduction at this session must rest largely with Congress

itself. It never set the Nation's fiscal house in order as a proper foundation for tax reduction. As the New Yorker magazine put it this week, Congress believes "that Uncle Sam should reduce his income and then try to live down to it."

Without showing how the President's budget could be cut even as much as $4,000,000,000 Congress plunged ahead with a tax reduction. Under the circumstances, Mr. Truman has a strong case in defense of a veto.

As for the public, disappointment in the lower income brackets need not be great. Republican Representative ENGEL, of Michigan, has charged that the bill would save most taxpayers a negligible sum each week (it has been estimated as little as 50 cents) while it gives a man who made the biggest profits during the war the biggest tax relief.

This situation led Mr. Truman to characterize the bill as "ill-apportioned." He also feels that it is risky and in violation of sound tax policy.

We can only look forward now to what the President calls "the right kind of tax reduction at the right time." The cynical may surmise that this will come during 1948, an election year.

Whenever it comes, it should be based upon what the President calls "sound and carefully related fiscal and economic policy." The sooner such a policy is evolved, the sooner we can expect tax relief.

Meanwhile, the President runs considerable political risk in a veto. If things are going well next year and he calls for a tax reduction, the public will ask why he didn't approve the one voted by a Republican Congress this year. But if the economic and foreign situations remain unsettled, Mr. Truman may be hailed as a prophet.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 18 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial regarding tax reduction from the Washington News of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOP CHOICE: CUT TAXES FOR NEXT YEAR, OR PLAY POLITICS

Republicans in Congress can give the people a tax cut, effective January 1 next—if they want to.

Or they can let the President's veto stand, do nothing but talk about it, and thereby keep alive an issue.

No doubt about it, it's a good issue—to get the votes. The Republicans tried to give a tax cut to 49,000,000 income taxpayers, effective July 1. The President vetoed it, and the House sustained the veto. To voters who read on the run, and haven't followed the nuances of what has happened, it looks as though the Republicans are on the side of the taxpayer and the Democrats against.

But the full truth may spread. It will show that the Republicans, by their blunders and politics-playing strategy, are largely responsible for this impasse. They made their first big mistake by failing to do their duty under the reorganization law, which required Congress, within 3 weeks after it convened, to fix an over-all ceiling on Government spending for the next fiscal year. The Republicans haven't yet fixed that ceiling, and they control both Houses of Congress. They are still flouting the law, still shirking their responsibility.

Their second mistake was in trying to make the tax cut retroactive to January 1 last. Their third was in delaying action 5 months and grudgingly compromising—too late—on the July 1 date. All the time there were plenty of Democrats who would have gone along, had the GOP been willing to make the tax cut effective at the start of the next calendar year. The Republicans chose instead to try to embarrass the President. To those who know the score, it would appear the Republicans themselves cannot be unembarrassed by what has happened.

It is still not too late to end tax uncertainty and assure taxpayers that their burdens next year will be lower. If congressional leaders will bring out the same tax bill, with only one change, to make the effective date January 1 next, it would attract much Democratic support and probably would be passed. Our guess is that the President would sign the bill. His principal objection to the vetoed bill—and a good one, too—was that it did not leave enough surplus for retirement of public debt. That objection would not apply to the new bill. In the unlikely event that a vote to override became necessary, plenty of Democrats would help the Republicans do the job.

Henry Wallace and the Southern Conference for Human Welfare

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 18 (legislative day of Monday, April 21), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very worthwhile editorial entitled "Henry and the SCHW," published in the Nashville Banner of June 13, 1947. I recommend its careful reading.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HENRY AND THE SCHW

Both Henry Wallace and the Southern Conference for Human Welfare have been best known by the company they keep. Among the company they keep is that of each other; hardly a recommendation for either. And in addition there are the wayside companionships to which each gravitates, always leftwardly, as moths to the irresistible candle flame.

So Monday evening again they are getting together, at Washington, the culmination of Wallace's barnstorming tour. It's the nearest approach to his Madison Square Garden appearances, under similar sponsorship, wherein the Reds and the pinks poured on coal to make the flame as fascinating as possible if not as hot as possible for any visiting moths. Only this time, the sponsor being the Southern Conference for Human Welfare, one anticipates that it will have something or other to do with the South.

As neither Wallace nor the SCHW enjoys any particular popularity in the South, a lack of esteem right noticeable at primary and election time; they may simply indulge in mutual commiserations and a lavish exchange of admiration. Henry may impart to them some special benediction brought from colleagues afar, or open a large keg of intellectual nails to bite.

On the other hand, he may stick to his text, and read his customary lecture about the horrible reactionaries who won't let America be loved into peace by that magnificent and pious peace-monger, Moscow.

"Dr." Clark Foreman says the SCHW is "misunderstood." The SCHW says Wallace is "misunderstood." Wallace says the Russians are "misunderstood."

Strange, isn't it, how all these "misunderstood" people get together? Can it be that "misunderstanding" is all they have in common?

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by David Lawrence, taken from the Washington Evening Star of June 17, 1947:

TAX BILL VETO TERMED ERROR THAT MAY COST TRUMAN 1948 VICTORY

(By David Lawrence)

President Truman's veto of the tax bill may cost him the 1948 election. He mistakenly thought, no doubt, that he would gain politically by the veto.

Today the Republicans are jubilant, for they have been handed on a platter an issue that can win for them no matter who their candidate may be.

What the President said to 46,000,000 taxpayers was that they couldn't have a tax reduction because he wanted to fix the tax rates and didn't recognize the right of a majority in Congress to do so.

In all American history no tax bill passed by both Houses has ever failed to become law. Only one has been vetoed heretofore, but it was overridden by Congress. If the pending tax bill is killed because it cannot muster two-thirds in both Houses, it will bring a tremendous change in legislative practice.

The arbitrary use of the veto to defeat the will of a majority in Congress will lead to the arbitrary use of the rider attached to other necessary legislation. The majority would be well justified in attaching the tax bill to any of the current appropriation bills, if only to assert the historic right of Congress to write legislation that raises revenues and fixes tax rates.

COMMUNISTIC ARGUMENT SEEN

When Mr. Truman tells the taxpayers who were to be granted a 30-percent reduction that they can't have it because someone with a higher income is getting a 10-percent reduction, he is misjudging human nature if he thinks this will please that vast number of taxpayers in the lower brackets to whom every dollar of saving is consequential and who do not feel they should be punished because Mr. Truman wants to play the demagogue. The President is, in effect, arguing for the communistic doctrine which seeks to level all incomes irrespective of brains or thrift.

The President says that he vetoed the bill because it is "the wrong kind of tax reduction, at the wrong time." This phrase will become famous in political history as the

prize boner of the age. For it implies plainly that the wrong kind of tax reduction will be all right at the right time—presumably next year when the Presidential campaign is in the offing and when presumably Mr. Truman can strive for political credit even for the wrong kind of tax reduction.

But next year the Congress will pass the same kind of tax bill it did this year except that it will be even more unpalatable for Mr. Truman to sign, and when he signs it, he will make his message of this week look rather ridiculous.

DAMAGE MAY BE DELAYED

The damage Mr. Truman did in vetoing the tax bill will not be apparent right away. It will be apparent in the recession that could conceivably be ushered in as a consequence of his blunder, and it would be felt throughout the world.

For Mr. Truman, by his action this week, may have killed all chance of helping the world-trade situation and European rehabilitation. Export trade that has been booming may decline severely. Then there would surely be a recession. The Republicans, so many of whom don't want to vote more billions to Europe, now have been given a very strong excuse—Mr. Truman's own words. For the President said:

"With the present huge public debt, it is of first importance that every effort now be made to reduce that debt as much as possible."

This means that debt reduction is, in the President's opinion, paramount. There are plenty of Republicans who will take him at his word. They will not vote billions for Europe while a Democratic President denies tax relief to the American people.

MESSAGE CALLED BOOMERANG

Unfortunately the Truman message, while intended to play politics in order to gain support from the left wing, really will prove a boomerang with the average man, who will not understand why the $40 or $50 savings he was to get are now being denied him. To lose a 30-percent tax reduction is more serious in the lower brackets than to forego a 10-percent reduction in the higher brackets.

There is a surplus of more than a billion dollars coming on June 30 and a surplus of at least eight billions is indicated for next year—yet Mr. Truman is denying the taxpayers any relief from wartime rates.

The Republicans ought not to adjourn without passing another tax bill—this one to be effective January 1, 1948, and giving an even greater reduction in rates to individuals in the lower brackets. If Congress surrenders to the Executive its authority to fix tax rates, the legislative branch of the Government would be surrendering also the independence it has exercised for more than 160 years.

When a River's Floods Are Counted Up

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 18 (legislative day of Monday, April 21), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "When a River's Floods Are Counted Up," published in the Arkansas Gazette of June 12, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHEN A RIVER'S FLOODS ARE COUNTED UP

At the hearing on flood-control funds Representative MILLS, of Arkansas, told the House Appropriations Committee there had been 143 floods at Batesville, Newport, and Clarendon between 1921 and 1943. Only 40 floods would have come during this period if dams and other projects in the White River comprehensive program had been finished. He urges systematic work, bringing this program to completion.

The White River drainage basin is in many respects similar to what the Tennessee Valley was before the TVA was established. Eroded hills, land subject to overflow, restricted agriculture, comparatively little industry, can be seen in the upland basin of the White. There were corresponding conditions in the Tennessee River highland until the Federal Government invested hundreds of millions of dollars in regional improvement.

Representative MILLS asks that flood control funds be considered as capital investment. Greater wealth can be created by mastering the White River and its main tributaries. Many of the dams in the plan will generate electric power as well as regulate stream flow. The power should help attract industries. Agricultural yields in the fertile lower valley can be increased when the dams upstream prevent the river from raging. High production of raw materials would provide an incentive for processing within the area.

Every approved project in the comprehensive program is economically feasible. The benefits would exceed costs, as shown in preliminary studies. In time higher revenue would go into the Federal Treasury as taxes from the region. Missouri and Arkansas would be obtaining greater returns from an area that is producing far below its potential.

The core of the economic problems of the White River country is complete mastery of the stream system.

The Lincoln Reader

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks, I include therein an editorial from the West Union Record, West Union, W. Va., entitled "The Lincoln Reader."

The editor, Mr. Walter Stuart, calls attention to the fact that though this book is made up of quotations from 65 authors, it is so skillfully blended as to give an uninterrupted story of the life of this great American. His influence has been so great on our country that we would all do well occasionally to review the events of his time and his life.

THE LINCOLN READER

The best one-volume life of Lincoln that has ever been published is the recent book-of-the-month selection, The Lincoln Reader. It contains 179 selections from 65 authors and was compiled and edited by Paul M. Angle, of Springfield, Ill., who is generally considered the greatest living authority on Lincoln.

More has been written about Lincoln than any other man with the possible exception of Napoleon. The Lincoln Reader is really the cream of all Lincolniana. The author has taken the best of each of the works on Lincoln and has made a book that is incomparably the best one-volume edition of Lincoln that has ever been published. We really believe that the average reader will learn more about Lincoln by reading author Angle's one-volume edition than he would by reading any of the editions composed of from two to six or more large volumes.

The author quotes what he considers the very best authority on each outstanding incident in Lincoln's life, and no man living is more familiar with all the works on Lincoln than is author Angle, if all the things which have been said about him are true.

Author Angle has certainly done a fine job of selecting material for his book. One reads the book without feeling that there is any break in the continuity of the story of Lincoln's life although the volume is made up of selections from the writings of 65 authors. It carries the story of Lincoln's life right through from his birth to his death just as if the story had been written by one author instead of 65.

The Lincoln Reader is one of the finest and most interesting books we have ever read. It is a kind of book that grips the reader's interest in such a way that he does not want to lay it aside for a minute after he begins to read it. We have read several Lincoln books, but we like Paul Angle's The Lincoln Reader the best of all. One gets from it every essential fact about the life of Lincoln that one should care to know. We do not believe that the ponderous works of Albert J. Beveridge and Carl Sandburg contain any more of the important or worth-while facts of Lincoln's life than does Paul Angle's one volume of fewer than 600 pages.

More books have been written about Lincoln than have been written about any other American, and it is very likely that more books will still be written about him. The historians of a hundred years from now may have a much different perspective of Lincoln than that of the historians of today. Probably some new material about Lincoln will soon be available. Lincoln's son, the late Robert T. Lincoln, had a great many of his father's papers and documents which he would never let anyone see or examine and which, under the terms of his will, were not to be revealed to the public until so many years after his death. The time specified to elapse after Robert Lincoln's death before the papers should be available for public inspection is, we understand, about run out. Those papers may contain some new Lincoln material, but it is hardly probable that they contain much which has not already been given to the public for the life of no other American has been studied and investigated so exhaustively as has the life of Lincoln.

Well-written books on the life of Abraham Lincoln will always be eagerly read. The readers of the present generation no doubt find the story of his life as interesting as did the readers of preceding generations. And the readers of the next generation will find his story not less interesting than do the readers of today.

But we doubt whether there will ever be published another one-volume book on Lincoln that will be any better than Paul Angle's The Lincoln Reader. We do not see how any improvement could be made in the contents of the Angle book.

No doubt the most exhaustive study of the life of Lincoln is represented in Carl Sandburg's work consisting of six volumes containing something like 3,000 pages. The work that the late Senator Beveridge planned would have surpassed Sandburg's opus had he lived to complete it. He finished four large volumes, but he got only as far as the Lincoln-Douglas debates when death ended his labors.

Explaining America Abroad

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of June 17, 1947:

EXPLAINING AMERICA ABROAD

Despite Secretary Marshall's earnest appeal, the State Department's cultural and informational program is still in danger of being largely suppressed. Its troubles began when the House eliminated the entire $34,000,000 appropriation for this purpose on the ground that the activities had not been authorized. To eliminate this objection Representative MUNDT, of South Dakota, introduced an enabling bill, which with some amendments was unanimously approved by the House Foreign Affairs Committee on May 21. This bill, if passed, would naturally be followed by an appropriation, though perhaps a smaller one than the State Department asked for. Its consideration has been repeatedly postponed and it has not yet passed the House. Meanwhile Senator BALL, of Minnesota, has asserted that the Senate will cut to $6,000,000 the sum of about $19,000,000 asked, mainly for the radio programs known as the Voice of America. Such a cut would keep us out of Russia, where otherwise no American voice will be heard.

If the Senate goes this far we cannot be hopeful about the rest of the cultural and informational program—the highly important interchange of students, trainees, teachers, guest instructors, professors, and leaders in fields of specialized knowledge or skill; the interchange and translation of books and periodicals; the maintenance of American libraries abroad and assistance to schools, libraries, and community centers in other countries. Hope for favorable action on the Mundt bill, in both House and Senate, and for an adequate appropriation may rest on a dawning perception that if the Marshall plan for systematizing our aid to foreign countries is to succeed we shall have to continue to explain ourselves to people in those countries. We might save a few millions by not explaining ourselves and in so doing vitiate the results of an investment of billions.

Exchange Students

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 18 (legislative day of Monday, April 21), 1947

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Exchange Students," published in the Hartford (Conn.) Courant of June 13, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXCHANGE STUDENTS

One result of the Second World War is the great flood of students that are now coming to the United States from foreign countries. There are more than 18,000 of them in American schools, and more are coming at the rate of 1,000 a month. Still others—some estimates run to six figures—are clamoring to get in. The United States is now the educational center of the world. These students are paying their own way but there are many more important things than money involved in this situation, which is only a prelude to a still more ambitious educational scheme that will involve extensive student exchanges between the United States and other countries.

One has only to think of the wide influence exerted by Rhodes scholars in the United States to realize that students possessing qualities of leadership can become ambassadors of good will when they return to their native country after receiving their education here. Another example is the long practice of sending outstanding Chinese students to this country. These have returned to their native land and much of China's good will toward us can be traced to them.

Since 1902 about 2,000 foreign students, 110 of them Americans, have studied at Oxford University. When the Fulbright Act becomes operative the two-way exchange of students, financed by credits acquired by the sale of surplus property, will be set in motion and will dwarf all previous programs in size. Although many of these young men will be interested only in the technological aspects of our culture, a protracted visit here is bound to affect their attitude toward us in one way or another. For example the Indian government, in preparation for its independence, is sending 2,000 scholars annually to the United States.

Nearer home, the Brazilian Government is sending young manual-training students to Connecticut to study our trade-school methods. Others will study government administration. The Fulbright Act provides for the payment of transportation, tuition, and maintenance of American students and teachers attending foreign schools. These scholarships will be administered by a ten-member board composed of representatives of cultural, educational, student, and war-veteran groups. It is an ambitious program, and may be more effective in the long run in securing permanent peace than any other means. It has been said that it is easy to hate people you do not know. That is why it is a good thing for these thousands of students, many of whom will emerge as leaders in their own countries, to know us. That is why it is good for American students to study abroad. Some of the two-way suspicion that exists between the United States and the Soviet Republic would be alleviated if a similar free flow of students exitsed between the two countries.

Flag Day Address

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include an address I delivered before the Benevolent and Protective Order of Elks, Lodge 243, of Worcester, Mass., on the occasion of their annual Flag Day ceremony, June 14, 1947:

Your request to take part in this annual Flag Day service was not regarded as an invitation, but a real honor.

This June 14 marks the one hundred and seventieth anniversary of that historic day in 1777 that the flag of 13 alternate stripes of red and white with a blue field of 13 stars was, by decree of Congress, made the emblem of the new, young Republic, but with the passing of those 170 years we now find ourselves the giant Nation of the world.

Literally looked upon the flag is but a piece of cloth with certain markings or insignia upon it, but actually it represents the dreams and labors of millions of people of the different nations throughout the world and the true significance and meaning of the flag has varied from generation to generation depending upon the thinking of the people in their particular periods.

It is most appropriate that on June 14 of each year—Flag Day—we recall the history of our "Old Glory"; recalling to our minds the great struggles of our forefathers; remembering as we look at our flag, it is red because of human sacrifice; it is blue because of their true loyalty; and they wove into it the white to indicate the purity and sincerity of their motives. The stars are there because of the great heartfelt hope of a greater, holier and nobler America.

The Stars and Stripes is the crystallized ambitions and fears of our heritage; the symbol of our national gloom and glory. Those who first made it lived for it and died for it, and are among our Nation's greatest. They have gone into the silence of history, but by their example of devotion and courage in their lives they ask us to be the flag makers of today and tomorrow. Make its red a little deeper by our sacrifices; its blue a little more like the blue of heaven by our faithfulness; its whiteness a real purity by our continued Christian standards; its stars a little brighter by our devotion to their highest hopes.

Under our flag, the brave and true have served and sacrificed, fought and died. It has ever been as a pillar of smoke by day and a flame by night to the armies of freedom. It was consecrated by the labor and wisdom of Washington and his heroic soldiers; it was held aloft by Lincoln and his armies of liberation that freed the slave and preserved the Union. It fluttered under the shot and shell of the titanic First World War; and during the recent world conflagration it was borne in triumph from the fires at Normandy beaches to the blood-drenched hill at Iwo Jima.

It has now become to all the world and its people the supreme symbol of free government and a free people, and upon us today, in the course of destiny, divine providence has placed a burden of world leadership. In accepting that stern trust, we must fully realize that flag waving is folly if it becomes a substitute for practical patriotism. It is treason when it is made an excuse to cover up weakness and unpreparedness. Flag flapping, shouting, cheers, and unstable emotions do not constitute patriotism, and will not suffice in this crisis.

The challenge can be met, and our democracy can survive, only if we have a strong and competent Government alert to the interests of all of its people, and unswerving in its devotion to the principles of individual freedom. We cannot have such a Government unless we have also an alert and cooperative American people, really united and fully determined to know and accept their national and world responsibilities.

The world today is shaking in a bitter struggle between two widely different philosophies. One upholding the personal liberty and dignity of man under God, and the other the evil force of oppression and destruction of individual rights and freedom, reducing man to the stature of a slave to the state.

In the midst of this struggle of all great powers, the United States alone remains a democracy, and more than any other factor, we are the key to the destiny of tomorrow's

world. We alone may be able to avert the decline of western civilization, and a reversion to barbarism. The disintegrated and panic-stricken western world is dependent upon us for its continued existence and the survival of individual liberty, and we must not fail the test.

It is commonly observed by our leading statesmen that the disruptive force creeping across Europe today is playing a waiting game; delaying and hindering every action that would promote peaceful and friendly settlement of international problems. They are counting upon the American people becoming weary and selfish in carrying the burden of their domestic and world responsibilities. We must answer that challenge.

The common sense of America demands that we put the sentimentalism and theory of visionaries and dreamers behind us, and by serious, practical measures prepare ourselves to meet the challenge.

War is the horror of our national life. America loves peace, and we seek quarrel with no nation. For the honor of our Nation and our flag, we meet the weak with justice and consideration; the powerful with confidence and dignity; but we have learned that the country that is rich, peaceful, and unprepared is never safe from the encroachments of the evil powers that are predatory and seeking imperial domination.

Our postwar period this far has been marked by much shallowness and superficiality; of much talking and little thinking. There is today too easy an acceptance of the shadow for the substance, of the promise for the performance. There is a growing habit of evading the responsibilities and realities of our citizenship, and the obligations we owe to each other and our Nation.

We cannot fulfill our destiny with various groups of our people arrayed against each other, each concerned only with their particular selfish interest. The path to peace lies in the union of common sacrifice.

To insure peace, we must prove to the enemies of freedom and the gallant nations of the world who are watching us so carefully that we have not become careless, selfish, and disunited. We must prove that we can set our own house in order by our cooperating efforts. The clash between capital and labor can be adjusted without revengeful measures, but mutual understanding and acceptance of their respective rights and obligations; the cost of living as an American can be made reasonable by just and honest competition under our system of free enterprise; we can provide enough homes for the men and women who went across the pestilent margins of the world to save us from death and destruction at home; we can enable every American family to live in a decent home; we can give Christian example to our youth to prevent the increasing scourge of juvenile delinquency and divorce; we can afford a living wage to all our honest working people. By common service and sacrifice together we can go forward to the greatest era of our history. Together we can fulfill our world responsibility; we can achieve the greatest social welfare that any people on earth have ever known. We can do all of these things without the sacrifice of a single important liberty or right that we have.

But in this crisis confronting us we must realize that we cannot do these things without going back to the real old-fashioned patriotism and unselfish love of country that we inherited. Nor can we do them without a spiritual reawakening; without a renewed recognition and faithful adherence to the eternal truths of the Christian philosophy and practices handed down by our forefathers.

When they first unfolded to the free skies our glorious flag, they told to the earth that a new dispensation had come to men, which was the flower and fruit of the seed sown on the Mount of Calvary, when He died who came to liberate the souls of men.

To meet the test of this hour before the world; to be worthy of our heritage, we must pledge to live and work together as true friends, true neighbors, true Americans, under God and under our flag.

Letter of the Gray Corner Club, of Springfield, Mass.

EXTENSION OF REMARKS
OF
HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. CLASON. Mr. Speaker, once in a while a Congressman receives a letter from a constituent or constituents which depicts so clearly and accurately the concern felt by the thoughtful members of the middle class of the American people, the backbone of our Nation, that it should be brought to the attention of all Members of Congress. Such a letter is the following, which, I believe, warrants the careful consideration of my colleagues. There is no class of people outside the United States who correspond to the members of the Gray Corner Club. They are average, intelligent, industrious, and loyal citizens. They are men of small property holdings and medium-sized incomes from wages, salaries, and professional pursuits. They know the value of a hard-earned dollar. They are deeply concerned over the failure of our Federal administration to face our international and domestic problems realistically. I urge you to read this letter carefully. It will interest you and give you much food for thought. I hope it will have weight with all of us as we seek to cut down our overgrown bureaucracy to proper size.

THE GRAY CORNER CLUB,
Springfield, Mass., June 14, 1947.

HON. CHARLES R. CLASON,
House Office Building, Washington, D. C.

DEAR SIR: Like all members of legislative bodies, in these times of so many controversial issues, you are probably deluged with correspondence from organizations and individuals, all seeking your support either for or against specific proposals now being considered by your body. We know that it is physically impossible for you to read and answer all of your mail. It did seem to us, however, that it might be interesting to you to get the viewpoint of a group of men who have only one interest in the activities of the National Congress, and that is the preservation of the ideals which we fear are slowly but surely slipping away from us.

The Gray Corner Club is a social and civic community group, composed of about 175 ordinary citizens from many walks of life, and both political parties, including salesmen, small businessmen, employees of insurance companies, banks, factories, and others, and a few members of the medical and legal professions. We have been meeting once each week for several years, and being practical men, with an inherent love of democracy as it was preached to us during our school years, we have become disturbed, and more recently, alarmed at the complacent acceptance by the people of our great country of conditions which, in our opinion, are gradually leading us into a feeling of dependence on Government which history has proven can only mean the end of democracy.

We are writing to you, therefore, to express some of the thoughts which are in the minds of the members of our club, and which are greatly responsible for the subconscious feeling of unrest and uncertainty, and in many cases, actual fear, which has gripped the minds of so many people during the past few years. We will all agree that the unsettled foreign situation, with the possibility of another war, plus the horrible potentialities of the atomic bomb, are disturbing factors, and these, coupled with the domestic uncertainties, have created an inner anxiety which has contributed greatly to the abnormal number of untimely deaths of so many men between the ages of 45 and 55. It would be too much to expect any one man to solve all of our problems with a wave of a magic wand, but we would like you to know the impressions which we have formed, as ordinary every-day citizens. Probably these same thoughts are in the minds of many other men and women, who do not take the time to place them on paper and forward them to their Representatives.

It has always been our feeling that, in America, all governments were created to serve the people, and that the Federal Government in particular, in conformance with the expressed reasons for its creation, can only be justified insofar as it protects the rights of our citizens expressed in the Constitution of the United States, and in the performance of those functions which the States could not undertake individually, such as the raising of an Army and a Navy, the establishment of a postal system, the coining of currency, and similar functions. We now find the Federal Government engaged in about every activity performed by the States, partly as a result of the impetus given by the United States Supreme Court, in its interpretation of "interstate commerce." Since that decision, Federal agencies have multiplied to such an extent that about every pursuit in which a person is engaged is subject to control from Washington, so that we now have a situation where everyone, even States and their political subdivisions, must look to the National Government for aid or sanction, which is contrary to both the expressed clauses and the spirit of the Constitution, in view of the fact that the United States Government has only those powers which were delegated to it by the States, and is subject to their limitations. We know what has happened in Germany, Italy, and Russia by the centralization of power in a national government, and, while some of our social benefits were necessary, in many cases Federal services are a duplication of State functions, and, although helpful, only tend to build up power in a central agency, and are luxuries which we cannot afford, with potential bankruptcy staring us in the face.

It seems to us that the time is here when we must choose between ultimate totalitarianism and government by the people, and, although the step would be drastic, we see no other course but to eliminate all Federal agencies except those absolutely necessary to carry out the original duties imposed upon the Government of the United States by the Constitution. There is no in-between course. With a national debt of more than a quarter of a trillion dollars, we cannot afford any but the most vital of Federal services. The anticipated cut of from four to six billion dollars from a budget of thirty-seven billions will not even make an impression.

We are not seeking tax reductions, at least while we have such a staggering debt, but we cannot understand how the Congress so humbly acquiesced, in a way, to the proposal of the Communist Party that the income of any individual be limited to $25,000 per year. It is true that such a statute was not enacted in express language, but the present

income tax rates have accomplished pretty nearly what the Communists wanted. The theory of "ability to pay" is acceptable, provided it is not carried to a point near confiscation, but when a system makes it impossible for a man with ingenuity and ambition to become financially independent, and discourages investment in those enterprises with some risk, because of the small net return possible, while encouraging the placing of funds only in safe bonds with a small return, that system is destroying the spirit of venture which alone made America the greatest producer of industrial products in the world. None of the members of our club are affected by the high surtax rates, as we are all men of moderate income, but we cannot understand how any tax of more than 50 percent of a person's income, no matter how great, can be justified under any theory, especially when advocated by the Communist Party, as part of its general leveling-off policy. Our confiscatory tax laws are greatly responsible for the loss of the incentive which prompted the creation of so many of our great industrial plants.

We see an unhealthy situation in the loss of that old New England thrift and the loss of the hereditary distaste of public aid of any description, brought about by the feeling that the Government will take care of everyone. People in that frame of mind are ripe for socialism, the first step toward communism.

The most disturbing situation is our domestic economy. We all realize that we never cured the last depression. It was merely interrupted by the war, and great public war expenditures. There were just as many people out of legitimate employment in 1940 as in 1932, and the only reason for the present so-called prosperity is the demand for civilian goods the production of which was suspended during the four war years. When the supply reaches the point where commodities are readily obtainable, we are bound to revert to the conditions of 1940, with even a greater number of unemployed, because of the advances made in methods and speed of production, brought about by the war necessity. When this happens, and it will apparently occur within a year, from present trade and inventory indications, we will be faced with twelve or fifteen million men and women out of work, all looking to Washington for another public works program. With the loss of income tax revenue from these unemployed, and from the industries which are now being taxed on great profits, it will be impossible to meet the demands of an inflated Federal budget, and, sooner or later, the Government will be forced to extend the time for payment of bonds coming due. That will be a perfect set-up for some crusader to tell the people that, unless they want another 9 years of depression and misery, it will be necessary to regiment the assets of the Nation, and take over the industries, farms, public utilities, and other facilities, and institute a planned economy, so that all will be guaranteed a place to sleep, and plenty to eat, under Government supervision. This sounds fantastic today, but with the frame of mind of our people, it is far from impossible, especially if the credit of the Nation is lost. We will then be in the middle of communism, without even having an opportunity to express ourselves on the question of its acceptance, minus, of course, the right to control births and deaths in the name of the State.

We could survive financial chaos, and even Federal bankruptcy, but not and retain the freedom which we up here in New England cherish so dearly. We are all practical men, and the thoughts expressed herein are our own. There are no economists in our organization, to distort our minds by impractical theories. This picture is indeed gloomy, and we would like very much to have someone show us where we are wrong. It would be a great relief.

All these problems add up to one conclusion—too much government, National, State, and local. We can solve our State and local problems in our own way, but the National Government is too far removed from the local community for our voices to be heard. It has grown to such a size and complexity that it is out of our reach, but is still constantly stretching its arms out farther and farther, like an octopus, gathering in everything within its power. We see no chance of stemming this apparent lust for power, excepting by you, our elected representatives, stopping the spread of central government, and returning to constitutional government by the States, not merely to conform to the Constitution itself, but for the practical reason that any other course will most certainly lead to the loss of that liberty which Patrick Henry said he would rather die than lose.

Thomas Jefferson once made a remark which is most appropriate at this time: "That government is best which governs least." There is a lesson in that statement for all of us.

If you can spare a little time from your busy program, we would appreciate your comments on this letter.

Yours very truly,

THE GRAY CORNER CLUB,
By THOMAS T. GRAY, *President*.

The forwarding of this communication was approved by a unanimous vote of the members present and voting at our last meeting.

Plight of the Navaho Indians

EXTENSION OF REMARKS
OF

HON. RICHARD F. HARLESS

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article which appeared in the Arizona Republic of June 9, 1947:

PLIGHT OF THE NAVAHO INDIANS

TUBA CITY, June 9.—Rising food and clothing prices and a diminishing postwar demand for fine merchandise they create are wreaking economic disaster upon Arizona's Navaho, says Ed Kerley, proprietor of a Tuba City trading post, who was born and reared in the western part of this 16,000,000-acre Indian reservation.

Hard times already have hit the reservation.

Today the Navaho are spending their "buttons." And a big storage case in Kerley's trading post contains the greatest amount of pawn his firm ever has accumulated.

The "buttons" are United States coins, generally dimes or quarters, with which the Navaho long has adorned his bright clothes. Today these "buttons," distinguishable by the small eye soldered to one side of each coin, are turning up in trading-post tills.

The pawn is the Indian's finest jewelry—belts, bracelets, earrings, chiefly family heirlooms passed down from generation to generation. It is the red man's bank account, for it always has a pawn value at the trading post.

But it generally is to be redeemed within 6 months, and at some trading posts prized articles of pawn already are being moved into dead displays, which mean the Indians haven't been able to redeem them.

In this area the wool season virtually is at end, and many a Navaho whose livelihood depends on the sheep herds cannot meet trading-post bills accumulated through the winter.

Congressional delay in passing a support bill for wool costs the red man plenty. Few could hold their clip to take advantage of possible price rises.

Trader Kerley pointed out that at this time last year the Indian received $4.25 for a small saddle blanket, about 30 by 30 inches in size. For that he could obtain 25 pounds of flour, 5 pounds of sugar, some baking powder, lard, a can of coffee, and a little candy for the kids.

The trader found a ready sale for the saddle blanket.

Today the same blanket brings the Indian only $3, and they're piling up in the trading posts. The $3 buys little more than a sack of flour and a can of coffee.

Cloth for the squaw's bright skirts, which used to sell for 20 cents per yard, now is 50 cents. Factory-made blankets the women wear over their shoulders and wrap about themselves are up from $15 to $23; were $27.50. Even common levis almost have doubled in price, from $2 to $3.75.

Many Indians ride their horses bareback, for a saddle once available for $65 now costs $175.

A year ago there still were some lucrative jobs off the reservation for the Navaho, though not as many as during war years.

A year ago the Navaho still bought some luxuries at the trading posts. Today the high-paying, off-reservation jobs are gone. Kerley says the Navaho now debate about buying some essentials.

What is the answer to the difficulties now confronting the Navaho?

Kerley frankly admits he doesn't know. He says the ranges need rain to grow more grass for lambs which now dot the sheep flocks, lambs which will be salable sheep this fall.

He insists there is a dire need for educational and hospital facilities for which the Navaho are pleading.

Many of the young Navaho who served valiantly during World War II in America's armed forces are reenlisting, says Kerley, after coming home to find they no longer can exist on the reservation.

When Kerley arrived at his reservation store and home 18 months ago, after serving with the Twenty-fourth Division, the stock of Indian "pawn" at the trading post represented $2,077 in loans. That was in midwinter when the "pawn" stock usually is heavy.

Today, at a time when most Indians have sold their wool and paid their bills, the pawn at the Kerley store represents more than $8,000 in loans. Some $1,600 in pawn is dead.

Kerley mentioned Johnnie Walker, a Navaho sheepman once considered by his tribesmen wealthy because he and his sister owned 3,000 sheep and supported all of their less fortunate relatives. Government stock reductions have slashed the flock to 750 sheep, still a large number compared to the sheep ranged by thousands of other Navaho.

Walker paid off $250 in bills at Kerley's store after selling his wool clip last year, the trader said. But this year his bills totaled $980.77, some of which resulted from illness in his family, and his wool brought him only $864.

Both Kerley and his chief trading post assistant, Maxwell Yazzie, who is a member of the Navaho Tribal Council, are critical of the Government's educational and health programs.

They say Tuba City has a boarding school which has been forced to turn down more pupils than it accepts. Yazzie declares his youngsters get to school 2 days before the opening each fall in order to be assured of enrollment. Many schools have been closed.

One at a nearby farming village has been closed since the war and the building is used for Boy Scout picnics, Kerley and Yazzie say.

They estimate as high as 75 percent of the children in their part of the reservation are unable to get into schools.

They say there are good hospital facilities at Tuba City, but they are inadequate for the area they must serve and even now there is a threat to transfer the one doctor on duty.

Navaho in the Tuba City area, declare Kerley and Yazzie, must get sick on schedule because the one doctor can't work at all hours, and not too far from the hospital because many must be sent back to their homes after being treated since there is no bed space for them.

Address of Thomas D. Russell

EXTENSION OF REMARKS
OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. RAINS. Mr. Speaker, I am happy to include in the RECORD a copy of an address delivered by Thomas D. Russell, president of the Russell Manufacturing Co., of Alexander City, Ala. This address was broadcast recently over radio station WRFS at Alexander City. Mr. Russell is one of the outstanding industrialists of the South, and I am quite sure his address will be interesting reading to all Members of Congress.

The address follows:

Ladies and gentlemen, I am very happy to have the opportunity of talking to you on this Sunday afternoon. Today I am opening the regular weekly program which will be put on each Sunday at this hour by the men and women who make up the Russell Manufacturing Co. During the course of these programs we hope to acquaint you with our company—its people—its products, and the things for which it stands. We will endeavor to make these programs interesting and entertaining. We sincerely hope that our friends and associates will enjoy each and every broadcast.

Today I am going to outline to you briefly the history and policy of our company. I shall not attempt to go into detailed discussion on any of the subjects which I bring up. Later in this series of broadcasts we will deal more fully with each and every phase of our business.

The Russell Manufacturing Co. was started in 1902 by the late Benjamin Russell. A half-dozen knitting machines and a one-room wooden building were the humble beginning of our company. Through hard work, foresight, and careful planning this small plant has grown steadily each year, until now our company has seven large plants, employing over 2,000 men and women. This steady growth has been made possible by the fact that it has always been the policy of this company to plow the profits which we made in good years back into the business. Thus, throughout the years, these profits have created more jobs for more people. In good times the profits are use for expansion and to provide a backlog to tide us over the bad times which always come along. However, during good times and bad times, these mills have always kept running and growing, providing a living directly or indirectly, for many thousands of people in this section.

The foremost task of these mills is to see that they continue running and growing. At the present time our company is prosperous and in robust health, as is this whole community. Much of the prosperity of this community and section is due directly to the prosperity of our mills. It is vitally important to our employees and to the citizens of Alexander City that we continue to be prosperous and healthy, for as we prosper so do you.

It is up to our management to plan for the future—to administer the mill affairs wisely and efficiently—to sell our goods advantageously. It is the duty of the men and women who operate our machinery to see that their machines run efficiently and turn out high quality materials. This task requires teamwork between management and employees, between each group of employees, and the cooperation of this entire community and section with our management and employees to keep the wheels turning. No one man—no group of men, can create an organization such as ours. The best efforts of all, working together in harmony, are necessary to safeguard our future.

That is one phase of our business—profits and production. They are very important. Yet, equally important to us is another side of our business. The human side—relations with our employees. We want our people to be happy. We take a great deal of pains and go to a lot of expense to bring about this state-of-mind throughout our mills. We firmly believe in fair play. We respect the rights and feelings of our people. We are proud of the people who run our mills. We are proud of their loyalty and cooperation. This, we shall always try to deserve. Loyalty is one commodity which cannot be bought with money. It must be earned by performance. I could talk at length of fair play, loyalty, and cooperation but such talk would be empty words unless I and my associates back up this talk by acts and deeds, and unless we earnestly and sincerely believe in these things—unless we practice them ourselves every hour of the day. Honesty, kindness, sincerity, fairness are not finery which is to be worn only on Sundays and special occasions. They are everyday working clothes to be worn at all times.

In order to sell our products in a competitive market, our mills must make efficient use of their men and women employees. At the same time we, who represent management, must see to it that working conditions are healthy and pleasant, that wages are fair and job loads are not burdensome. It is up to us to look after the health and welfare of our people. We want our employees to be happy in their work and satisfied with their jobs. These two things go hand in hand. A happy worker is a good worker and a good worker is a happy worker.

The people who work in the Russell mills are a fine group by any standard. They come to work in our mills from all over this section. They are your friends, they are your neighbors, they are your relatives, and they are your customers. In short, they are a cross-section of all the people in this city and surrounding territory. They are self-respecting, honest men and women who are proud of their skill and their job and of the company for which they work. You may be assured that their company is equally proud of them.

You read and hear a great deal about human relations, capital and labor, worker's right, big business, and a lot of other catch phrases. Here in the Russell mills we are not bothered with all this economic bunk. We have neither the time nor inclination to get involved in economic theories and propaganda. We just go along from day to day, working together and being friendly and pleasant about the whole thing. We respect each other and like each other and if there is any better way of getting along, we haven't found it yet. This may explain why we all get along so well together, why we do such good work and continue to run successfully.

Here in these mills we make a variety of products. Cotton yarns, which we spin from cotton grown by Alabama farmers; cotton cloth, which we weave from these yarns; knit cloth, which is knitted from our yarns. This knit cloth is cut and sewed into underwear and athletic wearing apparel. In our finishing and dye plants, we dye the yarns and finish and sanforize the cloth which we make. When the manufacturing process is finished, we pack our products in attractive packages and ship them to our customers all over the world.

In order to sell our goods we have to have an elaborate sales organization. This is a part of our organization that you people here in Alexander City do not see. Our salesmen are scattered far and wide, and yet they are just as much a part of our company as each of you here in Alexander City. Without our sales force functioning properly and doing a good job every day, our warehouse would soon be crowded with finished goods and we would have to close down.

Our sales start and end here with our main office in Alexander City. Sales managers decide what we are to make and sell, and the price and delivery. They contact our sales offices in New York, Chicago, Nashville, Dallas, Los Angeles, Seattle, Baltimore, and other places where we maintain salesmen. These officers get in touch with our customers and sell our manufactured products. We are on very friendly terms with our customers. We have been dealing with them for many years. They know us and know our products, and we know them. They are our friends. Over the years we have built up a name that is known and respected wherever cotton goods are sold. We are proud of our reputation for good products and for fairness and honesty in our dealings, and you too may be proud that your company is one of the leaders in the textile industry. It is important to you as well as to us. It is important to every citizen in Alexander City because it means that our goods will sell at fair prices and that in turn means that our mills will run and keep on running just as long as we continue to merit our reputation in the markets.

Our products go to the largest buying houses in the United States. Practically all the large jobbers, mail-order houses, sporting-goods dealers, converters, and dress and shirt manufacturers are included in our list of customers. Each year we manufacture and sell millions of garments and millions of yards of cloth, and believe me, that takes lots of selling.

Our company is not a one-man organization. As president, I am the one responsible for everything that goes on. Working with me are a number of men who have full authority to run their own departments, men who have knowledge, judgment, and ability to do their job and do it well. They are willing to assume full responsibility and at all times consult with me and with each other. Every policy, every new method, every important decision that is made is discussed fully and thoroughly by all parties interested. When we arrive at decisions, it is the result of the combined knowledge and wisdom of this group and rarely ever the decision of any one man. We have no individual stars. Our team is made up of experts who know and practice teamwork and who are deeply and sincerely interested in the welfare of our company and this community. In picking men, we do not want any shining lights, we want men who know how and will work with each other.

All of these factors go into the make-up of the Russell mills. They are important to me and they are important to the people who work in the mills and to the business people of Alexander City. Without the necessary qualifications which I have named, we would be just another cotton mill where a bunch of people have a job in good times and go without in bad. Just another cotton

mill which is not concerned with the welfare of the people in the town in which it operates. A mill where all vital parts function but from which human kindness is missing. We are not just another cotton mill—we are an organization devoted to the welfare of the people who work with us and to the upbuilding of Alexander City.

Briefly, ladies and gentlemen, this is the Russell Manufacturing Co., its policies, its position, and its purposes.

Terminal-Leave-Pay Bonds

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. SMATHERS. Mr. Speaker, there was recently introduced in the Florida State Legislature by Senator Leaird, of Broward County, Fla., Senate Concurrent Resolution No. 7. It was a resolution requesting the United States House of Representatives to pass legislation providing that terminal-leave-pay bonds can be negotiated and cashed. I shall not take the time of the House to read the resolution in its entirety, but suffice it to say that the Florida State Legislature unanimously requested the House of Representatives to adopt H. R. 4051 introduced by our distinguished colleague, the gentleman from Florida, DWIGHT ROGERS.

There has been much said on the floor of this House about help to veterans. He has been given priority in the matter of obtaining homes, rooms, job preference, and training, but as was so well said here the other day, priority without the financial ability or opportunity to take advantage of it, is merely a worthless, hollow, gesture. All of us agree it is a matter of rights and justice for enlisted veterans to cash their terminal-leave-pay bonds. I am certain that everyone of us, if asked the specific question, Do we favor cashing the terminal-leave pay? would respond in the affirmative and yet this Congress has not yet done anything to effectuate this desire. I read in the papers this morning that we are to adjourn on July 28, which means that less than 5 weeks remain for us to do something about this vital piece of legislation.

There is a petition now on the Speaker's desk awaiting signatures of 218 Members. Certainly those of us who sincerely believe that the veteran is entitled to his cash or to negotiate his leave bonds, should now sign that petition if he has not already done so. H. R. 4015 does not require the expenditure of any additional money on the part of the Federal Government; it does not necessitate any additional Government personnel; it merely, in a practical way, remedies a long-existing injustice by permitting the veteran who holds a terminal-leave-pay bond to use it by selling it or trading it as a negotiable instrument. Here is an opportunity for us to stop these verbal protestations of interest in the veteran and to really do something for him.

I should like to here introduce the resolution adopted by the Florida State Legislature:

Senate Concurrent Resolution 7

Resolution requesting the United States House of Representatives to pass legislation providing for cash payment to veterans for terminal-leave pay

Whereas there was enacted by the Congress of the United States, H. R. 4051, which bill was introduced by a former member of this legislature, DWIGHT L. ROGERS, granting and providing for terminal-leave pay for the enlisted personnel of the armed forces; and

Whereas at the time said bill was introduced by the said DWIGHT L. ROGERS, it provided for a lump-sum, cash payment for terminal-leave pay and it was so passed by the House of Representatives; however, said bill was amended in the Senate to provide for the payment of terminal-leave pay in 5-year bonds bearing interest at the rate of 2½ percent per annum; and

Whereas it was necessary on the part of the House to agree to the amendment as proposed by the Senate in order that any legislation might be passed for terminal-leave pay; and

Whereas cash payment was made to all commissioned officers for terminal-leave pay and in order to do away with this unfair and discriminatory treatment between commissioned officers and noncommissioned officers and privates, said DWIGHT L. ROGERS, Representative in Congress from the Sixth Congressional District of the State of Florida, introduced on January 3, 1947, in the Eightieth Congress, H. R. 3, providing that terminal-leave pay bonds shall be redeemable in cash upon the application of any veteran holding said bonds and that hereafter veterans can request cash payment instead of bonds: Now, therefore, be it

Resolved by the Senate of the State of Florida (the house of representatives concurring), That it is the desire of this body that the veterans should be permitted to have their bonds payable in cash upon application filed by the holders of any bond and that hereafter cash payment should be made when requested; and

That the Representatives in Congress from Florida be urged to support said H. R. 3, or similar legislation which would provide for cash payment to said veterans for terminal leave pay; and be it further

Resolved, That a copy of this resolution be mailed by the clerk of this house to the Senators and Representatives in Congress from the State of Florida and that a copy by sent to the Honorable JOSEPH W. MARTIN, JR., Speaker of the United States House of Representatives.

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bridgeport Post of June 17, 1947:

HIGH TAX HARRY

A famous character in American history was a gentleman known to his friends as "Light Horse Harry." He now has a successor in the title (no hero) who, we think, should be known as High Tax Harry. Of course, we mean Harry Truman, President of the United States.

For Mr. Truman has vetoed the first tax-relief bill given to 48,000,000 American taxpayers in many years. He has vetoed it on the specious grounds that the Government ought to save up a surplus now through high taxes in order to pay something on the national debt.

He has completely ignored the fact that a much more effective way of paying off the national debt would be to accumulate a surplus by reducing our daily governmental expenditures. This he is opposed to.

So we think that the name High Tax Harry is fair and truthful in describing the personal policies of our President. He believes in maintaining taxes at their present high repressive level and he believes in spending money like a drunken sailor. All this talk about reducing the national debt or making our Government's financial policies sound and conservative is specious nonsense because the very basis of sound and conservative policies is to reduce reckless spending and this the President refuses to do.

It sounds very pious, this talk about making payments on our national debt but it doesn't seem so pious in practice when one examines the President's method, which is to put 48,000,000 taxpayers through the wringer four times a year while he goes on spending money for a thousand and one unnecessary projects at a fabulous rate.

We think the Republicans who were elected on a platform calling for a reduction of taxes have a case which will carry the next Presidential election without fail, if they explain it to the people just as it is. The President spoke at Kansas City the other day and in that speech he did not advocate economy in Government. On the contrary, he advocated every costly project that his imagination could conjure up. He has gone back to the old policy once favored by the late Harry Hopkins:

"We propose to spend and spend and tax and tax and elect and elect."

Where the President's foot slipped was on the last part of the program. For the people understand this kind of business now and they are sick and tired of being endlessly taxed for expenditures they do not approve of, for wastes in Government of which they highly disapprove.

"High Tax Harry" has done it. He has sealed his own political doom for 1948.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 10, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the secretary of the Commerce and Industry Association of New York:

JUNE 18, 1947.

Mr. THOMAS JEFFERSON MILEY,
Commerce and Industry Association, New York, N. Y.

DEAR MR. MILEY: I note that the Commerce and Industry Association has gone on record as opposing the St. Lawrence seaway project. Was there a full and complete discussion among the members of the association before this decision was reached? If not, I think it would be advisable to have such a discussion so that the members might express their views on this momentous project.

I am one of those who favors the St. Lawrence seaway. Frankly I do not think the reasons for the construction of this water seaway has been fully brought home to the rank and file of your members. The construction cost and maintenance could be fully recouped by appropriate tolls. General Marshall, former Chief of Staff, and present Secretary of State, supports this plan of self-liquidation.

I am sure your members have not been adequately told the benefits of this waterway to our national defense. The project would make possible the building and repairing of many of our oceangoing ships in the secure area of the Great Lakes. Vessels of the type of our Liberty and Victory ships could be constructed inland, at shipyards on the Great Lakes. Secondly, there would be developed a new and important line of communication into the heart of the industrial area of the United States, complementing the existent rail transportation. Nor would New York's harbor suffer. There is plenty of commerce and tonnage for all ports. Our international trade is growing and will continue to grow.

Thirdly, this project would create a tremendous source of cheap electric power, comparable to the power developed by TVA. Industry throughout the northeastern area would benefit.

Fourthly and lastly, the building of this waterway has the joint support of the Governments of Canada and the United States, primarily because it would be for the security not only of Canada and the United States, but for the security of North America.

There is, as you know, a United States-Canada permanent Joint Board of Defense, and this Board has considered the significance of the St. Lawrence seaway, and has recognized that this deep-water-navigation road from the sea to the heart of the continent would greatly increase the defense potentials of the two countries.

There are many other reasons that actuate me in espousing this cause. Because of the importance of the Commerce and Industry Association, you will agree that its members should have at first hand, complete and detailed information concerning the pros and and cons of the St. Lawrence seaway.

Please let me hear from you on this important matter.

Sincerely yours,

EMANUEL CELLER.

The Story of Appropriations by the Eightieth Congress

EXTENSION OF REMARKS
OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. TABER. Mr. Speaker, the House of Representatives has already approved measures to save $4,483,916,796 in the cost of operating the Federal Government. Indications are this large total will be increased substantially before Congress adjourns.

The gratifying economy record of the Republican House of Representatives was made through wise reductions in President Truman's colossal budget estimates for spendthrift bureaucrats, repeals of appropriations, and recoveries into the Federal Treasury.

Reductions in departmental appropriations estimates accounted chiefly for one group of $3,701,326,029 in savings effected by the House. We rescinded $2,176,023,325 in appropriations on the ground they were unnecessary and at least $500,000,000 of these rescissions was set up as an expenditure in the budget and in addition, the House made savings in appropriation bills for fiscal year 1947 amounting to $282,590,767.

When we Republicans organized the present Congress last January, we tackled the job of getting our Federal house in order. Confronting us were hundreds of money-spending boards, bureaus and commissions—the spawn of 14 years of Democrat misrule.

The House Appropriations Committee, aided by some of the soundest authorities on administration of government, labored hours without end to bring a semblance of order out of the chaos that had been compounded by slip-shod fiscal policies during the war.

This is merely a progress report. Much remains to be done. The Republican Congress, as guardian of the Nation's purse-strings, is keeping close watch. I am confident that we will be able to report much more progress in cutting unnecessary cost of Government during the next session of Congress.

Every Government agency is under study by appropriate committees of Congress. Their efforts for economy and efficiency would be faciliated if the executive branch would offer enthusiastic cooperation.

That cooperation the Republican majority in Congress has not yet received from President Truman and down the line in the executive branch.

The people elected a Republican Congress because they had enough of new dealism. It will be recalled that immediately after last November's elections President Truman issued a formal statement acknowledging the verdict of the people in putting Republicans in control of Congress and pledging his cooperation with the Congress.

He has not kept that solemn pledge. He has openly protested against cutting his spend-and-spend and tax-and-tax budget one dollar. His statements have been a signal to key men in executive agencies to fight every effort to lop off their unnecessary tax-eating operations.

House Democrats, taking their cue from the White House, have fought the Republican economy drive every step of the way, obviously trying to curry favor of special interest pressure groups.

Yes, the New Deal was repudiated in the last elections, but New Dealers, from the President down, are still beating the drums of spend and spend and tax and tax at their old stand.

Some real Democrats in the House have put their country above New Deal politics and have joined in voting for economy measures. I give them their just credit. But they comprise a small minority of the minority party.

The Republican Congress, in response to the will of the people, has been cutting the cost of Government in the interest of better Government and to pass along the savings to the people in the form of relief from sky-high, wartime tax rates, and to reduce the public debt.

President Truman, in a shocking abuse of the veto power, vetoed the tax-relief bill and told the people that if they spend their own money the result would be inflationary, but if the Government takes it from them and spends it the result would not be inflationary. Nonsense.

The House, with Democratic votes, sustained the veto and thus denied the people the tax relief they were entitled to have.

An important fact to remember is that the Democratic Party denied the people the tax relief they demanded as the fruit from cutting Mr. Truman's spend-and-spend budget. Voting to override the veto were 233 Republicans and 35 Democrats; against were 134 Democrats, one American-Laborite, and only two Republicans. A two-thirds majority was necessary to override the veto.

Since that tragic action by the President and his followers I have been asked by many anxious persons whether scuttling of the tax-relief bill means the end of our Republican economy efforts. My emphatic answer is, "No." The Republican Party will not let the people down.

We shall continue to fight for elimination of unnecessary governmental expenditures. The way of the economizer is difficult when faced by an administration bent on spending every dollar in sight.

The taxpayer should realize that eternal vigilance is the price of liberty and that it is impossible for the Congress to prevent reckless spending, unless it has the continuous support of the American people.

And so we come to the economy record, to date, of the Republican House of Representatives. The expenditures will be reduced much more than the actual cuts in appropriations and in getting President Truman's spendthrift budget down to size.

The House of Representatives last February set as a theoretical goal to obliterate 14 years of New Deal spending psychology, a reduction of $6,000,000,000 in expenditures for 1948, and a reduction in appropriations to be expended in 1948 of $4,500,000,000.

Herewith is the bullet-proof record of the gratifying progress made, which no New Deal chairbottomers can shatter.

Since January 3, the House of Representatives has made the following cuts in President Truman's budget estimates of appropriations and repeals of appropriations and recoveries of funds into the Treasury, and has been responsible for the submission of reduced estimates through its investigatorial and hearing activities.

These all relate either to the amounts that will be received into the Treasury or what will be paid out, and effect changes in the general balance of the Treasury for the fiscal year 1948:

TABLE I

Treasury-Post Office	$897,072,750
Labor-Federal Security	73,825,520
Interior Department	134,006,907
State, Justice, and Commerce	159,645,031
War Department, Military Affairs	435,809,077
Navy Department	377,519,200
Department of Agriculture (includes repeal of $108,000,000 for 1948 of sec. 32 funds)	340,969,342
Government corporations	28,887,470

Independent offices:	
Direct cuts	$330,540,732
Additional cuts in proposed expenditures: U. S. Maritime Commission	120,900,000
Revised estimate submitted by the Budget, resulting from investigation by the Appropriations Committee:	
Veterans' Administration:	
Printing and binding	1,500,000
Pensions and compensation	269,825,000
War Assets Administration	20,750,000
	292,075,000
Additional revenue to be recovered into the Treasury from sale and charter of vessels above the amount included in budget estimates of receipts	505,075,000
Total	3,701,326,029

In addition to that, the Appropriations Committee has made rescissions and recoveries as appear in the following table (of these rescissions, at least $500,000,000, according to my information, are included in the table of expenditures which the President sent up here for 1948):

TABLE II

First deficiency	$1,011,423,325
War, military	1,100,000,000
Independent offices: Maritime Commission rescission and transfer of receipts, construction fund	108,000,000
Federal Works Agency	$5,100,000
Veterans' Administration	50,000,000
Second deficiency, National Housing Agency	2,500,000
Total	2,277,023,325

In addition to those savings, the House of Representatives has made savings in appropriation bills for funds to use during the fiscal year 1947 totaling $282,590,767, as appear in the following table:

TABLE III

	Budget estimate	As enacted	Reduction below budget
First urgent deficiency	$179,319,100	$179,645,668	—$326,568
First deficiency	3,106,566,788	2,835,161,509	271,405,279
Second deficiency	139,528,414	117,438,858	22,089,556
Second urgent deficiency	[1] 60,278,757	[1] 70,856,257	[1] —10,577,500
H. J. Res. 154 (hoof and mouth disease)	9,000,000	9,000,000	
H. J. Res. 159 (pay)	243,255,607	243,255,607	
Total	3,737,948,666	3,455,357,899	282,590,767

[1] As passed by House, pending in Senate.

Opinion of Supreme Court in Interstate Natural Gas Case

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. RIZLEY. Mr. Speaker, in view of the opinion of the Supreme Court in the Interstate Natural Gas case, released on June 16, it is imperative that immediate action be given H. R. 2185, H. R. 2235, and H. R. 2292 in the interest, not only of the producers of gas but also the consumers of gas, in States other than those where natural gas is produced.

Evidence before the House Committee on Interstate and Foreign Commerce disclosed the fear of independent gas producers and oil producers who produce gas with their oil that under the interpretation of the Natural Gas Act, which the Commission presented successfully to the circuit court of appeals in the Interstate case, they might be subject to regulation of their earnings by the Federal Power Commission. It was shown that some producers of gas are deliberately boycotting interstate-market outlets, and shutting in their wells until a market for local use is available; that some are contemplating the construction in the producing areas of plants for the complete utilization of gas in the manufacture of gasoline.

In a proposed staff report released by the Commission in March 1947 and discussing section 1 (b) of the Natural Gas Act with reference to the production and gathering of gas, this fear was recognized to exist; and it was stated that a continuance of the existing disturbed situation is certain to interfere with the effective performance in the public interest of the duties of both Federal and State regulatory agencies that—

> It may be expected also that unless this issue is clarified the results will be detrimental to those who consume natural gas and to the efforts of conservation authorities to prevent its waste.

In the staff report it was suggested that the Commission might by rule determine those producers which it would subject to its jurisdiction. Commission counsel, arguing the Interstate case before the Supreme Court, sought to limit the Commission's jurisdiction over producers and gatherers to those who, because of other operations, are natural-gas companies, or who do not sell their gas under arms-length contracts.

In his appearance before the committee, Chairman Smith presented that same interpretation of the act and suggested, in part, that no action be taken by the Congress looking toward an amendment of the Natural Gas Act until it could have the benefit of the Supreme Court's interpretation. He said, in response to an inquiry from one of the members of the committee, that if the Court sustained the Commission's jurisdiction in sweeping terms, supporting what he termed "inferences" from the opinions of lower courts, amendatory legislation might be appropriate.

The Supreme Court has now acted. It has sustained the Commission's jurisdiction in most sweeping terms. It has gone even beyond the views expressed by the circuit court of appeals and has disregarded the distinction which the Commission has sought to draw between the regulation of earnings from production and gathering operations of different classes of producers.

It has now apparently held that all sales of gas committed to interstate markets are under the Commission's jurisdiction. The necessary effect of this holding will be further to limit the supplies of gas available for interstate markets.

The Commission cannot pick and choose those whom it will subject to regulation. There is no discretion vested in the Commission. Nor should there be. As the assistant attorney general of Texas pointed out in his argument of the Interstate case, the Commission is required to enforce the act against all within its jurisdiction.

Under such circumstances it is clear that producers of gas will hesitate to commit their gas to interstate markets; that they will hold their gas until intrastate markets are available.

This can result only in prejudicing the interests of consumers in States other than those of production. Most pipe lines rely in great part, and some exclusively, on gas purchased from other producers for their supplies of gas. It is obvious that a withholding of gas of such producers from interstate markets will result in many instances in shortages of supplies of gas; and that even though a pipe-line company has a substantial supply of gas from its own production, prices charged consumers will necessarily be increased because of the necessity of a shorter period of amortization.

The passage of the proposed legislation is urgently needed so as to require the recognition of gas as a commodity at the place of production and permit its free movement to interstate as well as intrastate markets.

Filipino Soldiers Are Veterans and Entitled to Veterans' Benefits, But Are Now Denied Them Under First Rescission Act of 1946

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article entitled "Filipino Soldiers Are Veterans," by Mr. Vicente Villamin, the well-known Filipino economist, and an editorial in the Washington Post pleading for justice to Filipino veterans.

There is a school of thought in our Government holding the view that those Filipinos who fought with our forces in the Philippines under a military order of our President were "in the active service of the United States Army, but not in the United States Army" and are, therefore, not entitled to veterans' benefits provided for by law.

Mr. Villamin's article upholds the contrary view, namely, that those brave and loyal Filipinos are veterans—veterans de facto, if you please—and hence should be granted full veterans' benefits. I wish to commend him for calling the attention of Congress to this matter and I urge all Members to read his lucid and logical article.

Mr. Speaker, our action or nonaction in our treatment of the Filipinos who fought under our command with such valor and gallantry is bound to have international repercussions. We must not let the Filipinos down for the sake of simple justice and our international reputation.

Mr. Villamin brings up two economic points worth considering: First, that the Philippine government did not receive lend-lease aid from us, and, second, that the Filipino participation in the war had shortened it and thus saved not only American lives but also billions of dollars.

Mr. Villamin's article and the Washington Post editorial follow:

FILIPINO SOLDIERS ARE VETERANS

(By Vicente Villamin)

The Filipinos who fought under General MacArthur have a story to tell to the American people.

In the last war there were 116,000 foreigners who joined the American Army in the United States or elsewhere. They are considered veterans and are enjoying veterans' benefits under the law. There were 400,000 Filipinos in that Army in the Philippines, but they are not considered veterans, and, therefore, not entitled to veterans' benefits, except insurance and pensions for death or disability, which are enjoyed by only a small percentage of that number.

Thus a Filipino soldier who was lucky enough to come out of the war unscathed gets nothing except the glory of having fought under the American flag made poignant by the chagrin of being read out as a veteran by postwar legalistic interpretation of his status. He is denied the benefits of the GI bill of rights, the Mustering-Out Pay Act, the Terminal Leave Act, the Six Months' Death Gratuity Act, and other acts.

The claim of the Filipino to recognition as a veteran rests on the fact that on July 26, 1941, the President of the United States, as Commander in Chief of the Army and Navy, and acting under the act of Congress of March 24, 1934, ordered the Philippine Army inducted in the American Army, and it was not until June 30, 1946, that it was released from under American military authority by another order of the President.

On April 27, 1942, the Attorney General held that the Philippine Army was by the President's induction order thereby placed in the "active service in the land and naval forces of the United States." This was the law until Congress, on February 18, 1946, passed the first Rescission Act, declaring that that army was not in such active service and, therefore, not entitled to veterans' benefits, with the two exceptions noted above. Since then the War Department has recommended to Congress a bill extending to Filipinos the benefits of the Missing Persons Act, which will give them their back pay.

On the induction of the Philippine Army 4 months before Pearl Harbor, the American Government assumed its expenses, development, and direction. There was no statement at that time by the President of the United States or law of Congress that suggested even faintly that they were other than soldiers in the American Army. On the contrary, they were made to understand that they were such soldiers. They were proud of it, and they fought with more zest.

When they were ordered by the President of the United States, the Filipino soldiers who by law owed allegiance to the United States could not have refused to comply. The order was as obligatory on them as the Conscription Act was on American citizens. They were roughly in the same position as the members of the National Guard, who were ordered into the Army and became veterans on honorable release. Stated in a different way, the President's order had the force and effect of a Federal statute declaring the Filipino soldiers members of the American armed forces, and that was equivalent to enlistment en masse.

The Filipino soldiers were not mercenaries or mere hired workers in uniform to be discharged summarily without benefit of veterans' rights after their combat usefulness had ceased with the war's ending, which they helped to hasten. They had acquired rights, both inherent and derivative, while serving under the American flag even as the 116,000 foreigners in the American Army had acquired veterans' benefits in full.

The British soldiers, for example, who fought with the American forces under a unified command, are in a different category. They served under an Anglo-American agreement to coordinate military operations. They were not under an order of the President of the United States or a law of the United States Congress. Clearly, therefore, they are not veterans of the American Army.

The Philippine Army lost its organic identity when it was merged in the American forces and the Philippine Government, which under the law then in force was merely a creature of the American Congress, was in temporary legal vacuum itself. These two facts were made patent at the Japanese surrender ceremonies in Tokyo Bay, where no Filipino representative was invited to sign the surrender instrument, although representatives of New Zealand, Australia, Canada, Holland, France, China, Russia, and Great Britain did sign to punctuate their victory over the enemy.

But the Filipinos were partly reconciled to that symbolic exclusion because their friend, General MacArthur, signed for Americans and for them. They were attached to America by ribbons of service and affection—an attachment so pathetic in its sincerity. And so it is hard for them to understand that the legalists in Washington should now hold that they were not in the active service of the American forces when they ask, as they now do, for veterans' recognition.

It is a fact that recognizing the Filipinos as veterans in these postwar times would cost the American Government money. But the Filipinos had saved America much more money than the cost. Let the two following considerations be taken into account in this connection:

First, General MacArthur has stated that the participation of the Filipinos in the war had shortened it considerably and saved many American lives. If it shortened the war by 50 days, it had saved the United States some $15,000,000,000 at the rate of $300,000,000 of expenditures a day.

Second, if the Philippine Army had not been inducted in the American Army 4 months before Pearl Harbor, the Philippine Government, ever loyal to the United States, would have prepared for and waged the war as a separate entity and as such it would have received billions of dollars worth of lend-lease assistance from the United States. As it was, it received no such assistance.

The Filipinos deserve to be considered veterans of the American armed forces. Strict technicality may militate against it, but equity is in its favor and fundamental policy fortifies it.

[From the Washington Post of June 17, 1947]

FILIPINO VETERANS

Few people in this country are aware, we suspect, of the shabby treatment meted out to the 400,000 Filipino veterans who were in the American Army during the war. Some months before Pearl Harbor, while the Philippine Islands were still under United States sovereignty, the President issued an order making the Filipino army a part of the American Army. Of course, this made the Filipino soldiers who constituted that army a part of our fighting forces as much as were soldiers drafted from the States, and they remained in this status until the eve of the Philippines' independence. Last year, however, Congress passed the First Rescission Act denying to Filipino veterans most of the benefits that go automatically to other veterans who were exposed to similar risks and hardships.

We can readily understand the reasoning of Congress in denying to Filipino veterans the full benefits of the so-called GI bill of rights. Since the Philippines have became a separate nation, they may be reasonably expected to assume the continuing burden of caring for injured veterans among their own people. After all, the Filipino soldiers fought for their homeland as well as for the United States. It seems to us unwarranted discrimination, however, to cut Filipino veterans off from mustering-out pay, from the benefits of the Terminal Leave Act and from back pay under the Missing Persons Act. The War Department has specifically recommended that Filipino veterans' rights under the Missing Persons Act be restored. It is one thing to leave the long-range problem of caring for disabled veterans to the new government at Manila, and quite another thing to deny to Filipinos the current benefits which they had earned as members of the American fighting forces. We cannot help thinking that if Congress reviews the situation, with full realization that these men were members of our own Army and subject to its orders, it will see that a grave injustice has been done.

The Freedom Train

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Attorney General before the House of Representatives Committee on Expenditures in the Executive Departments concerning the Freedom Train:

I am very happy that you have seen fit to inquire about the Freedom Train. This inquiry presents a welcome opportunity to set forth on the record the motives, the objectives, and the plans for what I believe to be a highly desirable program of education in good citizenship.

At the very outset, it should be unmistakably clear that the entire project is being conducted, wholly managed, and financed entirely by the American Heritage Foundation formed by a group of public-spirited citizens who seek the development of a greater awareness of the blessings of American democracy and thus the creation of a higher standard of citizenship. These men and women were

chosen for this responsibility without any regard for their political persuasion. Each of them is moved by a patriotic concern for the welfare of our country. As a group, they represent a cross-section of leadership in many phases of industrial and civic endeavor.

These citizens have organized an educational foundation chartered in the District of Columbia known as the American Heritage Foundation. I am leaving with the committee a copy of the certificate of incorporation of the American Heritage Foundation. The governing body of this organization consists of a board of trustees. A list of the members of the board of trustees is attached to this statement and marked exhibit A. I am also submitting a statement of the objectives and program of this foundation (as presented at a conference held at the White House on May 22, 1947). Mr. Thomas D'A. Brophy, president of the foundation is present to furnish any information about the program of the foundation which the committee desires.

As the Attorney General of the United States, I have been concerned with the increase in lawlessness, the development of a tacit acceptance of American institutions, and the threatening danger of subversive activity. I am sure that these aspects of the current American scene have been of concern to you and other thinking Americans. As the chief law-enforcement officer of the Federal Government, I have an additional and special responsibility in this regard.

Because of this, early in 1946 I sought for an instrumentality that could reawaken in the mind and the heart of the American people a greater appreciation of our American heritage. If this could be accomplished, we would be able to strengthen the spiritual resources of our people and immunize the American body politic against the germs of subversive propaganda.

It was obvious that any educational program designed to meet this end would be effective to the degree that it made a dramatic impact upon the minds of the American people. In other words, something to spearhead the program was needed. This led to the idea of a special exhibit train to carry a collection of the original American documents on which our liberties are based. After canvassing the field, we found, insofar as the Federal Government was concerned, that the documents most desired are in the custody of the Library of Congress and the National Archives. In this connection, there is ample authority for these agencies to make such documents available. With respect to the National Archives, such authority is conferred by the act of June 19, 1934 (44 U. S. C. 300c), while the act of February 19, 1897 (2 U. S. C. 136), vests similar authority in the Librarian of Congress. I enlisted and secured the cooperation of these and other agencies.

The visit of such an exhibit to any community would be a significant event. There are millions of our fellow citizens who may never have an opportunity to see these priceless treasures of our heritage. The very fact of the visit will inspire appropriate coverage by the newspapers, radio, magazines, and other agencies of public information and offer them an opportunity to carry a beneficial message to the public. With this assistance, the exhibit train can become the spearhead for an effective program of education in the principles and ideals of our democracy. As the idea developed into a reality, someone labeled the exhibit the "Freedom Train," and this apt title has since been adopted. From the very beginning I felt that such a program should be handled by private citizens rather than the Government itself. It could be most effective if it became a spontaneous citizens' movement for rededication to American institutions—not just a Government project.

With this in mind, I approached some patriotic and distinguished citizens with the suggestion that they undertake to organize the program. This has been done. The project has been in the process of development and expansion for more than a year. As they enlisted the support of other persons, the group decided that the program should be handled by a patriotic nonprofit corporation to be chartered under the provisions of chapter VI of title 29 of the District of Columbia Code. On February 14, 1947, a certificate of incorporation for the American Heritage Foundation was filed pursuant to that law. Thereafter, from suggestions made by Mr. Winthrop W. Aldrich, Mr. Thomas D'A. Brophy, and myself, 34 individuals were invited to serve as the board of trustees for the American Heritage Foundation. On May 15, 1947, the trustees met in New York and elected the following officers: Mr. Aldrich as chairman of the board of trustees; William Green, president of the American Federation of Labor, as vice chairman; Robert G. Sproul, president of the University of California, as vice chairman; Philip Murray, president of the Congress of Industrial Organizations, as vice chairman; Mr. Brophy as president; and Louis A. Novins as vice president and secretary. The entire management and direction of the program has since been in the hands of the officers and trustees of the foundation.

I have been delighted with the enthusiasm that the project has inspired and with the remarkable progress that has been made. I am sure you will agree that the program, as outlined in the accompanying brochure, represents a most ingenious development of the original concept and offers a stimulating program of rededication for the American public. I take this opportunity to pay tribute to the devotion and zeal which the officers and trustees of the American Heritage Foundation have given to the project. They deserve the gratitude of all Americans concerned with the welfare of our country.

As stated above, the complete management and direction of the affairs of the foundation and the operation of the program has been vested in the officers and trustees of the foundation. The foundation is employing a staff of competent persons to execute the program. Members of the staff will accompany the train and will precede it for the purpose of making all necessary arrangements for the fullest participation by each community on the itinerary. Their duties and responsibilities will be those consistent with the proper development of community programs of rededication. They will endeavor to obtain the maximum educational benefit from the message of democracy carried by the Freedom Train.

Every item of expenditure for this project will be financed by the American Heritage Foundation. It should be noted in addition that a vast amount of time, space, and talent will be voluntarily contributed to the program by patriotic individuals and organizations. It is anticipated that the funds required will be raised from contributions by individuals, corporations, labor unions, and every type of civic, fraternal, veterans', and community organization. The trustees hope that the budget of the foundation will be financed by the broadest kind of public participation. The Department of Justice has no funds appropriated for this purpose and therefore will not contribute any financial assistance whatsoever to this project.

It is expected that the Freedom Train will visit approximately 300 communities in 48 States during the period of a year commencing on September 17, 1947. The list of communities has been compiled upon the principle of trying to visit at least three cities in each State together with other larger centers of population so as to reach the largest number of people. The practical limitation upon the number of communities to be visited is that the foundation has set up its budget with the objective of operating the program for only 1 year. In each community visited, this great collection of documents will be exhibited to the public without charge. Under the present plans of the foundation, the appearance of the train in a particular community will provide the basis for a community-wide program of rededication to the ideals and institutions of America. It is planned that schools and civic and patriotic groups will participate in these programs. The governor of each State and the mayor of each city on the Freedom Train itinerary will be asked to sponsor the local program within his jurisdiction. Each will be asked to appoint a citizens' committee to be responsible for all the activity within his respective area. Thus, the broadest possible sponsorship will be developed.

The documents to be carried on the Freedom Train will be selected from a list suggested by a group of experts from the National Archives, the Library of Congress, and other authoritative sources. The foundation will endeavor to exhibit an impressive collection of the significant landmarks of our American history. Each document will be a precious heirloom accepted by all of the American people as deserving of universal reverence.

The final list of the documents has not yet been approved by the trustees of the foundation, however. I am leaving with the committee a list of the documents now being considered for exhibition on the Freedom Train. The list was copied upon the basis of advice and suggestions of experts from the Library of Congress and the National Archives, Dr. A. S. W. Rosenbach, the well-known specialist and dealer in such documents, Donald Culross Peattie, writer and editor, and others. The Library of Congress felt that the signed official copies of the Constitution and the Declaration of Independence should not be placed on the train. They will not be, but contemporary original drafts will be included. On the other hand, various individuals have made unsolicited offers to lend documents for the exhibit, and some of them have been accepted.

Apart from securing the assistance of other Government agencies, the role of the Department of Justice is a limited one. I am assuming responsibility for the physical custody and safeguarding of the documents involved. I am being assisted in this respect by the Marine Corps which, by direction of the Secretary of the Navy, has undertaken to maintain on the train at all times a small guard of marines. In addition, they will cooperate with local fire and police officials for additional protective measures.

Extraordinary mechanical precautions are being taken for the physical protection of the documents. The three exhibit cars are being reconstructed from three cars donated by the Pennsylvania Railroad. The cars have been stripped down to the steel shells, the windows have been sealed over with welded steel plates on both inside and outside, the steel floors have been reinforced and steel ceilings have been doubled. Steel revetments will substantially strengthen the cars against stress and strain. The understructures of the cars have been completely renewed. Only fireproof or fire-resistant materials are to be used in the decoration of the cars. Thus, the cars containing the documents will in effect be traveling vaults. Special temperature and humidity controls will be installed to preserve all inks and paper. Each car will be equipped with automatic fire-fighting equipment of a carbon-dioxide type especially suitable for the protection of documents. Furthermore, the train will travel at low speeds and, usually, for short distances. The document cars will also be protected from shock by a baggage car on one end and three personnel cars on the other. The documents themselves will be exhibited behind heavy layers of special plastic and glass embedded in steel cases. The protection arrangements are subject to the approval of the experts of the Library of Con-

gress and of the National Archives, who are being constantly consulted.

The program will definitely start on September 17 from Philadelphia on the occasion of the one hundred and sixtieth anniversary of the signing of the Constitution. I am sure you will agree that this is a most fitting time to launch such a program. This project of the American Heritage Foundation will truly attract Nation-wide interest. It invites participation by all Americans.

EXHIBIT A

THE AMERICAN HERITAGE FOUNDATION

Winthrop W. Aldrich, chairman of the board of trustees; William Green, vice chairman; Robert G. Sproul, vice chairman; Philip Murray, vice chairman; Thomas D'A. Brophy, president; Louis A. Novins, vice president and secretary.

Board of trustees: Winthrop W. Aldrich, William D. Askren, Barney Balaban, Chester I. Barnard, Thomas D'A. Brophy, John S. Burke, C. Donald Dallas, John W. Davis, Mrs. LaFell Dickinson, William Green, Paul G. Hoffman, Eric A. Johnston, Harry T. Kendall, Robert H. Lehman, Charles Luckman, Timothy A. McInerny, Philip Murray, Reinhold Niebuhr, Louis A. Message Broadcast From the National Museum at Meeting of Washington Art Committee

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message, broadcast from the National Museum at a meeting of the Washington Art Committee by Madam Martins, wife of the Ambassador of Brazil:

My fellow artists, ladies, and gentlemen, my message is a confession of faith in a mission of peace to which we can mostly contribute as an inspiration and as a stimulus, and of which we are an essential part—the mission of art to peace.

My message is a confession of faith in a world of freedom in which the manifold differences of race, nationalities, religions, social conditions, and opinions have full expression on the basis of free interchange. Such a world of diversified aspects, which play their adequate part without restrictions of preconceptions, privileges, or hatreds is a world of rich creative activity, not of destructive conflicts. It is our world—the world of art—for which and in which every being is good, and therefore beautiful.

First of all, contrary to common belief, art is not an appeal to delicate sentiments only; it does not request from man the best in man only; but it is an appeal to all the emotions, deep and superficial, delicate and strong, measured and unruled; it is a mobilization of all in man.

As such an absorption of everything in man—his spirit and his body, his virtues and his passions, his patience and his violence, his diligence and his intuitions—as such a universal demand upon man, it is the best program and guaranty of peace, because art is directed to creation, not to destruction; to achievement, not to domination; to expression, not to elimination; to construction and integration, not to dissociation and oppression.

The other means to peace leave some of man aside or emphasize some particular aspect of human nature.

World organization, for instance, preserves nationalism and the policy of balance of power gives relief to egotism and selfish interests.

In the second place, art is a liberation, not only for the artist, but for the admirer of art, the simple observer of artistic realizations.

To a certain extent, the contemplation of a work of art is a second creation; the sculpture, the oil painting, the song as they are touched or seen or heard impress the individual soul according to each individual nature, each individual sentiment, each individual transient mood.

Each one, educated or not to art, recreates art and by so doing grows to a higher level of human life, the level of creation. This is the Aristotelian catharsis, that superation of oneself which lifts up the visitor of an art gallery or the listener to a concert.

Now, liberation is synonimous with peace, not a stagnant peace, not a transitory peace, but a dynamic peace. It is a wrong belief, too frequently shared, to think that only war is dynamic. There is a dynamic peace, a creative peace, the peace through art.

It was by destruction of works of art, the so-called auto-da-fé, the bonfires of German-Jewish literary works as of those of a Heine, that Hitler began his nihilistic drive of conquest, domination, and destruction. Art is liberation and construction; it is by art that we must rebuild this shattered world.

What I mean is not art in the narrow sense; such narrow sense of art is a convenient example, a magnificent point of reference, a superior result of art.

What I mean is art in its universal sense, the artistic spirit, the education to art, the aesthetic contemplation, the natural inclination to regard everything in its peculiar aspect to beauty, an inclination unfortunately more congenital to orientals than to us.

After all beauty is not only in everything, but belongs to the essence of everything; beauty is transcendental.

In the third place, art is immortal, it is in a continuous process of renewal. I wish to emphasize that political regimes die, statesmen's combinations disintegrate, social theories shift from one extreme of individualism to the other extreme of totalitarianism.

Art is eternal not in its styles, not in its schools, not in its technique, not in its conceptions, nor in its subjects, but in its ideal, in its definition, in its aims, in its consequences. Art is the most solid basis of peace.

The unity of its ideal is the reason of its renewals. It guarantees peaceful transformation and adaptation to new conditions, the constant fidelity to realities, through its power of interpretation.

Political forms, social theories have limitations which point to breaks, wars, and revolutions, because to a certain extent they are rigid, lack fundamental unity, universal significance. But life changes and renders wars and revolutions necessary if governments and peoples renounce the ideal of perfection and freedom and adhere to restricted ideals and limited philosophies.

Peace through education to art is my message to you who in your jobs on your papers, in your associations, in your public or social positions, may have a decisive role in making of Washington the real center of an aesthetic peace, that is, a permanent peace, and thereby contributing to have it fulfill, as the Capital of the country, the vocation of today's America.

Fifty Million Americans Denied Tax Relief by the Veto of Tax Bill

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

The House had under consideration the veto message of President Truman on H. R. 1, the tax bill, and for other purposes.

Mr. ROBSION. Mr. Speaker, the House of Representatives on yesterday voted without debate on the President's veto of the tax-reduction bill. The House voted 268 to override his veto to 137 to sustain it; those in favor of this tax reduction lacked just 3 votes of overriding the veto; 233 Republicans and 35 Democrats voted to override the veto; 2 Republicans voted to sustain it. If those two Republicans had voted to override the veto, the vote would have stood 270 to 135, the necessary two-thirds.

Under the Constitution, the power of the purse—the taxing power—is vested in the Congress. The Congress is made up of the representatives of the people. The President, with his veto, made history. It is the second time that a President vetoed a tax bill. President Roosevelt, in 1943, vetoed a tax bill, and he was denounced by his majority leader in the Senate and by other Democrats, and the House and Senate both voted to override the veto.

TAX, SQUANDER, AND SPEND

The New Dealers, since 1933, have become past masters in the art of creating debts, increasing the national debt, and increasing taxes. They have never learned the art of cutting out unnecessary expenditures or in reducing debts. The statement was attributed to Harry Hopkins that the policy of the New Deal was "to tax and tax, spend and spend, elect and elect." Whether he made this statement or not, this is the policy that has been followed and today we find our country with the highest per capita debt and the highest per capita taxes of any of the leading countries of the world with a stable fiscal policy.

FIFTY MILLION INCOME-TAX PAYERS HIT HARD

Not many years ago, we had only a few million Federal income-tax payers. Under the New Deal, with their tax-squander-and-spend policy, we have increased this number of income-tax payers to nearly 50,000,000. It not only reached down and got practically every working man and woman and small farmer in this country, but persons of wealth and large incomes and levied a heavy tax on them so that today many persons pay 86 cents out of every dollar of their taxable incomes. The average taxpayer was willing, during the emergency of the war, to pay these heavy taxes, but the war in Europe has now been over more than 2 years and nearly 2 years in the Pacific. The President was unwilling to give tax relief to these overburdened taxpayers, both large and small, in the Nation.

The President, by the use of sophistry, in his message, would have the Nation to

believe that only a few persons would benefit substantially by this tax reduction. This tax-reduction bill gives relief as follows:

First. Thirty-percent reduction to approximately 30,000,000 in the low-income brackets. This includes all of those millions of workers, teachers, white-collar workers, and others in the low-income brackets who have on pay day a part of their wages or salaries withheld for taxes and their take-home pay thereby lessened.

Second. A 20-percent reduction to approximately 17,000,000 income-tax payers of the middle-income group.

Third. Ten and one-half percent reduction to approximately 900 persons in the higher income brackets.

Fourth. Approximately 1,500,000 people 65 years of age or over would have received an additional exemption of $500.

Those of the lower income brackets receive the highest percentage of relief and this bill gives a distinct preference to the 30,000,000 persons of the low income tax group and other persons 65 years of age or over. There is a mere handful of those who receive the reduction of only 10½ percent in the higher income brackets. Congress has shown preference here that is not shown in the State and city taxing laws. The widow, the small farmer, the owner of a small dwelling house or a small business house, pays the same rate of tax on their property as the big businessman, the big farmer, and the owner of the fine residence in the city.

The American people's income tax is not only high but they are paying tremendous sums in the way of concealed taxes on everything that they eat, wear, and consume. They are paying heavy taxes on their light, gas, oil, telephone and telegraph bills, so that today, the average common man and woman is paying out for taxes in one form or another at least 33⅓ percent of his or her wages, salaries, and other income.

The American people will refuse to continue to carry this load. Mr. Truman and his group will be driven from power in 1948 by an outraged and tax-burdened people. These 50,000,000 people can and will in no uncertain terms express their resentment. President Truman may be able, for the moment, to defeat the will of the people and the expressed will of almost two-thirds of the Congress, but, the people will have their say in November 1948.

RELIEVE OTHERS, DENY OUR OWN

The President states that because of the very heavy commitments for relief, rehabilitation, and restoration of other nations of the world that the American people must continue to carry their heavy burden of taxes. The American people have been on the giving end of this international program of war and of relief beginning with 1939. They have contributed heavily of their blood and treasure, more than $340,000,000,000, great quantities of food, clothing, and other supplies. We have stripped our country of much of its natural resources—timber, oil, and other essential commodities. We have given the blood of hundreds of thousands of our young men and women, a million or more have been injured or lost their health. We have poured into these countries approximately $18,000,000,000 since the war in wheat, corn, meat, and other foods, fuel, building materials, machinery, and many other supplies and commodities greatly needed in our own country. We have also poured into these countries money and credits.

We have shipped to foreign countries within the last year more than 12,000,000 tons of corn, wheat, and other grains, and it is claimed that we will ship approximately fourteen or fifteen million tons during the coming year, and, of course, untold quantities of food, fruits, and so forth, of every kind. These have been and will be sent to the foreign countries as gifts or on credit extended by our Government, and very little, if any, will ever be repaid. We have been stripping our own country of its supplies; we have intensified scarcity, and, of course, up goes the price of bread, meat, and other foods and other commodities. These foreign nations, with our own money, become the competitors of American consumers in American markets, and the net result is higher and higher prices for our own people. I shudder to think what will happen in this country when and if we have a real crop shortage in this country. For the last 3 or 4 years we have been unsually blessed by favorable weather.

President Hoover and many other great men of this country have, too, become alarmed. While we are furnishing the money and supplies, many of these nations are increasing their armies, engaging in wars, rebellions, and insurrections. The President and the Congress owe the American people some consideration. Of course, these heavy taxes and scarcity mean an increase in the prices of raw materials and an increase in wages and that means an increase in the cost of products consumed by the American people.

The President admits that this tax reduction means that the American taxpayers themselves will have more money to spend for things they consume. He states that this will increase inflation. The President says that we must not give the American people this break but he wants to hold the taxes high and turn the money over to him and his administration and they will spend it for waste, extravagance, relief, and the rehabilitation of foreign countries. Of course, the administration will use this money to go into American markets and buy these commodities, equipment, and so forth, and compete with the American housewives and American factory and shop workers and producers and, of course, prices will go up. Now what is the difference—to let Mr. Truman and his bureaucrats spend the money or let the American people spend the money for the things they desire and need? That illustrates the demagogery of the President in finding excuse for refusing to relieve the tax burden of the American people. It is passing strange indeed that many of the countries that we have been aiding in the war and since the war and that the President proposes to aid, have reduced the tax burden of their people. I want our country to help in any reasonable way it can but 140,000,000 people cannot continue to bear the load of 2,000,000,000 people in the world. The President should demand that these persons who have been the recipients of our bounty to quit increasing their armies, quit fighting, and go to work. The American people are working and must continue to work.

Hon. Ben Cohen, of the New Deal fame, has been going over Europe and he is reporting that we must put up $24,000,000,000 more for Europe. Henry Wallace, whom Mr. Truman tried to cram down the throats of the American people with the job of Secretary of Commerce, the RFC, and other auxiliary positions, says that we ought to put up $50,000,000,000, and our country now with the highest per capita debt and the highest per capita taxes of any country in the world.

President Truman and Secretary of State Marshall have put out a feeler that the American people with all their burdens should contribute billions more and, therefore, he says in vetoing the tax bill that he and his administration have made such large commitments for relief and rehabilitation for Europe and other countries that they cannot relieve the 50,000,000 income taxpayers of our own country.

I have been for some time voting against these wild commitments of this administration and I shall continue to do so in the future. The American people have some rights and I do not believe that Mr. Truman and his administration have the right, under the Constitution, to bankrupt our own country and to encourage the people of other countries to continue in their unwise policies.

FIFTY BILLION DEFICIT, SIX BILLION TAX REDUCTION

In 1944 and 1945 President Roosevelt and President Truman's administrations backed six billion of tax reduction largely for corporations, in cutting down excess-profit taxes and other corporate taxes, but then at that time we were having deficits of more than fifty billion and we had campaigns going on all over the country, using Hollywood stars and others, selling billions and billions of dollars worth of new bonds. Yes, President Roosevelt and Mr. Truman insisted upon tax reductions more than is provided in this bill, and not for the little income-tax payer, the laboring people, the white collar people, and others, but mostly for the corporations of the country, and insisted upon a reduction of excess-profit taxes. At that time they were not paying on the national debt. They were increasing the national debt approximately $50,000,000,000. Why did not he insist on keeping these excess-profit taxes and other corporation taxes and use the money to carry on the expense of the Government and avoid deficits of more than $50,000,000,000? But he says in his message vetoing H. R. 1 on yesterday that we should keep these high taxes for relief and rehabilitation of other countries and pay on our national debt. Of course, those tax reductions were phony. No government ought to have a tax reduction while having a deficit. Tax reductions should be made out of surplus. There should be no tax reduction while the Government has a campaign on to sell billions of new bonds as was done under President Roosevelt and President Truman in 1944 and 1945.

President Truman submitted his budget calling for expenditures of thirty-seven and one-half billion for the fiscal year beginning July 1, 1947. He stated the revenues of the Government would be approximately thirty-seven billion nine hundred million, leaving the small margin of four hundred million. Of course, he has enlarged his field of expenditures since he submitted that budget and if we had followed his advice, we would not have four hundred million to pay on the national debt. This budget was for the third peacetime year after the war and that is three times as much as President Roosevelt ever asked for to expend in a peacetime year. Mr. Truman and his bureaucrats have fought like tigers to prevent the cutting down of his budget of thirty-seven and one-half billion and against reduction of taxes.

The House voted to cut the President's budget six billion and the Senate voted to cut it four and one-half billion. There is little doubt but what the cuts will amount to four and one-half billion and then the budget will stand at thirty-three billion. It is now definitely estimated that the taxes and other revenues of the Government will amount to approximately forty-three billion. This will leave a surplus of approximately ten billion. This surplus cannot be less than eight billion. This tax reduction bill will take four billion of that and that will leave at least four billion to pay on the national debt.

There is no good excuse why this Nation for the third year of peacetime should spend and squander three times as much as was squandered and spent in any one peacetime year by President Roosevelt. If President Truman and his bureaucrats would cooperate with the Republicans and cut about a million of useless Federal officeholders and their expenses and cut out the waste and extravagance, the American people could have tax reduction, not only for this year but in subsequent years and also consistently reduce the national debt by a substantial sum every year. The American people cannot continue to pay this enormous sum of forty-three billion in taxes, but, the American people can never receive real relief until they change administrations and get an administration in power that believes in honesty, efficiency, and reasonable economy in government and that will give at least some consideration to the American people themselves.

Missouri Vote Scandal—Keeping the Record

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, the corrupt Kansas City political machine has played an important part in the political life of Harry S. Truman. It is unbelievable that four wards in Kansas City could influence ultimate results in elections as they have and with no credit to the President. He cannot ignore or avoid all of the implications involved.

Mr. Speaker, the United States News, in its issue of June 20, sets out in detail the rotten story of the Pendergast machine, and in particular the role of four wards in elections dating back to 1934. Here is that story:

In the 1934 primary: Harry S. Truman won Democratic senatorial nomination by 40,905 votes. Four wards in Kansas City gave him 50,477 votes over his nearest opponent, more than offsetting Truman's losses elsewhere in Missouri.

In the 1940 primary: Mr. Truman won renomination for the Senate by 7,976 votes. The same four wards gave him 9,295 votes over his nearest opponent, again offsetting his losses elsewhere in the State.

In the 1946 primary: Enos Axtell, endorsed by Mr. Truman, won the nomination for Representative from the Fifth Congressional District of Missouri by 2,361 votes. The four wards gave Axtell 10,032 votes over his nearest opponent.

Mr. Speaker, as part of my remarks I include the complete article which appeared in the United States News, above referred to:

BACK OF MISSOURI VOTE SCANDAL: A STORY THAT WILL ECHO IN 1948—THREE TIMES WHEN KANSAS CITY MACHINE DELIVERED VITAL MAJORITIES—STAKES FOR HIGH OFFICIALS IN INVESTIGATION OF THE 1946 DEMOCRATIC PRIMARY

A political mystery story with all the elements of a paper-bound thriller is unfolding in four wards in Kansas City. The story is capturing the attention of the Senate. It is one of compelling interest to President Truman. Repercussions from it promise to echo all through the 1948 Presidential campaign.

The story is crammed with drama and big names. Tough characters move through it. There was a safe blowing and a theft of ballots. Indictments have been brought against 71 persons. The head of the Federal Bureau of Investigation says he was ordered to confine his inquiry to the questioning of six men. The Attorney General is being asked about these orders. There is talk of impeachment charges. A Senate committee is pressing for a full-dress investigation.

The FBI men, who formerly had been held back, now are busy in Kansas City. Under the urging of Senator HOMER FERGUSON (Republican), of Michigan, and a special Senate subcommittee, they are making a thoroughgoing investigation of the manner in which the four wards gave a Democratic congressional nomination to Enos A. Axtell, a friend of the President, in the primary of August 6, 1946. But the ballots that comprised much of the evidence have been stolen.

The implications of the study reach far beyond the defeat of Representative Roger C. Slaughter by Mr. Axtell, at the urging of the President, last August. To bring about the defeat of Mr. Slaughter, Mr. Truman called into service his old friend, Jim Pendergast, and the reconstituted elements of the old Pendergast vote-getting organization in Kansas City. Mr. Pendergast threw his resources back of the Presidential effort.

The four wards involved in the present inquiry are the old strongholds of Pendergast strength. They used to deliver the votes for the late Tom J. Pendergast, uncle of Jim, when the former was thriving as political boss of Kansas City. These were the four wards that, under Tom Pendergast's leadership, put Mr. Truman on the road to the Presidency by electing him to county offices and then by assuring his nomination and election to the Senate in 1934.

To understand the involved structure of the relationship, the story must go back to the First World War. Capt. Harry Truman served at Camp Doniphan then with a young lieutenant named Jim Pendergast. They became fast friends. After the war, this friendship with Jim Pendergast and his father, Mike Pendergast, elder brother of Tom, flourished. It was Jim Pendergast who sold to his father and uncle the idea of making Mr. Truman a county judge.

Mr. Truman served a term as judge—which, in Kansas City, is an administrative and not a judicial office—and then was beaten. After one term out of office he moved back in with the aid of the Pendergast organization and stayed there until 1934. This was during the period when the Pendergast organization was ruling Kansas City with a firm hand.

In 1934, Mr. Truman went to Tom Pendergast and told him that he wanted to run for Congress in the Fourth Missouri District, which had just been revamped so as to include rural Jackson County where Mr. Truman felt he could be reelected regularly. Mr. Pendergast said no; C. JASPER BELL, the present Member from that district, was to be the candidate.

The old story that Mr. Truman wanted to be collector of revenue and was rejected by Tom Pendergast appears to be erroneous. In May of 1934, James P. Aylward, the Democratic State chairman, and Jim Pendergast met Mr. Truman at Sedalia and asked him to run for the Senate with Tom Pendergast support. Mr. Truman said he would rather run for governor. They made it clear that he would not have Tom Pendergast's support for that spot. So he agreed to run for the Senate.

The primary brought Mr. Truman up against two men who had been or were serving as Representatives—Jacob L. Milligan and John J. Cochran. Mr. Truman came into the four tightly controlled Pendergast wards needing 9,732 votes to win the nomination. The results were:

	Cochran	Milligan	Truman
Ward 1	49	147	17,485
Ward 2	24	68	15,145
Ward 3	24	171	8,182
Ward 4	53	171	9,825
Total	160	557	50,637

The four wards gave Mr. Truman the nomination by 40,905 votes. He was elected in November in that year of wide Democratic victories.

The machine in charge of the four wards came under fire right after that victory. Maurice M. Milligan, United States district attorney and brother of the defeated candidate, said the day after the primary Federal agents had gathered evidence of ballot-box padding, of repeater voters, of judges refusing to count votes against the machine candidates. But it was several years before Mr. Milligan rounded up the evidence that he finally took to a Federal grand jury.

When Mr. Milligan cracked down in earnest, after the general election of 1936, he did not even tell Attorney General Homer L. Cummings of his plans. He simply asked Federal Judge Albert L. Reeves to call a Federal grand jury and told the local office of the FBI to move into action. Ballot boxes were impounded and put into the keeping of an armed guard.

Within a month after the election, the grand jury was busy. Mr. Milligan indicted 278 of the Pendergast political workers and

election officials. He sent 258 of them to jail. And, in 1939, he finished cracking the machine by convicting Tom Pendergast of income-tax evasion. In 1938, Mr. Truman, as Senator, fought the renomination of Mr. Milligan. He was the only Senator to vote against the confirmation.

In 1940, when Mr. Truman came up for reelection he had two major opponents for the Democratic nomination. One was Maurice Milligan; the other, Governor Lloyd C. Stark. Even in the old stronghold of the first four wards, little was left of the Pendergast organization. It had been battered down. Mr. Truman came into the first four wards of Kansas City, the fortress of the machine, needing 1,319 votes to win the nomination. The vote there was:

	Stark	Milligan	Truman
Ward 1	852	1,261	4,172
Ward 2	888	869	3,828
Ward 3	837	1,097	2,515
Ward 4	879	1,205	2,236
Total	3,456	4,432	12,751

Mr. Truman won by 7,976 votes. The four key wards, even with a battered Pendergast organization, managed to give him a margin of 9,295 votes over Governor Stark, who was his closest opponent for the nomination. But the old days of lopsided majorities in the four fortress wards seemed to be gone. Maurice Milligan had trimmed the power of the organization to the vanishing point.

MACHINE OPPONENT

Mr. Truman went back to the Senate and moved on to the Vice Presidency. When he was Vice President, the name of Maurice Milligan came up again for reappointment. Mr. Truman vigorously opposed it. He manage to get it delayed. Then Franklin D. Roosevelt died.

When Mr. Truman went into the White House, he refused to reappoint the man who had crippled the organization in the four wards. In Mr. Milligan's stead, the President named Sam M. Wear, who as a delegate to the 1944 convention had been a stanch supporter of Mr. Truman for the Vice Presidency.

In Kansas City, Jim Pendergast began putting back together the pieces of his uncle's old organization, aided by such old lieutenants as Tim Moran and Henry McKissick. The four wards began to hum again.

PRESIDENT AND FRIEND

On the walls of Jim Pendergast's law office in Kansas City are two frames. One contains a picture of President Truman inscribed: "To James M. Pendergast, friend, comrade, adviser." The other frame holds a letter on White House stationery, dated December 7, 1945. It reads:

"DEAR JIM: I am enclosing you check for $6 in payment of my Jackson Democratic Club dues. I hope the outfit is still going good. Sincerely yours, Harry." In the same frame is the uncashed personal check of the President, drawn on a Washington bank.

In 1946, the President found Representative Slaughter an obstacle to many bits of legislation he wanted. Mr. Slaughter held a key place on the House Rules Committee. The four old wards of the Pendergast stronghold lay in the middle of Mr. Slaughter's district. And Jim Pendergast had not been idle. The President called him to Washington and asked him to back Mr. Axtel. He finally agreed.

In the voting, Mr. Axtell lost Washington Township, his home town. He lost every other ward until he came to the key four, the home of the Pendergast organization. He came into these first four wards trailing Mr. Slaughter by 7,668 votes. In these four wards, the count was:

	Axtell	Slaughter	Jerome Walsh
Ward 1	5,033	825	563
Ward 2	3,264	219	194
Ward 3	2,187	704	481
Ward 4	1,620	324	585
Total	12,104	2,072	1,823

In two precincts, Mr. Slaughter did not get a single vote. In others, he got only two, three, or four. In the four wards, Mr. Axtell's majority was more than 10,000. He won the nomination by better than 2,300 votes. But he was beaten in the general election by the Republican, ALBERT L. REEVES, JR., son of the Federal judge.

A cry for an investigation arose immediately. Mr. Slaughter said he saw evidence of irregularities in the four wards. Roy A. Roberts, president of the Kansas City Star, set 34 men to collecting evidence and affidavits. The city council formally asked the Justice Department for an inquiry. A grand jury went to work.

Mr. Wear, the United States district attorney in Kansas City, sent material from the Star into Washington. Theron L. Caudle, Assistant Attorney General in charge of the criminal division, passed it along to Attorney General Tom Clark. He asked the FBI to make a study. It did. Mr. Wear talked the matter over with three Federal judges at Kansas City. They agreed there was not enough evidence to prosecute. The case was dropped. The four wards seemed to be safe.

NEW DRIVE

Then Congress came in. Senator JAMES P. KEM, a Republican, himself from Kansas City, led a drive for a congressional inquiry. Other Missourians joined in. The St. Louis Post-Dispatch added its voice. The Senate Judiciary Committee created a special subcommittee and put Senator FERGUSON, one of the Senate's most vigorous prosecutors, in charge of the inquiry.

FBI Director J. Edgar Hoover told the committee his orders from Mr. Clark limited the FBI inquiry to questioning six men. Mr. FERGUSON demanded to know of Mr. Clark why that was done. Mr. Clark said this was routine in preliminary inquiries. The Federal judges—Judge Reeves, Judge Albert A. Ridge, and Judge John Caskie Collet—said they had not read the FBI survey, but had seen only a summary prepared by Mr. Wear.

The judges said they had not based their advice upon full information. Moreover, they said the usual procedure was for the district attorney simply to ask a judge to call a grand jury into session without asking the advice of the judge.

FOUR WARDS UNDER FIRE

In the meantime, a Jackson County grand jury indicted 71 persons, most of them from the four key Pendergast wards. The jury reported that: ballots had been deliberately miscounted in some precincts; false returns had been made; there had been wrongful, illegal and wholesale marking of ballots; there had been vote buying and bribery; party workers who were not polling officials had participated illegally in counting votes, and there had been gross negligence, carelessness and indifference by judges and clerks.

Where miscounts were made, the jury said, they invariably were in favor of one group of candidates. There was not a single instance of an error on the other side. And it added: "It is our belief that Roger C. Slaughter in this race was deprived of the nomination by a fraudulent miscount of votes and by other types of fraud." The jury subpenaed ballots, tally sheets, poll books, and other records, and strongly urged a full investigation by the FBI.

That was on May 7. On May 28, the vault in which the grand jury had stored the evidence was blown open and the ballots were stolen, just after the grand jury had ordered a recount. Under the urging of the Senate subcommittee, the FBI began a full-scale investigation of the mystery voters in the first four wards.

In the meantime, Representative MARION T. BENNETT, a Missouri Republican, began talking about filing impeachment charges against Attorney General Clark. The national spotlight was falling upon the four Kansas City wards that hold the clues to the Pendergast strength. They helped to make a man President, and may play a big part in his reelection campaign.

Courts Martial in Germany

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Wednesday, June 18 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, a part of the occupation job which our Army is performing in Germany is to educate the German people to govern themselves in a democratic way.

One of the cornerstones of democracy is the right to fair trial. Procedural safeguards for the accused in criminal cases form the most important parts of Magna Carta and of our own Bill of Rights. But how can our Army teach these fundamentals of democracy to the Germans when they are not observed within the Army? The example which the Army sets is probably much more effective than any preachments which are made in words.

I therefore look with great alarm at copies of three petitions to General Clay, which I received in the mail from Europe this morning. In these petitions three American soldiers state that they have been denied the right of adequate representation by counsel in court-martial cases which are currently being tried. The petitions are addressed to Lucius D. Clay, commanding general, European Command, and request the revocation of his order denying these three soldiers the right to be represented by a civilian counsel, Mr. Earl J. Carroll.

We all know that the rules of Army court martial provide that soldiers may be represented by any counsel of his choosing, military or civilian. However, while the Army is not specifically denying these defendants the rights to be represented by Mr. Carroll they have effectively prevented such representation by ordering Mr. Carroll to leave Europe. I feel that this is a shocking situation which merits the immediate attention of the Secretary of War. I ask unanimous consent to insert these three petitions in the RECORD at this point where they may be read in full by my colleagues and by responsible officials of the War Department.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

POST GUARDHOUSE,
HEADQUARTERS COMMAND, EUCOM,
APO 757, United States Army, May 9, 1947.

Subject: Application for redress of wrong under Articles of War 121.

To: Gen. Lucius D. Clay, commanding general, European Command, APO 742, United States Army.

1. Request is hereby made pursuant to the provisions of Articles of War 121, for redress of wrong, to wit: the improper deprivation of civil counsel selected by the undersigned and provided by him for his defense pursuant to the provisions of Articles of War 17.

2. The undersigned was inducted into military service on March 20, 1944, and served the field artillery until October 29, 1945. On October 30, 1945, the undersigned enlisted in the Regular Army for a period of 3 years. The undersigned came overseas in October 1944, served through the Ardennes, central Europe, and Rhineland campaigns with the Ninth Army. He has no previous courts martial.

3. On December 14, 1946, the undersigned was arrested and placed in confinement at the Post Guardhouse, Headquarters Command, USFET, APO 757, where he has remained in continuous confinement until present date.

4. Under date January 21, 1947, charges were preferred against the undersigned. These charges were not served until February 4, 1947. During this period, the undersigned was held helpless in the post guardhouse, while the Inspector General, Headquarters Command, USFET, built up a case against him. The undersigned had no opportunity to talk to or search for witnesses in his own behalf. The undersigned requested counsel and was advised that he was not entitled to counsel until after his charges had been referred for trial. The alleged confidential nature of an Inspector General's report was utilized as a means of securing a statement from the undersigned and other witnesses. Actually the Inspector General was used as an agency of criminal prosecution rather than as an agency of administrative investigation. Statements of witnesses were distorted. Such tactics, together with my personal observations of the prosecution of other accused by Headquarters Command, USFET, have completely destroyed all faith in the administration of justice by that command, and any hope of the undersigned for a fair and impartial trial of the charges brought against him.

5. Immediately following the service of charges, the undersigned solicited the services of Mr. Earl J. Carroll, civil attorney at law, to represent him in accordance with the provisions of Articles of War 17. Mr. Carroll has prepared the defense of the undersigned and entered an arrangement with the Staff Judge Advocates' Section, Headquarters Command, as to a suitable time for trial.

6. On May 8, 1947, the undersigned was informed by Captain Adams, the regularly appointed defense counsel, that the staff judge advocate, Headquarters Command, EUCOM, APO 757, had instructed him to inform the undersigned that General Duff, Commanding General, Headquarters Command, wanted him to know that Mr. Earl J. Carroll was not available and would not be available to act as his defense counsel, by order of Gen. Lucius D. Clay, and further that the trial of the undersigned was to be held on Monday, May 12, 1947. Captain Adams stated that the undersigned could request other defense counsel, civil or military, now present in this theater, and that such request must be by letter. He stated that such letter was to be addressed to General Clay, who would determine whether or not counsel so requested is available. He suggested that such a letter of request, if it was to be made, should be prepared immediately, and that within 20 minutes of his leaving the post guardhouse, it would be delivered to the staff judge advocate. Captain Adams stated that if the undersigned waited until he was brought before the court to request other counsel, that his request would most likely be denied, and that he would have to accept such counsel as had been appointed for him, as he was going to be compelled to go to trial without further delay. Captain Adams said, "If I defend you I won't guarantee you anything except that you won't get over the maximum punishment."

7. The undersigned has been advised by Mr. Carroll that the latter is ready, willing, and able to continue to represent the undersigned in his defense of these charges in accordance with the arrangements originally agreed upon, provided that the order issued by you, which is contained in your letter to Mr. Carroll, under date April 30, 1947, is rescinded so as to remove the obstacle to his appearance thereby created by you.

8. Under these circumstances, the undersigned is determined to reject the services of the regularly appointed military counsel on the ground that he has no confidence in either the ability or integrity to the interest of an accused; that from his personal observation he has been compelled that such services are wholly perfunctory and for the apparent purpose of giving the trial by courts martial the appearance of a controversy that does not in fact exist. It is the prevailing opinion of those who have appeared before the courts martial, conducted by Headquarters Command, that an accused does not appear before them to be tried but only to be sentenced.

9. The undersigned respectfully requests the revocation of your order which has the effect of denying him the right to be represented by Mr. Earl J. Carroll, the civil counsel selected by the undersigned and provided by him for his defense, in accordance with the provisions of A. W. 17.

PHILIP O. BOUVIER, 42107395,
T/5, 7702 Service Battalion.

POST GUARDHOUSE,
HEADQUARTERS COMMAND, EUCOM,
APO 757, UNITED STATES ARMY,
9 May 1947.

Subject: Application for redress of wrong under article of war 121.

To: Gen. Lucius D. Clay, commanding general, European Command, APO 742, United States Army.

1. Request is hereby made for redress of wrongful denial to the undersigned of his right to the services of Mr. Earl J. Carroll, civil counsel of his selection, provided by him for his defense to the charges referred for trial to general courts martial, appointed by paragraph 20, special orders No. 340, Headquarters Command, USFET, APO No. 757, United States Army, in violation of article of war 17.

2. The undersigned served as an enlisted man from 22 December 1939 to 28 October 1945, and reenlisted in the Regular Army on 29 October 1945 for a term of 3 years. The undersigned served in the Hawaiian Islands from 1940 to 1944, and served in this theater from 2 May 1946. He has had but one summary courts martial in 7½ years' service.

3. On 21 December 1946, the undersigned was arrested and placed in confinement in the post guardhouse, Headquarters Command, USFET, APO No. 757, where he has been continuously held in confinement to the present date.

4. Under date 26 December 1946, charges were preferred against the undersigned, charging violations of an unstated article of war and the ninety-sixth article of war. The specification under the first charge alleges the misapplication of an Army jeep, for which another enlisted man, Sgt. Herman Hoffman, was tried and convicted and sentenced to 6 months by a general courts martial on or about 1 May 1947. The first two specifications under the second charge, alleges alteration of bumper markings and wrongful operation of this jeep. The third specification alleges an attempt to hire civilian employees by offering 100 percent higher wages than those being paid by the Army. The fourth specification alleges wrongful discharge of a pistol.

5. On 10 February 1947, these charges were referred to trial. During the 51 days of confinement between the time of arrest and the reference of charges for trial, the undersigned was told that he was not entitled to counsel. The long lapse of time during which he was helplessly locked up enabled the prosecution to prepare a case against him without according him a corresponding opportunity to prepare his defense.

6. The undersigned engaged the services of Mr. Earl J. Carroll, civil counsel, now in this theater to defend several other accused, to represent him in defense of these charges. Arrangements were made with the Staff Judge Advocates' Section for the trial of the undersigned's case to be handled in an agreed order with other cases being defended by Mr. Carroll. Satisfactory arrangements were completed and the entire defense of the accused was turned over to Mr. Carroll.

7. On May 8, 1947, Captain Adams, of the Staff Judge Advocate's Section, Headquarters Command, EUCOM, the regularly appointed defense counsel, called on the undersigned at the post guardhouse. Captain Adams informed the undersigned, in substance and effect, as follows, "The Staff Judge Advocate has asked me to inform you that your trial will be held on Tuesday, May 13, 1947, and that General Duff, commanding general, Headquarters Command, EUCOM, has instructed the Staff Judge Advocate to inform you that Mr. Earl J. Carroll, the civil counsel who has been representing you, is not now available and will not be available to represent you at your trial, which is to be held without further delay. You can request other counsel, civil or military, by letter, which will go to General Clay, who will determine whether or not they are available. It is suggested that if you desire to request any other defense counsel, that you prepare the letter right now and within 20 minutes after I leave here, it will be in the Staff Judge Advocate's Office. Your request for such counsel is limited to someone who is already in the theater, in order to prevent any further delay in bringing your case to trial. If you wait until you go to trial to request other counsel, your request will most likely be denied, and you will be compelled to go to trial, and you will have to accept whatever counsel has been appointed to defend you. If I defend you in this case, I won't guarantee you anything except that you won't get anything over the maximum punishment."

8. Mr. Carroll has advised the undersigned that he is ready, willing, and able to continue to represent the undersigned, and to appear in the undersigned's defense, in accordance with arrangements originally made, and that the only obstacle to his so doing is the order issued by you, which order is contained in your letter to him under date, April 30, 1947, and received by him on May 5, 1947.

9. The undersigned has no confidence in the military counsel provided by Headquarters Command, EUCOM, and refuses to accept the services of such counsel.

10. The undersigned respectfully submits that his long record of military service to his country, both in war and in peace, entitles him to more equitable consideration than that which is now being accorded to him, and requests the revocation of your order which has the effect of denying him the right to be represented by Mr. Carroll, who is civil counsel of the undersigned's selection, provided by the undersigned for his defense, in accordance with the provisions of Article of War 17.

CECIL B. PITTMAN, 6997234,
T/Sgt., 3466 Ordnance.

POST GUARDHOUSE,
HEADQUARTERS COMMAND, EUCOM,
APO 757, United States Army, 9 May 1947.

Subject: Application for redress of wrong under Article of War 12.

To: Gen. Lucius D. Clay, commanding general, European Command, APO 742, United States Army.

1. In accordance with article of war 121, request is hereby made for redress of wrong, to wit: Violation of seventeenth article of war by refusal to permit the undersigned to be represented by Mr. Earl J. Carroll, civil counsel of his own selection, whose services he has provided to represent him in his pending trial by general courts martial.

2. The undersigned served as an enlisted man from 7 October 1942 to 19 October 1945, and then reenlisted 20 October 1945 for a term of three (3) years in the Regular Army. The undersigned came overseas 11 February 1944, and entered combat at Omaha Beach 16 June 1944, and participated in the Normandy, Northern France, Ardennes, Central Europe, and Rhineland campaigns with the Eighty-third Infantry Division. The only courts martial against the undersigned was a summary court fine of $5.

3. On 21 December 1945, the undersigned was arrested and placed in confinement at the post guardhouse, headquarters command, USFET, APO 757, United States Army, where he has been continuously held to date. Under date 26 December 1946, charges were preferred against the undersigned alleging violations of the articles of war 94, 96, and 83. The specification under first charge alleges misapplication of an Army jeep. Three specifications under the second charge alleges alteration of bumper markings, and improper windshield sticker in connection with the same vehicle. The fourth specification under the second charge alleges an attempt to employ a civilian by offering 100 percent increase above the prevailing wage. The specification under the third charge alleges wrongful disposal of an Army pistol.

4. On 10 February 1947, these charges were referred to trial by general courts martial, appointed by paragraph 20, special orders No. 340, headquarters command, USFET, APO 757, United States Army.

5. During the long period between the time of arrest and the reference of these charges for trial, the undersigned was deprived of all opportunity to prepare any defense whatsoever. He was informed that he was not entitled to any counsel during this time.

6. Immediately following the service of these charges, the undersigned secured the services of a civil attorney, Mr. Earl J. Carroll, present in Frankfurt to defend other courts martial cases. Arrangement was made with the staff judge advocate's section, Headquarters Command, EUCOM, to have Mr. Carroll defend the undersigned in accordance with a mutual understanding as to the order of trial of the accused represented by Mr. Carroll.

7. On May 8, 1947, Captain Adams, of the Staff Judge Advocate's Section, Headquarters Command, EUCOM, the regularly appointed defense counsel, called on the undersigned at the post guardhouse. Captain Adams informed the undersigned in substance and effect as follows: "The Staff Judge Advocate has asked me to inform you that your trial will be hold on Tuesday, May 13, 1947, and that Brigadier General Duff, commanding general, Headquarters Command, EUCOM, had instructed the Staff Judge Advocate to inform you that Mr. Earl J. Carroll, the civil counsel who has been representing you, is not now available and will not be available to represent you at your trial, which is to be held without further delay. You can request other counsel, civil or military, by letter, which will go to General Clay, who will determine whether or not they are available. It is suggested that if you desire to request any other counsel, that you prepare the letter right now, and within 20 minutes after I leave here, it will be in the Staff Judge Advocate's office. Your request for such counsel is limited to someone who is already in the theater, in order to prevent any further delay in bringing your case to trial. If you wait until you go to trial to request other counsel, your request will most likely be denied and you will be compelled to go to trial, and you will have to accept whatever counsel has been appointed to defend you. If I defend you in this case, I won't guarantee you anything except that you won't get anything over the maximum punishment."

8. Mr. Carroll has informed the undersigned that he is ready, willing, and able to continue to represent the undersigned and to appear in the undersigned's defense in accordance with arrangements originally made, and that the only obstacle to his so doing is the order issued by you, which order is contained in your letter to him under date April 30, 1947, and received by him on May 5, 1947.

9. The undersigned has no confidence in the military counsel provided by Headquarters Command, EUCOM, and refuses to accept the services of such counsel.

10. The undersigned respectfully submits that his long record of satisfactory military service entitles him to more equitable consideration than that which is now being accorded him, and requests the revocation of your order which has the effect of denying the undersigned the right to be represented by Mr. Carroll, who is the civil counsel of the undersigned's selection, provided by the undersigned for his defense, in accordance with the provisions of Article of War 17.

WARREN G. COLLINS, 35561519,
S/Sgt. 3466 Ordnance.

Speech of Henry A. Wallace

EXTENSION OF REMARKS
OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks, I include the following speech of Henry A. Wallace, editor of the New Republic, at the Water Gate, sponsored by the Southern Conference for Human Welfare, Monday, June 16, 1947:

During the past 60 days I have traveled in five foreign countries and in the East, West, North, and South of the United States. I have talked with the people.

Everywhere I have found a belief that both Russia and the United States are pursuing aggressive courses which will lead to war.

Everywhere I have declared that neither war nor depression is inevitable.

Everywhere I have denounced the dangerous practice of arming reactionary governments.

Everywhere I have found that the people demand peace.

Tonight, I have come back to Washington where I spent 14 years of my life working for the greatest government on earth in the greatest capital city in the world.

I came here in 1933 to join a team which saved our capitalistic democracy from its own folly.

I worked with men and women of great integrity—many thousands of them—who were wholly devoted to their country and its democratic principles.

Many of you—happily—are still in the Government, doing good work. I hope that you will not be purged because of your presence here tonight.

The man who put the team together and made it work, has gone—though he lives in the hearts of the common people the world over.

Harry Hopkins has gone.

Harold Ickes, Henry Morgenthau and Frances Perkins have left.

You will excuse me if I feel a certain nostalgia for the troublesome, but exciting days a decade ago, when the energies of men and women in Washington were being poured into the constructive jobs of solving human problems and meeting human needs.

The job in Washington today should be no less exciting and satisfying than it was a decade ago.

The atmosphere here should be one of hope and confidence; not frustration and fear.

This postwar world can be excitingly peaceful or we can continue to pursue the road toward war.

We must change our course. We can't ignore the cries of people everywhere for peace and prosperity.

We must find and travel the road to peace.

Everywhere in the United States we hear that it is Russia that stands in the way of peace. And so it is.

But I doubt that it is entirely the Russia of reality which is the great obstacle to peace. It is—in large measure—the Russia which is painted for us—day in and day out—by men of blind prejudice or genuine malice.

Outside of our own borders one hears that not only Russia, but the United States, as well, stands in the way of peace.

I have been asked many times why I do not denounce the Soviet Union. There is widespread belief, perpetuated by unfriendly segments of the press, that I have not been critical of Russia.

That is not true.

I have been critical. But I have always tried to be constructively critical.

I could stand on this platform and declaim at great length about Soviet actions of which I thoroughly disapprove. But by so doing I should do nothing to advance the cause of peace.

I am primarily concerned with influencing the policies I can help to change.

I am primarily concerned with making our own American practices conform to American principles.

I share with millions of my fellow Americans a conscience. I can get as indignant as any man at the suppression of civil liberties anywhere in the world.

But I admit to a certain shame when I hear some of our official statements of protest about election methods in eastern Europe; and look at the same time at certain election methods in South Carolina and Kansas City—and the absence of any elections at all here in Washington.

This discrepancy disturbs me.

I can't insist on the perfection of democracy abroad and ignore undemocratic systems at home.

I believe that the preservation of our democratic system here in the United States depends on the living practice and demonstration of democracy.

I oppose terror or intimidation anywhere in the world. But my conscience and common sense tell me that I must use my strongest language against such methods in my own country.

I can hope in this democracy—if we save it—to help change policies which breed fear. I can hope to see the day when all Americans can hold their heads high and speak with pride their differing views.

Here in the United States, it should not take courage to exercise the right of free speech.

If it were true—which it is not—that our official indignation with Russia is over her suppression of civil liberties in her zone of influence; then, our greatest hope of changing that situation would be to find the ways to minimize her insecurity and remove her fears of encirclement and attack.

I don't believe there is more than a handful of Americans who want us to attack and attempt to obliterate the Soviet Union. But the Russians—as they study our press and listen to the statements of high officials—naturally think they have reasons for fear.

We must remember that many of the things we dislike about the Communist leadership of Russia today flow directly from the way in which Britain, France, and the United States armed the reactionaries of Poland and other peoples for the purpose of destroying the Russian revolution.

If we persist today in a policy of threats and encirclement, we shall increase international suspicion and distrust.

We are paving the way to war.

We must either exhibit our faith in democracy—in the give-and-take of differing ideas—or we shall breed a psychopathic hysteria which will drain our resources and lead us into a war in which there can be no victory.

The world cannot afford its present annual expenditure of $26,000,000,000 for armies and navies.

The world cannot afford 19,000,000 soldiers and sailors.

We need the dollar-power and the manpower to meet human needs and eliminate the causes of wars.

The European leaders with whom I spoke during my trip abroad could not understand our preoccupation with communism. They could not understand the world's greatest power trembling in fear of an idea, or the ideas leading * * * exponent-devastated Russia.

Many of these leaders are veterans of the resistance movements in their countries.

They will not be bribed nor intimidated.

They will not accept any policy which has the seeds of war.

They have gone through hell; and they are looking—with you and me—for a road to peace.

They will not join the United States in a war against Russia; nor Russia in a war against the United States, unless by pursuing the Truman doctrine we drive them—against their wishes—into the Communist camp.

The failure of force to suppress ideas is nowhere more clearly demonstrated than in the recent history of Italy, where Mussolini stood—not long ago—as the mighty suppressor of communism. Today, in Italy, there is a Communist Party of 2,000,000 members.

We must not be fooled by the cries of communism which fil' the air today.

Most of those who raise the cries do not fear communism; they fear democracy.

Communism, as an idea, is a threat to capitalism; but it will be a real threat only so long as we delay in ridding our capitalist economy of depressions. Twenty-five thousand-dollar loyalty investigations will never stop communism; full stomachs and security can do that job.

We must overcome this Red phobia which the reactionaries would carefully nurture in all of us.

We must concentrate on the solution of our major domestic problems.

We must take positive actions to make peace with Russia, as a fundamental to world peace.

An agreement with Russia must take precedence over the peace treaties with Germany and Austria so ardently sought by Herbert Hoover and ARTHUR VANDENBERG.

The Russians require peace.

The Russians must have peace.

The evidence is plentiful.

There is, first of all, the indisputable fact that Russia today—and for many years to come—will not be in a position to wage war.

The devastation of her most productive manufacturing and agricultural areas by the Nazis—as they invaded and retreated from the Soviet Union—is almost incalculable.

The Russians must have peace.

And I am convinced that Russians genuinely desire peace.

In three important interviews this year—with Alexander Werth, the British newspaperman, with Elliot Roosevelt, and with Harold Stassen, Stalin clearly indicated that he believes such cooperation is possible and necessary.

Many editorial writers and commentators insist on quoting the statements of Stalin 25 years ago that peace is not possible in a world part socialist and part capitalist.

I can see no legitimate reason for believing Stalin's statements a quarter of a century ago and doubting his statements of the past 6 months.

Stalin can change his mind in 25 years. Most of us have. Twenty-five years ago I was Republican.

I do not question that there are men in Russia who act as foolishly as ignorant men in the United States—men who insist that war is inevitable.

But the fact that Russia needs peace and that her principal spokesmen are genuinely seeking peace should provide a practical step toward peace.

Our hopes for a strong United Nations rest on our ability to make peace with the Soviet Union. It should be easier to reach agreement with a valiant ally than with the dictator in Argentina.

As a first step, I would suggest that the President and Secretary Marshall issue an invitation to Stalin and Molotov to meet with them in Berlin for the avowed and announced purpose of drawing up an agreement which will cover all the points at issue between the United States and the Soviet Union.

We must settle basic differences with the Russians, as completely as possible; or we shall continue to increase the friction which develops in every attempt to settle secondary problems.

We cannot reach agreement on Germany until Russia and the United States have reached agreement on their individual objectives.

We need markets—and as the world becomes increasingly short of dollars—we shall have more and more difficulty in our attempts to do business abroad.

We can act now to develop trade relations with the Soviet Union and keep our plants in continuous operation, or we can continue to pursue a policy of arming Russia's political enemies and reap the results in depression.

We can invest our wealth constructively in long-term loans at low interest rates, or we can waste our wealth in the unproductive, dangerous business of manufacturing and distributing munitions.

We can assure our businessmen reasonable profits, our farmers good prices, and our workers good wages, by planning for peace.

The world needs machinery and plows and motors, not guns and tanks and bombers.

Our first duty to ourselves is to protect our international markets by reaching an agreement with Russia.

Russia today does not need world markets. She does not have sufficient goods for international trade.

But Russia does need assistance in economic rehabilitation. We have the means to help.

We must be practical. The time has come to substitute a "get practical" policy for the Dulles-Vandenberg "get tough" policy.

There is nothing in the Russian Socialist economy which prevents us from developing good trade relations.

Eventually we must be prepared to accept repayment of initial investments with the purchases of materials the Soviet Union will be able to furnish.

Covering one-sixth of the world's surface, she has immense undeveloped resources which will eventually be useful to American industry.

Our own resources are not inexhaustible.

The time will come when we shall be glad that we have established long-term friendly relations with a powerful nation rich in natural resources.

We shall need Russia as a market and as a source of raw materials. Today we have bargaining power. Tomorrow—given depression—we may not have such power.

In 1931 and 1932 Russia purchased about 70 percent of our machine-tool production and 55 percent of our tractor production. At the depth of the depression Russian orders saved some American business firms.

And Russia, more than any other country, has generally adopted American production methods and machinery. Industry after industry has been built and modernized along American lines.

Russia is a ready-made market.

If Truman and Marshall will discuss frankly with Stalin and Molotov the respective economic needs of the two nations, agreement can be reached.

If we fail to act now, the time will come when we have bought our way, through munitions, into a full scale depression.

At that time we shall be confronted with two alternatives:

If no agreement is reached, when depression hits, we can either let Russia save us with large purchases of goods at depression prices or we can manufacture a war as an escape from the doldrums of depression and to ward off any moves toward socialism here which might be undertaken in a time of crisis.

We abhor both depression and war. We can avoid both.

If we remember that there is nothing criminal in the idea of socialism, we can do business—in peace—with a socialist Europe. But if we set out to lick socialist ideas with bribes and the force of arms, rather than through a practical demonstration of democratic capitalism, we shall prove the contention of the Communists that a capitalist economy can't be free of depressions.

If we pursue the policy of fighting ideas with force we shall drive the peoples of Europe and Asia to completely socialist economies and we shall drive them into military alliance with Russia.

If Truman and Marshall will arrange trade relations with Russia to indicate to the peoples of Europe that we are sincerely working to eliminate the causes of friction we can have peace and prosperity, and Europeans will enjoy greater freedom than they have ever known.

American-Russian agreement is the fundamental for a strong United Nations capable of preserving the peace.

An agreement with Russia must involve an understanding on the problems of the Near East.

American engineers and technicians are the best equipped in the world to develop the oil resources of that area, but we must give evidence—not only to Russia, but to all of non-Russian Europe—that we will abide by article IV of the Atlantic Charter which pledges equal access to the raw materials of the world.

If we persist in unilateral exploitation of these resources we shall increase our

friction with many nations outside the Soviet sphere of influence and shall, indeed, increase that Soviet influence.

Russia wants to perfect her own Socialist economy within her borders.

She has confidence that a successful experiment in Russia will win the peoples of the world to socialism.

She is challenging us.

We must meet the challenge by an active demonstration of the potential superiority of our democratic capitalism.

We are having difficulty in reaching agreement on the control of atomic weapons. We have remained adamant in our insistence that our plan be adopted. The Russians have remained adamant in their position.

We must have such control and understanding, but we need a first step as evidence of our good faith and Russia's good faith in looking toward eventual disarmament.

As evidence of our good faith and as a test of Russia's good faith, I suggest that the United States propose a complete ban on international traffic in weapons of war. This is only a first step, but first steps are important.

By this time I know that there are thousands in this politically conscious Capital City who are saying: "Wallace is crazy. He doesn't realize that the Senate would never approve a settlement which had in it a large loan to Russia and a prohibition against arming foreign powers. Moreover, the House would not furnish the money."

Undoubtedly you are right about the present House and Senate. But remember that there is an election coming up in 1948.

Truman's only possible chance for election is to make the Democratic Party the party of peace.

If Truman and Marshall make a sincere effort to get a settlement with the Russians of outstanding issues—an agreement which would guarantee the success of the United Nations and serve as a guarantee against real depression; and, if they carry their fight for approval into the elections of 1948, we shall get a Congress dedicated to peace.

If the issue is clearly drawn the people will vote right and we shall have in 1949 a peace Congress, not a war Congress.

If both parties insist on pursuing the present suicidal course toward war and depression, there will be a new party, even if it has no chance of election success in 1948.

It will be important—if the Democratic Party succumbs to Wall Street domination—to have a new party to let the people of the world know that those who believe in peace and understanding still have some means of expression.

It will be important as evidence that this is still a democracy.

It would provide the evidence that the United States has not gone completely imperialistic and psychopathic.

And like third parties in other periods of American history it would have a long-term influence on American life.

I have profund affection for the Democratic Party of Franklin Roosevelt.

It was a genuinely liberal party. It was the true friend of the worker, the farmer, and the small businessman.

Under Roosevelt, ordinary people the world over, and especially in Latin-America, loved the United States for its democracy instead of fearing it for its dollar diplomacy backed up by armed might.

Today the Administration has departed from the course Roosevelt charted. The local leadership and the rank-and-file of the Democratic Party throughout the Nation, must act now to reverse this trend.

I still have faith that the Democratic Party can come back again to the new freedom of Woodrow Wilson and the New Deal of Franklin Roosevelt; and that both its foreign and domestic policies can command the affectionate respect of the common man everywhere in the world.

If the Democrats are to win in 1948, we must demonstrate that they have applied American principles in working out a pattern for international understanding; and that we have energetically worked for a dynamic program implementing the employment act of 1946, which established an advisory council to plan ways and means of avoiding depressions.

We must appeal to the people for support in carrying out the recommendations of the President's Economic Advisory Council.

If we fail to get action from the present Congress, we must make this an issue for getting a new Congress in 1948.

The Economic Advisory Council has made recommendations to the Congress, and a congressional committee, headed by Senator TAFT was established to consider the recommendations and do something about them. Last winter the Council reported that prices were dangerously high. Today they are even higher. The committee headed by Senator TAFT has done nothing to meet the problem.

The announcement of good programs for stabilizing our economy and warding off depression is not sufficient.

Genuine leadership requires fighting for these programs with every power at the President's command.

The President did not lack vigor in rushing to Congress at the time of the railroad strike a year ago, when he berated leading labor leaders and called for dangerous repressive legislation; nor did he lack vigor in rushing to Congress with an emergency message on the need of shipping arms to Turkey.

We must have the same vigor on behalf of positive programs that we have seen in the presentation of these negative programs.

The President can and must demonstrate that he recognizes the national housing crisis as at least equal in importance to the munitions requirements of reactionary governments abroad.

He can and must appeal to the Congress and the people for the health legislation which will extend the useful lives of millions of Americans.

He can and must carry a vigorous fight for the improvement of our educational system through Federal aid to the States.

In meeting a dozen major domestic problems he need not manufacture emergencies—they are here, now.

I would suggest, also, that the administration and the Democratic Party take leadership—now—today—in a campaign to nationaliz our munitions industries.

The people should own and control our armaments plants.

There should be no profit in the patriotic duty of defending our country.

Leadership on this issue will bring a response from the people; it will increase faith in the legitimacy of national expenditures for weapons of defense.

If the new Congress elected in 1948 is again composed chiefly of Republicans and crypto-Republicans masquerading as Democrats we may be certain that it will continue to grind labor under its heel, sabotage the farm programs, strangle reclamation and power programs, and refuse to take action to prevent depression.

It will refuse to appropriate any large sums of money except for fighting Russia.

It will kill the capitalistic democracy some of us are fighting so hard to save.

I have said that if the Democratic Party does not return to liberal principles, it will not return to power.

Merely blaming Republicans for national crises will not win for us Democrats.

I have mentioned the possibility of a third party. Let me add a few words on that subject:

I am convinced by a careful study of the American political scene that a truly liberal party—whether it be the Democratic Party or a new party—can elect a useful number of Congressmen in 1948.

Such a liberal bloc in the Congress will help halt the present reactionary trend.

I would prefer to see a genuine two-party system.

I would rather congratulate the administration on a reversal of present trends and on assuming some dynamic, positive, liberal leadership. The trend of the past year has been the other way.

In the 9 months which have passed since President Truman reversed his approval of my foreign-policy speech at Madison Square Garden, we have taken many dangerous steps down the road toward war and depression.

But though these steps have been accelerated in recent weeks, the decisions are not irrevocable.

We can yet regain the respect of the peoples of the world.

We shall not regain such respect by strengthening the Peron dictatorship in Argentina.

We shall not regain such respect by using our limited shipping facilities for guns in place of plows.

We shall not gain such respect by failing to recognize that we have just lost a war in China at a cost of $2,000,000,000 and yet continuing a policy of arming reactionaries.

We shall not regain respect by training our 18-year-olds in the art of war and in other ways expanding our already fantastic military superiority over the rest of the world.

To gain respect we must vigorously push a domestic program to avoid depressions.

To gain respect we must attempt to reach agreement with the Soviet Government and substitute strict adherence to our basic principles for dangerous economic and political opportunism.

To gain respect we must practice at home the principles we preach abroad.

Let's stop fooling ourselves.

We can gain no respect—except in the most reactionary circles—by our failure to abolish the poll tax and extend and protect our fundamental doctrine of equal opportunity.

The case against us which is preached by leftists throughout the world may be exaggerated, but it has a substantial basis in fact. When confessed murderers are acquitted in South Carolina, the world does not rush to embrace American democracy.

The correct antidote is remedial action:

We can abolish the poll tax and other hindrances to free franchise.

We can establish a Federal fair employment practices commission—with power.

We can put the power of the Federal Government behind those law-enforcement officers who want to thwart those who take the law into their own lands.

We can end the right of Congressmen—without majority approval—to use their cloaks of immunity from libel to smear any American who suggests we practice democratic and Christian principles.

We can and must give evidence of our devotion to basic American principles and to the principles of the United Nations.

Democracy is only practical when it is not infringed. We shall perfect our democracy or we shall come to know—at first-hand—the lash of dictatorship.

Peace requires thinking on a grand scale. It demands leadership. We have all the resources and the know-how and the manpower to create abundance for the common man everywhere. We have the knowledge and spirit to create such a world. We must imbue our present leaders with that spirit or we must replace them.

The application of common sense and a little courage will make peace inevitable.

Louisiana Deserves Its Rightful Place as a Great Industrial and Agricultural State

EXTENSION OF REMARKS
OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. MORRISON. Mr. Speaker, the State of Louisiana is one of the great industrial States in the Union. Henry Kaiser, the industrialist, realized the great commercial possibilities when he took over the aluminum plant at Baton Rouge, and is now building a wharf at Baton Rouge costing approximately $1,000,000,000, which will permit ocean-going vessels to go through to the Baton Rouge aluminum plant to unload bauxite. I had the pleasure of working with Henry Kaiser in completing negotiations with the War Assets Administration for the aluminum plant and aiding in the opening of this great industrial giant.

On May 29, 1947, Henry J. Kaiser, president of the Permanente Metals Corp., Oakland, Calif., wrote me as follows:

I have just been informed that the Baton Rouge alumina plant is now actually producing the entire alumina requirements for our aluminum plants in the Northwest.

When I received this message, it immediately recalled to me your great determination and untiring efforts to develop peacetime utilization of the war plants in Louisiana.

I know you will share our sense of constructive accomplishment in the successful reconversion of the Baton Rouge plant and its contribution to employment and productive capacity of both your State and the Nation.

I should like to add that the people of Louisiana whom we have come to know—many as employees and others from business contacts arising from our operation of the Baton Rouge plant—have been most warm and helpful to our establishing this new business

In addition, about a year ago, through the joint efforts of myself and the New Orleans Association of Commerce, an air route was established to the Latin-American countries.

As a Congressman from Louisiana, with its great industrial potentialities, I am, indeed, proud of my record of support of every sound piece of legislation, and I repeat for emphasis, every sound measure, which would assure a happier and more prosperous livelihood for our farmers, our laborers, our oilmen, our veterans, our lumbermen, our trappers, and for our fishermen. Louisiana ranks third in the Nation as a producer of natural gas and petroleum and is internationally known for its agricultural products. Our fishing industry is a most important commercial enterprise and we produce more fur pelts than any other State. The coastal waters of Louisiana afford endless sources of shells and salt deposits and the chemical industry is now taking its place among the important industries of the State. Power is cheap. Labor supply is adequate and all types of transportation are available. The ideal climate of Lousiana is most desirable. Its strategic location makes it accessible to a tremendous market, both foreign and domestic.

FIGHTING FOR THE EQUALIZATION OF FREIGHT RATES FOR THE SOUTH

The Supreme Court decision upholding the Interstate Commerce Commission directive lowering southern and western freight rates was, indeed, a victory for the South. But it does not eliminate all the estimated 39 percent discrimination under which the South has labored for the past century.

The ICC order raises the official Northeastern territory rates 10 percent and lowers southern and western rates by the same amount. Although full equalization in national transportation is not yet a reality, a great deal of credit should be given to President Truman, who lives in one of the States unjustly discriminated against. We of the South must continue our efforts until all unjust discriminations in freight rates are completely eliminated.

SECURED INTERNATIONAL AIR ROUTES

Ever since I came to Congress I have worked hard to promote aviation for Louisiana. Recently I urged the Civil Aeronautics Board to permit air line extensions from New Orleans to Caribbean countries and from New Orleans to Central American countries. My cooperation and efforts were successful as shown by Civil Aeronautics Board release of May 26, 1946, authorizing the following extensions:

Chicago and Southern Airlines, Inc., for extension of service from New Orleans to Havana, Cuba; Port-au-Prince, Haiti; Dominican Republic; San Juan, Puerto Rico; Kingston, Jamaica; and Curacao, Venezuela.

Eastern Airlines for extension of service from New Orleans and Mexico City to terminal point San Juan, Puerto Rico.

Pan American Airways, Inc., for extension of service from coterminal points of New Orleans, La., and Houston, Tex., to Merida, Mexico, and terminal point Guatemala City.

At this point I desire to present a letter from the New Orleans Association of Commerce:

NEW ORLEANS
ASSOCIATION OF COMMERCE,
New Orleans, La., May 23, 1946.

Hon. JAMES H. MORRISON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN MORRISON: Thank you very much for your telegram informing us of the decision of the Civil Aeronautics Board granting air routes from New Orleans to Mexico City, Habana, San Juan, and Caracas—service which our organization had been advocating for several years.

This decision will assure New Orleans of its ability to maintain its preeminent position as the gateway to Latin America and the principal North American center for Latin-American business.

We recall with pleasure your active cooperation and support in our desire to have this decision finally announced and we wish to express to you our sincere appreciation of your assistance in the matter.

With kindest regards,
Sincerely yours,
GEO. E. SCHNEIDER,
General Manager.

FARMERS DEMAND HIGHWAYS

Good highways are the backbone of every State. To get products to market, farmers are urging better farm-to-market roads.

During the war the Federal Government contributed approximately $13,000,000 in Louisiana for the construction of 430 miles of new roads to carry the war implements from our factories to our ports, and the State highway department contributed $3,000,000 toward the cost.

But our highway system felt the pangs of war. Military maneuvers sent fleets of wheeled and tracked vehicles pounding over our back country roads, breaking down the bridges and damaging some roads. To correct this damage, the Congress authorized $2,000,000 for the repair of hundreds of miles of highways in Louisiana. In this connection it is worthy to note that outside of the war period, dating back for approximately 8 years, very little has been done to improve or repair the highway system of Louisiana by the State department of highways.

Surely, there is an urgent need for extensive Federal and State highway and farm-road maintenance in Louisiana. There is also an urgent need for new roads both paved and black-topped. Already motor-vehicle registrations for 1947 are within 2 percent of the 1941 peak. Motor-fuel consumption, a reliable gage of travel, is 19 percent greater than in 1941. This year we will have more cars on the road than ever, and they will travel more miles than ever before. There seems to be no limit to travel so long as we can provide road space for cars and trucks.

FORESTRY ROADS A MUST

Sixteen million acres—more than half the total land area of Louisiana—is forest land. The forests of Louisiana support industries which normally employ more labor than any other industrial group except crop farming. One-third of all workers employed in manufacturing receive their income directly from industries based on forest products.

The annual value of the forest crop in Louisiana is approximately $50,000,000. That does not include the value added by remanufacture into numerous products. Louisiana is among the leading States in the production of hardwood lumber. Seven pulp mills place us first among the States of the lower South in pulp output, and fourth in the Nation. The new pulp mill at Springhill, La., is the largest in the South.

Good roads are not only important to agriculture, tourist business, and business generally in Louisiana, but they are important in forestry. They reduce the cost of truck logging and facilitate transportation of forest products; and aid fire protection and forest management.

All told, the forest resources of Louisiana are of tremendous importance to the State and if they are properly and wisely managed they will continue to play a major part in Louisiana development and prosperity.

I shall, therefore, devote all the time and energy required to make certain that Louisiana's matching funds are made available so that urgently needed repairs can be made at the earliest possible date and will advocate construction of

thousands of miles of new highways to serve our people and our industries.

AGRICULTURE IS LOUISIANA'S BREAD BASKET

Louisiana is one of the greatest agricultural States of the Union. The varieties of soils to be found within the State and our favorable climatic conditions make possible the growing of almost every kind of fruit and vegetable known to man.

Cotton is our most valuable crop. Our annual income from production of cotton averages $50,000,000.

We are the largest producer of sugarcane, producing 75 percent of the product grown in the continental United States. Louisiana ranks first among all States in production of rice. In 1946 Louisiana produced more than 22,000,000 bushels of this important food. We are first in the production of sweetpotatoes and also one of the large producers of Irish potatoes. Soybeans, Spanish moss, and tung-oil trees are also important agricultural products in Louisiana.

Other fruits and vegetables produced in abundance include strawberries, oranges, peppers, snap beans, and cabbage. We market more than 2,500 carloads of strawberries per year normally. Our oranges are the finest produced anywhere. Our vegetables go to more than 20 States.

The value of our dairy and beef products has more than doubled in the last 10 years. For example, in 1935 our dairy products were valued at $14,000,000 while in 1944 income from dairy products exceeded $28,000,000. In 1935 our cash income from sales of cattle and calves was $7,500,000 while for the year of 1944 it was almost $17,000,000.

Corn, oats, hay, alfalfa, lespedeza, and other feed crops are produced in large quantities.

WILDLIFE RESOURCES OF LOUISIANA

The forests and waters of Louisiana have enormous resources of fish, oysters, and fur-bearing animals that enrich the State for commercial uses. The pursuit of hunting and fishing for recreation in Louisiana is unexcelled.

Louisiana leads the Nation in the production of the small fur-bearing animals, whose pelts are sold in the fur markets of the world. In 1944, trappers took 8,869,000 pelts in this State to supply the demand. Most of these were muskrat—the most universally popular and most widely used fur in the United States. Other furs taken in Louisiana include mink, opossum, otter, and skunk.

One of the most valuable fishery products of the country—the shrimp—has its center of production in Louisiana. Fishermen of this State take more than a hundred million pounds of shrimp annually. This is about two-thirds of the total United States catch. Shrimp fishing, unlike many industries, is not centralized in a few large ports, but is carried on from many small coastal towns. One of these—Morgan City—has within the past ten years seen the development of a new fishery based on the large and especially valuable "jumbo-size" shrimp. These are taken in deeper offshore waters where large populations were discovered about 1938, and we are the only source of this size shrimp.

Louisiana is also rich in waterfowl. The State lies at the southern end of the vast system of migratory routes known as the Mississippi flyway. It is the wintering ground for large numbers of blue geese, snow geese, mallards, pintails and other species.

The Federal Government maintains more than 200,000 acres of wildlife refuges in the coastal marshes of Louisiana to provide necessary winter food for these birds. In 1946, the State of Louisiana issued 163,000 licenses to hunters, and 35,000 to fishermen. These sportsmen took advantage of the abundant fish and game and in pursuing their recreation brought financial benefit to many small and scattered communities.

In conclusion, Mr. Speaker, Louisiana deserves and is entitled to its rightful place as a great industrial and agricultural State in this land of the free and home of the brave.

FLOOD-CONTROL AND NAVIGATION PROGRAM SHOULD BE CONTINUED

Louisiana, at the foot of the Mississippi River, receives the run-off waters from 41 percent of the United States including all or part of 31 States. Being so situated, the economy and welfare of the State is largely dependent upon artificial works to protect its property and people from the floodwaters of this second largest river system in the world.

In 1717, Bienville founded the city of New Orleans at its present site because it was the only portion of southern Louisiana which he found above floodwaters at that time. Within less than a year the settlement started the construction of levee protection, the first levee on the Mississippi River. Since that time, gigantic levees have grown on the Misssissippi, Red, and Ouachita Rivers, and lesser streams. The northwest part of the State is dotted with reservoirs; emergency spillways have been constructed; floodways and auxiliary channels have been built to care for floodwaters in excess of the carrying capacity of natural streams. Channel dredging is performed annually in the interest of flood control as well as navigation. The structures that have been completed or authorized in the interest of flood protection for the State of Louisiana aggregate $500,000,000 in estimated cost.

The future prosperity of the State, its industrial economy as well as its agriculture, are largely dependent upon the completion and maintenance of authorized improvements.

The most important project affecting the State of Louisiana is the one for the alluvial valley of the Mississippi River which is being constructed by the Army Corps of Engineers. Work accomplished on the project for the protection of the alluvial valley of the Mississippi River has demonstrated its effectiveness by an unbroken record for a period of 18 years.

Louisiana has been greatly benefited by the flood-control works constructed and operated by the Corps of Engineers. Continued cooperation of the State and Federal Governments in the construction and operation of flood control and navigation facilities is essential for the safety of our people and development and profitable operation of our industries.

PETROLEUM AND CHEMICAL INDUSTRIES

Few industries either directly or more vitally affect every American family than the petroleum industry. Aside from food and shelter no other factor enters so intimately into the life of the people as well as into their industries as do the products of this industry.

One of the reasons why our chemical production is expanding is because we have in abundance many needed basic materials such as petroleum, natural gas, sulphur, salt, and so forth.

During the last 5 years, Louisiana's chemical industry has been expanding by leaps and bounds. The annual value of our products has increased more than $100,000,000 and prospects for future expansion of this industry indicate that the annual value of our chemical production will double within a short period of time.

Synthetic rubber, ammonia, sulfuric acid, salt cake, and paper pulp, are among the products being manufactured in quantities at our Louisiana factories. Naturally, I am sincerely proud of Louisiana achievements and shall continue my efforts to cooperate with one and all and thereby do everything possible to help and aid the great State of Louisiana.

Congress Versus Presidential Encroachment

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. JOHNSON of Indiana. Mr. Speaker, the following editorial from the New York Sun is very well written and clearly demonstrates the attempt of the administration to play politics with tax reduction.

It should be called to mind that the present tax law was written by a Democratic Congress, and if the rates of tax on those in the low-income brackets are disproportionate, it is the result of Democratic legislation.

A Democratic Congress passed the present tax law and fixed the present tax rates. Any reduction in taxes is just that much less that the taxpayers are required to pay under the present Democratic tax law.

The editorial above referred to is as follows:

CONGRESS VERSUS PRESIDENTIAL ENCROACHMENT

President Truman's message accompanying his veto of the tax-reduction bill is one of the strangest, most confusing, and most disingeneous of all the messages ever sent from the White House to the Capitol. If it is not as provocative as the one which Congress slapped down in 1944, this is simply because Mr. Truman knows better than Franklin D. Roosevelt ever did how sensitive the boys on Capitol Hill are about such things. Essentially, however, the two are equally mischievous. What both have said in effect is that, for reasons of political expediency, the control of the public purse, which tradition and the Constitution have placed in the hands of Congress, must now be transferred to the hands of the Executive.

On February 22, 1944, Franklin D. Roosevelt vetoed a revenue bill in a bitterly sarcastic message in which he termed the measure as "not a tax bill but a tax-relief bill providing not relief for the needy but for the greedy." His good friend, "Dear ALBEN BARKLEY," was so angry that he resigned as majority leader of the Senate, declaring that if Congress had any self-respect left it would pass the bill over the President's veto. By smashing majorities in each, both Houses did vote to override.

Observe, now, with what greater urbanity President Truman makes almost the same point made by his predecessor:

"H. R. 1 reduces taxes in the high-income brackets to a grossly disproportionate extent as compared to the reduction in the low-income brackets. A good tax-reduction bill would give a greater proportion of relief to the low-income group."

What an extraordinary statement. The bill just vetoed would reduce taxes by approximately 30 percent for persons in the low-income group and by only a fraction more than 10 percent for persons in the highest income group. If a reduction of 30 percent isn't greater than a reduction of 10 percent, the President should, without delay, issue a new textbook on simple arithmetic.

The real issue of partisan politics appears in the second sentence of the veto message. "The right kind of tax reduction," says Mr. Truman, "at the right time is an objective to which I am deeply committed." When will that right time roll around, Mr. President? What will be the right kind? If the White House doesn't know the answers, we do. The "right time," from a Democratic point of view, will be next summer, some 3 months before the Presidential election. The "right kind" will be a tax bill sired by Democratic partisanship out of the remnant of the New Deal.

The basic and inescapable truth is, of course, that the intrenched spenders of Federal bureaucracy are still managing the formulas of finance of which President Truman is residuary legatee. Reduction of taxes means drawing, somewhere, some kind of line against the extravagance which has brought the national debt and Federal spending to heights which threaten the fiscal integrity of the United States for a hundred years to come. Yet the President can say: "There is no justification now for tax reduction." Mr. Truman should go back home and take a refresher course with some of the practical professors of economics so numerous in the region around the confluence of the Missouri River and the Kaw.

The failure of Congress to override this veto can only be interpreted as acquiescence in an encroachment upon its constitutional power of the purse.

OPA Fades Out

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following recent editorial from the Medford (Mass.) Mercury, which is one of the best statements I have seen relating to the passing of OPA:

OPA FADES OUT

The much "cussed and discussed" Office of Price Administration finally passed out of the picture on Saturday, May 31. So ended quietly a Government bureau which has caused more controversy than any other in the modern history of Washington at least.

Grumblingly tolerated during the war, criticism of the bureaucracy and its unscientific and often stubborn positions became increasingly louder until at the close of the campaign of 1946 the scarcity of meat and other commonly used household articles due to OPA price control became the dominant political issue. So violent was the political reaction to the OPA because of scarcity of meat that President Truman decontrolled meat a few days before the election. In November and December, before the Republican Congress could have a whack at decontrol, President Truman practically completed the job. Near the end the only friends of the OPA were the CIO-PAC and the lunatic left-wing fringe.

During its final days all the OPA had left was control of sugar and rents. The duties of controlling these have been turned over to other departments. In the fall control over sugar will be lifted unless the Department of Agriculture decides to do it sooner.

The story of the OPA is the history of a bureau which thought itself bigger than the laws of nature and economy, and then learned to its sorrow that it wasn't quite that large.

But at any rate the OPA has passed out of the picture, taking with it the fond hopes of all left-wingers who wanted to regiment American life into the European way. And as Shakespeare wrote of one of his characters in Macbeth, "Nothing in his life became him like the leaving it."

And Now, Mr. Truman, We Come to the $64,000,000,000 Question

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. McDONOUGH. Mr. Speaker, should the President of the United States veto a bill that contains his own recommendations?

We will give you until midnight Friday, June 20, to answer, Mr. Truman. No coaching from the audience, please.

Here are a few tips which may help you with the answer.

Remember, Mr. Truman, in your message to Congress recently you stated that there was no justification for jurisdictional or secondary boycott strikes, and you recommended that such strikes should be outlawed. The labor bill contains your recommendations. No coaching please.

Remember, Mr. Truman, you also recommended in a recent message to Congress that there be a nonpartisan board set up to make a long-term study of the causes of labor-management difficulties. Well, this bill contains your recommendation on that also. Please, no coaching.

Remember, Mr. Truman, you vigorously recommended that Communists should be cleaned out of Government positions. Well, this bill will clean Communists out of labor unions, which I am sure you will agree with.

Here is an additional tip. An editorial from the June 14 Washington Post, which contains some excellent and carefully thought out suggestions on the Taft-Hartley bill and its relation to the power of the veto possessed by the President.

This may prove helpful in your answer to the $64,000,000,000 question. I suggest you read it carefully:

PRESIDENT AND CONGRESS: CRUCIAL TEST

A veto by President Truman of the labor bill would do more harm to international peace than to industrial peace. Two-thirds of the Congress may override a veto, but how could the President expect future cooperation from Congress if he sets up his judgment against the carefully considered views of more than two-thirds of the Senators and Representatives?

Congress knows far more than the President about the need for legislation and about the way the new law will meet that need. Congressmen have been holding hearings and arguing among themselves and with constituents over labor relations for many months. The President has been engrossed in a multiplicity of other problems. He won't be able personally to study the labor bill adequately. He must rely largely on advisers to analyze its merits and demerits. What advisers are as reliable as two-thirds of the Congress?

In foreign affairs the President must constantly call upon the Congress to trust him, because his sources of information are so intimate and his responsibility is so great. But how could he expect the Congress to trust him if, when its Members are much better informed, he showed no trust in them, and refused to follow their good judgment?

Furthermore, the Congress knows, and thinks the President should know, that our international influence and our domestic strength have been seriously weakened by abuses of organized labor power—and particularly by the reckless industrial warfare of 1946. Is our memory so short that we forget the serious conditions that created the public demand for the intervention of law? Unless labor as well as management is legally required to fulfill its obligations to the general welfare, our country will steadily deteriorate and our Government become more and more impotent to protect our interests at home and abroad. The world will wonder who pulls the strings of our Government.

It is the primary duty of the Congress to legislate. The veto power of the President was never intended, and should never be used to impose his will upon the American people contrary to the judgment of their chosen lawmakers. The veto power is only designed as a safeguard against legislation which, because of mistake or haste or the overlooking of important considerations, would not be approved by the Congress after being advised of its errors. An example of hasty legislation which thoroughly deserved the veto it got was the Case bill. Another piece of legislation equally deserving of a veto because of its overlooking of prospective world reconstruction needs is the lopsided tax reduction bill now on the White House desk.

But this Congress has given to the labor bill an extended and detailed consideration which cannot be duplicated by the President in 10 days or 10 weeks. This legislative judgment should weigh more heavily with the President than 1,000,000 letters from persons selfishly affected, more heavily than 100 memoranda from public officials personally concerned, more heavily than the well-intentioned but inexpert counsel of "intimate advisers," certainly more heavily than the intimidation of labor leaders who, after cold-shouldering all requests for cooperation

in framing wise legislation to cope with crying needs, are now filling the woods with lamentations.

When two-thirds of the Congress vote to pass a much-needed law against violent opposition, they have a right to expect cooperative approval from a President who cannot fulfill his high responsibilities except by giving cooperation in exchange for the cooperation he must obtain.

The American Taxpayer Is No Moron

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. VAN ZANDT. Mr. Speaker, President Truman's action in vetoing the Individual Income Tax Reduction Act of 1947 reveals a carefully planned attempt to delay tax reforms until the Presidential campaign of 1948. It is an echo from the immediate past when WPA and relief funds were used for political purposes. In other words, here is a practical application of the age-old saying "history repeats itself."

It will be interesting to watch the speed of the present administration during the next 6 months in deciding that tax reduction is a worthy objective. Conversion to this viewpoint will be accomplished with both eyes on the 1948 ballot boxes of the Nation. In fact, President Truman left the door open by his reference to tax revision, which makes it more difficult for him to justify his veto of the tax bill.

There is no denial of the fact that the American people are sick and tired of exorbitant taxes. They are demanding reduction in the expenses of their Government, realizing that it is impossible to continue the waste of public funds without bankrupting the Nation and stifling the economic growth and development of the individual and the country by levying a multitude of taxes on every phase of American life.

There are approximately 46,000,000 citizens of the United States who are income-taxpayers. Twenty-five million of this group are in the low income brackets, while an additional 6,000,000 have slightly higher incomes not in excess of $1,400 annually. The third group embraces some 15,000,000 earning in excess of $1,400 annually, but not over $302,396. There are approximately 922 taxpayers whose taxable income, after deductions and exemptions, exceeds $302,396.

The average American citizen is conscious to a marked degree of the effect of the withholding tax on his regular pay check. It is an insult to the intelligence of the American workingman to conclude that he is unschooled in the fact that the present high cost of government is robbing his pay envelope and depriving him of providing his family with many of the necessities of life.

While we do not know the identity of the President's economic advisers, it is evident that they are not "rubbing elbows" with the average American citizen who works for a living. Members of the Senate and House of Representatives, who are in close contact with their constituents, approved the tax bill in response to overwhelming sentiment for tax reductions. Surely those Members of the Senate and House of Representatives who provided the fine majorities in both branches of Congress in approving this bill cannot be charged with faulty reasoning in following the wishes of the people from home who elected them.

The tax bill as vetoed by President Truman afforded tax relief on a graduated scale of benefits that are in adherence with the American standards of justice and fair play.

It is intellectually dishonest to establish a smoke screen and thus attempt to delude American taxpayers by piously referring to inflationary tendencies and the need for reducing the national debt. Such hypocrisy on the part of the present administration is fully revealed when we recall that we were told by the late leader of the Democracy Party to forget the national debt and not worry about it as it was merely an obligation we owed to ourselves.

The average American workman is not the only one to be sacrificed in the efforts of President Truman to bewilder and befuddle American taxpayers while he views the 1948 Presidential election with anxiety and alarm. The elderly citizens of this great Nation, who upon attaining age 65 were granted an additional exemption of $500 for income-tax purposes, are affected by the President's veto of the tax bill since it contained such a provision. To these splendid citizens, in the twilight of life, the future becomes increasingly bleak and fraught with continued despair.

While President Truman was filling his fountain pen, preparatory to vetoing the tax bill, the American people were listening to fervent pleas that we continue to pour millions of dollars into foreign countries without any guaranty that we would ever recover one dollar of these vast sums of money, taken from the pockets of the American taxpayers.

Republican Members of Congress, in their drive for economy in Government, are being crucified by the present administration in the frenzied efforts being made to mislead the rank and file of American citizens, as to the true story regarding tax reduction. But the American workingman is no moron and that fact will be brought home to New Deal disciples when they profess the faith in tax reduction and schedule their conversion when the polls begin to open in 1948. Their sincerity would be more genuine if they had recognized the burden of the American taxpayer and hit the saw-dust trail now by approving the tax bill as a worthy measure of relief to the 46,000,000 income taxpayers of America.

In fact, when the 46,000,000 people pay a quarterly income tax in September and December, they will know they are paying 20 or 30 percent more because President Truman vetoed the tax bill. It will be a Truman assessment on the American people.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. DAVIS of Georgia. Mr. Speaker, the labor legislation now awaiting the President's approval or veto has called forth much editorial comment throughout the Nation. One of the most interesting discussions of this bill which I have read is by a distinguished Georgia editor, Ralph McGill, which appeared in the Atlanta Constitution under date of June 16, 1947. I insert this editorial here as a part of my remarks:

FROM NO OLYMPIAN HEIGHT
(By Ralph McGill)

Kenneth Douty, Georgia State director of the Textile Workers of America (CIO), is one of my acquaintances I most respect. I would be less than honest if I did not say I sincerely like him.

He is a waspish man, of superior intelligence. I think perhaps he has a heart of gold, but at times it seems to me he has copper-plated it. He dwells in the monastery of CIO with all the devout zeal of a Trappist monk. When he chooses he can be sharper than the serpent's tongue and woe betide the ill-informed and awkward of speech who verbally jousts with him.

In a note to me he said, in effect:

"Over here (CIO headquarters) the opinion is you haven't read the bill (Taft-Hartley). I maintain this may be true, but the greater problem is that it would be difficult for a newspaper editor to have the experience to evaluate the effect of a clever and complex bill. And that you refuse to take it in its historical context in the social and economic life of the country. I think you do yourself a real disservice by okaying a bill (as 'generally fair') that is a part of a stream of reaction that may engulf us all."

It is a fair letter, as I would expect. Therefore, I wish to discuss it.

ENVY

I long have envied those persons who have all the answers. I frequently sigh for the good old days when one could go to the Oracle of Delphi and get the real McCoy. I know columnists who dwell on Olympian heights, looking down on the poor mortals below, who hand down opinions as if they were bolts from Jove himself.

I frankly admit to a wrestling match over many issues. There are times when I regret opinions previously reached.

GENERALLY FAIR

I have read the labor bill. I doubt, incidentally, that his own members have. But Kenneth Douty is correct in saying that I lacked the background to detect certain "sleepers" in the bill. Obviously, the amendment which makes it possible to refuse "reporting pay" was maliciously slipped into the provision of the bill which strikes at the admitted evil of feather-bedding. The experts of the CIO and AFL have found several other provisions which make possible abuse of the rights of labor.

Nevertheless, I believe the bill to be generally fair and I believe that it should be signed.

Labor is in the poor strategic position it occupies because it so avidy used the provisions of the Wagner bill which enabled it to carry on admitted abuses.

Also, it is regrettably true, that not only did no responsible labor leader raise his voice

against the abuses in labor's ranks, and worse, there came from labor no recommendation for remedial legislation.

POWER

I have been going about the rural sections of the State. Farmers are not against high wages. They know high wages mean good prices for farm goods.

But farmers are genuinely, and deeply, concerned by the enormous power possessed by labor. It is no greater power than the farmer possesses if he should choose to use it as he has not. But it disturbs him that John L. Lewis or the Railway Brotherhood can, and will, strike and paralyze the whole Nation for the benefit of only a few thousand persons among the Nation's millions.

The farmer is not antilabor. That surprised me some. But the farmer is antilabor boss, and he is rabidly against the use of strikes which tie up the Nation.

The farmer is a good 100 percent for some protective labor legislation. He hasn't read this bill, but he has read about it and listened to radio discussions and he is for it.

THE BILL

This bill contains none of the measures to which labor orignially objected. It is not as harsh as the one Congress really wanted to pass. It is not as severe as the Case bill. It is, save for a few sleepers, which public opinion may prevent from being turned into abuses, a middle-of-the-road bill.

It does not enslave labor. It does not, as far as I can see, relieve the employer of any major measures required by the Wagner Act. It certainly is nowhere close to the proposal to draft strikers into the Army in cases of great emergency.

Labor cannot say there was no need for legislation when, with the Wagner Act in full operation, there were 113,000,000 man-days of work lost in 1946 by strikes. It is not true that matters were working out satisfactorily. Strikes were not being reduced.

Certainly, the overwhelming support given it in Congress reflects not simply reaction, but public opinion.

Some of this legislation goes against my instincts and emotions; but I believe it important to keep in mind we are a nation and that organized labor is but a part of it. I believe the national welfare required a start be made. The next Congress is but a few months away. It can begin the task of amending where necessary.

The historical fact is we progress by trial and error. The Wagner Act will remain.

Taft-Hartley Labor Bill

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. SMITH of Virginia. Mr. Speaker, in an effort to discredit Members of Congress who voted for the Taft-Hartley labor bill, an anonymous circular from an unknown source styling itself, "Committee for the Preservation of Southern Traditions," has been issued and widely circulated, charging that the bill contains a provision that would put into effect the so-called FEPC bill.

This statement is utterly untrue and obviously put out as a red herring by some unknown opponent of the labor bill.

The basis for the circular is formed by quoting a part of a sentence from section 8 (a) of the bill and failing to quote the entire language of the sentence. Section 8 (a), subsection (3) makes it an unfair labor practice for an employer by "discrimination in regard to hire or tenure of employment or any term or condition of employment to encourage or discourage membership in any labor organization." The bill then provides an exception to that rule by permitting the formation of a union shop by agreement between the employer and a majority of the employees. By this method, an employer and a union may agree that all employees shall be required to became and remain members of the union after a period of 30 days as a condition of employment. This means that if, for any reason, an employee did not become a member or did not maintain his membership, the union could demand his discharge.

If the language of the bill stopped there, all employees under such an arrangement would be at the mercy of the union, and if the union refused to accept an employee or dismissed an employee from the union for any or no reason, the employer would be compelled to discharge him, regardless of the merits of the controversy.

A further proviso was therefore written into the bill which was quoted in the circular referred to, the effect of which is to say that the employer shall not be compelled to discharge an employee in a union shop where he is willing to join the union and is refused membership or is expelled. The provision is eminently fair, and no fair-minded person could object to it in this bill or in any other bill.

It should be clearly understood that the language of the bill does not compel the employer to hire or discharge any person, whatever his race or religion may be.

It does not compel the union to accept any person into membership if the union does not wish to do so.

It merely provides that the union cannot compel the employer to discharge an employee unless he refuses to join the union or maintain his membership in the union.

It does not compel the union to admit anyone to membership or to exclude anyone from membership.

It simply provides that the union may not exclude an employee from membership and then demand his discharge from his job.

Nothing could be fairer to all parties concerned. Without this provision the bill would have been highly discriminatory and indefensible.

As far as I am concerned, I have always advocated labor legislation that would give to employer and employee and union as much freedom and as little compulsion as possible.

This provision gives to the employer the freedom to agree or refuse to agree to a union shop the freedom to hire or fire as he sees fit employees who are excluded by a union from membership.

It gives the employee the freedom to work without fear of arbitrary exclusion by the union and discharge by the employer.

It gives the union the freedom to select its own membership and exclude those employees that it prefers not to extend its membership to.

I cannot conceive of any provision that could be more expressive of the rights of all free American citizens, regardless of race or religion.

I have made some effort to ascertain the identity of the organization styling itself Committee for the Preservation of Southern Traditions.

I find that the circular was mailed out by an individual who is a member of the electrical workers union and claims to be associated with other union members whose objective is to induce Congress to sustain a possible veto of the Taft-Hartley labor bill.

This individual has so far declined to reveal the identity of any of his alleged associates in the so-called Committee for the Preservation of Southern Traditions.

The President's Tax Veto

EXTENSION OF REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. KNUTSON. Mr. Speaker, President Truman's veto of the tax reduction bill, H. R. 1, indicates that the New Deal continues to follow the Harry Hopkins formula of tax and tax, spend and spend, and I may say that his veto message was replete with demagoguery and sophistry, unworthy of a President of a great Republic.

Canada and the United Kingdom have already had a tax reduction and the Canadian people are to get a second cut in taxes on July 1 that will give those in the lower brackets as much as 29 percent tax reduction.

Mr. Truman does not want tax reduction because that would give him less money to spend, and he is the greatest spending President in our history, as witness his $37,500,000,000 budget for the fiscal year 1948, which is four times greater than the highest Roosevelt peacetime budget.

I am sure the corporations of America feel grateful to Mr. Truman for having given them a $6,000,000,000 tax reduction in 1945, notwithstanding that we were facing a $50,000,000,000 deficit at the time. Now when a Republican Congress proposes to give tax relief to 49,000,000 individual taxpayers, at a cost much lower than the corporate tax reduction cost us, he would have us believe that such reduction would be inflationary. I might say parenthetically that we now have a substantial surplus in the Treasury and we are, therefore, in better shape to give relief. I also contend that tax reductions do not increase prices, as do the wage increases the President has forced the country to accept.

It looks like we will have to wait for a Republican President to take over in January 1949 before there can be tax relief for the harassed individual.

Mr. Speaker, in connection with the President's action, which is universally condemned, I desire to insert a very fine

article on the subject by David Lawrence which appeared in the Washington Star last evening.

The article follows:

TAX BILL VETO TERMED ERROR THAT MAY COST TRUMAN 1948 VICTORY

(By David Lawrence)

President Truman's veto of the tax bill may cost him the 1948 election. He mistakenly thought, no doubt, that he would gain politically by the veto.

Today the Republicans are jubilant, for they have been handed on a platter an issue that can win for them no matter who their candidate may be.

What the President said to 46,000,000 taxpayers was that they couldn't have a tax reduction because he wanted to fix the tax rates and didn't recognize the right of a majority in Congress to do so.

In all American history no tax bill passed by both Houses has ever failed to become law. Only one has been vetoed heretofore, but it was overridden by Congress. If the pending tax bill is killed because it cannot muster two-thirds in both Houses, it will bring a tremendous change in legislative practice.

The arbitrary use of the veto to defeat the will of a majority in Congress will lead to the arbitrary use of the rider attached to other necessary legislation. The majority would be well justified in attaching the tax bill to any of the current appropriation bills, if only to assert the historic right of Congress to write legislation that raises revenue and fixes tax rates.

COMMUNISTIC ARGUMENT SEEN

When Mr. Truman tells the taxpayers who were to be granted a 30-percent reduction that they can't have it because someone with a higher income is getting a 10 percent reduction, he is misjudging human nature if he thinks this will please that vast number of taxpayers in the lower brackets to whom every dollar of saving is consequential and who do not feel they should be punished because Mr. Truman wants to play the demagog. The President is, in effect, arguing for the communistic doctrine which seeks to level all incomes irrespective of brains or thrift.

The President says that he vetoed the bill because it is "the wrong kind of tax reduction, at the wrong time." This phrase will become famous in political history as the prize boner of the age. For it implies plainly that the wrong kind of tax reduction will be all right at the right time—presumably next year when the Presidential campaign is in the offing and when presumably Mr. Truman can strive for political credit even for the "wrong kind of tax reduction."

But next year the Congress will pass the same kind of tax bill it did this year except that will be even more unpalatable for Mr. Truman to sign, and when he signs it, he will make his message of this week look rather ridiculous.

DAMAGE MAY BE DELAYED

The damage Mr. Truman did in vetoing the tax bill will not be apparent right away. It will be apparent in the "recession" that could conceivably be ushered in as a consequence of his blunder, and it would be felt throughout the world.

For Mr. Truman, by his action this week, may have killed all chance of helping the world trade situation and European rehabilitation. Export trade that has been booming may decline severely. Then there would surely be a recession. The Republicans, so many of whom don't want to vote more billions to Europe, now have been given a very strong excuse—Mr. Truman's own words. For the President said:

"With the present huge public debt, it is of first importance that every effort now be made to reduce that debt as much as possible."

This means that debt reduction is, in the President's opinion, paramount. There are plenty of Republicans who will take him at his word. They will not vote billions for Europe while a Democratic President denies tax relief to the American people.

MESSAGE CALLED BOOMERANG

Unfortunately, the Truman message, while intended to play politics in order to gain support from the left wing, really will prove a boomerang with the average man, who will not understand why the $40 or $50 savings he was to get are now being denied him. To lose a 30-percent tax reduction is more serious in the lower brackets than to forego a 10-percent reduction in the higher brackets.

There is a surplus of more than $1,000,000,000 coming on June 30 and a surplus of at least $8,000,000,000 is indicated for next year—yet Mr. Truman is denying the taxpayers any relief from wartime rates.

The Republicans ought not to adjourn without passing another tax bill—this one to be effective January 1, 1948, and giving an even greater reduction in rates to individuals in the lower brackets. If Congress surrenders to the Executive its authority to fix tax rates, the legislative branch of the Government would be surrendering also the independence it has exercised for more than 160 years.

I also wish to insert an editorial from yesterday morning's Times and a front-page editorial from the New York Sun for Monday morning:

[From the New York Times of June 17, 1947]

THE TAX VETO

The responsibility always rests, or should rest, upon the President, in employing his veto power, to justify such action by reasoning which is so logical and so convincing as to be, to all intents and purposes, unanswerable. There are two reasons, moreover, why this generalization may be said to have applied with more than ordinary force in the case of H. R. 1, which President Truman refused to validate with his signature yesterday. In the first place, the determination of tax policy has always been regarded as peculiarly the domain of the legislative branch of the Government, not to be lightly set aside by the Executive. (This largely explains, no doubt, why yesterday's veto was only the second of its kind in the Nation's history.) In the second place, when taxes, going into the third postwar year, are still close to wartime peak levels, the burden of proof is not upon those who propose to reduce them, but upon the opponents of such a course.

Does the President's veto message justify his action when judged by these exacting requirements? In our opinion, the answer is clearly in the negative. A convincing case might have been made for signing the measure with the reservation that he was doing so against his better judgment and on the understanding that if the budget surplus on which it was predicated failed to materialize Congress would be expected to provide the necessary revenues. But if an equally convincing case could be made for a veto, one will seek it in vain in yesterday's message. It is a truism in the legal profession that when a lawyer tries to prove too much it is a sign that either he is a bad lawyer or that he has a bad case. In yesterday's message the President, it seems to us, tried to prove too much. And since he has legal advisers around him of unquestionable competence, the conclusion would appear to be inescapable that he had a weak case.

The theme of Mr. Truman's veto message was that "H. R. 1" represented "the wrong kind of tax reduction, at the wrong time." This is the wrong time for tax reduction, said he, for three reasons: (1) We are still in a transition period, in terms of the national finances, and the situation calls for "prudence and conservative management"; (2) the economy is already subject to inflationary pressures, and tax reduction would tend to increase them; and (3) if we are to "maintain the integrity of the national debt" we must reduce it by substantial amounts.

Mr. Truman is on sound ground when he calls for a conservative attitude toward the nation's finances at this time. The Republican leadership, in its anxiety to make good a campaign pledge, has left itself open to the charge of patent over-optimism in a field in which over-optimism has no place; and its approach to the tax problem, as we have pointed out numerous times has been a good deal less than orderly and consistent. Although it has been hoped that by mid-June the picture of prospective federal income and outgo between now and June 30, 1948, would be fairly clear, developments in that respect have not fulfilled the more hopeful expectations. In recent weeks, for example, private estimates of the excess receipts over this period have ranged from as high as $10,000,000,000 to as low as $4,000,000,000. These figures, moreover, have included little or no allowance for the fact that the recent reorientation of the Administration's foreign policy, with its emphasis on economic aid abroad, introduces a new element of uncertainty so far as the spending side of the budget is concerned.

But is this sufficient ground on which to justify a veto of the proposed legislation? The best answer to that question, perhaps, is that no one has shown a greater awareness of all this than Senator GEORGE, who headed the Finance Committee when the Democrats were in control of Congress, and is recognized as the party's outstanding authority; yet Mr. GEORGE only a few days ago was reported to have urged the President against vetoing the bill.

Less convincing is the second of the President's reasons for his veto, the inflation argument. It is convincing enough as a matter of pure monetary theory. The trouble is that the administration has demonstrated in the past that its forecasts in the field of inflation and deflation and related matters have been highly undependable where they have not been highly political. It is difficult to take the inflation argument of an administration too seriously in the case of taxes, moreover, when that same administration ignores inflation in its wage policies and when one of its chief spokesmen has already gone on record against the tax-reduction bill because deflation was in the offing, which, he pointed out, would mean a drop in the national income and hence in the yield of prevailing tax rates.

The third argument, that the national debt must be reduced by substantial amounts, would be impressive were it not for one fact. The authors of H. R. 1 have never said that the debt should not be reduced. On the contrary, their contention from the start has been that the fiscal outlook was such that the debt and taxes could be reduced by equal amounts. That premise may be wrong, but there can be no doubt that it is there and that it is a basic postulate among conservative Members of Congress who have supported the measure.

It is when the President sets out to show that this is not only the wrong time for tax reduction, but that H. R. 1 represents the wrong kind of tax measure that he reveals the real measure of the weakness of his case. For this section descends to the plane of pure political demagoguery.

One of the standard arguments advanced against an across-the-board reduction in taxes at this time is that such a reduction granted greater relief in the upper than in the lower brackets. The President not only employs this fallacious and mischievous argument, but pushes it close to the reductio ad absurdum. Under the tax schedule proposed in H. R. 1, he declares, the average family with an income of $2,500 a year would receive an increase in its take-home pay of only 1.2 percent, whereas the average family

with an income of $50,000 would enjoy an increase of 18.6 percent and a $500,000-income family, 62.3 percent.

Let us see what this means in terms of the actual tax figures in these three brackets. At the present time the $2,500 family is paying $95 a year in taxes; the $50,000 family, $24,111; and the $500,000 family, $406,600. Put another way, the Government takes 3.8 percent of the net income of the $2,500 family, leaving it 96.2 percent as take-home pay; it takes 48.2 percent of the income of the $50,000 family, leaving it 51.8 percent; and it takes 81.3 percent of the income in the case of the $500,000 family, which is permitted to take home 18.7 percent.

In other words, families in the upper brackets have been taxed at such high rates under wartime and postwar schedules that their actual income has fallen to a fraction of their nominal income. And now they find the President actually proposing to use this enormously deflated take-home pay as a statistical basis to prove that they would be treated with undue generosity under H. R. 1.

Perhaps the best way to sum up the President's veto message would be to say that he has taken the wrong course, for the wrong reasons.

[From the New York Sun of June 16, 1947]

MR. TRUMAN THROWS A BOOMERANG

Yes, when President Truman vetoed the tax-reduction bill, he threw a boomerang which was a beaut!

Although the President is left-handed, experts tell us tnat a southpaw can throw a bomerang with great effect. This particular one will gather force as it goes and, in November of 1948, will come back with numbing effect to the place from which it started.

By this veto the President has made his choice between petty partisan politics on one hand and, on the other, the butcher's bill and the grocery bill of every worker for wages or salary in the United States. He plumped for partisan advantage.

The difference does not involve peanut money.

It affects the take-home pay of not fewer than 48,000,000 American citizens.

As estimated in discussion before the Ways and Means Committee of the House of Representatives, the bill passed by Congress would mean an aggregate saving of $2,000,000,000 to taxpayers in 1947 and $4,000,000,000 in 1948.

That would buy a lot of pork chops, Mr. Average Citizens!

Put another way, the bill would mean on the average that, for the rest of 1947, each taxpayer could take home to his wife at least one of the $10 now claimed from him by the Federal Treasury; that for the first half of 1948 he could take home 2 of the 10 smackers which then will be claimed from him.

All this notwithstanding the probability that by the end of the present month the surplus in the Treasury will be anywhere from $1,250,000,000 on up.

Partisan Democratic strategy has decided that it would be bad politics to allow credit for any such reduction to accrue to a Republican Congress; that it would be good politics to wait until next year when it might accrue to the advantage of the next Democratic candidate for the Presidency.

Apparently Mr. Truman's advisers have persuaded him into acceptance of the old hokum that the public memory is short; that the people will be so happy over lower taxes next year that they will forget all about excess taxes unnecessarily abstracted from their pocketbooks this year.

The bill he has just vetoed is far more moderate than the one originally presented in the House of Representatives. In general, it provides for a reduction of 30 percent on taxable income up to $1,000; of 20 percent on that between $1,000 and $136,720; of 10.5 percent on all higher income. Since all reductions would be effective only from July 1 of this year, actual immediate reductions would be one-half those. Full percentages would be effective on incomes for 1948. Any taxpayer who can add and subtract needs only a pencil and the back of an envelop to figure out for himself what it may cost him personally for the President of the United States to play party politics in anticipation of the Presidential plebiscite in 1948.

Whether Congress will get mad at Mr. Truman for thus interfering with its control of the public purse—as a previous Congress got mad at Franklin D. Roosevelt for vetoing a revenue bill in 1944—remains to be seen. Party loyalty may keep enough Democrats in line to prevent any such recurrence. But whether it does or not, the Republicans in Congress and in the Nation at large have every reason to expect practical results. A lot of taxpayers will be going to the polls in 1948 determined to put an end forever to what is left of the Hopkins formula about taxing, spending, and electing.

The President accompanies his veto measure with a lot of choice rhetoric of which there is a specific name in his native Missouri.

Out there they call it "soft sawder."

Price Increase

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article by Tom McGovern which appeared in the Lynn Telegram-News, published in Lynn, Mass., on Sunday, June 15, 1947, which merits the attention of each and every Member of Congress. It must be apparent to all of us that the necessities of life and especially foodstuffs continue to increase in price daily so that it is becoming humanly impossible for the poorer class of people to obtain the meat and foodstuffs vitally necessary to sustain life. Prices have now risen to such an extent that only through the action of Congress by investigation of this problem and by legislation to be passed will this constant increasing of prices be terminated. I sincerely hope that some one of our select committees of the House will institute an immediate investigation of this situation which is of primary importance to the entire population of our whole United States. Some action must be taken and that action should be commenced immediately.

The article follows:

STILL WAITING

I'm almost ashamed to confess that I believe Russia has it on the United States in one little department—not that I want to leave here and go there to live.

I have reference to the liberties extended to those who openly endanger the Nation's economy for their own selfish pecuniary advancements. I don't think they could get away with it anywhere but here in the United States. It's just a reminder that democracy is too good for some people.

It was just about a year ago that price controls were dropped by the President. To the President's credit, he knew it wasn't the time for the abandoning of ceilings but he found himself squeezed by powerful monopolistic groups and forced to bend.

The most of us will recall that meat was so scarce in June of last year that you were almost afraid to be locked in a room with your cat. We were assured, however, that once controls were out of the way, the old law of supply and demand would take over and everything would be just lovely.

There would be mild boosts in prices, the public was informed, but that was only to get things rolling; later on prices would fall off until there was plenty for everybody at nominal costs.

Nowadays when you walk into a meat store, you feel like screaming. It's so bad that some of the markets advertise items like boiled ham at so much per half pound. Apparently they're ashamed to put down the actual price per pound. At last reports, boiled ham had reached the $1.30 per pound mark—wonderful.

Why, I keep asking myself, should such things be allowed to exist? Who is bigger, the Governement or the meat packers? In the light of existent prices, the answer is obvious.

I happened to be examining the ceiling prices of a year ago, and they're interesting, to say the least. Bacon (curse the pigs) was then 41 cents per pound—today it is 75 cents, and that is at the supermarkets where it sells for 2 or 3 cents cheaper than in the neighborhood marts.

Top of the round steak was 42 cents per pound, today it is 89 cents. Hamburger has risen from 27 cents per pound to 45. Porterhouse steak from 51 to 79 cents per pound. Rump steak from 52 cents to 99 cents per pound. Tenderloin which was something like 59 cents, now sells for $1.25—and I suppose there are a lot of people buying it.

Aitchbones of beef which formerly retailed at 29 cents per pound are now 49; chuck roast with the bone in has risen from 29 to 49; chuck roast boneless has soared from 38 to 65 cents per pound; pig's liver (damn the porkers) has jumped from 22 to 39 cents—even the poor cat is taking it on the chin, every penny of his allowance is going for food.

Brisket corned beef has jumped from 35 to 55 cents per pound; pork chops of hallowed memory from 37 cents to 79 cents per pound, and roast pork from 31 to 59.

Somebody is cleaning up it is obvious, but at the expense of the poor American workingman whose children are deprived of various little pleasures and advantages a modest week's pay might bring to them, were not about every penny going for food each week.

Those who expect that things are going to remedy themselves, I believe, are in for a long hard struggle. Relief will come only when the Government gets hard-boiled and steps into the picture with some two-fisted directives.

After the debacle of the last year, I think those Congressmen who opposed price controls should now be convinced that you can't do without them, that there are certain businessmen who can't be trusted, who place their own personal bank accounts on an altitude miles higher than the American way of life and the well-being of the American Government.

It shouldn't be difficult to get to the bottom of these fantastic prices. It's not the stores, not the shippers, only those who are slaughtering or raising the cattle. Why is their business any better than all others that they should be looking for such outrageous profits.

I know that I speak for about everybody when I express the hope that something will be done before the greed of certain interests gets the country in a position from which it will take years to recover.

St. Louis Post-Dispatch Deplores Possibility Congress May Not Authorize Program of United States Information Abroad in This Critical Period in Our Battle for Peace—Favors Prompt Passage of Mundt Bill—Secretary Marshall Takes New Action To Assure Information Program Is Administered by Able, Patriotic Americans

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. MUNDT. Mr. Speaker, the unfinished business now before the House is the final disposition of H. R. 3342, the legislation unanimously reported by the House Foreign Affairs Committee to establish and regulate the operation of a United States Information Service abroad adequately equipped to enable America to wage its struggle for peace and world security. It is expected this legislation will be scheduled for final action this week, and it is highly important to the future stability of the world that this House reach a wise and rational decision on this legislation. To demobilize our forces for peace and to cripple our defense against the alarming aggressions of communism would be a reckless gamble to take in an era when the future is filled with frightening and frightful possibilities.

Mr. Speaker, in its good wisdom the House has now added eight additional safeguarding amendments to H. R. 3342 in addition to the more than 20 congressional controls and safeguards written into the legislation by our Committee on Foreign Affairs. The question is now reduced in its simplest terms to the decision as to whether we are to withdraw from the world, surrender its remaining areas of freedom to communism, and deprive ourselves of effective weapons with which to defeat and deny the poisonous propaganda being circulated against us by unfriendly nations or whether we are to face up to the responsibilities of peace the way we measured up to the challenges of war and equip ourselves with every available means of getting the true story of American principles and purposes across to every region of the world which we can penetrate with the bright light of truth.

In short, Mr. Speaker, the question reduces itself down to this: Are we to rely upon the light of the Red star of Moscow or the beacon from the Statute of Liberty to enlighten the world as to the causes which the United States espouses and the principles and purposes which motivate our actions at home and abroad? A vote against H. R. 3342 or a vote to recommit it to committee, which would be equivalent to killing it without decent burial, is a vote to place our confidence in the voice of Russia rather than developing and equipping a Voice of America to carry our own message in our way where we know it is imperative that it be heard.

In this connection it is tremendously important we do not limit General Marshall in his hunt for peace to a single shell or a single weapon. In other words, we must guard against establishing or continuing a so-called Voice of America program which emits but an occasional squeak. General Marshall has insisted over and over again that simply broadcasting to others by short-wave radio is a waste of public funds and is a futile program unless augmented and supplemented by the other portions of the program envisaged by H. R. 3342, which tie into the radio broadcasts and round out an effective attempt to tell the world about America. General Marshall has reiterated over and over again that he needs the educational exchange features of this proposal, that he needs the information centers abroad, the right to assign Government specialists to aid the faltering governments of friendly powers, the authority to publish and circulate abroad magazines and periodicals portraying the true American concept and purpose. To me, sir, it is incredable that this Congress should deny our forces for peace the equipment it tells us is its minimum requirements if we are to preserve the peace and promote conditions essential to our national security and peace of mind.

Mr. Speaker, I think the great St. Louis Post-Dispatch, of St. Louis, Mo., puts the challenge before us clearly and cogently in the following editorial:

SHOUT LOUD, AMERICA

Is it conceivable that Congress proposes to stand by and allow time to silence the Voice of America 3 weeks hence? Unless approval is forthcoming, our overseas information program is scheduled to end July 1. The House shoved aside consideration of an approval measure after three attempts at passage ran headlong into stormy debate.

Absence of an American voice moving into the homes of millions in other parts of the world would constitute a major loss, a catastrophe of great proportions. For today the value of propaganda is greater than ever. Two civilizations are competing for the rest of the world. While the Soviets present data colored by Communist monitors, we must counter with a true and straightforward exposition of the facts.

Secretary Marshall considers the program essential to our foreign relations. He told a Senate committee:

"As I have said before, one effective way to promote peace is to dispel misunderstanding, fear, and ignorance. Foreign people should know the nature and objectives of our policy. They should have a true understanding of American life. We should broadcast the truth to the world through all the media of communications."

This is no occasion to hamstring an imperative program. The best way to implant democracy in the countries where it is tottering is to make known the mechanics of democracy. It is our democratic responsibility to make known the facts of the way we live, favorable and unfavorable, so the peoples of other lands may get to know and to cherish the advantages of free government.

Rather than silence the Voice of America, better raise it high and loud.

SECRETARY MARSHALL HAS STARTED THE "HOUSE-CLEANING JOB"

Mr. Speaker, much has been said about "cleaning house down at the State Department" before we approve of a program such as encompassed in H. R. 3342. In a way, that is like locking the fire engine in the station while the city burns because we are not satisfied that the fire chief has had a recent bath but in all events there is no longer any reason to delay giving the State Department the tools it needs to build a permanent temple of peace because, sir, the evidence is crystal clear that the "house cleaning job" is under way.

H. R. 3342 itself takes care of that problem and I am among those who have long insisted that the character of the people in our State Department and their loyalty to America must be as pure as Caesar's wife. We have provided for a complete loyalty check by the Federal Bureau of Investigation, we have provided a bipartisan control board to regulate and develop our information program, we have provided against the employment of aliens. Now comes the good news that Secretary of State Marshall is acting on his own initiative to remove every shadow of suspicion from the personel of his department and of the division handling the American information program abroad by requesting the FBI to check his Department first. In addition, Assistant Secretary of State Benton has asked Secretary of State Marshall to have the FBI screen and scrutinize his employees first of all among those of the entire Department. So that the record will be clear on this point, I refer you to the following Associated Press story carrying the date line of June 14—just a few days ago:

RADIO VOICE STAFF FACES FBI CHECK—MARSHALL ASKS PRIORITY IN LOYALTY INVESTIGATION

WASHINGTON, June 14.—Assistant Secretary of State William Benton said today that the Federal Bureau of Investigation, now engaged in investigating the loyalty of Government employees, has been asked to check first on personnel of the "Voice of America," the short-wave broadcasting in foreign languages done by the State Department.

Mr. Benton told about the request to the FBI in testifying before a Senate Appropriations Subcommittee.

"Secretary (George C.) Marshall, at my suggestion, has written to the Attorney General asking the FBI to give highest priority in its loyalty investigations to the State Department, and in this case to OIC," he said. He referred to the Office of International Information and Cultural Affairs, which handles the broadcasts.

Mr. Benton appeared before the subcommittee to ask $34,000,000 for OIC's operation in the 12 months beginning July 1. The House refused to vote the funds on the ground that Congress never had authorized the program, but legislation now is pending in the House to sanction it.

He said passage of this legislation would make it possible "to bring in more top people who up to now would not have been warranted in giving up their jobs for the risky venture which we have been pioneering."

Mr. Speaker, a Republican public relations expert sent me yesterday some suggested programs which he believes might well be included in the radio scripts, the films, the news releases, and the demonstration areas operated under the authority of H. R. 3342. Many of them closely resemble plans I have heard discussed in connection with the operation of this program. I think they reveal some of the possibilities and potentialities of a United States Information Service abroad as well as some of the reasons why some such type of program is so

imperatively needed now. If they do nothing else they reveal from an experienced traveler some of the slander and libel being directed against America abroad. How best to offset these attacks and how best to defend ourselves must be worked out by experts and will be one of the first major studies of the advisory control board provided for in H. R. 3342 by the Dirksen amendment.

Unless we are willing to sit back and say nothing, do nothing, and be nothing in this turbulent world of unpredictable events, however, we should approve H. R. 3342 and move forward with an intelligent and effective program of information abroad directed to the important goals of national security and international peace.

SUGGESTIONS FOR PROJECTS TO BE INCLUDED IN VOICE OF AMERICA BROADCASTS TO EUROPE

The Soviet Union is conducting an intensive and vicious anti-American propaganda both at home and abroad. This propaganda attacks not only the actions of the American Government, but tries to discredit, in the eyes of the Russian people and the world in general the entire American social, economic, and political way of life.

It is, in my opinion, utterly inadequate to counteract such a propaganda by simply presenting a picture of conditions and events in the United States without regard to the Soviet charges and conditions in the Soviet Union itself.

I believe that in reviewing conditions and events in the United States they should, at least in part, be so selected and presented as to refute or discredit Soviet propaganda and, whenever possible, directly or indirectly, reflect on the Soviet system.

In order to achieve this, I believe, that a certain part of the daily broadcasts should be built along the following lines:

I. Refutation of the usual Soviet contention that workers in America are mercilessly exploited.

This could be achieved by a series of talks about, by, or with workers (preferably Russian-speaking ones) of various trades and industries. Union officials or representatives could also be called upon to speak (many of them are of Russian descent and speak Russian).

Facts which should be brought to light are illustrated by the following average and actual case:

"Paul B., Manhattan, N. Y.; a Russian immigrant. Came to the United States in 1923 at the age of 22. Learned the trade of house painter. Average earnings for the last 10 years, $2,800 per year. Works 5 days a week, 7 hours a day, getting $14 per day, with time and a half for overtime, or $20 for a 9-hour day. Supports wife and mother-in-law. Occupies a nice 6-room apartment, consisting of living room, dining room, three bedrooms, kitchen, and bathroom, with all modern improvements—electric light, gas, heat, electric refrigerator, etc. Has $2,800 in the bank. Entertains friends regularly. Goes to the movies regularly. Wife always well dressed. In summer drives out of town on week ends. Last winter took a 4-month vacation going with his wife to Florida in his own car, 2,800 miles. Recently went into business as contractor in partnership with another Russian immigrant who owns an apartment house in New York."

Some other points which should be brought home are:

(a) The fact that hundreds of thousands of American workers own houses and automobiles.

(b) That the United States, with only 6 percent of the world's population, is producing 47 percent of the radios, 49 percent of the telephones, and 72 percent of the automobiles.

(c) That the average factory worker in the United States is able to buy 7.5 pounds of bread with the proceeds of 1 hour's work, whereas comparable prewar figures in other countries were: Great Britain, 5.2 pounds; Germany, 2.5 pounds; and the U. S. S. R., 1.9 pounds. That the average worker in the building trades—painter, carpenter, plumber, bricklayer—can buy a good-quality, 100-percent woolen overcoat or suit with the proceeds of 2 or 3 working days, and a pair of good shoes with the proceeds of half a day's work.

(d) The worker's right to strike, change his employer, etc.

(e) The fact that any worker (or other person in the United States of America) is free to move or travel without any permit, and can go abroad by freely obtaining a passport from the Department of State. That thousands of American workers and farmers have visited their native countries.

II. Refutation of the usual Soviet propaganda line to the effect that scientists, artists, inventors, etc., are mercilessly exploited by capitalists and have no chance of success (such propaganda can be found even in children's textbooks).

This can be achieved by broadcasting to Russian listeners biographies of Russian-born scientists, etc., who have achieved fame in the United States. Such broadcasts would be especially interesting because, generally speaking, everyone likes to hear success stories and especially stories which tell of the success of one's own countrymen in a foreign country.

As far as Russian scientists, etc., are concerned, biographies of the following could be used:

Radio and television: David Sarnoff, Dr. Vladimir Zworykin (head of the RCA research laboratory), Prof. Leo Terëmin (theremivox).

Aviation: Igor Sikorsky, Major Seversky.

Science: Prof. E. P. Timoshenko (Stanford University and Westinghouse), Prof. Basil Boldyreff (former assistant of Prof. Pavlov), Prof. Alexis Romanoff (embryology), Prof. Pitirim Sorokin (sociology, Harvard University), Prof. Alexander Petrunkevich (biology, Yale University), Andrew Avinov (director of Carnegie Museum in Pittsburgh), and others.

Music: Serge Rachmaninoff (deceased), Serge Koussevitsky, Fabian Sevitsky, Arcady Dubensky, Yasha Heifetz, Misha Elman, Gregory Piatigorsky, the Don Cossack Chorus, etc.

Ballet: Michael Fokin (deceased), Balanchin, Mordkin, Leonidov, the Ballet Russe, etc.

Painters: Dobuzhinsky, Savely Sorin, Constantin Alajalov, Boris Artzybashev, Eugene Dunkel, and others.

Sculpture: Deryuzhinsky, Arkhipenko.

Moving pictures: Mamulian, Gregory Ratoff, Akim Tamiroff, Maria Ouspenskaia, etc.

III. Refutation of the Soviet contention that there is no freedom of the press in the United States. (See booklet published by Pravda, The American Press, also Simonov's play, The American Question, etc.)

In refuting charges against the American press, the question of free speech and free assembly could be brought up. Town meetings and forums of the air, etc., could be described.

IV. Refutation of the Soviet contention that there is no freedom of elections in the United States. (See booklet published by Pravda, Political Parties in the United States of America, etc.)

V. Rebuttal of the Soviet contention that the American system is doomed through the inevitability of depressions which make millions of people idle.

The fact that no one ever died of hunger in the United States may be mentioned (in contrast with two major famines in the Union of Soviet Socialist Republics when millions of people died of starvation, 1921–1936) also that the United States has learned how to cope with depressions (public works, etc.).

N. C. STEPANOFF,
Formerly With the National Republican Committee on Public Information.

The Roosevelt That Jim Farley Knew

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of June 14, 1947:

THE ROOSEVELT THAT JIM FARLEY KNEW

James A. Farley's memoirs, the first instalment of which appears in the current Collier's, throws an intensely bright spotlight upon the Roosevelt era, and some of its darkest corners.

Revealed by it is the monstrous cynicism; the lust for power that could abide no interference; the gross ingratitude that was the reward for loyalty; the queer code of ethics that laughed off broken promises but made mingling with one's social inferiors a disgrace; the hypocritical attempt to pose as the champion of the masses while seeking only the aggrandizement of one man and his clique: all these the distinguishing traits of the New Deal philosophy and the man who directed its practice, Franklin D. Roosevelt.

Roosevelt was a politician. Farley was a politician too, one of the best-equipped and most successful. No one alive today is better qualified to judge the late President from the political standpoint. The result is a dissection of Roosevelt's political career that brings him down to his rightful size, not the demigod of the New Deal survivors but a cold, calculating politician who could cast off his most loyal friends and followers as one would discard a worn-out garment.

With Franklin Roosevelt the ancient dictum that the king can do no wrong was still valid. Undeviating adherence to his every whim, right or wrong, was demanded of his followers.

Jim Farley, who, more than any other man, was responsible for getting Roosevelt into the White House, was ushered out of the presence and left unforgiven because he put the welfare of the Democratic Party above the personal allegiance the President considered his due.

Accompanying this leader complex in the Roosevelt character was the persistence of class consciousness.

Farley was Roosevelt's friend and most loyal of supporters, besides holding important offices as Postmaster General, chairman of the Democratic National Committee and chairman of the New York State Democratic Committee.

Yet, amazingly, he was never invited to spend the night in the White House; never asked to join intimate White House gatherings. Mrs. Roosevelt explained it all in a statement Farley quotes: "Franklin finds it so hard to relax with people who aren't his social equals."

As a politician avid for votes he could shake the hands of all comers; as a member of the Hyde Park caste he held to the theory of a master race.

Roosevelt's ungrateful treatment of Jim Farley, terminating in their historic break, had many political repercussions. But it was strictly in character. The split was gradual,

but inevitable, because of the difference in the characters of the two men.

Farley believed in keeping his word, and he believed others meant to keep theirs.

Roosevelt's declaration that he would not seek a third term, and his reversal of that position later, shocked Farley. So did the President's blunt demand that they violate their joint pledges against taking sides in the Senate leadership contest between Senators BARKLEY and Harrison, and seek Mayor Kelly's intervention to gain the winning vote for BARKLEY.

When Farley refused to break his word Roosevelt coldly told him that "I'll get Harry Hopkins to do it"—which he did.

Roosevelt's vindictiveness was shown when he sought to purge Members of Congress who opposed his Supreme Court-packing plan. When Farley refused to go along with him on the purge he made Farley a victim of his vindictiveness, too.

This country suffered much from the foul play, double-crossing, overspending, and overtaxing tactics of the Roosevelt era. But a hang-over from that era remains. The remnants of the New Deal gang, in high office in Washington, in Henry Wallace and the assortment of freaks who surround him, in radical labor leaders who were nourished by Roosevelt, in the pro-Red fringe who preach communism in Roosevelt's name, are with us still. They are hungrier than ever for power, for the chance to afflict us again with the hypocrisy, the extravagance, the dictatorial rule that Roosevelt thrust upon our people.

Cold revealing facts about the Roosevelt New Deal and how it operated, as revealed in Jim Farley's story, help bring home the urgent warning: Don't let it happen again.

Rebild American National Park

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. OWENS. Mr. Speaker, several days ago I received a visit from one of Chicago's prominent advertising executives, George P. Jensen, whom I have been very proud to know as a friend for many years. He was on his way to Denmark, where he is scheduled to speak at Rebild American National Park in that country on the 4th of July. The history of Rebild American National Park, and its very unique relationship with our Nation, is such that I cannot refrain from making a brief statement with respect thereto. In doing so, I shall use some of the information given to me by Mr. Jensen, and facts which were obtained from the Rebild National Park Board and other sources.

On July 4, 1909, Danish-American Day was celebrated at the national exposition in Aarhus, and the attendance was the greatest in the history of the exposition. The event gave the late Dr. Max Henius, an eminent citizen and chemist of Chicago, Ill., the idea of creating an American national park in Denmark. Here, he thought, Danish-born Americans, and other Americans, might meet annually and celebrate the American Independence Day.

There was but a short step from thought to action with Dr. Max Henius. With his usual initiative and energy he aroused interests among other Danish-born Americans in the project of an American National Park. Certain parts of the beautiful heather hills in Rebild were bought. On the grounds thus acquired a great festival was held in the summer of 1912, and the land was formally presented to the Danish Government as a gift from Americans of Danish origin.

This was done by means of a formation of a corporation not for profit in the State of Illinois. Danish-American citizens of Chicago were among those who raised the original funds and successfully completed the project.

Since 1912, with the exception of a few years when world events made trans-Atlantic traffic difficult or impossible, every Fourth of July has been celebrated in Rebild National Park, as it was called. These celebrations, with speeches and songs, have strengthened the ties between Danes in the United States and their mother country, and between Denmark and the United States. Year by year, more and more acres have been added to Rebild National Park and it is now visited annually by thousands of tourists from America, Denmark, and other countries.

There is probably no other place in the world where Danish-born American citizens are so deeply stirred by pride and patriotism in and for their adopted country as in Rebild American National Park in Denmark on American Independence Day.

The park, consisting of 278 acres of heather land—an almost extinct topographical condition in Denmark, as the prairie is in the United States—was purchased 35 years ago by Danish-born American citizens and presented to the Dutch Government, with the provision that in it on the Fourth of July each year, when possible, the independence of the United States should be observed with appropriate ceremony as a mark of understanding of freedom that the Danish and the American peoples have in common.

The park has a natural bowl, formed by surrounding hills on which the 48 State flags of the United States are grouped, and over a speakers' platform on the floor of the bowl the American and the Danish flags fly side by side. Seated on the slopes of the hills may be 40,000 Danes, and a number of American visitors, who rise to the strains of the Star-Spangled Banner.

The colorful sight of the great silk flags, the large audience rising to sing the American national anthem, and the stirring music by a large orchestra, is a heart-moving event that no American can ever forget.

Usually members of the Danish royal family are present, as are members of the Danish Parliament, and noted persons in Denmark and from the United States make the addresses, which sometimes are broadcast to America.

The park board of directors have control of the park and of the celebration, half of the members residing in the United States, the others in Denmark. Dr. Max Henius, the founder of the movement, was board president for many years. Subsequently, Mr. George P. Jensen was elected to the office. The president now is Mr. Holger Bladt of Aalborg, and the vice president is Mr. Jean Hersholt, well-known Danish-American. In 1930 Mr. Jensen was leader of a group of 250 who were received by President Hoover on their way to Denmark, and Mr. Jensen was given a special message from the President to the King of Denmark and to the Danish people. He has been invited as ex-president of the board to make the address this coming Fourth of July. Let us trust that it will be even more successful this year than it has been in the past, and that it will assist in continuing the fine relationship which exists between Denmark and our Nation. It is to be hoped that similar arrangements can be made with other nations of Europe. It will certainly help to bring the peace which we all so deeply desire and for which we constantly pray.

World War III

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD an article written by one of my constituents, Mr. W. C. Carter, of Delaware, Ohio.

I fully realize many will disagree with Mr. Carter's statements, but I take the position his article merits consideration. Mr. Carter has spent much time and study on this subject and I feel that all should be given the opportunity to read his comments.

The article follows:

WORLD WAR III

(By W. C. Carter)

We are not yet finished with the bloodiest, costliest, and most destructive war of all history, and instead of promised international peace and cooperation we have the atomic bomb, Russian communism, and general dissension—the ominous signs of World War III. In fact, this war has already been declared in no uncertain terms and the opposing forces are busy jockeying for strategic positions. World War II was presumably fought against aggression and dictatorship, but while putting down one dictator, our "superminds" in Washington have been misusing American resources and prestige to build up another dictator even more ruthless, unscrupulous, and unpredictable. This growing threat is personified in "Bloody Joe" Stalin and his miscalled communism which is really an absolute and cruel despotism for the benefit of the few, imposed upon the common people against their will, and enforced through intimidation, imprisonment, forced labor, and even mass assassination.

Communism is presumed to be "rule by the proletariat"—the common people—but they have very little to say about their own welfare or government, and their sorry plight is concealed behind the iron curtain of censorship and closed borders. A small group of internationally minded racketeers misrule Russia and through traitorous stooges in all countries their poisonous doctrines are being spread throughout the world.

Their established policy is confiscation and aggression against weak minorities, the promotion of world-wide trouble and discord in every possible way, and the hope that revolution will bring about the adoption of their oppressive system.

The strong position of Russia today is largely due to the moral and material support of the United States of America, but we are now the avowed target of Soviet attack as the main obstacle in the path of their planned world conquest. While seeking favors from us, they brazenly repeat that there can be no compromise between their so-called communism and our free enterprise system, yet for many years our State Department policy has been one of appeasement through recognition, concessions, gifts, and loans. This dangerous un-American liberalism was evidently followed for political reasons—the votes of reds, pinks, and radicals. Now—while tolerating Communist activities at home—our Washington politicians propose to spend hundreds of millions of the taxpayers' dollars to fight communism abroad.

The military development of the atomic bomb and its unjustified use 16 days after Japan was ready to surrender, was the greatest strategic blunder in all history because it introduced a new and incomparable horror into warfare. Regrettably, that tragic mistake cannot be corrected, and if Stalin had the atomic bomb, he would not hesitate to use it on the United States of America today. The present Russian regime has consistently shown open contempt for pledges, promises, treaties, or cooperation for peace, and a callous indifference for the rights of minorities. This cynical, moralless regime does not represent the interests or the wishes of the people it presumes to govern, and it maintains its absolute power only through brute force. Russia is today ready for an internal revolution, and a well directed, timely push would send its tyrannical government crashing like a house of cards.

The wrangling United Nations—like the old League of Nations—has so far shown its incompetence and impotence to promote international peace and cooperation. Instead of squandering our wealth and resources in a vain attempt to check a universal and threatening evil from abroad, we should attack that evil at its source. Abraham Lincoln freed the slaves in the United States of America, and the United States of America could render no greater service for lasting world peace and justice than to free the slaves of Europe and Asia by sending an atomic bomb, to be delivered from on high and dropped in the center of the Kremlin.

Why should we not be realistic and recognize the ominous signs of war? Strong measures are justified if your way of life and government is to survive, and if World War III is to be prevented. A proven military maxim and sound strategy is, "When in doubt the best defense is attack."

Peacetime Military Training

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. BRADLEY. Mr. Speaker, I take pleasure in inserting in the CONGRESSIONAL RECORD the following resolution regarding peacetime military training adopted at the annual meeting of 140 Congregational Christian Churches in southern California, Arizona, New Mexico, Texas, and Nevada at Riverside, Calif., on May 13 and 14, 1947:

RESOLUTION REGARDING PEACETIME MILITARY TRAINING

Appreciating the gravity and complexity of the international problems threatening the peace of the world and confronting the leaders of our Government, and recognizing the necessity of implementing for the present our diplomatic efforts in maintaining the peace with strength commensurate with our security, we do, nevertheless, hereby express our belief that peacetime conscription, under whatever name, would tend to make our youth believe in the war method rather than in spiritual forces as the ultimate court of decision in international crises; that conscription would tend to produce another armaments race among the nations which in turn would lead to fear and antagonism among nations; that conscription now bears little if any relation to adequate national defense in atomic warfare; and that conscription tends to minimize the vital factor of world-wide international organization, law, and law enforcement as the only real preventive of war; therefore, be it resolved, that this conference urge the members and pastors of its constituent churches to bring the pressure of the Christian conscience to bear upon Congress against conscription or compulsory peacetime military training; and that we ask our conference office to transmit our opposition to the present plans for a conscription measure to our Congregational Senators and Congressmen in Washington without delay.

The Tax Study

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me to extend my remarks, I desire to include an article which appeared in the Washington Post this morning in regard to the proposed tax study by the House Ways and Means Committee.

Marquis Childs, the writer of the article, is recognized as one of the foremost columnists of the country, whose keen perception and impartial analysis of trends and events has won for him the confidence and admiration of the American reading public. The article follows:

WASHINGTON CALLING
(By Marquis Childs)
LOPSIDED TAX STUDY

The political clamor following on President Truman's veto of the Republican tax bill is likely to obscure one of the most telling points he made. In the last paragraph of his veto message he called for a program of tax adjustments and tax reduction "geared to the financial and economic needs of this country."

That kind of program is long overdue. The late President Roosevelt talked about it often, but he never got around to it.

Evidence is growing that some Republicans have a tax program they intend to try to put over next year. It is also evident that they want to try to shift as much of the tax burden as possible from income tax to the excise or sales tax. In other words, they would shift to the kind of tax that penalizes the low-income groups.

A tax program must originate with the House Ways and Means Committee. The other day Chairman HAROLD KNUTSON of that committee named a group of outsiders to help draft a tax plan for 1948. He named them without consulting the full committee and there were prompt cries of dictatorship.

The key men of that committee long have lobbied to reduce income taxes in the higher brackets. In some instances they have openly advocated a Federal sales tax.

The chairman and prime mover of the special "tax study committee" is Roswell Magill, member of one of New York's largest corporations law firms and a professor of law at Columbia University. One of the most influential members is John W. Hanes, who represents large corporate interests in New York, including the Hearst properties. Hanes was one of the two private citizens permitted by the Republican majority to testify before the Ways and Means Committee on the tax bill just vetoed.

Another member is Cheever Cowdin, motion-picture executive who has frequently been a spokesman for the National Association of Manufacturers on taxes and finance. Still another member is Carson S. Duncan, economist of the Association of American Railroads.

KNUTSON'S efforts to make this appear a bipartisan committee is plain foolish. While there is some window-dressing—members who theoretically represent farm and labor—the key men will speak from the special point of view of great wealth.

An editorial in the New York Journal of Commerce made clear what the Wall Street community thought of the Magill group. The editorial had the headline: "Magill Appointment Underscores Trend Toward Sales Tax." Magill, said the editorial, will play a key role in formulating a new tax program.

Representative AIME J. FORAND, of Rhode Island, one of the Democrats who challenged KNUTSON'S right to name these outsiders and give them special powers, pointed out a deadly parallel. It is a parallel which should make the Republican leadership stop, look and listen.

In 1930 Herbert Hoover was in the White House; Republicans controlled both Senate and House. While the stock market crash of 1929 had jarred confidence, the philosophy of high and unending prosperity was still in the ascendant.

In that fateful year the Republicans in the House invited businessmen to come in and write a tariff law. They brought into the committee room high priests of high protection—such men as Joseph Grundy, of Pennsylvania—and they told them to write their own ticket.

The result was the Smoot-Hawley high-tariff law. Mr. Hoover himself protested. A thousand experts in economics and political science signed an earnest plea to prevent adoption of the law. They knew that it would hasten the tide of depression all over the world.

A tax program that transfers even part of the burden to the low-income groups will take dollars out of the pocket of the average consumer that he otherwise would spend for the products of our factories and farms. It means we shall be less able to buy those products. It means depression.

There should be changes in our antiquated tax structure. The Committee for Economic Development pointed the other day to the need to give small businesses a chance to invest a larger share of their earnings. These and other changes are long overdue. But if they come as merely part of a plan to switch the load to the small wage earner, then we shall be asking for boom and bust in the good old pattern of 1929, and after.

H. R. 3: Terminal-Leave-Pay Legislation

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at Miami, Fla., April 17, 1947, at the Twenty-ninth Annual Convention of the American Legion, duly assembled:

The following resolution was offered by Legionnaire Dan Kelly, of Fernandina, a member of the Theodore H. Hernandez Post 54:

"Whereas it has come to the attention of the American Legion, Department of Florida, in convention assembled at Miami, Fla., this 17th day of April, that H. R. No. 3, commonly known as the Rogers bill, providing for cash payment of terminal leave pay, is pending in the Congress of the United States, and

"Whereas it is extremely important to the thousands of veterans in Florida that they receive their terminal leave pay in cash: Therefore be it

"*Resolved*, That the Twenty-ninth Annual Convention of the American Legion, Department of Florida, go on record as strongly urging the Congress of the United States to immediately pass H. R. No. 3 for the benefit not only of the veterans of Florida, but of the entire United States; and be it further

"*Resolved*, That a copy of this resolution be sent to each member of the congressional delegation of the State of Florida and a copy be furnished the local press."

I, Reid Mann, department adjutant of the American Legion, Department of Florida, do certify that the above and foregoing resolution was duly adopted at Miami, Fla., April 17, 1947, at the Twenty-ninth Annual Convention of the American Legion, duly assembled.

Attest:

REID MANN,
Department Adjutant.

Tax-Bill Veto

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 17, 1947:

A PROPER VETO

The reasoning behind the President's veto of the income-tax-reduction bill should appeal to the common sense of the American people.

The prospect of continuing high taxes is not, of course, a pleasant one. The man or woman who likes to pay taxes has not yet been born, and it must be admitted that the Republican promise of tax reduction appealed to an instinct that is deeply rooted in human nature.

Nevertheless, the better arguments are on the President's side.

We are in the midst of an era of exceptional prosperity, and it is in such a period that debt must be reduced if it is ever to be done. The Senate was aiming at a reduction in the national debt of $2,600,000,000 in the 1948 fiscal year. That, however, is only 1 percent of the total debt. At this rate, and on the highly improbable assumption that an equivalent reduction could be made annually, it still would take 100 years to pay off the debt.

This is enough to demonstrate the desirability of reducing the debt as much as possible in the years when we are able to afford it. Every man who has wrestled with his own budget problems knows that debts must be paid when the money to pay them is available. For if they are not paid then, they never will be paid.

Another effective argument against tax reduction at this time lies in the uncertainties of the international situation. As Mr. Truman said, we are still in the midst of a transition period, and we continue to be confronted with relief and rehabilitation demands. The exact cost of these is unknown, but it certainly will be heavy.

In the face of these considerations, it seems to the Star that it would be sheer folly to reduce Government income at this time. The President is to be commended for his veto of the tax bill. It may prove politically harmful to him, but in the long run it will best serve the interests of this country.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. EDWARD J. ELSAESSER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. ELSAESSER. Mr. Speaker, the new proposals for the construction of a St. Lawrence seaway and power project will not remove any of the objections which I believe are self-evident.

Self-liquidation, by payment of tolls, cannot make the water navigable for more than 6 or 7 months of the year. Neither will it provide the docking facilities sufficient to serve the larger ocean-going vessels. Thirteen major ports on the Great Lakes would be bypassed by this shipping and huge investments would become worthless or partially worthless.

The city of Buffalo, which is a thriving grain center, would be compelled to expand its facilities at a cost of at least $50,000,000 in order to continue receiving, storing, and processing grains. The same is true of every other city in which grain is one of the major industries.

The toll charges, proposed by the Vandenberg resolution, will never liquidate the cost of constructing such a seaway. Self-liquidation is a loose term used to confuse the opposition to this project. The power development, which has found favor among many of the friends of this proposal, will be costly and the expense of producing power would be excessive and much greater than the cost of power developed by modern and efficient steam plants.

The fact that this proposed seaway would be of great importance in national defense is not justified when submitted to careful scrutiny. Certainly the seaway would be useless unless Canada and our country were allies in a war. Ninety percent of the seaway is and must be Canadian dominated. If the United States became engaged in a war and Canada remained a neutral nation, it would be a breach of Canada's neutrality to assist this country, a nation at war, by operation of a seaway that is jointly owned.

The proponents of this seaway project further advance the fact that shipbuilding is an important factor in a national-defense program. Ships would be built on the Lakes instead of being built along the Atlantic and Pacific Oceans. The Lake ports are promised new industries. However, the proponents overlook the winter season in the Great Lakes area. Large vessels require open water for navigation. For at least 5 months of each year these ships would be frozen to the drydocks and would make excellent targets in warfare.

My objections to the investment of billions of dollars for this seaway are based on facts, which the self-liquidation theory cannot change. At its very best it would be a part-time seaway. The tolls collected during this period would be consumed by the year-round supervision and maintenance costs. In my opinion it would never liquidate itself. It would cause havoc among existing facilities, rearranging and resettling the Lakes area. It is not a defense necessity and the power that would be generated and sold by the operating agency would be produced at a terrific expense if honest bookkeeping is to be employed.

Can We Keep the Peace?

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial, Can We Keep the Peace? which appeared in the Laurinburg Exchange, Laurinburg, N. C., on June 5, 1947:

CAN WE KEEP THE PEACE?

There is a great deal of apprehension and fear in the minds and hearts of the American people today. Now that we have won a second world war, and stand to lose the peace.

Americans are frustrated and scared because of the strangeness of the new world to which they are not accustomed. They are homesick for the good old days, the yesteryears when this country could safely mind its own business and not worry too much about that of others. At heart most of us are isolationists and would prefer to live our lives apart from the swirling currents of world affairs.

But two wars have taught us a lesson, and good sense tells us that we can't live apart any more, or be indifferent to what is going on in other parts of the world. And since this is the most powerful, the richest, and least damaged of all the major powers by the war, the role of world leadership is thrust upon us.

Will our leaders muff the ball? Can we furnish a leadership sufficiently good and strong and wise to formulate a policy of world peace? There are many who feel that if things are managed rightly there need not be another war. But it is so easy to make

a mistake, so easy to miss the bus, to muff the ball. The United States and the American people are standing in the need of competent leadership today as never before.

Will a strong military power save us? The President's Commission recommends it. Our military leaders say it is indispensable. Yet, many distrust it. We know that our weakness as a military power was largely responsible for World War II. If weakness failed us once, can military strength save us next time? Maybe so, but deep in our hearts we know there is a spiritual reserve that is stronger than armaments, greater than statesmen, and more to be trusted than powers and municipalities.

In the present unhappy period we seem to be groping for just the right formula of power and spirit to make a go of it. Not by the sword, but by my Spirit, saith the Lord!

A Message From Congress

EXTENSION OF REMARKS
OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio speech which I gave over WJR, the Goodwill Station, Detroit, Mich., on Saturday, May 31, 1947:

Ladies and gentlemen, through the courtesy of WJR, the Good Will Station, it is my privilege to address the citizens of my home State of Michigan at this period known as Your Congress program.

I am very glad to report to you that, notwithstanding certain comments and articles that you have heard or read, the Eightieth Congress now in session is ahead of previous Congresses in its legislative program. It is true that at the beginning of this session there was some criticism at the slowness with which the Congress seemed to be functioning. However, many of our citizens did not know that, under the new Reorganization Act passed last year, the first thing that Congress had to do before it could start its legislative business was to comply with the provisions of that Reorganization Act. That was the immediate major problem confronting Congress when it convened on January 3 last, and was accordingly done.

I was formerly a member of the Naval Affairs Committee, upon which I served for many years. Under the Reorganization Act, the Naval Affairs Committee and the Military Affairs Committee were merged into the Armed Services Committee, consisting of 33 members. It is my privilege to be a member of this committee and to be chairman of the Subcommittee on Pay and Administration.

The Armed Services Committee is now one of the most important committees in Congress, as it deals not only with the Army and the Navy but with the Air Corps, with the Coast Guard, with the Marine Corps, and with all other agencies of our armed forces.

Let me just give you a brief outline of what the Armed Services Committee has done thus far in the eightieth session of Congress. Among the more important bills is the Army-Navy nurses bill, which was reported by our committee and passed by Congress—which, for the first time, gives nurses a permanent status as commissioned officers in the Regular Army and Navy with substantially the same provisions for promotions, pay, and retirement as other officers. In addition, this act established an Army-Navy Nurse Reserve Corps with permanent status.

We also have reported a bill to the House to establish a Medical Service Corps of the Army and Navy with almost identical provisions for each. When this bill becomes a law, as I am sure it will, it will group into one corps for each branch of service those categories of persons whose work or profession is allied with medicine.

Our committee also reported a bill which provided $30,000,000 for the construction of two experimental submarines. This was done in order that our Nation might keep abreast of the developments in submarine construction, particularly that learned from examining captured German submarines.

The Armed Services Committee is now in process of reviewing the Army-Navy forms of military justice in order to eliminate existing inequities and to bring the system of military justice into line with our present-day concept of justice.

It will also be the Armed Services Committee that conducts the hearings and passes on the legislation pertaining to universal military training. While hearings have not yet been started, you may be assured that when this matter is brought before the committee, it will be considered with the view of determining what is for the best interests of our Nation.

You may recall that last year the House passed the terminal-leave bill which provided for cash payments of terminal leave to our veterans. The Senate amended our bill providing that payment should be made in 5-year nonnegotiable bonds. We have bills before our committee now providing for an amendment to the existing law so that these payments can be made to our veterans in cash.

As chairman of the subcommittee to which this bill is referred, I wish to state that in the immediate near future my committee will conduct hearings on this bill. It is my judgment, when our bill is reported favorably, that the Congress will approve it so that those veterans now holding terminal-leave bonds may convert them into cash, should they so desire, although I would state that the Secretary of the Treasury is opposed to the passage of this bill at the present time.

Our committee has already reported to the House favorably 43 bills, and many others are yet to be reported.

The Congress is concerned over the attitude which Russia has maintained toward this country and toward the United Nations organization. At no time has Russia manifested a spirit of cooperation. Let me illustrate what I mean.

Our State Department has repeatedly made demands upon Russia for a settlement of her $11,000,000,000 lend-lease account. These notices have been ignored by the Soviet Union, although other nations to whom lend-lease was extended have been cooperative with the United States in arranging settlements therefor. Seventy percent of this country's $51,000,000,000 lend-lease operations has been settled.

In view of the aid which has been given to Russia by the United States, it is rather difficult to understand the philosophy underlying Stalin's treatment of our country in his neglect to either adjust or settle her lend-lease obligations, and his refusal to return to the United States more than 100 ships which were turned over to Russia during the preceding administration.

Few of us seriously believe that Russia wants, or could fight, another war; but the United States and Russia are the two great powers of the postwar world. It is impossible for us to undersell Russia's position, her resources, her manpower, and above all, her determination to take a leading position in world affairs.

It is absurd to feel that we can bargain on equal terms with Russia unless we can match her, resources for resources, determination for determination, machine for machine, trained men for trained men.

One of the major questions confronting the Congress and the American people today is to determine the attitude of the United States with reference to European countries that are asking for financial and economic support, in order to safeguard those countries and to prevent the sweep of communism and radicalism which is gradually destroying them.

World War II, which was the greatest of all wars, has brought in its wake the greatest political, social, and economic upheaval of recorded history.

The great British Empire which for many years boasted that the sun never set on her Dominions is gradually disintegrating, and already Great Britain has announced that she will no longer be able to continue her commitments to some of her possessions and to other European countries needing aid.

Korea, which is controlled temporarily as a war measure by the United States and Russia, is slowly being flooded with communistic principles. France is thoroughly depleted financially. The smaller countries of western Europe are exhausted and practically prostrated. If Germany is to be maintained as a Republic, it is apparent that much money must be furnished her by nations interested in restoring to Germany a responsible government.

The President, in addressing a joint session of Congress recently, spoke of the urgent need of Greece in securing money and equipment to maintain the responsibility of her government.

Turkey, from the reports of American experts abroad, is in dire need of financial assistance in order to preserve her integrity as a nation. Other countries, devastated by war, are asking for relief.

This is not a very hopeful picture of foreign countries and their economic conditions. We all know that the United States has a debt today in excess of $250,000,000,000. Tax experts state that the average citizen is paying in taxes—National, State, and local—35 percent of his income.

Congress is doing its best to curtail expenses to the limit. How much further we may be able to go in furnishing relief to other countries overseas, and at the same time maintain our own economic solidarity is a serious problem.

It is well that Congress and the American people at large have begun to realize the menace of the growth of communism in the United States. I remember the time on the floor of the House when those who were antagonistic to communism were called "Red baiters," and the Communists and those who sympathized with them attacked the proponents of the Dies committee, later known as the Un-American Activities Committee, predicating their attack upon the constitutional guarantee of freedom of speech and freedom of the press.

Of course, when our forefathers wrote the Constitution and guaranteed freedom of speech, they did not mean that an individual under the Constitution could call any other individual vile or indecent names; neither did they mean that any group seeking refuge under the Constitution could attack insidiously and destructively our Government structure. This is not freedom of speech.

Official Washington, during the last few months, has been hearing the voices of the great rank and file of the American people in their protests against communistic activities, since which time it is highly noticeable in congressional circles that it is much easier than formerly to remove avowed Communists from the public pay roll.

The Supreme Court recently stated in no uncertain terms that the head of a department has the right to remove Communists from his department.

Then, President Truman recently issued a statement to the effect that Government agencies and bureaus should remove those

known to be Communists. This is a wholesome sign.

The great majority of the American people believe in the Constitution and in constitutional government and have no use for those people who, seeking the protection of our Constitution, endeavor to subvert or destroy it.

The FBI has done an outstanding job in this matter. The FBI knows no politics—is neither Republican nor Democrat—and under the leadership of J. Edgar Hoover has brought to public attention the menace of encroaching communism in this country.

This Congress is going to do everything possible to remove from the Federal Government any known Communist who, at the taxpayers' expense, is endeavoring to destroy American institutions.

Any person has the right to criticize his Government but so long as he remains a citizen of his Government, he is duty bound to support the principles of the Constitution to which he has given direct allegiance by oath if he is naturalized, or indirect allegiance if he is born in this country.

Communism is antagonistic to the American way of life; it is antagonistic to American institutions, to our religion, and to our school systems. The quicker that menace is removed from America, the better for all of us.

In conclusion, let me state that in the time allotted to me, I have been able to discuss only a few of the problems pending in Congress and affecting the American people. One thing is definite, however, and that is the people of the United States do not want a potential World War III. They are, therefore, greatly interested in the United Nations organization and in the endeavor of that organization to remove the causes of war insofar as possible.

One of the best means to prevent war is to be adequately prepared in time of peace. For that reason, it has been stated by Congress that the postwar Army will consist of approximately 1,000,000 men, the Navy approximately 425,000 men, and the Marine Corps 80,000 men.

We want our Army, Navy, and Air Forces maintained at the highest degree of efficiency in order that this country may be adequately protected at all times. If we are a strong Nation, we will be better able to be of assistance in the counsel of the United Nations organization. For that reason it is not inconsistent that we maintain efficient armed forces and yet, at the same time, express our approval of the United Nations organization. The two work hand in hand rather than being opposed to each other.

Let me also state that the Eightieth Congress now in session realizes the economic conditions of our own country; are definite in their desire to reduce the budget, to make substantial payments on the national debt; to reduce, insofar as possible, our income tax; to eliminate needless agencies and bureaus; and to remove from the public pay roll thousands of employees not necessary in the various bureaus and agencies of the Government.

I appreciate the courtesy of this station in giving me this opportunity of presenting to you a few of the many important problems confronting the Congress and the American people. I thank you.

Ambassador Emmet O'Neal

EXTENSION OF REMARKS

OF

HON. JAMES P. RICHARDS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. RICHARDS. Mr. Speaker, the President did honor to both the United States and the Philippine Republic when he named as Ambassador to the Philippines that outstanding American, the Honorable Emmet O'Neal, of Kentucky. It was a foregone conclusion that the Senate would confirm his appointment, because there is nothing that can be brought against him.

Those of us who have served in the House of Representatives with Emmet O'Neal fully appreciate his great ability, his loyal Americanism, and his unwavering support of democratic institutions. In all my experience I have never known a man who tried harder to put himself in the other fellow's shoes and to understand his problems. He is full of kindness for all mankind. There is nothing of the bigot about him. To know him is to respect him.

Such a man will certainly make an ideal Ambassador to the great new Republic in the Pacific. The people of the Philippines will always find his ears receptive to their problems and in him an able champion of their legitimate aspirations.

Bunker Hill Address

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the Bunker Hill address delivered yesterday by the Honorable Joseph E. Casey, former Member of the United States House of Representatives from Massachusetts, who served his Nation and State well for 8 years. As always his address presents a thoughtful and timely message.

The address follows:

It is altogether fitting—and, indeed, I think necessary—that here in the shadow of Bunker Hill we commemorate that epochal battle that meant so much to the future history of the United States. While this noble shaft that rises as a monument to Bunker Hill is a constant and visible commemoration of that battle, it is our inspiring duty to actively celebrate this day. We are, of course, not the first nor shall we be the last to do it gladly. From a standpoint of numbers involved, the Battle of Bunker Hill does not belong in the category of important war engagements. There were only some 1,500 Americans opposing a force of approximately 3,000 British troops. What is it that makes it so important? In order to find the answer I think that we must go back in our minds to the days that preceded it.

On April 19, 1775, there had been skirmishes at Concord and Lexington between the American Colonials and British Regulars. The Battle of Concord and Lexington has been described as "the shot heard round the world," meaning that it gave heart throughout the world to the forces that were fighting for freedom and liberty.

After the Battle of Concord and Lexington there was a lull in hostilities. The commander of the British troops sent hasty messages to England asking for more troops and supplies. Before Bunker Hill these fresh troops had arrived.

On June 15, 1775, at Philadelphia, George Washington took command of the Continental Army. The day after, June 16, 172 years ago today, a band of some 1,500 Americans, with some few engineers, marched up the hill and proceeded to build redoubts and speedily entrenched themselves. The British lost no time moving against the hill because they saw its strategic importance.

On the next day the British troops, marching as though on parade up the steepest part of the hill, were routed by the calm and efficient fire of the American defenders. "Don't fire until you see the whites of their eyes" was the command and with the coolness of veterans these amateurs waited until they could see the whites of their opponents' eyes and then blazed forth with such devastating fire of musketry that the British fell back in disorganization. Their forces were rallied a second time and they marched up the hill in the same closed-rank fashion and a second time they were met with the same deadly fire and once more they fell back. The third time they were successful because by this time the American forces were out of powder. This was the first battle of the Continental Army against the British Army.

Before this battle it was a widely prevalent idea that the untrained Americans would stand no chance against the fresh and well-disciplined forces of Great Britain. Had American forces not defended the hill in such an efficient and courageous manner, it would have meant to many minds in the Colonies that resistance against the great power of England would be foolhardy. Their firm and determined stand gave heart to Washington, the newly elected Commander in Chief; gave heart to all of the colonists and proved that there was at least an even chance of success in the struggle against the mother country.

Without Bunker Hill there might never have been the United States of America. That, then, is the importance of this event which we celebrate. I might go on and continue to praise the courage and bravery of the heroes of Bunker Hill, but having said what I have said I prefer to leave it without further addition.

Bravery and courage belong to no particular race. No race has a monopoly of these qualities. Indeed, the British Regulars showed a high degree of bravery and courage when they rallied for a second and third time in the face of devastating fire to finally gain possession of the hill.

The courage of the Russians at Stalingrad and Leningrad in defense of their home land has never been surpassed.

The courage of all the races in the world involved in World War II has been proved beyond reasonable doubt. It is not, therefore, a lesson in physical courage and bravery that is gleaned from the Battle of Bunker Hill. It is something above and beyond that. It is the story of how free men met the issues that preceded Bunker Hill and determined them upon a high moral plane.

When we read about the heroes of these early days we are apt to fall into the error of thinking of them as being immortals. We assume that they were infallible and that there never was any question in their minds about the course which they would pursue. Such was not the case. These heroes whom we celebrate tonight were human beings. They did not know what the future held in store for them. They were filled with doubts and fears. There was a strong division of opinion as to whether or not they should resist the mother country. There were ties of common ancestry, ties of a common tongue. Understandably, there was a large minority of Tories. The question was debated pro and con throughout the Thirteen Colonies. The majority decided to throw off the yoke of oppression and to sacrifice life, property, and all that they held dear, in order to achieve liberty and freedom. They were motivated by a high sense of moral values and an appreciation that man is a creature of God, made to his image and likeness, and that he is endowed from outside himself, from his Creator, with the power to determine right and wrong.

The majority of them made the decision, but it was not their belief in the wisdom of the majority that convinced them they were right. They did not believe in the divine right of kings, and they did not believe in the divine right of the majority either. They looked beyond themselves to find the answer to their problem, and their answer came straight from God.

The greatest lesson that comes down to us from these early patriots is not to be found in the exhibition of physical courage. It is rather to be found in the high inspiration that motivated them, in the intelligent manner in which they met the issues of their day, and their determination to fight for the right as they saw it. We have great need for those qualities today.

True, we are not engaged in a shooting war, but we have grave problems to solve and great difficulties to surmount.

In 1775 the Thirteen Colonies were merely "a segment of the British Empire." These small colonies have grown so that today they have become the United States of America, the strongest and, I hope, the wisest Nation on the face of God's green earth. We need divine inspiration. We need to be motivated by a sense of high moral values. We need intelligence to appraise our problems which are world-wide in scope. We need resoluteness to determine our course of action and we need courage and bravery to pursue that course of action when once it has been determined.

We are the only real democracy left. In this democracy, the people rule, the people govern, the people elect, the people determine the issues. In this Government, therefore, more than under any other form of government, it is absolutely necessary that the people be well informed, that they may be able to make the momentous decisions that have to be made. If we are frank with ourselves, we must admit that we have shown a lamentable ignorance about affairs beyond our shores. Most of us thought that when we won the war the people of other lands, having the hand of oppression removed from them, would automatically turn to Jeffersonian democracy. We know now that such is not the case. Democracy and free enterprise are good for America, but may not be the best form of government for countries that have been devastated, for countries whose economies have been ruined, whose people are impoverished and hungry, and where the fires of even hope itself, are almost extinguished. These are the ills that communism thrives upon.

Communism offers them a plan, something to do, something to eat, and many of them in their bewilderment and hopelessness have grasped at this plan and have accepted communism.

Russia does not march great military forces into a country which it wishes to conquer. Where want and suffering prevails, it offers a positive plan, a plan that whispers "the state will take care of you; the state will give you work; the state will give you food; the state will give you shelter and it will distribute the wealth even amongst you."

The state is all. It is from within yourselves that good must come. There is no higher law. There are no higher moral values.

Eastern Europe has succumbed to the blandishments of this ideology. The only opposition came from the church, came from religion, but the church's plea that man does not live by bread alone, the church's offer of spiritual help, was not sufficient. The hunger was there. The mess of pottage was there. Mankind's birthright was sold.

The culmination of all this was the political coup in Hungary. It practically completed Russian domination of eastern Europe. The shadow of the Bear now falls menacingly over western Europe. The issue becomes increasingly clear. Shall we continue to stand by until nation after nation falls under the domination of communistic Russia?

There are extremists on both sides. Some who answer "Yes;" let us confine ourselves to our own problems and pay no attention to what goes on beyond our territorial limits." There are some who ansfer "No; let us begin a shooting war now."

In the middle, I hope, are the sound and clear-thinking people of this democracy who wish to take neither of these courses. The first course of isolationism we reject as having been tried twice and found wanting. It is for those who have learned nothing from the lessons of the past.

Those who are in favor of war with Russia now argue that we have the atomic bomb, within 5 or 10 years Russia may have it, but while we have the advantage we ought to start shooting. We reject this violent doctrine because instinctively we abhor war and violence with all its attendant suffering and anguish. Force is to be used only as a last resort. We cannot make a people change their ideas or change their atheism by dropping bombs upon them.

The course that we must follow seems to me to be pretty plainly marked. We must first of all recognize the fact that we are already engaged in an economic war. President Truman and the Congress recognized this fact, as evidenced by our loans to Greece and Turkey.

Eastern Europe, already lost, is beyond our power to aid. We can, however, help in western Europe. The people of most of those countries hate communism. Countries such as Sweden, Norway, Denmark, Netherlands, Belgium, France, Italy, are all opposed to communism. They have fairly stable governments. They are our allies. We can and must help their economies.

Their first need is for economic freedom. When economic freedom has been established, there will be individual freedom. These countries must be productive to be free. They need the tools of industry. They need dollars to buy machinery to get back into production. We should loan dollars to them to the utmost of our capacity. It must not, however, be done with a profligate hand. We must bear in mind on the one hand that the basis for future loans or grants rests upon a sound economy at home. If we have not a sound economy at home, if management and labor can't settle down to a long period of constant production, our ability to aid will be seriously hampered. Management and labor and the citizens of our country can find inspiration in the conduct of the founders of Massachusetts whose memory we celebrate here tonight. They met the issues of their day not only with courage but also with intelligence. They were motivated by a high sense of moral values. These qualities are needed by our citizenry of today just as they were in 1775. If we turn our back upon suffering mankind, we virtually push them down the road to communism.

Already our leaders are acting with wisdom and foresight. Secretary of State Marshall is talking about a plan to integrate European economy, a plan to make all of Europe a common economic entity. This is a splendid start in the right direction. The trade barriers that separate all of the various European countries are unsound. Europe should be an economic unit unhampered by any tariff barriers. There is more sense to their barriers than there would be if the United States had tariff restrictions and trade barriers between States. Such barriers would prevent free movement of goods. It does the same thing in Europe. We should all give support to General Marshall's idea of treating the whole of Europe as one economic unit.

We must help Europe help itself. When this is done, we must help them build up their productive facilities. This is the best method for combating communism. When coal is being mined in Europe with our machinery, when food is being raised in great quantities with our machinery, when machines begin to whir again in the factories of Europe, it will bring the spark of life to the peoples of Europe. It will arouse ambition. It will create within them an urge for self-expression. It will create an economic condition that will enable them to make a free choice. If they have a free choice, they will never choose communism. I firmly believe that it will be the cheapest money we have ever spent. Such a course may well lead the world into its greatest era of prosperity.

The men whom we honor here tonight have given us an example that we would do well to follow. If we let them, they can continue to be a living influence in the endless struggle of mankind for freedom. Let us make the fight without bitterness but with all the enthusiasm we possess for a better, saner, and a more peaceful world.

Reorganization Plan No. 3 of 1947

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "In Opposition to Reorganization Plan No. 3 of 1947," made by Vernon P. Spencer, before the Senate Banking and Currency Committee this afternoon.

I have submitted the statement to the Public Printer, and he estimates that the cost of printing it will be $230.75.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Honorable chairman and members of the committee, I am Vernon P. Spencer, of Inglewood, Calif. I have been associated with savings and loan institutions for the past 17 years and am presently serving both as director and counsel for federally and State chartered savings and loan associations. As such director and counsel, I have been in close contact with the home-construction industry in southern California, and am responsible for the development of plans and techniques whereby upward of $5,000,000 of low-cost housing facilities have been constructed by private industry in Los Angeles County, Calif., our association having made loans in excess of $5,000,000 for this purpose. The techniques developed by our association have now become standard practice in Los Angeles County and have done much to encourage the fulfillment of housing needs in that area at costs within the means of the low-income groups.

I appear before this committee today by express authorization of the California Savings and Loan League.

Before presenting the resolution of the California Savings and Loan League, I desire to make the following observation: That the California Savings and Loan League regrets that its opposition to reorganization plan No. 3 of 1947 must be directed to the plan in its entirety by reason of the fact that the Congress has no power to amend the recommendations of the Chief Executive, as expressed in the plan, that power being denied to the Congress by the provisions of the Reorganization Act of 1945. Therefore, in view of what appears to the California Savings and Loan League to be serious deficiencies in certain aspects of the plan, the league on June 10 adopted the following

resolution at its recent convention at Santa Barbara, Calif.:

"Whereas the Committee on Expenditures of the Executive Departments of the House of Representatives and the Senate Committee on Banking and Currency have before them the President's Reorganization Plan No. 3; and

"Whereas said reorganization plan abolishes the statutory five-man Board of the Federal home-loan bank and substitutes therefor a three-man board, the Chairman of which is given arbitrary power over the Federal Home Loan Bank System and of any agency under the Board, including the Federal savings and loan associations; and

"Whereas the functioning of the FHLB system through one-man administration under Executive Order No. 9070 has proven unsatisfactory and dictatorial; and

"Whereas said reorganization plan makes provisions which appear contrary to the express directives of the Reorganization Act of 1945; and

"Whereas the ambiguities in the plan indicate that its scope must be determined by litigation; and

"Whereas the California Savings and Loan League believes that the Federal Home Loan Bank System can only be effectively managed in the public interest if its policies are established by a representative board reflecting the diverse problems throughout the Nation, such as the five-man Board provided by the Federal Home Loan Bank Act; and

"Whereas the plan perpetuates the emergency wartime control and direction by the National Housing Administrator of the thrift and home-financing business: Now, therefore, be it

"Resolved, That the California Savings and Loan League in convention assembled does hereby make known its opposition to the approval of said Reorganization Plan No. 3; and be it further

"Resolved, That copies of this resolution be sent to the Members of Congress and the United States Senators from the States of California and Arizona and to each member of the committee of the Congress now considering said reorganization plan."

I was privileged to sit in with the committee of the California Savings and Loan League having Reorganization Plan No. 3 under consideration. Therefore, I am in a position to state that the resolution finally adopted by the committee was not the result of a moving clique, but was the deliberate and considered judgment of the members of the committee after a 2-day study of the plan.

One of the fatal defects, it appears to me, in the reorganization plan, as submitted by the Chief Executive, is that the plan fails to distinguish between two entirely different functions of the Federal Government with reference to the housing problem.

That this in fact is a fatal defect, we are certain will be made clear by the considerations to which I respectfully invite the attention of the committee. One of the principal bulwarks of our democracy lies in the traditional ownership of homes by our citizens. The policy of our Government has always found expression in legislation fostering the private ownership of homes by its citizens. That has been the American concept as distinguished from the concepts advanced and fostered by other nations. Therein lies our strength and in the further extension of that concept the future of our Nation is secure. Any policy which tends toward a lessening of the dignity attaching to the benefits flowing therefrom threatens the very fiber of our Nation and the foundation upon which our Government rests.

Implementing this concept, the Congress as far back as 1932 established the Home Owners Loan Corporation to provide a means for the refinancing of mortgage-ridden residential and farm properties, the private ownership of which was threatened by the economic disasters incident to the depression of those days. As an integral part of that legislation and for the purpose of encouraging and fostering thrift to enable our citizens to acquire their own homes, the Congress authorized the organization throughout the Nation of Savings and Loan Associations, provided that they be Federally chartered, granted them benefits in local ownership and management and exempted them from Federal and State income taxation.

To enable such federally chartered savings and loan associations to carry forward their primary purpose of providing adequate home financing, the Congress in 1932 established the Federal Home Loan Bank System and created a Federal Home Loan Bank Board whose primary purpose was to bring into being credit reservoirs upon which such locally managed Federal savings and loan associations could rely for funds to achieve the objectives which Congress set up. This System, the Federal Home Loan Bank System, was established in the following manner: The United States was divided into 12 districts. A Federal home-loan bank was established in each such district and pursuant to the enabling act of the Congress the Federal home-loan bank in each district was granted corporate autonomy, its affairs being subject to management by a board of 12 directors, 4 of whom, representing the public interest, were designated by the Federal Home Loan Bank Board, the supervising agency of the Federal Home Loan Bank System, and 8 of whom were elected by the stockholder members of the district bank. As in other bodies corporate, the management of each district bank was vested in its board of directors which had authority to select officers, employ and fix the compensation of its personnel, and otherwise to conduct the affairs of such bank within the territorial limits of each district in accordance with the needs and local conditions prevailing in such district. The Federal Home Loan Bank Board was charged with the duty to supervise the management of such district banks and was authorized to suspend or remove the officers thereof for cause in the manner provided by statute.

The System admirably served the needs of the Nation and realized the fondest hopes of those who were instrumental in providing this means of assisting the encouragement of thrift and home ownership. The System flourished in the accomplishment of the objectives which Congress had set up and grew in strength. Through it untold thousands of American citizens were enabled to achieve the dignity and stability and independence which is inherent in private-home ownership.

In 1942, with the advent of the war and pursuant to the alleged authority of title I of the First War Powers Act, the President of the United States, for the avowed purpose of furthering the war effort, subordinated the Federal Home Loan Bank System to the authority of the National Housing Administration, and by Executive Order No. 9070 directed, amongst other things, that the functions of the Federal Home Loan Bank Board be performed by one member thereof, to wit, its Chairman. This change, however, was stated to be a temporary expedient which would terminate upon the expiration of title I of the First War Powers Act, at which time the independence of the Federal Home Loan Bank Board and its constituent agencies was to be reestablished.

Now that we are on the eve of the expiration of title I of the First War Powers Act, and despite the admitted absence of any exigency justifying the further deferral of the restoration of the independence of the Federal Home Loan Bank Board and its constituent agencies, the Congress is confronted with the President's proposal to abolish the statutory independent Federal Home Loan Bank Board and permanently substitute in its place a device which will perpetuate the autocratic and totalitarian philosophy of government represented by the administration we have experienced under the authority of Executive Order No. 9070. That experience has not been happy nor has it contributed to the realization of the objectives for the accomplishment of which the Federal Home Loan Bank System was established. (See Tenth Intermediate Report of the Select Committee To Investigate Executive Agencies of the House of Representatives, 79th Cong.) If that were the only aspect upon which criticism of Reorganization Plan No. 3 could be predicated, in our humble opinion, it would be more than sufficient to condemn it, but, unfortunately, that is not even the case. In addition to centralizing extreme authoritarian power in the hands of one individual, contrary to every precept of sound democratic government, the plan proposed envisages the subordination of the Federal Home Loan Bank System to the over-all planning philosophy of a superior administrator.

The plan proposes that the Federal Home Loan Bank System, which is designed to encourage private home ownership, be placed on the same level as publicly owned and administered housing and that an Administrator be superimposed upon both for the avowed purpose of coordinating the functions at such level. Logically the coordination of functions would necessarily imply that such functions be reasonably related to the accomplishment of the same objectives, but in the proposal before this committee the objectives of the Federal Home Loan Bank System are unalterably opposed to the objectives of public and communal housing authority. The two are irreconcilable. The one is an expression of the dignity of the individual tradition in American democracy and typified in the private ownership of homes. Whereas the other, by encouraging dependence upon the Federal Government for housing facilities, of necessity is destructive of both the incentive for private home ownership and the individual's responsibility as a citizen.

Any policy, whether of the Federal Government or of Federal officials, inherently capable of tending toward public ownership and communal management of housing facilities, is a serious step taken in contradiction to the natural tendencies of our people, who, ever since the founding of this country, have been encouraged to plant their feet firmly on the soil of our land. Such a step should not be undertaken by the Congress without serious consideration of the consequences which will inevitably follow. Any assumption that such diverse objectives as private home ownership and Government-owned housing can be harmoniously coordinated is obviously fallacious. We trust, however, that the members of this committee will be alerted to the danger inherently implicit in the proposed grant of authority to any Administrator to sublimate the traditional and proven philosophy of private home ownership to the doubtful benefits of Government ownership and communal management of housing facilities.

Attention is respectfully invited to the fact that Reorganization Plan No. 3 as submitted contains no standards whatever for the guidance of, nor any limitations upon the authority of the proposed Administrator, with respect to the extent to which either system may be fostered as against the other. The only safeguard which has been advanced has been a disclaimer by Mr. Foley of any allegiance to the ideology which favors Government ownership and communal management of housing facilities as a national policy.

Ever since the effective date of Executive Order No. 9070, which consolidated the functions, duties, and powers of the Federal Home Loan Bank Board and the Federal Savings and Loan Insurance Corporation, and the members of said Federal Home Loan Bank Board and the powers and duties of the Board of Trustees of the Federal Savings

and Loan Insurance Corporation with other agencies into a consolidated agency designated as National Housing Agency, and transferred the Board's powers, functions, and duties to the Federal Home Loan Bank Administration and the Federal Savings and Loan Association to the National Housing Agency in a Commissioner acting under the direction and supervision of the National Housing Administrator. The savings and loan industry in California, and I believe throughout the Nation, has been working for the restoration and control of the Federal Home Loan Bank System by a board constituted, as originally provided for in the Federal Home Loan Bank Act.

This desire is natural and understandable in light of the fact that as originally established each district Federal home-loan bank was an independent autonomous and self-governing corporate entity subject only to the general supervision of the Federal Home Loan Bank Board. Each local district bank was managed by a directorate representative of the saving and loan industry in each district. True, in the beginning a substantial part of the capital of each of the several Federal home-loan banks was provided by the Federal Government. It was nevertheless contemplated and it is now a fact that the investment of the Federal Government in the capital of each district Federal home-loan bank did diminish from year to year and that ultimately all of the capital of the several Federal home-loan banks would be provided by the constituent members thereof and thus assured each bank keeping autonomous except for such supervision as might be necessary in the public interest. While the proposal now under consideration purports to provide for a Board to administer the Federal Home Loan Bank System it is the opinion of the California Savings and Loan League that the proposed Board does not restore to the savings and loan industry an independent Federal Home Loan Bank System managed and controlled by an independent Board of Directors having the power and duties originally conferred upon the directors of banks of the Federal Home Loan Bank System or an independent Federal Home Loan Bank Board with powers and duties as defined by section 17 of the Federal Home Loan Bank Act.

It is to be noted that under the Federal Home Loan Bank Act the following provisions were made with reference to the government of the Federal Home Loan Bank, to wit:

"FEDERAL HOME LOAN BANK BOARD

"SEC. 17. For the purposes of this act there shall be a board, to be known as the 'Federal Home Loan Bank Board,' which shall consist of five citizens of the United States appointed by the President of the United States, by and with the advice and consent of the Senate. Not more than three members of the Board shall be members of the same political party. Each member shall devote his entire time to the business of the Board. Before entering upon his duties each of the members shall take an oath faithfully to discharge the duties of his office. The President of the United States shall designate one of the mmebers of the Board to serve for a term of 2 years, one for 3 years, one for 4 years, one for 5 years, and one for 6 years from the date of the enactment hereof, and thereafter the term of each member shall be 6 years from the date of the expiration of the term for which his predecessor was appointed. Whenever a vacancy shall occur among the members the persons appointed to fill such vacancy shall hold office for the unexpired portion of the term of the member whose place he is selected to fill. Each of the members of the Board shall receive a salary at the rate of $10,000 per annum: *Provided*, That during the fiscal year 1933 the salary shall be $9,000 per annum. The President shall designate one of the members as Chairman of the Board. The Chairman shall be the chief executive officer of the Board and in his absence or disability the duties of his office shall be performed by some one of the other members to be designated as Acting Chairman by the Chairman in such order as he may determine. The Board shall supervise the Federal home loan banks created by this act, shall perform the other duties specifically prescribed by this act, and shall have power to adopt, amend, and require the observance of such rules, regulations, and orders as shall be necessary from time to time for carrying out the purposes of the provisions of this act. The Board shall have power to suspend or remove any director, officer, employee, or agent of any Federal home loan bank, the cause of such suspension or removal to be communicated in writing forthwith to such director, officer, employee, or agent and to such Federal home loan bank."

It is to be noted that under the original provisions of the Federal Home Loan Bank Act the Chairman of the Board had no powers which were greater than those given to any member of the Board, and that all action with reference to the operation, supervision, and functioning of the Federal Home Loan Bank System was the result of action by the Federal Home Loan Bank Board. But all of that was changed by Executive Order No. 9070, for by that order the offices of all members of the Federal Home Loan Bank Board, other than the Chairman, were vacated for the duration of title I of the First War Powers Act and the Chairman of the Board was invested with the authority, powers, and functions which had theretofore reposed in the 5-man bipartisan Board. The Chaiman was then designated as a Commissioner and headed up what came to be known as the Federal Home Loan Bank Administration. (See secs. 3 and 8 of Executive Order No. 9070.) The Federal Home Loan Bank Administration itself was one of the three main constituent units of the National Housing Agency which the Executive order referred to created.

The Federal Home Loan Bank Board proposed is nothing more than a phantom board in which all real authority of significance is vested in the single individual designated as Chairman. This, for all practical purposes, permanently imposes upon the Federal Home Loan Bank System and its constituent agencies the very limitations which were originally said to have been justified only by the exigencies of the war. That conclusion is apparent in the following provisions quoted from the reorganization plan.

Section 2 of said reorganization plan, subsection A, provides as follows:

"The Home Loan Bank Board shall consist of three members, appointed by the President, by and with the advice and consent of the Senate."

Subsection B of said section 2 provides: "The President shall designate one of the members of the Home Loan Bank Board as Chairman of the Board. The Chairman shall (1) be the chief executive officer of the Board, (2) appoint and direct the personnel necessary for the performance of the functions of the Board or of the Chairman or of any agency under the Board, and (3) designate the order in which the other members of the Board shall, during the absence or disability of the Chairman be Acting Chairman, and perform the duties of the Chairman."

Subsection C of said section 2 provides: "Except as otherwise provided in subsection B of this section, there are transferred to the Home Loan Bank Board the functions (1) of the Federal Home Loan Bank Board, (2) of the Board of Directors of the Home Owners' Loan Corporation, (3) of the Board of Trustees of the Federal Savings and Loan Insurance Corporation, (4) of any member or members of any of said Boards, and (5) with respect to the dissolution of the United States Housing Corporation."

From the foregoing quotations from Reorganization Plan No. 3 of 1947, it is clear that for all practical purposes, and to a large extent as a matter of law, if this be law, the absolute control and administration of the Federal Home Loan Bank System and the agencies under it would be vested in the Chairman of the Board. This is totalitarian power. No such power was vested in the Chairman of the Federal Home Loan Bank Board as originally constituted by the Congress. Although it may be argued that as a matter of practice the Chairman of the Federal Home Loan Bank Board as originally constituted exercised the proposed powers granted to him under the reorganization plan, such power if exercised by the Chairman of the Federal Home Loan Bank Board was exercised either by and through the sufferance of his fellow members of the Board, or as the result of expressed Board authorization. Under the proposal now before the committee, the exercise of the functions proposed to be granted to the Chairman and which may have heretofore been exercised by him under the circumstances just mentioned, are powers vested in him by law thus placing the Chairman of the proposed Board of the Federal Home Loan Bank System in a position superior to that of his fellow members, thereby making it possible for the Chairman in the exercise of the administrative power so granted to negative any policy established by the Board. In other words, the proposed Board does not have the power to enforce its policies.

Under the provisions of section 17 of the Federal Home Loan Bank Act, the Board of the Federal Home Loan Bank was given certain powers with reference to "suspending or removing any director, officer, employee, or agent of any Federal home-loan bank, the cause of such suspension or removal to be communicated in writing forthwith to such director, officer, employee, or agent, and to such Federal home-loan bank."

The powers proposed to be given to the Chairman of the proposed Board of the Federal Home Loan Bank under Reorganization Plan No. 3 with reference to the personnel of any Federal home-loan bank are vested exclusively in the Chairman of the Board without any requirement whatsoever that the chairman give notice as to the cause of such suspension or removal. Moreover, the powers proposed to be given to the Chairman of the Board go beyond the Federal home-loan banks for, as heretofore noted, subsection B of section 2 of Reorganization Plan No. 3 of 1947 grants to the Chairman of the Home Loan Bank Board the power to appoint and direct the personnel necessary for the performance of functions "of any agency under the Board." This language, in our opinion, is sufficiently broad to give to the Chairman of the proposed Federal Home Loan Bank Board the power to remove without cause any director, officer, agent, or administrative personnel, of any Federal savings and loan association for such associations are, in my opinion, agencies under the Federal Home Loan Bank Board, and are a necessary and important constituent element of the Federal Home Loan Bank System.

The attention of this committee is respectfully invited to the fact that the Federal Home Loan Bank System was one which the Congress created and surrounded with certain safeguards to the end that the banks which comprised the System should have a great deal of autonomy. The management of all the banks of the Federal Home Loan Bank System under the law is vested in a Board of 12 directors, 8 of whom are chosen by stockholders, and 4 of whom are appointed by the Federal Home Loan Bank Board under section 2-B (2) of the reorganization plan before the committee. It is proposed that the Chairman and not the Federal Home Loan Bank Board shall appoint such directors.

This provision of the plan is flatly in contravention of the original act of Congress and would permanently strip the Federal Home Loan Bank Board of its real authority. In effect, the proposal establishes a phantom board of a potential autocrat with unlimited authority.

It appears to us that the proposal now before this committee is in direct conflict with the Reorganization Act of 1945. The Reorganization Act of 1945 provides, in part, as follows:

"Section 5 (A). No reorganization plan shall provide for, and no reorganization under this act shall have the effect of—

"* * * (5) authorize any agency to exercise any function which is not expressly authorized by law at the time the plan is transmitted to the Congress; or (6) impose in connection with the exercise of any quasi-judicial or quasi-legislative functions possessed by an independent agency any greater limits upon the exercise of independent judgment and discretion to the full extent authorized by law, in the carrying out of such function than existed with respect to the exercise of such function by the agency in which it was vested prior to the taking effect of such reorganization; except that the prohibition shall not prevent the abolition of any such functions."

Under the proposed reorganization, there is vested in the Chairman of the proposed Federal Home Loan Bank Board the exercise of functions which are not vested in him by express authorization of law and the functions possessed by the independent Federal Home Loan Bank Board, whose powers are now in a state of suspension by virtue of Executive Order No. 9070, are materially and substantially curtailed; moreover, that limitations are imposed upon the exercise of independent judgment and discretion in the carrying out of authorized functions imposed by the Federal Home Loan Bank Act upon the Federal Home Loan Bank Board. In other words, the Executive has invaded the legislative prerogatives of the Congress by nullifying the policies of the Congress as expressed in the Federal Home Loan Bank Act by attempting to vest substantial and arbitrary power in the Chairman of the Board as distinct from the Board itself instead of leaving the Board to freely exercise the independent judgment and discretion with which it was originally vested. Incidentally, the Congress has no way of preventing the exercise of this legislative power by the Executive except by disapproving the plan and concurring in the adoption of House Concurrent Resolution No. 51.

It is to be noted that in the hearings before the Committee on Expenditures in the Executive Departments, House of Representatives of this Congress, on whose Concurrent Resolution No. 51, Mr. Frederick J. Lawton, Acting Assistant Director of the Bureau of the Budget, appeared as a proponent of the proposed reorganization. A study of his testimony convinces one that the only substantial benefit which Mr. Lawton can find in the proposed reorganization plan was the possibility that the public and private housing interests, as represented by and in the proposed three constituent agencies of the Housing and Home Finance Agency was the possibility of the development of plans for low-cost material, the use of housing, the testing programs, and things of that sort, and yet Mr. Lawton did not direct attention to any element in Reorganization Plan No. 3 of 1947 which makes such a study possible, or if made, superior to the studies which have been and are now being made by established agencies of the Federal Government. It should also be noted that Mr. Lawton acknowledged that the adoption of Reorganization Plan No. 3 of 1947 would create an additional superagency, (see p. 12 of the hearings before the Committee on Expenditures in Executive Departments) and at the same time an examination of Mr. Lawton's testimony discloses that he was not at all sure that the consolidation of housing functions pursuant to the proposed Reorganization Plan No. 3 of 1947 would in any wise reduce the aggregate number of the personnel of the Federal Government charged with the responsibility for housing, or the over-all cost of administering any housing policy established by the Congress. There is nothing in the Reorganization Act of 1945 that authorizes the creation of a new agency, rather Congress specifically intended by enacting it to authorize the Congress to reduce the number of agencies rather than create superagencies, and to effect economies averaging 25 percent of the budget for the year 1945.

I listened with interest to the presentation which Mr. Foley made to this committee yesterday and I cannot refrain from expressing concern with the philosophy of government which is implicit in the thesis he presented. His premise tended strongly toward a state of affairs which would encourage and foster dependence by the people upon the Federal Government for the solution of our housing problems, whereas in fact the real answer to the problem lies with the people themselves at the local community and not the national level. Mr. Foley recognized that the housing problem has not been solved, chiefly because of production costs, nor did he demonstrate during the course of his remarks that the adoption of Reorganization Plan No. 3 would in any wise result in a lowering of production costs or the establishment of more efficient means of housing construction. Mr. Foley stated he believed this could be accomplished through new methods, techniques, and materials, greater efficiency and reduction of waste but there is nothing whatever in Reorganization Plan No. 3 which refers to new methods, techniques, and materials for the building of housing.

His statement, "I am convinced that these costs can and must be definitely reduced as measured in relation to the ability of middle and low income family groups to pay for housing," clearly implies a conviction on his part that such ends can only be attained by a planned economy.

Mr. Foley, in common with other proponents of the reorganization plan who are directly identified with the National Housing Administration, fails to recognize the distinction between powers exercised by the Chairman of the proposed Board as a matter of law on the one hand, and by sufferance or direct authority of the Board, on the other hand. Mr. Foley states, "While section 2-B of the plan provides that the Chairman of the Board shall 'appoint and direct the personnel necessary for the performance of the functions of the Board' this is entirely consistent with his functions (under the plan as under the Home Loan Bank Act) as chief executive officer of the Board." In making this statement Mr. Foley was less than candid with the committee for, as heretofore pointed out, section 17 of the Home Loan Bank Act does not give the Chairman of the Board any powers different from or greater than these imposed upon any other member of the Board.

In conclusion it may be said that the proposed Reorganization Plan No. 3 of 1947 is not substantially differennt from the proposals of Reorganization Plan No. 1 of 1946 and that the proposed Reorganization Plan No. 3 of 1947 is inconsistent with the action taken by the Seventy-ninth Congress which determined in effect:

"(1) Congress and the Federal Government should encourage private home ownership and discourage Government ownership because private home ownership is the foundation of our democracy (2) private home ownership is strongly favored and will not be encouraged or protected by an agency whose policy favors Federal building and Federal control of homes; therefore (3) while there should be a permanent consolidation and grouping of all related housing agencies and the functions thereof, such agencies as the Federal Home Loan Bank Board and the Federal Housing Administration which respectively make mortgage loans to, and insure mortgage loans for private builders and private home owners, should not be placed under administrative control of an agency whose primary function is to build houses with Federal funds or manage Federally owned housing projects."

Moreover, agencies now allied with and in effect governed by Federal Home Loan Bank Board should not be placed under administrative control of an agency which might be tempted to place administrative emphasis upon public housing and the expenditure of Federal funds therefor.

It seems extremely likely that if the Congress does not disapprove proposed Reorganization Plan No. 3 of 1947 that the validity of said plan will be questioned in the courts, in which event the proper functioning of the said Home Loan Bank System as a credit reservoir for savings and loan institutions would be seriously impaired for so long as the matter of the validity of the plan was being contested it would be impossible for the Federal Home Loan Bank System to offer for sale the debentures authorized by the Federal Home Loan Bank Act for the purpose of making available adequate financing for private home owners. It appears to me that Congress should be most concerned with the increasing tendency of Government to concentrate its administrative functions in the hands of individuals free from legislative restraint and control with powers capable of being exercised in an arbitrary and autocratic fashion.

The Federal Home Loan Bank System as originally conceived was designed to encourage thrift and savings for the primary purpose of enabling the average American to own his own home, to plant his feet more firmly in the soil of American tradition, and to make of him a sounder and more substantial citizen taking pride in his resourcefulness and ability to live in the American way without the assistance of Government crutches, and to attain a stature either exceeding in dignity that which he could ever enjoy as the supplicant for housing accomodations at some publicly managed facility.

We hope this committee will take such action as, in its judgment, may be calculated to permit the Federal Home Loan Bank System to again serve the Nation as it has in the past. That end will necessarily require disapproval of the plan of reorganization before the committee and the restoration of the Federal Home Loan Bank System to the status established by the Federal Home Loan Bank Act.

Chickens Coming Home To Roost in India

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. CELLER. Mr. Speaker, chickens are coming home to roost. Mohammed Ali Jinnah, president of the Moslem League, by his dogged insistence and misdirected enthusiasm has secured Pakistan. He now issues a manifesto insisting upon the right of the Indian princes to declare themselves independent sovereign nations. One can imagine the confusion worse confounded with Pakis-

tan, Hindustan, and over 580 small and large princely sovereignties. One would have to have a hundred different visas to travel across India.

Nehru stated that the recognition of the independence of any princely state by an foreign power would be regarded as an unfriendly act by the Congress Party.

This conflicting approach to the question of the independence of the princely states points to a bitter break between Hindustan and Pakistan. Jinnah, doubtlessly, is determined to have as many of the princely states as possible join Pakistan in opposition to Hindustan. Hyderabad and Travancore, two of the largest princely states, have already declared their independence and have demanded that they become the inheritors of Great Britain's paramountcy.

India by culture, tradition, language, geography should be a single nation. The very idea of Pakistan and now the refinement of Pakistan into hundreds of princely states shows how wrong it was from the very beginning. As I said before, Pakistan is an engraved invitation to His Majesty's government to remain in India. India should remain one nation. Its salvation and its progress depend upon the unity of India. Pakistan is a menacing and overshadowing cloud.

It is hoped that unity of India will be obtained by peaceful ways and that eventually Jinnah will be won over to the principle of unity, wiping out forever the cross purposes that have wracked India.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Corvallis (Oreg.) Gazette-Times of June 11, 1947, written by one of the best known and outstanding editors in our Pacific Northwest, Mr. Claude E. Ingalls, of Corvallis, Oreg.:

UNIVERSAL MILITARY TRAINING

With the report of President Truman's special commission for the investigation and study of universal military training, comes the first ray of hope for those right thinking citizens who know the necessity of military preparedness. If our lawmakers will now seriously consider the commission's recommendations, which for the most part seem very sound, we may feel that it is no longer a dirty trick to bring new children into the world. If, on the other hand they insist on listening to crackpots, commies, and fellow travelers, and putting their political careers before the welfare of their country, we may as well cash in our chips and wait for the chain gang.

The old adage of Hegel's "We learn from history that we learn nothing from history" has never been more pathetically demonstrated than in a case history of the United States Army versus the United States Congress.

Because we failed to supply George Washington with an adequate regular army and sufficient funds and supplies, we fumbled around in our war for independence and won it only by default when the British were required to withdraw their troops to face the Napoleonic menace. Washington later wrote, "Had we formed a permanent army in the beginning—we should not have been the greatest part of the war inferior to the enemy, indebted for our safety to their inactivity, enduring frequently the mortification of seeing opportunities to ruin them pass unimproved for want of a force, which the country was completely able to afford—."

Regardless of the pleading of our first soldier and President, a short time after the conclusion of the war, our Regular Army consisted of exactly 80 men. Even after our Constitution was adopted we could boast of only 590 men. For the next decade the Indians killed thousands of settlers and militia troops along our frontier and it wasn't until Anthony Wayne raised and trained an army for over a year before leading them into battle that this scourge was eliminated.

One of the most shameful stories in American history is the War of 1812. The Navy, well trained, officered, and manned, fought bravely and creditably; our untrained army was poorly led and was a dismal and disgraceful failure. The figures show that we called out over a half-million men and could not drive a maximum of not more than 16,000 from our shores in over 2 years. We spent nearly $200,000,000 when 2 percent of that sum, with a small, well-trained force would have been sufficient. The greatest tragedy was the loss of 6,000 lives, when that figure need not have been over 200. That the war was again successfully concluded in our favor was the responsibility of Napoleon who had so wearied the British in Europe. We did learn one great lesson from this war. We kept our army up to strength for 3 months before reducing it to 10,000 men; 5 years later we pruned it down to 6,000.

By 1834 we again received our reward for false economy and shortsightedness when we found we had only 4,000 men trying to guard a 10,000-mile frontier and seacoast. Indians were killing off settlers and militia faster than men could be sent against them. Finally Congress authorized a 10,000-man Army and the Indians were put down.

In 1842 the Army was down to 8,613 men. At this time Cengress thundered at no prospect of war and the waste of money and just 4 years later we were embroiled in war with Mexico. Gen. Zachary Taylor had less than 3,000 troops against a possible 50,000 Mexicans, yet he was supposed to advance his force into Mexico as well as defend our own borders. We had to hold up the war until we trained an adequate Army to bring the Mexicans to terms.

Even after this lesson the Americans refused to learn. At the conclusion of the war the Army was reduced to a size similar to its strength at the end of the War of 1812. In the meantime we had gained close to a million square miles of territory and increased our population by 12,000,000. This paltry Army was supposed to protect our frontiers against hundreds of thousands of warring Indians. Thousands more settlers lost their lives, but it was too expensive to provide an adequate Army.

This condition existed up to the time of the War Between the States. Experts, foreign and domestic agree that if we had had a finely trained force in the East in 1860, of not more than 25,000, the war could not have lasted over 3 months with the maximum of a thousand casualties. As it was the North threw away 360,000 lives and the Confederate losses would bring the toll to a half-million. Today, we still have people preaching against preparedness.

One morning in 1898 our people woke up to find the battleship *Maine* had gone down and we were at war with Spain. When we looked around for our Army we found that it was 25,000 strong—the size it had been 22 years before—and scattered in small posts on the border and Alaska. There were no plans for expansion, no staffs, no maps, and equipment, food, and guns were lacking. We still had our Revolutionary War precept, "an able-bodied man is a soldier." The Navy finally won that war for us, while the Army vainly struggled to train a reasonable army. The gallant sacrifices of a few of the 200,000 men called out were not in vain, but 13 times as many men died in camp as were killed by the enemy. We did not even have the facilities to train the men in camp.

A short time after the Spanish-American War we cut our Army down to 25,000 men and then sat around watching Europeans slaughter each other and Germans sink our ships. Had it not been for Pancho Villa's depredations against our border we would have been even less prepared for World War I than we were. When we finally got into the war we found we needed immediately 200,000 trained offieers to train the new officers and men. We had 10,000. In equipment we were worse off—a few obsolete airplanes, artillery ammunition for 2 days' battle, no automatic rifles, and comparatively few machine guns and rifles. The most horrible part of the whole thing is that we never would have had to go to war at all had we been ready and able to fight—no one would have provoked us into the bloody mess.

At the end of the First World War Americans permitted their Congress and actually encouraged it to forget national defense in deference to their pocketbooks. They still believed that an adequate Regular Army was an invitation to war. In the past when armies were the playthings of kings perhaps this belief was true; today, no. No idea could be more distressingly pitiful. The tragedy of the last war is still too much with us to forget that had we been prepared, no Jap plane would ever have flown over Pearl Harbor and there would have been no death march from Bataan.

We heartily commend the report of the Presidential committee, and urge that Congress adopt the policies outlined therein.

Address of Hon. James P. McGranery

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a powerful and timely radio speech delivered by the Honorable James P. McGranery, judge of the United States District Court, Eastern District of Pennsylvania, at the second annual corporate communion breakfast of the Pennsylvania Railroad Holy Name Society on Father's Day, June 15, 1947, at Broadwood Hotel, Philadelphia, Pa.

As most of my colleagues know Judge McGranery served with ability, distinction, and courage for a number of years in this body, and was a member of the Ways and Means Committee.

The speech follows:

Mr. Chairman, Your Excellencies, Right Reverend Monsignori, Reverend Fathers, distinguished guests and members of the Pennsylvania Railroad Holy Name Society, "Justice and chairty must meet again, and good will be the cement between men and between nations."

These words echo through the years and reecho on this day set aside to honor fatherhood—in this assembly of men solemnly dedicated to daily honoring of the holy name of our Divine Father.

You are the working partners of the Pennsylvania Railroad system, one of the greatest railroad systems in the world. It is the artery through which flows the life-giving blood of the East to all parts of our vast country. It is the builder and developer of our community living and of our community relations.

Always the greatest contribution to the growth and development of your railroad—and to America—has been made by men like you—whose loyalty is a trinity of devotion; to home, to country, to God.

Your beloved president, Mr. Clement, is one of America's great leaders. He commands the respect and regard of the Nation, but we who have had the happy privilege of knowing him more intimately, give to him also our affection.

History of men is the history of communications, and the forward march of civilization has followed the lines of communications. Therefore, at a glance one can see the vital part that you—and I mean each of you—play in America's future. No wonder I am indeed proud and happy and grateful to be here at these exercises, to take part in your public manifestation of divine faith.

For the brotherhood of man is but an empty phrase if it does not bring the further thought of the fatherhood of God.

America was founded on a religious idea and this idea was proudly proclaimed by its founders, who declared that men were created free and equal, that they were endowed with reason and that they were morally responsible.

These early Americans thus expressed their faith and revealed their hope—their vision of the distant day when all men would walk the earth in freedom and equality.

Washington, Jefferson, and their contemporaries made a pact with destiny, as they foresaw America's role as the role of the peacemaker. She was to be the exemplar of democracy, and to be militant only in its defense.

To others could be left the short-lived triumph of transient conquest and of passing empire. The final end of a Napoleon, they knew, would always be as ignominious as the last collapse of a Hitler.

In those early years our statesmen had a sense of history, as our national life has since revealed. Lincoln solemnly phrased this when he said:

"Fellow citizens, we cannot escape history; the fiery trial through which we pass will light us down in honor or dishonor to the latest generation. We shall nobly save or meanly lose the last best hope of earth." He forever emphasized his certainty that nations, like men, shall be judged by the moral consequences of their actions.

Ever since the beginning of our country, we have passed through national crises and world crises without forsaking these ideals.

World War II began, for us, with a sneak attack upon our Territorial integrity. It found us better prepared spiritually than materially. It aroused our ire and our fervor as it challenged the philosophy which is the wellspring of our national life.

It was at once a Global War, and a universal struggle striking at truths, fundamental to human existence.

Our Republic proved its military strength, as it may again, with the infinite sacrifice of millions of our heroic youth.

Pearl Harbor immediately enflamed the spark of patriotic fervor in the breast of every American, but we know well that months and years of intense, coordinated effort were required to build the military planes and ships and armaments; yes, even the manpower organization demanded for total war. We shall never know the price exacted during those months and years in needless loss of the lives of America's young manhood.

Needless, I say, because we had the lessons of our own history to dictate the necessity for military preparedness.

Yet the record discloses all too clearly that we failed to heed the lessons of World War I. Yet, we had been told then, as now, that if we are to know the future we must study the past.

Instead, following the First World War, there was held a series of disarmament conferences.

The great nations of the world participated in these and entered into solemn agreements to disarm. What happened?

We of America, in good faith, cut our appropriations for the Army and the Navy; and we actually scrapped our naval ships.

Some of the other great powers took their agreements home, tucked them away in their archives, and quietly—secretly—continued their armament-building programs.

Conduct such as this should, by now, have taught the American people a costly lesson in history.

I earnestly pray that the Congress of the United States will not be blinded by short-sighted economy and require us to take the lead again in disarming.

If our Nation is to hold fast to its moral position in a havoc-stricken, war-torn world, we cannot strip our defenses. Soviet Russia dictates that we share the secret of the atom bomb while she draws tighter her iron curtain in ominous secrecy.

The bold gangster methods which the world witnessed in the rape of Hungary and in the continuing Balkan annexations are part of the same world-disruptive plan under which she insidiously continues to promote strife, confusion, and discord within the borders of our own country.

Communism conquers only where there is already chaos. Russia uses treachery and deceit to accomplish her goal of tyranny and oppression. It has been too clear that those who have been betrayed into communism were deceived because communism uses the language of liberty and follows with the methods of totalitarianism.

These unwilling captives have awakened abruptly to discover the loss of every freedom—even and especially the freedom to find their way to God. Their children have been kidnapped early by the collective state and doomed to a perpetual delinquency of spirit from which there is no escape.

The political slavery of atheistic communism has already overtaken too many of our brothers across the sea.

A world half-slave and half-free can never come to know the tranquillity of order which is the only peace and guarantee of continued peace.

Oppression, despair, and ruin inevitably result from a defiance of the moral law—from loss of the grace of God among men.

Our own country through the years has freed groups of our fellow Americans from racial and economic bondage.

We have fought to carry out the words of the founding fathers to their fullness. We have battled for a family wage under conditions befitting the dignity of human nature. We have loosed the shackles of the economically enslaved and at the same time protected the property rights of capital to a fair share of the profits.

We have tried—and we must continue to try—to strengthen the family spiritually as well as economically.

For the true strength of a country is in its citizens. We must defeat the Communist objective which is to destroy our form of government through their European-rehearsed method, and to erode public confidence in the workings of democracy.

Our Government continues to be a practical medium for expressing the popular will.

No one who cannot speak the common thought, who does not move by the common impulse is the man to speak for America, or for any of her set purposes.

Only he is fit to speak who knows the thoughts of the great body of citizens.

Repeatedly we have been singularly blessed in having such a man at our helm in time of critical need. Today when there is a cleavage of ideas abroad, and the menace of the atheistic collective state reaching westward with the greedy hands of empire-hungry men, we have a truly American President who, within this week, has expressed the American ideal and the American mind, when he said:

"At this crucial point in history, we of the United States are deeply conscious of our responsibilities to the world.

* * * * *

"We seek a peaceful world, a prosperous world, a free world, a world of good neighbors—living on terms of equality and mutual respect.

* * * * *

"We intend to uphold those who respect the dignity of the individual, who guarantee him equal treatment under law, and who allow him the widest possible liberty to work out his own destiny and achieve success to the limit of his capacity."

His words might have been uttered by Washington or Lincoln. They are of our time and of all time for they are based on the eternal conscience of mankind.

President Truman voiced the charity and good will which form the cement of men or of nations when he further declared:

"We know that in this trying period, between a war that is over and a peace that is not yet secure, the destitute and the oppressed of the earth look chiefly to us for sustenance and support until they can face life with self-confidence and self-reliance."

And I say to you today that the reality of the world situation and the principles of justice alike demand that America share a portion of her harvest with those still freedom-loving men who were victims of World War II.

It is dangerous to be the only well-fed people in the world.

It is dangerous not only because America could soon find the world regimented against her, and herself the shining target to be annihilated.

It is doubly dangerous because it would mean the surrender of her long-cherished principles of justice, charity, and good will, and it would mark the crumbling decay of our national fiber.

If America isolates herself completely from the oppressed abroad, she will betray her historic role, she will betray herself, and betray her God.

In sharing her bread with freedom-loving men who are standing uncertain at the brink of starvation, America will revive in them the very breath of spiritual liberty.

For it is not enough to restore these war-shattered people physically. To do just this alone would merely set the stage for a more devastating and perhaps conclusive global conflict.

Human values are the clue to human solidarity. And the peace, to be a lasting peace, should be founded on the nature of man. Blueprints of the future must be traced with lines of justice and charity. Then only will come peace to men of good will.

America shall strengthen herself at home in the democratic way by standing guard with the Bill of Rights, true sentinel of liberty. Her people's prosperity, natural fruit of economic justice, will protect her institutions from the termites of Communist Russia.

America, dynamic in her democracy, can then and only then, continue to be a vision of hope to oppressed people everywhere. She will have the true answer to people who want security joined with freedom.

The twentieth century is America's century if we make it the century when justice and charity meet again and good will is the cement between men and between nations.

Republican Paper Admits Republican Errors Brought About Veto of Republican "Soak the Poor" Tax Bill

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. SABATH. Mr. Speaker, here is an editorial from one of the outstanding Republican newspapers of the country, the Washington Daily News, owned by Republican Roy Howard's vast news empire, admitting that Republican errors brought about the courageous veto by the President of the Republican soak-the-poor tax bill.

I am inserting here just a few paragraphs from this remarkably frank editorial:

GOP CHOICE: CUT TAXES FOR NEXT YEAR, OR PLAY POLITICS

To voters who read on the run and haven't followed the nuances of what has happened, it looks as though the Republicans are on the side of the taxpayer, and the Democrats against.

But the full truth may spread. It will show that the Republicans, by their blunders and politics-playing strategy, are largely responsible for this impasse. They made their first big mistake by failing to do their duty under the reorganization law, which required Congress, within 3 weeks after it convened, to fix an over-all ceiling on Government spending for the next fiscal year. The Republicans haven't yet fixed that ceiling, and they control both Houses of Congress. They are still flouting the law, still shirking their responsibility.

Their second mistake was in trying to make the tax cut retroactive to January 1 last. Their third was in delaying action 5 months and grudgingly compromising—too late—on the July 1 date. All the time there were plenty of Democrats who would have gone along, had the GOP been wiling to make the tax cut effective at the start of the next calendar year. The Republicans chose instead to try to embarrass the President. To those who know the score, it would appear the Republicans themselves cannot be unembarrassed by what has happened.

But, Mr. Speaker, this editorial does not tell the basic and underlying error made by the Republicans.

That error was that they sent to the President a tax bill which favored the few over the many.

It soaked the poor and pampered the rich.

It takes real courage to veto a bill reducing taxes; but the President knew that he was right and he knew that the people would back him up.

The Republican tax bill relieved those best able to pay of tremendous burdens, while it gave very little relief to the little man struggling with Republican high prices and faced now with Republican high rents.

With one hand they granted the $2,500 a year family tax relief amounting to not more than $50 a year, and with the other hand they passed a so-called rent-control bill which will add from $100 to $200 to the same little man's rent bill this coming year.

The Republican tax bill made no provision for retiring our staggering public debt at a time when the country is at its highest prosperity of all time and can best afford to pay on the national debt.

Rent Legislation

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a press release which I prepared on the rent-control bill, on which we so recently voted.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The legislation just reported by the conference committee should be disapproved by the two Houses, and in any event merits a Presidential veto.

Congress and the country should be under no illusions about the proposition. For all practical purposes, this measure kills the veterans' housing program. For all practical purposes, it ends effective rent control for 16,000,000 families in the United States who have relied on its protection.

In the face of the most desperate housing shortage in American history, especially for veterans and their families, this bill wipes out the few remaining controls that were deemed necessary by the Housing Expediter for the limited period of the 1947 construction season. It opens the floodgates of construction for commercial purposes, for which $2,000,000,000 in permits are pending at the present time. It makes possible construction of luxury apartments and mansions instead of homes of modest size within the veterans' means to buy or rent. It strikes down the guaranteed market program to stimulate prefabricated housing and new-type materials, thus destroying a growing nucleus of mass production that would turn out housing in volume for the volume needs of the American people. It eliminates further expenditure for access roads to enable small lumbermen, as well as the giant interests, to bring desperately needed timber out of the Government-owned lands.

This Congress has given no better illustration of selfish interests running riot than in the callous provisions of this measure.

The rent control provisions are equally farcical. The bill practically assures landlords a 15-percent increase across the board, notwithstanding the liberalized procedure for adjustments and the thousands on thousands of adjustments for individual hardships made in recent months. The local board idea is sound on an advisory basis, but this measure really creates local boards nominated by the Governors of the States, as an added administrative layer, thus confusing the picture and slowing up the procedure of administration, adjustment of individual hardship and decontrol where the facts justify such action. The bill in effect repeals Federal control over evictions. It repeals rent control over so-called residential hotels and new construction, thus creating two types of housing, controlled and uncontrolled, with certainty of discrimination against the veterans who would move into uncontrolled accommodations and against the owners of controlled accommodations. It would end rent control next winter with the certainty of widespread hardship evictions or cruel increases of rent.

I submit that Congress and the President should not take lying down the repeal of the Veterans' Housing Program, with its promise of hundreds of thousands of homes this year if controls are continued, in order to continue for a few months more an empty shell mislabeled rent control. By vetoing the measure, the President would insure that the controls under the Patman Act would remain effective until their expiration date December 31, 1947.

Congress has set another trap for the President similar to that of a year ago when it sent to the White House a deceptive and confusing bill purporting to extend price control. That OPA bill was a time bomb which did not explode until the Congressmen who planted it had adjourned and taken cover outside of Washington. By vetoing the measure, the President will place responsibility for destroying rent control where it belongs, squarely on the Republican Congress.

It will then be up to the public to compel the Congress to create real and effective rent control.

The bill reported by the conference committee is called the Rent Control Act of 1947. A better name would be the rent decontrol and dehousing bill of 1947.

Information and Educational Exchange Act

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and also an editorial from the Washington Post of June 18, 1947:

UNIVERSITY OF CALIFORNIA,
DEPARTMENT OF HISTORY,
Los Angeles, Calif., June 14, 1947.

The Honorable DONALD L. JACKSON,
House of Representatives,
Washington, D. C.

DEAR MR. JACKSON: I am writing to urge you to support in every way possible H. R. 3342, the United States Information and Educational Exchange Act of 1947. During 1945–46 I was head of the United States Information Service in Copenhagen. I know that our work in making available to the Danish public an accurate and a fair picture of American life and policy was highly successful and much appreciated by the Danish press and public.

Our USIS supplemented the routine work of the legation, with which we always worked as a team. Our press service, library, films documentary and educational, musical recordings, advisory service to students and mature scholars planning to visit the United States, went out to a public that no private news or other agency was equipped to handle. Secretary Marshall and his Department will be able to work more efficiently if the Voice of America is heard in the world,

and if the present Information and Educational agency is properly supported and maintained. It will enable us to implement our leadership in world affairs.

Yours very sincerely,

WALDEMAR WESTERGAARD.

[From the Washington Post of June 18, 1947]

SOTTO VOCE

The fate that seems to be in store for the State Department foreign information program is nothing short of disastrous. By a series of pettifogging delays the unrepentant isolationists in the House have prevented the Mundt bill from reaching the floor. This is the bill that would continue after July 1 the short-wave broadcasts, the American libraries abroad and the other informational and educational services which seek to present a true picture of this country. The strategy of the House die hards is to kill the program entirely by talking it to death. The disturbing part is that now the Senate Republican leadership, which should know better, apparently has thrown in the towel. Influential GOP Senators are reported to have consented to a compromise which would narrow the information activities to a constricted broadcasting program with an appropriation of only $6,000,000 instead of the $31,000,000 originally asked.

Important as are the overseas broadcasts in themselves, their consideration should not exclude other significant aspects of the foreign information program. If the present congressional tack continues, for example, it will force the closing of our libraries abroad. In many capitals these libraries constitute virtually the only source of accurate factual information about the United States. The libraries are fountains of Americana. They contain reference books, periodicals, copies of official publications. They are becoming increasingly popular. Another essential which congressional parsimony would eliminate is the distribution of the texts of important American speeches and policy statements—texts which otherwise would not be available in many areas of the world. These activities in making the truth known about America add up to a composite package of the most effective advertising we could have.

The issue now becomes a matter of principle. Either we present the facts, along the line established by the Mundt bill, or we leave it to the Kremlin to explain our motives. No American who knows the diet of falsehood dished out by Pravda can want that. But we may rest assured that if we do not continue to tell our story, no one else will do it for us.

The Tax Veto

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 17, 1947

Mr. KNUTSON. Mr. Speaker, President Truman's veto of the tax-reduction bill—H. R. 1—has aroused a storm of indignant protests from coast to coast. These protests come from editorial writers, commentators, businessmen, and just plain folks. One woman in upstate New York wrote me that a $30 reduction in her tax may appear as chicken feed to Mr. Truman, but it would have meant two tons of coal to her. All agree that the President was playing cheap politics, as witness the following editorial from the St. Paul Pioneer Press for June 17:

TRUMAN'S VETO

President Truman vetoed the tax reduction because he was thinking more about the votes to be cast next year for President than he was about the votes that were cast last November for Congress. The veto is a direct repudiation of the result of the fall election, which was fought on a Republican promise to reduce taxes. It is also a repudiation of Truman's own pledge at the time to cooperate with Congress to carry out the wishes of the people.

The technical right of the President to veto this or any other legislation is of course indisputable. But the moral right of a President to obstruct the legislative process in a matter of tax policy after his own party and administration had been set down by the voters is another matter.

Reasons for vetoing any tax reduction or tax increase can always be found, since this is a matter of policy and a complicated one. But Congress, and particularly the House, has far more right to decide those matters of policy than the President when, as in this case, it comes fresh from a mandate of the people. This is all the more the case when the man who is President was never elected to that office but owes his power to the accident of Vice Presidential succession.

In overruling Congress, President Truman has undertaken to overrule the American people. He perhaps expects to correct this situation next year when he can carry out the wishes of the people with some part of the credit coming to himself. This maneuver will cost 49,000,000 taxpayers $4,000,000,000.

Congress should see that the rights and interests of the people are served in this modest measure of tax relief by repassing the bill over his veto. It is significant that the House seems to have the votes to do this; the Senate not. All the House membership was elected last November, but only one-third of the Senate.

There is ample justification for overriding the veto. The most conclusive one is the simple fact that 2 years after the war, taxpayers are entitled to some measurable relief from the peak of onerous wartime taxation. The rights of the taxpayer to this consideration, strangely, were not even mentioned as a major factor in the veto message.

The message rested heavily on the inflationary effect of putting more money in private pockets. President Truman had no such compunction when he signed the repeal of the excess-profits tax, which put $6,000,000,000 into private corporation pockets at a time when the Government was running on a $9,000,000,000 deficit. Now he vetoes a $4,000,000,000 tax cut for private individuals at a time when the Government is running on a six to eight billion dollar surplus.

Of this surplus, some three billions at the least will result from economies in his budget legislated by Congress; in other words, three billions which he had intended the Government to spend. If it would not be inflationary for the Government to spend this sum, it is not inflationary for private citizens; certainly not more so. The inflationary factor in this tax cut thus is a matter of $1,000,000,000, which is too small to be judged as a factor at all, a mere matter of half of 1 percent or so of the entire national product at this time.

Assuming that the veto stands, Congress should not let its concern for the taxpayer stop there. A smaller tax cut would be better than none. To refuse to try again on the theory that Truman might get off the spot would also be playing politics with taxpayers' money. Congress should put up another tax cut, this time conforming to the amount it is saving on the Presidential spending budget; and if that is also vetoed, then override the veto, even though Truman would thereby have less to answer for.

The rights of taxpayers, caught between the onslaughts of ferocious tax rates on their incomes and the equally ferocious costs of living, come ahead of all party politics.

Preparations for National Security

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very outstanding address delivered by Mr. Cord Meyer, Jr., at a luncheon-forum sponsored by United World Federalists and American Federation of Scientists, in Washington, D. C., today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I hardly need to remind you here, who are close to events in the National Capital, of the crisis in foreign relations which our Government now faces. It is impossible to exaggerate the fatal significance of the decisions that America cannot avoid making in the immediate future. Whether our fate is to be peace or an atomic-biological war is the issue. I do not overstate the case when I say that the lives of more than one-third of humanity and the survival of what we have chosen to call civilization are at stake. Let me describe briefly the three basic alternatives before us.

The first alternative is to attempt to insure our national security by remaining the strongest military power in the world. Although there is no effective defense against an atomic attack once it is launched, we can try to prevent a would-be aggressor from ever beginning such an attack by the obvious size and efficiency of our preparations for a counteroffensive. By building up our capacity to retaliate even though our cities lie in ruins and half our people are killed, we can hope to instill such fear into other governments that they will never dare to risk war with us. This is the policy of peace through intimidation into which our Government is rapidly drifting.

If we adopt this alternative, other nations have no choice but to do likewise. When superior military power is the sole guaranty of national security, each government is forced to compete for that superiority. Every increase in our armed strength will provoke a corresponding increase in the power of others. A mounting competition for arms, allies, strategic bases, and raw materials is the inevitable result. Our only possible competitor in this struggle is the Soviet Union, which alone has the potential strength to challenge our lead. Quite apart from ideological considerations, the United States and the Soviet Union are doomed to be the two central contestants because in the search for national security each is the only real threat to the other.

Before we are finally and irrevocably committed to this meaningless struggle, there is still time to consider the consequences. We cannot insure our ability to strike back after the holocaust of a modern assault merely by

building more atomic bombs, biological weapons, bombers, and rockets than our possible opponent. That nation which is able to protect from atomic bombing vital sections of its industry and population by subterranean dispersal will enjoy a decisive advantage in any future war. If we seek protection in our ability to retaliate, we have no time whatever to lose in building secret and self-sufficient underground production centers. Our present concentration of men and machines in a few congested cities makes us the most vulnerable target in the world. There is also need for a large professional standing army equipped with the most effective modern weapons, widely dispersed, and kept in instant readiness to launch the counter-offensive. As far as possible, our urban population must be protected by underground shelters. The concentration of the entire directing personnel of the Government in Washington can no longer be tolerated.

This is the minimum price of modern preparedness. It can only be paid by profound changes in our political and economic system. The necessary dispersion of industry can only be accomplished by autocratic planning and Government edict. Labor will have to be conscripted to work in the underground factories. As the stock piles of weapons grow, our living standards will decline. Anti-sabotage and anti-espionage precautions will restrict and finally eliminate our civil liberties. In foreign policy, the search for allies will lead us into backing any regime, no matter how corrupt and tyrannical, so long as it opposes Russia. In attempting to defend the independence of our country, by military power in this new age, we will have to give up all that has made it worth defending in the past. When the last measure of preparedness has been completed and the state has become one vast military machine poised for instantaneous retaliation, we will be a driven and degraded people, and life for the individual will be a drawn-out agony of oppression and suspense.

Will these sacrifices accomplish their purpose? Can war be prevented by fear of our armed power? I do not believe so. As the nations accumulate the weapons with which they can annihilate each other's cities, suspicions will grow monstrous. Already as the struggle for power increases between the United States and Russia, each government protests that its own preparations are purely defensive but each suspects that the other plots aggression. Now that the only defense is a counter-offensive, there is no longer any way of distinguishing between defensive and aggressive preparations, until the last moment when the attack is launched. Sooner or later, fear will provoke war and one nation or the other will strike first in order to deny the advantage of the initiative to its opponent. Peace cannot be built on mutual terror. In the war that will inevitably result from competing programs of preparedness industrial society will be totally destroyed.

The second alternative is the preventive war. The difficulties and dangers of a prolonged competition for military supremacy with Russia have led some to the conclusion that we should attack now while we have the atomic bomb and they don't. Life magazine has recently condensed for mass consumption James Burnham's vision of an American Empire established and maintained by nuclear fission. There are demands in the Senate for an immediate showdown with Russia. Because the body of opinion that believes in the preventive war is growing with remarkable speed, the argument is worth refuting. Morally, preventive war is a nice name for aggression. The unsubstantiable suspicion that our victim planned to attack at some future date could not mitigate our guilt. Preventive war is the act for which we hung the Nazi leaders at Nuremburg. Practically, the preventive war is not as easy as it has been made to appear by its supporters. It would not end with the atomization of Moscow and Leningrad. The Red Army would march into Western Europe, the Middle East and China. They would have many allies, as our attack would alienate even our own friends. The resulting land campaign would be long and incredibly costly. England and Europe would be ruined beyond repair. If the Russians do not yet have atomic bombs, it is quite probable that they are already armed with the means of biological warfare. Should we attack them, they would be justified in striking back with incurable epidemics that might eliminate whole sections of our population. Eventually, we might be able to win a shadow victory. We would then be forced to establish an iron tyranny over the entire earth in order to prevent the defeated from constructing modern weapons for revenge. Nor can the spread of communism be stopped by killing large numbers of those who believe in it. Past attempts to crush militant faiths by the sword have been singularly unsuccessful.

Who would fight this preventive war for those who seek to provoke it? I believe that there are many who fought bravely and well in the last war to defend their country who would prefer jail to the role of aggressors. Preventive war is a nightmare that we must reject.

There is a third alternative: It is the policy of attempting to find with the Soviet Union and the other nations a cooperative solution of the security problem. Good-will gestures of unilateral disarmament are futile and dangerous. But we must offer to join with others in transforming an impotent United Nations into a reliable system of international security, while preserving our national armed strength until general agreement to the new system is obtained. Once it is recognized that no amount of sacrifice for armaments can delay war for long or protect the country when war comes, it is clear that we have a right and a duty to demand that the first objective of the United States Government be the establishment of an effective international organization for our protection.

What has the United States Government done to date in order to strengthen the United Nations and to halt the suicidal arms race that has already begun? It has proposed the Baruch plan, and many think that in doing so we have fulfilled our obligation as the first country to develop and use atomic weapons. The feeling is general that we have done all within our power to assure peace. Now, it is argued, the other nations, and particularly Russia, must accept the Baruch plan or, by refusing it, convict themselves of intent to commit aggression. Whether this view is accurate can only be shown by a critical analysis of the Baruch plan itself.

As you know, the plan calls for an abolition of atomic weapons. Inspection and an international monopoly on the potentially dangerous peacetime uses of atomic energy are to insure that bombs cannot be secretly constructed by any government. Only by expropriating the plants of the international authority would a nation be able to manufacture bombs, and this seizure would be immediately evident to the world. All other nations acting through the Security Council are then to join forces against the violator, which would not retain its veto to prevent collective action. In other words, if and when the Baruch plan is put into effect, the danger of sudden and surprise attack with atom bombs will be eliminated, since no nation will have them. Any attempt to make bombs is to be discovered by an international intelligence service, and all governments can then seize the atomic plants in their respective territories and join in the race to make the first bombs for the resulting atomic war. All weapons except atomic explosives are to remain uncontrolled and each nation is to retain its army, navy, and air force. How practical is this plan and what chance is there of its general acceptance?

It has been claimed that by eliminating the veto the Baruch plan would insure effective enforcement action against a government violating the atomic agreement. I cannot agree. Here in new guise is the old fallacy that separate armed nations can find security by formally undertaking to use their respective armies jointly against any one of their number that commits aggression. It is an attempt to revive the impractical principles of the League of Nations and to graft them on to a veto-ridden United Nations. A mere change of voting rules in the Security Council can have no effect on the actions of the United States and Russia. If either chose to defy the international inspectors and seize the plants of the authority, the result would be World War III, with the two giants and their satellites ranged against each other. No majority vote in the Security Council could disguise that reality or provide protection. It is even unlikely that such a vote could ever be taken. The seizure of atomic plants would be such a clear indication of aggressive designs that it would only be attempted in coordination with a general assault launched with rockets, blockbusters, bacteria, and mechanized armies. The victims of the attack would be more interested in defending themselves than in voting. Changes in the structure of the United Nations more fundamental than a juggling of voting rules in the Security Council are necessary, if the swift, certain, and sure system of punishment which Mr. Baruch called for is to be achieved.

Under the Baruch plan, veto or no veto, war would result from interference with the inspection system. The plan recognizes this fact by calling for a strategic balance of atomic plants among the nations. The number of plants and the amount of nuclear fuel within the borders of each nation will be an essential factor in its national security. If one nation seizes its plants to produce bombs, the others will be forced to seize theirs, and the side that has the largest atomic industry will have a considerable advantage in the resulting war. Agreement to a scheme determining the allocation of atomic industry is a prerequisite to the acceptance of the plan and such agreement is extremely unlikely.

For instance, if the Soviet Government believed that the United States and the British Commonwealth would be allied against it in the event of another war, it could hardly agree to an equal division of atomic facilities among the three. Nor can I imagine either the United States or Britain consenting to a balance which would give the Russians as large an atomic industry as they owned together. Similarly, the number of atomic plants the United States might allow France for peaceful use would depend entirely upon the direction of French foreign policy. A victory at the polls for the French Communists would swing France into the Russian orbit. The United States would then be compelled to demand a revision of the balance or accept military inferiority when and if aggression occurred.

Agreement to a distribution scheme is further complicated by the impossibility of equalizing the factors that condition the speed with which the various nations can convert to bomb production. The high level of industrialization, the technological skill, and the special experience of the United States with atomic energy combine to place this country for a long time at a distinct advantage in any sudden attempt to construct bombs. The Soviet Union might well hesitate to agree to a plan which upon the first violation would commit it to an atomic armament race which it would have little hope of winning against the technological superiority of the United States. Russia may

prefer to continue unrestricted and secret competition for atomic weapons in the belief that an inferior supply of bombs is more protection than no bombs at all, if a potential enemy can construct them with greater speed than its own industrial efficiency permits. Even if accepted, the Baruch plan would only replace competition for bombs by an intense rivalry between the nations for the personnel and methods with which to produce bombs in the shortest possible time. Peace based on a balance of power has proved to be a brief truce between wars. Peace based on a nice balance of atomic power is not likely to be any more stable or enduring, whether that power exists as bombs ready for use or as plants capable of conversion within 3 months to bomb manufacture.

Another serious obstacle to the acceptance of the plan is the fact that under its provisions the nations are to remain free to compete for every weapon except bombs. With proper concern for American security, the Senate would be justified in refusing to destroy our atomic weapons except in conjunction with the demobilization of the Red army and in return for material proof that Russia was not preparing for other types of specialized warfare. The Senate leaders have repeatedly demanded "a foolproof system of security" in return for any surrender of atomic secrets. The Baruch plan is far from foolproof. Each nation would retain as many millions of soldiers, as many mechanized divisions and biological weapons as it wished. Against a large nation armed with these forces, an attempt to punish a violation of the atomic agreement would result in a long and indecisive conflict. By agreeing to the Baruch plan, the United States would be giving up its one decisive weapon in return for the privilege of competing for other weapons where it has no advantage.

I hope this analysis of the plan will indictate why many of us in UWF believe that a more comprehensive and effective scheme is necessary, if there is to be any chance of acceptance by either the Russians or the United States Senate. The fatal defect of Mr. Baruch's proposal is the false assumption that atomic bombs can be probibited while aggression in all its other forms remains possible. Security is undivisible and cannot be realized by attempting to ban one particular type of weapon. The first and only step toward the prevention of atomic warfare is the creation of an international organization powerful enough to prevent all war between nations. By specific amendments, the United Nations must be strengthened to the point where national preparation for war is not only unnecessary but impossible. The indispensable changes are briefly these.

First, the United Nations must be given the power to administer world laws binding the individual citizens of each country as their first duty. The constitutional authority must be strictly limited to those matters found essential to the preservation of peace. For example, the United Nations must be able to prohibit by binding enactment the manufacture or ownership by any national government of the means of organized warfare. It must be able to prohibit the use of force in the settlement of international disputes and it must be able to control and regulate the dangerous aspects of atomic development.

Secondly, the United Nations must have the power to arrest and try in world courts those who violate the basic security law. We need a procedure through which a Nuremburg trial can be held according to an established law before rather than after war has begun.

Thirdly, the United Nations must have the power to conduct an international system of inspection with free access into every country. It would be the task of the inspectors to discover any illegal attempt to produce the prohibited armament.

Fourthly, the United Nations must have not only the right to prohibit internation war but the police power to enforce its authority. A world police force must be recruited from the individuals of each nation. It must be responsible only to the United Nations, armed with a monopoly on modern weapons, and strategically distributed. Until national governments are willing to give a world organization preponderant military power to keep the peace, they will be condemned to compete for arms among themselves.

These significant additions to the authority of the United Nations will necessitate certain changes in its internal structure. Particularly, the Security Council will cease to be legislator, prosecutor, judge, and jury. It will become an executive cabinet operating to administer the laws every nation has accepted as essential to the common security.

This would be world government, if you want to use the word. But it would be government only in a very limited area. Each nation would remain free to conduct its domestic affairs and foreign trade without restriction. The nations in agreeing to these amendments would be giving up only the right and means of annihilating each other.

There is but one way in which these changes can be made realities. As the nation which first developed, employed and continues to manufacture atomic weapons, the United States has the responsibility for taking the initiative in proposing the formation of a strong United Nations. Our unilateral action in Greece and Turkey has been explained on the ground that the United Nations is not yet capable of assuming such a burden. But the United Nations cannot strengthen itself. It is a league of sovereign states and will remain impotent unless its members agree to give it the strength it needs. Through every available instrument of public information, the American people must be reached with the knowledge that they must choose between a suicidal war or a strong United Nations. An insistent and informed public demand must be brought to bear on the Government here in Washington.

But what of Russia? There are many who claim that the Soviet Regime would reject any radical amendment of the United Nations and that the offer is not worth making. I am not so pessimistic. They have as much to lose as we do in a mutually devastating war. Faced with a choice between a desperate arms race ending in war and an effective system of security protecting them and us alike, the Kremlin leaders may well choose security. At least, until the Russians are given a fair opportunity to make the choice, we cannot tell whether the purpose of their present policy is aggression or defense. An American offer to erect an enforceable world law would be the only real test of Russian intentions. If they turned that down, we would be justified in assuming the worst. But let me repeat that I believe there is a good chance that they would accept.

I recognize that the changes necessary in traditional institutions are great and the time short. A shooting war may not be imminent but we are rapidly approaching a critical point when in preparation for conflict policies will have been adopted that make war inescapable. Soon preparedness and propaganda will have swept both governments past all chance of turning back. While there is still time and room for hope, let us present to the people of this country the real choice, the destruction of civilized society or some measure of world government. When they understand that choice, I have confidence in their decision. Men are sufficiently rational to acquiesce in their own survival.

The Taft-Hartley Bill

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I have just received a statement from 13 leading practitioners and professors of administrative law, which points out serious defects and dangers involved in the Taft-Hartley bill. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The PRESIDENT,
The White House.

MY DEAR MR. PRESIDENT: We write to you as students and practitioners of administrative law and procedure; and without reference to the economic and social effects of the substantive provisions of the Taft-Hartley bill (H. R. 3020). We have, however, carefully examined the provisions having to do with the procedures for administration, and have come to the conclusion that these violate nearly every tenet of sound administrative law and procedure developed and established during the long history of administrative agencies in this country. These defects are, in our opinion, so serious that for this reason alone, and without reference to the inherent merits or demerits of the substantive provisions of the bill, we urge you to disapprove it.

1. The first aspect in which the bill flouts and threatens the whole administrative process is in respect of its provisions with respect to judicial review of the Board's findings. (Amendments to sec. 10 (b), (c), (e), and (f) of the act.) It is a well-settled principle of administrative law that the findings of administrative agencies are to be accepted by the courts if they have substantial support in the evidence and a rational basis in law. This rule has heretofore been applied in the case of the National Labor Relations Board (see *Consolidated Edison Co.* v. *National Labor Relations Board*, 305 U. S. 197; *National Labor Relations Board* v. *Hearst Publications, Inc.*, 322 U. S. 111; *National Labor Relations Board* v. *Nevada Consolidated Copper Corp.*, 316 U. S. 105; *National Labor Relations Board* v. *Packard Motor Car Co.*, decided March 10, 1947, U. S. Supreme Court, October 1946 term), as well as in the case of other similar agencies such as the Interstate Commerce Commission, the Federal Power Commission, the Securities and Exchange Commission, and the Federal Trade Commission, to name only a few (final report of Attorney General's Committee on Administrative Procedure, S. Doc. 8, 77th Cong., 1st sess., pp. 89–91. See also sec. 10 of the Administrative Procedure Act of 1946, and comments of Attorney General Clark with respect to its effect. S. Doc. 248, 79th Cong., 2d sess., pp. 229–230).

Unless this principle is accepted, there is little, if any, excuse for the administrative process, which rests upon the fundamental concept that proper solution of certain difficult social and economic questions requires the attention of specialists who may become and remain continuously informed about them. It was because the courts and legislatures could not give these problems the specialized and detailed supervision which was required that administrative agencies were established to do so.

The Taft-Hartley bill deliberately and unequivocally rejects this essential principle. In explaining the effect of the amendments to section 10 of the act, as agreed upon by the conferees, the conference report (House Rept. No. 510, 80th Cong., 1st sess.) states (p. 56):

"As previously stated in the discussion of amendments to section 10 (b) and section 10 (c), by reason of the new language concerning the rules of evidence and the preponderance of the evidence, presumed expertness on the part of the Board in its field can no longer be a factor in the Board's decisions."

The report criticizes the courts for giving "deference" on occasion "to specialized knowledge that is supposed to inhere in administrative agencies" (pp. 55-56), and specifically adverts to the Hearst, Packard, and Nevada Consolidated decisions of the Supreme Court as intended to be overruled. We cannot emphasize too strongly that this basic approach to the bill to the proper relations between administrative agencies and the courts threatens to destroy the values of expertness and specialization which were sought in the establishment of administrative agencies.

2. A second respect in which the bill overrules sound administrative practices is in respect of dispersion of responsibility for administration. This is accomplished by the creation of an independent office of the general counsel, to be appointed by the President for a fixed term, and to be completely independent of the Board with respect to issuance and prosecution of complaints (sec. 3 (d)).

An essential advantage of regulation by the administrative process over regulation by the judicial process is insurance of a single, coordinated policy and responsibility for regulation in the field. For this reason, Congress has heretofore consistently merged and centralized all functions of the administrative process in the agency heads, and has refused to require a complete separation, for example, of the investigative from the judicial functions. Congress made its considered and informed decision in this connection, following more than a decade of intensive study, in the recently enacted Administrative Procedure Act of 1946. In that act Congress established a uniform system of "internal" separation applicable to all agencies, including the Board.

The Taft-Hartley bill reverses this. A new office of General Counsel is established, who is to have (conference report, p. 37) "the final authority to act in the name of, but independently of any direction, control, or review by, the Board in respect of the investigation of charges and the issuance of complaints of unfair labor practices, and in respect of the prosecution of such complaints before the Board. * * * By this provision responsibility for what takes place in the Board's regional offices is centralized in one individual, who is ultimately responsible to the President and Congress."

Under this provision, responsibility for regulation of labor relations is divided between the Board and the general counsel. The advantages of coordinated and uniform policy are ignored. Here again, the approach of the Taft-Hartley bill threatens the essence of the administrative process.

3. A third respect in which the Taft-Hartley bill violates a fundamental tenet of administrative law is with respect to its provision in section 10 (b) that the administrative proceedings shall, so far as practicable, "be conducted in accordance with the rules of evidence applicable in the district courts of the United States under the rules of civil procedure. * * *" The universal, firmly-established rule of administrative law, embodied in the Administrative Procedure Act (sec. 7 (c)), is that the technical rules of evidence applicable in courts of law need not be followed, but that, as a matter of policy, irrelevant, immaterial, and unduly repetitious evidence shall be excluded.

An important characteristic of the administrative process is its speed, informality, and freedom from technicalities. This quality comes into play most significantly in connection with hearings and settlements. The safeguards established in the rules of evidence to avoid erroneous decisions and improper influences upon juries are not needed in the case of administrative agencies. Morover, liberality in admitting evidence cannot in itself cause any prejudice, because where inadequate evidence so admitted is made the basis of an administrative finding, a clear remedy is available to correct the error in the reviewing courts. The administrative agency is thus free to receive all relevant evidence bearing upon the issues.

The Taft-Hartley bill, by incorporating into administrative law unnecessary and technical concepts prevailing in courts, threatens to dissipate these important advantages which the administrative process is able to employ in discharging its functions in the field sought to be regulated.

4. Still another respect in which the bill imposes serious impediments on the administrative process is in connection with the so-called "free speech" provision, contained in section 8 (c). All administrative agencies, like all courts and other governmental bodies, are precluded under the first amendment to the Constitution from infringing the right to freedom of speech and expression. Under the guise of further protecting this right against infringement by the Board, however, the Taft-Hartley bill forbids that agency from even receiving in evidence any statements or expressions of views or opinions if they do not on their face contain a threat of force or reprisal or promise of benefit.

This is a shocking shackle to place upon administrative agencies in their search for the truth in factually-disputed cases coming before them. All courts, including even the criminal courts in cases involving capital offenses, are permitted to receive and consider relevant statements of a defendant bearing upon motive or intention. For example, if a defendant in a criminal case has made statements which show bias or purpose, such statements may be received in evidence for the probative force they may have in connection with those issues. Under the bill, however, for the first time, an administrative agency is forbidden from using such clear evidence of intention. Here again, the bill turns the clock back on well-established and valuable principles of law as they are applied in the administrative field.

The foregoing objectionable features of the Taft-Hartley bill do not exhaust the ways in which it turns back the clock on the administrative process. But we do not believe it necessary or desirable to catalog every one of the respects in which this bill makes a departure from fundamental principles upon which the structure of the administrative process rests. The inroads described are serious enough in themselves, we think, to warrant our conviction that if they are accepted or permitted to go unchallenged, the development of sound governmental techniques and procedures will be retarded and perhaps wholly defeated in very substantial respects.

For this reason, if for no other, Mr. President, we do not believe this bill deserves to become law. We, therefore, respectfully urge that you disapprove it.

Respectfully,

William Hammatt Davis, of Davis, Hoxie & Faithful, New York City; Ralph F. Fuchs, Professor of Law, University of Indiana Law School, Bloomington, Ind.; Willard Hurst, Professor of Law, University of Wisconsin Law School, Madison, Wis.; Robert E. Mathews, Professor of Law, Ohio State University Law School, Columbus, Ohio; Louis L. Jaffe, Professor of Law, University of Buffalo Law School, Buffalo, N. Y.; Eugene V. Rostow, Professor of Law, Yale University Law School, New Haven, Conn.; Leon Andrew Ransom, Former Acting Dean, Law School, Howard University, Washington, D. C.; Mitchell Franklin, Professor of Law, Tulane University Law School, New Orleans, La.; William G. Rice, Professor of Law, University of Wisconsin Law School, Madison, Wis.; Nathan P. Feinsinger, Professor of Law, University of Wisconsin Law School, Madison, Wis.; J. H. Beuscher, Professor of Law, University of Wisconsin Law School, Madison, Wis.; Harry A. Shulman, Professor of Law, Yale University Law School, New Haven, Conn.; Douglas B. Maggs, Professor of Law, Duke University Law School, Durham, N. C.

Since this letter was dispatched to the President, Walter Gellhorn, professor of law, Columbia University Law School, has indicated his agreement with the points made herein.

Dispute Over Air Safety Equipment

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "CAA, Air Lines, Armed Forces Squabble Over Air Safety Equipment," by Albert Douglas, published in the June 19, 1947, issue of the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAA, AIR LINES, ARMED FORCES SQUABBLE OVER AIR-SAFETY EQUIPMENT—CAN'T AGREE ON WHICH ADVANCED RADIO AND RADAR SYSTEMS TO USE; HIGH COSTS A HURDLE

(By Albert Douglas)

WASHINGTON.—The men responsible for air safety agree present navigation instruments aren't good enough—but they're at loggerheads over what to do next.

The Civil Aeronautics Authority, the airline managements, and the Army and Navy Air Forces are in a three-way tug of war. Recent plane crashes have high-lighted shortcomings of existing equipment—and the discord over a solution. One high congressional figure comments the two most recent tragedies might have been averted by using one or another of the complex radio and radar instruments under dispute, and many air experts have to agree with him.

The principal radio aid currently serving planes is a Nation-wide network of beams shot out from transmitters on the ground. Receiving sets aloft enable the pilot to follow the path.

TROUBLE ON THE BEAM

When he's on the beam, however, he still may have trouble. The beam is subject to

static; it can be interfered with by other range stations, and can actually be bent by mountains. Aviators complain that if they flew some beams according to rule, they'd go into hillsides. What's more, the beam can't tell the pilot or airport control tower the plane's distance from the landing field or the ground beneath it. More and faster planes are complicating the problem.

Vastly improved instruments have been invented, built, and tested. But what suits one group does not fit the precise ideas of the others. And there's the huge hurdle of who is to foot the bill.

Today's $25,000 to $50,000 outlay for instruments in each transport craft might be boosted to more than $100,000 per plane. The CAA complains it can't get from Congress the millions of dollars needed for ground installations. Nobody has an answer to how costs shall be divided between taxpayer and air line.

Here are directions the three groups are tugging:

Army and Navy agree their flights should be controlled through ground radar, known as GCA, which means ground-control approach. An operator on the ground can observe the plane despite fog and give the pilot landing directions. Ground radar also permits the operator to observe other planes and keep all informed of each other's whereabouts. The Army would supplement this with ILS—instrument-landing system—sending local radio beams from port to plane, giving it a path for gliding into the field. The Navy is now constructing its supplement A—radar airway—across the Nation with beacon signals connecting plane and ground.

The military services also want airborne radar such as was used during the war, but the air lines complain most such present equipment for use aloft is too heavy and too expensive.

Two lines, TWA and American, plan to install much lighter and less costly, but more near-sighted, radar instruments on their planes.

The air lines' pet idea is a mechanical-block system, comparable to the block-signal system used by railroads. This would divide each heavily traveled air route into segments, or blocks, with only one plane permitted in any one block at a time.

These blocks, 20 miles long and 500 feet high, would be marked by very high-frequency (VHF) radio "doors." Lights in the pilot's cockpit would tell him when he passed through a "door," and whether it was safe to enter the next block.

The air lines are working, too, on a powerful lightweight airborne radar designed especially for use with the block system. This radar, like that of TWA and American, is lighter and less expensive than the similar military radar. The combination of the two instruments would tell the pilot where he is and what's ahead of him in flight, say the air-line experts. The dual system is being tested now.

CAA TURNS THUMBS DOWN

The CAA likes neither the air lines' nor the military's systems.

"None of the systems offered to us has proved itself to date," says Charles Stanton, Deputy Administrator. The CAA, Government agency responsible for air traffic control and air safety, is pushing the construction and use of its own static-free VOR ranges coupled with DME, or distance-measuring equipment.

VOR stands for very high frequency omnidirectional ranges. This beam fans out in all directions from the ground point where it is installed. A pilot "working" a VOR range using special airborne radio equipment learns in what direction he is relative to the range. DME is another airborne radar instrument which measures the distance to a VOR transmitter. Coupled, the two instruments tell the pilot where he is. Both these airborne instruments are costly.

To date the CAA has built 10 VOR ranges and hopes to build 500 of them by the end of 1948 if Congress provides the money. Prototype DME equipment will be available by January, according to the CAA.

The CAA also is developing other instruments to be used in conjunction with VOR and DME, such as the navigational computer which automatically keeps the pilot informed at all times of his position with reference to the ground.

The CAA favors the ILS landing system, but disagrees with the military as to which radio frequency should be used by the ILS.

The air lines' complaint against the CAA proposed system is that it would cost too much. The military complain that their own radar navigation systems were proven during the war, and if "properly refined" would provide for safe flight control as well as be a warning system, through the use of ground surveillance radar, against possible enemy air attack.

The private pilot, unwanted stepchild in the argument, complains he cannot afford to buy the costly radio equipment necessary to use in any proposed control system offered to date.

The Potato Surplus

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. KEATING. Mr. Speaker, although it is true, as is stated in the editorial which I shall include as a part of my remarks, that there may be before the country and the Congress more pressing and serious problems than the potato situation, the action of the Department of Agriculture in destroying huge quantities of this vegetable when poor people need them in this country and entire nations are starving overseas, has aroused so much resentment among our people that I must speak out against this inexcusable waste and inefficiency.

I am hopeful that House Resolution 166, which has already been passed authorizing and directing the Committee on Agriculture to undertake a thorough investigation of the potato surplus, will lead to the enactment of remedial measures which will prevent a repetition of such a shocking performance.

I commend to the careful consideration of my colleagues the remarks appearing in the Appendix of June 2 CONGRESSIONAL RECORD made by my neighbor, the able gentleman from the Thirty-sixth New York District, Hon. R. WALTER RIEHLMAN, who speaks on this subject from his own personal business experience as well as from the depths of his common sense, which has been vouchsafed to him in such great abundance.

Under leave to extend my remarks, I include editorials from the Rochester Times-Union and from the Washington Evening Star:

[From the Rochester (N. Y.) Times-Union]

POTATOES AS EXHIBIT A

The House Agriculture Committee has been looking into the results of Agriculture Department activities in taking over the potato surplus last fall. It has found some odd things, according to a Gannett News Service dispatch from Washington.

For example, in Richmond, Va., where one of the Government's potato-destruction incidents occurred, restaurant owners were later forced to buy Canadian potatoes for $4.50 a hundred pounds. We must assume families fared no better on their potato purchases last winter.

The Times-Union, months ago, cited complaints from housewives that they found it hard to get really first-grade potatoes. The set-up on potato-price support encouraged the farmers to sell practically all their top-grade potatoes to the Government. It was simpler and cheaper to do this than to dicker with commission men later on.

The Government did not place these potatoes on the market. That would have defeated the idea behind the price-support law. The amount public institutions could take was limited. Potatoes are too bulky and spoil too easily in a ship's hold unless refrigerated to ship them to the starving Europeans, as many persons proposed. So the potatoes were left to rot.

Now Representative AUGUST H. ANDRESEN, Republican, of Minnesota, chairman of the committee, says that unless the potato program is better administered there is danger of an acute domestic scarcity next winter and spring.

Very likely. That's the way Government controls work. They foster scarcity. But the House Agriculture Committee does not grasp that basic fact. It lays the trouble to personal bungling by officials and has a brand-new price-support program in view.

What reason is there to suppose the new plan will work any better than the old? For hundreds of years the efforts of governments to establish fair prices for commodities have ended in failure. They still do.

[From the Washington Evening Star]

TOO MANY POTATOES

There are more important problems in the world today than the issue of our surplus potatoes and what to do about them. Yet the potato problem is one concerning which the average man can form an opinion, and the opinion to which he is being driven is one that is not apt to fill him with confidence in the ability of those on the higher planning levels to solve the weightier dilemmas.

The latest development is the announcement that the Department of Agriculture, as an alternative to destroying surplus potatoes, now is willing to sell them to industrial users for 1 cent a bushel. It seems that this can be done without nullifying the price-support program for potatoes. "Price support" is a fancy name for the subsidy being paid potato growers. But these same surplus potatoes which are virtually to be given to industrial users, who presumably could afford to pay a reasonable price, cannot be given to the poor and hungry. For to do this, it is claimed, would upset the price-support program.

Maybe this makes sense. But last year the Government bought up 1,750,000,000 pounds of choice Maine potatoes, and in the end almost half of them were dumped. One method of dumping is to pour kerosene over them, so they are fit for nothing. At any minute now the Government will be called upon to buy up 200 carloads of South Carolina potatoes, and the chances are that they, too, will be dumped. And there will be more of the same before the season is over.

With hunger and famine sweeping the world, this may be good, sound, sensible planning. But a good many people are going to be hard to convince.

Analysis of Key Points of the Labor Bill

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Louis Stark entitled "An Analysis of Key Points of the Labor Bill," which appeared in the New York Times of Sunday, June 15, 1947. Mr. Stark is one of the ablest labor reporters in the country, and I believe his analysis of the bill should be studied by those who are interested in arriving at an accurate conclusion as to the merits of the legislation now pending on the President's desk.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ANALYSIS OF KEY POINTS OF THE LABOR BILL—SOME OF THE CLAUSES ARE SUBJECT TO WIDELY VARYING INTERPRETATIONS

(By Louis Stark)

WASHINGTON, June 14.—The Labor-Management Relations Act of 1947, now on President Truman's desk, is one of the most important pieces of social legislation of the last 15 years.

By writing a substitute for an extension of the National Labor Relations (Wagner) Act of 1935, Congress has definitely cast its lot with those who have been insisting that in recent years labor's rights and privileges have so far outstripped those of industry that the imbalance must be righted.

Seldom has a measure been so attacked and defended. Labor has denounced it as a slave bill which would turn back the clock and deprive employees of many hard-won rights. Employers generally and others who hold with them say that it will strengthen the collective-bargaining procress because it recognizes the responsibility of both parties to carry out agreements and for the first time compels unions to bargain collectively. Hitherto only employers have been compelled to bargain.

Most important to the public, according to the bill's proponents, are the sections which would discourage national paralysis strikes and deal with the vexing problems of jurisdictional disputes and secondary boycotts.

Some labor relations students believe that under this bill, as under the Wagner Act or any bill dealing with labor relations, disputes will arise. There follows a summary of the bill and the points which may lead to controversy.

WHAT THE BILL PROVIDES

The principal provisions of the new act are these:

(1) The closed shop (making union membership a condition of employment) is forbidden and the union shop (requiring workers to join after they are hired) is greatly restricted.

(2) The National Labor Relations Board's administrative and judicial functions are separated.

(3) To equalize the Wagner Act, which limits unfair labor practices to those committed by employers, a new section is added banning unfair labor practices by employees.

(4) The right to strike is restricted in some respects but is not banned.

(5) Employers' free speech rights are broadened.

(6) Injunctions and damage suits against unions are made easier.

(7) Industry-wide bargaining is limited.

(8) The individual employee's rights are to be protected against his union.

(9) Political expenditures and contributions by unions to caucuses, conventions as well as to elections are prohibited.

UNION SECURITY

The closed shop, under which 30 percent of organized employees are operating, came into existence largely because of employer discrimination against union membership prior to the Wagner Act. The act sought to and succeeded in removing, to a great extent, such discrimination.

The congressional conferees frankly were out to change what they felt to be the abuse by union leaders of their prerogatives in closed or union shops. They did this by outlawing the closed shop and placing severe restrictions around the union shop. However, many employers have come to favor the closed or union shop because, in their experience, it has made for union responsibility.

The union shop is allowed to continue under certain conditions. The main one provides that a majority of those eligible must vote for it, not a majority of those voting as required in ordinary elections.

A union can call for dismissal of members from their jobs only for failure to pay dues. So long as a member makes such payments he is not subject to union discipline, though he may have engaged in actions which would otherwise result in loss of membership.

Labor-management relations may become strained in such cases since union members will not relinquish the right to work or not work with nonunion members. British unions do not have closed shops, but refusal to work with nonunion members is an effective weapon to gain the same end. There is also the possibility of continuing a banned union security provision (by the employers who prefer it) on a sort of "bootleg" basis. Oral closed-shop agreements are already being made in States which ban this type of union security.

THE NEW NLRB

"The NLRB is investigator, prosecutor, judge, and jury."

This charge has been leveled at the Board frequently to support the argument that its administrative and judicial functions should be separated.

The new NLRB will be turned into a judicial body, a labor court. It is divested of its administrative functions by an arrangement which sets up a statutory general counsel. This official, now made all but independent of the Board, will have complete supervision of the field staff in the regional offices and final authority in regard to attorneys, with certain exceptions, and also over investigation of charges and issuances of complaints. The general counsel takes over many of the Board's functions. He will settle approximately 85 percent of the cases in the field "on behalf of the Board."

The general counsel's office was set up by Congress in its eagerness to divorce the NLRB's administrative and judicial powers. His salary is to be $12,000 a year, equal to that of the Board members.

The general counsel, named by the President subject to senatorial confirmation, can refuse requests by unions or employers for issuance of complaints against each other. There is no appeal from his decision. So much depends upon the general counsel that it may be said that his personality will be dominant in the future course of the Nation's labor relations.

UNFAIR LABOR PRACTICES

The new act forbids coercion of employees to join unions.

Considerable controversy and litigation may arise over the exact meaning of coercion, which is not defined.

If picket-line brawls constitute coercion these questions may arise: (1) Does State laws cover such contingencies, and (2) if not, will these disputes encumber the Federal courts with many police-court types of cases?

It is made an unfair labor practice for a union to require members in a union shop to pay "excessive" fees. How will the NLRB decide what is excessive? It may be impelled to go into the internal affairs of a union in a manner that would be deemed by the union as interference in the legitimate conduct of its business.

Secondary boycotts and jurisdictional strikes are also made unfair labor practices by unions. While the act's sponsors do not feel this provision should prohibit boycotts against sweatshop conditions, labor spokesmen have raised this question. It will be for the courts to decide.

Aiming to end "featherbedding," the act holds it an unfair labor practice for a union to require an employer to pay money "in the nature of an exaction" for services not rendered. This issue will involve disputes over such things as whether a machine should be manned by three men or five, whether radio stations using records may be compelled to use or pay live musicians, whether a textile worker can run half a dozen machines or more.

RIGHT TO STRIKE

The act provides a 60-day cooling-off period at the end of each contract. Employees would summarily lose their rights under the act if they violated this regulation. On the other hand, if an employer were guilty of an unfair labor practice, only a "cease and desist" order would be issued; he would not lose his rights under the act.

The strikers would also lose their voting rights in an election since the act bars "economic strikers" from the suffrage. Since under another provision an employer may now request an election under much more liberal terms than hitherto, the loss of employee rights may involve sharp controversy and lead to sympathy strikes.

In emergency cases where a strike or threatened strike affects substantially an entire industry and also "national health or safety," there is a delay of about 75 days, with the final step a report by the President to Congress for appropriate action.

Labor relations experts, analyzing the complicated provisions to delay strikes affecting health and safety, point out that these disputes are shunted from the President to a board of inquiry to the Attorney General to the NLRB, and finally left in the lap of Congress when the strike threat still remains.

FREE SPEECH

The NLRB has ruled that an employer's statement to his employees must be considered in the light of his subsequent actions in charges of unfair labor practices. It is now provided that no expression of his views can be "evidence" of an unfair labor practice under any of the provisions of the act.

This is interpreted to mean that the Board cannot receive testimony of a statement of an employer made on one day, though the employer is charged with firing a worker illegally the next day.

The controversy over this question of free speech is likely to be one of the early cases to go up to the Supreme Court.

This section was defended by the Senate proponents as necessary to employers' free speech but experts studying it now point out it will cut both ways, namely, that union officers and members will also be permitted to speak freely without having their works quoted to support a charge of unfair labor practice.

INJUNCTIONS AND SUITS

The Norris-LaGuardia Anti-Injunction Act of 1932 is softened in the new bill to make injunctions easier in some cases.

Seeking to stop certain flagrant abuses of secondary boycotts and disputes over jurisdiction, the new act permits employers and employees to ask the NLRB to petition for injunctions in all unfair labor-practice cases.

It is significant that the Board may apply for the injunction as soon as a complaint is issued by it and before a trial is had. In secondary boycott cases and jurisdictional disputes, however, it is made mandatory upon the Board to ask for a restraining order even before a complaint is issued.

Under the act there may be considerable competition by employers and employees for injunctions. Despite the union's reluctance hitherto to resort to such proceedings, they may feel driven to this action.

INDUSTRY-WIDE BARGAINING

Although a House ban on industry-wide bargaining as such was killed in the Senate, one section of the act dealing with emergencies limits such bargaining.

It requires the NLRB to supervise elections by employes of each individual employer on the basis of the latter's last offer.

Intended to apply to such national emergency disputes as the current coal wage controversy, this section means that each coal operator would poll his own employees. This opens the way for a multiplicity of "final offers" which might, in some cases, be acceptable and in some not. In any event, this provision is likely to lead to a dimunition or break-up of industry-wide bargaining through a national miners' union. Wages again may be thrown into a competitive struggle.

The unions have raised the question as to why this section—if it is to be fair to both sides—does not require the vote of the management negotiators on the union's last offer. As sometimes happens, they feel that these negotiators might agree with the union but would be overruled by top management. As it now stands the unions feel the rule is one-sided since it permits employees to disagree with union leaders but not management conferees to disagree with their chiefs.

INDIVIDUAL GRIEVANCES

The protection of the right to work has long been a goal sought by employers to cover the case of individuals who refuse to join unions and wish to bargain separately. The act now states that employees shall have the right "to refrain from * * * concerted activities."

Since it is made an unfair labor practice to interfere with this right, the unions believe it opens the way for employees to make individual agreements with employers not to join unions. Thus the so-called yellow-dog contract would be revived.

Whether this assumption is correct would be matter of litigation.

A section of the new bill allows individual employees or groups to adjust grievances without the union bargaining agent's intervention so long as (1) the individual arrangement is not inconsistent with the union contract, and (2) the official union bargaining agent is allowed to be present at such adjustment.

Whether the union agent might be allowed to appear at the preliminary discussions is not disclosed, and this may lead to charges of favored treatment to nonunion employees, in an attempt to undermine the union. Labor feels that this provision is a long step backward and would compel it to renew its early struggles for union status.

POLITICAL EXPENDITURES

Ever since the formation of the CIO's Political Action Committee the part played by unions in political campaigns has been under attack.

The act prohibits, under severe penalties, contributions by labor unions and corporations in connection with Federal elections and also extends this ban to expenditures in primaries, caucuses, and in conventions as well as in elections.

It was brought out during the Senate debate that this section prohibits any kind of activity by a union in favor of a candidate for Federal office if the union spends any money in this work.

Republican Senator ROBERT A. TAFT, of Ohio, agreed with Democratic Senator CLAUDE PEPPER, of Florida, that if Labor, a publication of the railway labor organizations, were to put out a special edition in support of a Democratic Presidential candidate it would be banned as a political expenditure if it were supported by union funds contributed by union members as dues.

The section, said Senator TAFT, would also forbid a union to issue a pamphlet advising its members about the labor record of a candidate. This argument over freedom of the press may move from Congress to the courts.

Only the passage of time will tell whether the new measure would interfere with collective bargaining and diminish purchasing power, as asserted by labor, or, as contended by its proponents, help bargaining power while compelling unions to conduct their affairs democratically and responsibly.

The Proposed Missouri Valley Authority

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to insert in the RECORD an editorial regarding the proposed Missouri Valley Authority, which appeared last week in the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR A FIELD HEARING ON MVA

Senator MURRAY brings home some unpleasant but palpable facts to his colleagues in pointing to the failure of Congress to do anything really adequate for the prevention of Missouri River floods which are damaging large areas of croplands. He points to the way to make up for this inaction—an investigation and hearing in the field by the Senate Public Works Committee.

It is not only proper but pressing for the Public Works Committee to give consideration to Senator MURRAY'S MVA bill and to come into the Missouri Valley and ascertain the wishes of its people respecting development of this region. Two Senate subcommittees went through the motions of hearings on MVA year before last, but Senator OVERTON, arch-foe of MVA and mouthpiece for the Army engineers, subverted them to his own prejudices. A genuine hearing of the issues is yet to be made and, as the Denver Post says, MVA must eventually be considered by Congress on the merits.

Senators and Representatives frequently complain that loud but unrepresentative lobbies try to mislead them, and that it is difficult to know what the people want. Senator MURRAY is offering the Congressmen a golden opportunity in the instance of MVA.

Trinity River Improvement

EXTENSION OF REMARKS

OF

HON. TOM PICKETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. PICKETT. Mr. Speaker, on Tuesday, June 12, 1947, the initial step in construction by the War Department on the comprehensive improvement program of the Trinity River and its watershed was taken by the breaking of ground for the Benbrook Dam and Reservoir. The initiation of the program is the result of long years of planning and working by many citizens who have envisioned the great benefits to be derived by the completed program. Foremost among the sponsors of the program is one to whom major credit is due for the success thus far achieved, our able and distinguished colleague, Hon. J. J. MANSFIELD. Another who has been among the leaders in the improvement is the Honorable D. A. Nunn, of Crockett, Tex., an able attorney and distinguished citizen, who has been tireless in the exercise of his influence and energy to achieve the goal we all are striving for. Under Judge Nunn's sponsorship, a resolution paying tribute to Judge MANSFIELD was adopted during the ceremonies on last Thursday. The resolution is as follows:

Whereas citizens from every part of the Trinity River watershed, as well as distinguished guests from all over the State of Texas and from other regions of the Nation, have gathered on this occasion to celebrate the initiation of War Department construction on the comprehensive program for the improvement of the Trinity River and its watershed; and

Whereas the men who have done most to make this project possible are accorded particular honor; and

Whereas no man has made a greater contribution to the development of water resources than has Judge MANSFIELD: Now, therefore, be it

Resolved, That the citizens of Texas here assembled, along with our distinguished out-of-State guests in the field of water and soil conservation and utilization, take special notice of the profoundly regretted absence of Judge MANSFIELD; and be it further

Resolved, That we inform Judge MANSFIELD of our delight in the recent reports of his improvement in health with the hope that this great friend of conservation soon may be able to be with us again in person as he has been with us always in spirit.

For all those associated in the Benbrook Dam ceremony.

JOHN M. FOUTS, *General Manager.*

NOTE.—Passed by acclamation on proposal by D. A. Nunn, of Crockett, Tex.

Confederate Memorial

EXTENSION OF REMARKS

OF

HON. WIRT COURTNEY

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. COURTNEY. Mr. Speaker, under leave to extend my remarks, I desire to

include an article from the Nashville Banner of June 4, 1947, written by Charles Moss.

My home town is Franklin, Tenn., scene of the bloodiest battle of the Civil War. An old southern mansion still stands just outside the town where, at one time, the bodies of five Confederate generals lay, who were killed in that engagement. Nearby is a cemetery where 1,500 Confederate soldiers are buried, also killed in that engagement.

The article follows:

CONFEDERATE MEMORIAL—SECTIONALISM WILL LIVE SO LONG AS—

(By Charles Moss)

A June wind dipped into the bend of the Harpeth River that holds the towers and white pillars of Franklin, the battlefield of Franklin and the cemetery where 1,500 young Confederates lie buried.

It was a Sunday afternoon, one of those early summer afternoons when the wind seems to blow the sunlight along in incandescent white shadows. And it was the day of the Confederate memorial. Cars were gathering beyond the iron fence. Inside, young girls in white dresses carried baskets of flowers, dropping blossoms on each grave. Earlier, gallant little Confederate flags had been placed before each headstone.

All this was the work of the United Daughters of the Confederacy.

The services were about to begin. The quadrangle of chairs in the corner of the cemetery was filling. Men leaned against a honeysuckle-covered fence. Men and women sat on the grass. The girls were coming back with empty baskets.

Mrs. W. P. Mullens, president of the UDC chapter, arose and read from a paper that had been written in longhand. She talked of honor and of being worthy sons and daughters of those who were buried there. She said things that have been said before, things that a sophisticate would call trite and meaningless. But to us they sounded beautiful and good. People do not gather much these days to talk of honor and of being worthy of those who have gone before.

"We will have the honor," she said, "of hearing from a leader of the First World War." Gen. Lytle Brown walked out into the bluegrass and faced the people. He looked like a soldier. He spoke up so his voice could be heard against the wind that billowed his dark coat.

These are not his words, but this is what he said: "These men lying here fought for what they thought was right. They were not fighting against the Constitution. They were fighting for State's rights in which they had been brought up to believe."

There was a pause. The Confederate flags, 1,500 of them, stood taut like companies of soldiers. They fluttered and hummed.

The speaker continued: "We will always have sectionalism, as long as the Federal Government interferes too much with our local affairs. We will have sectionalism as long as one part of the country smears the other by broadcast and press."

He spoke of efforts at national unity, world unity, and the curse of totalitarianism.

"If this country is ever defeated at war," he said, "I hope it is not from unworthy ambition and greed. I pray that it will be on some great Armageddon where we will be fighting for the glory of God."

Mrs. Mullens stood. "We will now hear from a veteran of the Second World War," she said. Her son, Will Reese Mullens, who in 1943 had left college to join the Naval Reserve, came forward. He had fought in the South Pacific on a submarine as a first lieutenant.

He too talked of honor and of worthiness, saying that the gray-clad men, who fought on these same fields where we stand were fighting for the right to live their own lives, determine their own destinies and conduct their affairs as they saw fit.

"Let it not be said," he continued, "by these warriors that look down on us today, that we failed to uphold the torch of the struggle to maintain the dignity of the individual. We are faced today by forces that personify the very opposite of all these things in which our forefathers believed. There is no doubt of the necessity of maintaining this struggle. It may not be our lot to wage this ideological conflict to a successful conclusion, but of the necessity of waging the conflict there is no doubt. They have passed to us a torch of courage, of dignity, and unswerving loyalty. They have passed it to us with the admonition to hold it high. Let us take the torch and heed the admonition with the words: 'Your example was not in vain.'"

There was another prayer and short commands brought an American Legion firing squad to position. The volleys rang out across the green valley. Then a young veteran standing beside a cedar tree, far back in the cemetery, sounded taps. The wind tore at the notes and carried them out over the rolling wheat field.

For a moment the people were still. Someone moved. Another started for the iron gate. The crowd started away. Automobile engines caught. A horn blew. A plane whipped by overhead.

Soon the cemetery was deserted except for the Confederate flags, 1,500 of them, that lived in the wind. The white flowers stirred against the initialed headstones of young colonels and captains and lieutenants and privates who had worn the gray.

At that moment they also seemed alive. And we were not too sure that sectionalism had died. At least we knew that the pride of a section still lived.

What It Means To Be an American

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, on May 21, 1947, I had the privilege of addressing the people of Hazleton, Pa., and vicinity at the I Am an American Day ceremonies sponsored by veterans' organizations of that patriotic section of Pennsylvania. In connection with I Am an American Day there, a contest was conducted in the schools for the best essays on what it means to be an American.

First prize went to Allan Holman, of the Hazleton Senior High School, who summed up America in relation to its freedoms. Second prize was won by John S. Marinko, of St. Gabriel's High School, who contrasted American democracy with other systems of government. Third prize went to Mary Veronica North of the D. A. Harman Junior High School, a ninth-grade student, who was much impressed with America in terms of its opportunities.

These are all such fine essays that I ask unanimous consent that they be inserted in the Appendix of the RECORD for the purpose of bringing home to all of us in Congress the fact that when we sometimes begin to lose faith in our country or in the things it stands for, we need only recall the fine faith of our youngsters.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WHAT IT MEANS TO BE AN AMERICAN

(By Allan Holman, of Hazleton Senior High School)

The question is frequently asked, "What does it mean to be an American?" The first thought to come to my mind when asked this question is freedom. Freedom is defined by Webster as, "possession of the rights or privileges of a citizen." In a sense the word "freedom" may be divided into four categories: freedom of speech, freedom of worship, freedom from fear, and freedom from want.

The first of the four, freedom of speech, is characterized by the words of one of the great statesmen of our country, who helped elevate the United States to its present status as the leading power of the world. Without this freedom, through which their opinions and views were expressed, I, as a citizen of the United States, would not have the opportunities for advancement and success or the pleasures I enjoy in everyday life. Freedom of speech, which gives me the authority to express my opinions as I see fit, is the first reason for my thankfulness to America. This is America to me!

Freedom of worship is the next large factor to be considered. A tangible grasp cannot be secured on life unless a person worships God sincerely and faithfully, whether he be white or colored, Christian or Jew. Freedom of religion is the rudimentary factor in the success of every American. Without it a true democracy could not survive. This privilege, to worship God freely, I cherish with my life. This is America to me!

The third condition which characterizes the American way of life is freedom from fear. The framers of the Constitution, upon which this country is governed, endowed us with this unalienable right, making my life, liberty, and happiness secure. Because of this freedom, I may have confidence in myself and my country, thereby taxing my talents to their highest level in order to keep this country and my community a superior place to live in. This is America to me!

Freedom from want is the fourth and final in this series of indispensable freedoms. Insuring my prosperity and social level, this privilege gives me the right to make a living in any legitimate way, retaining a part of my income. Although the Government has access to a percentage of my earnings, I have the privilege, through the foresight of those who created this freedom, to accumulate my acquired wealth and invest it in any lawful manner. This is America to me!

The four freedoms I have enumerated are without a doubt the basis of any democratic system of government. These four democratic principles are all equally important. The views I have related under each category may be honestly placed under the heading, America, because there could not be a United States of America, as I know it, without any one of the "four freedoms." Liberty is worth to me more than all the wealth in the world, and I will do everything within my power to live up to the expectations this country has for me as a citizen. This is America to me!

WHAT IT MEANS TO BE AN AMERICAN

(By John S. Marinka, of St. Gabriel's High School)

The wisdom of our sages and the blood of our heroes have been devoted to the attainment of our American principles. Our way of life was established by men whose insatiable desire for freedom, drove them to seek progress and prosperity across the seas. Those who came here brought with them the

best of racial, national, and religious culture. As a result we have our own "Sweet land of liberty."

Our way of life and system of government is democracy. It considers first the dignity of the individual and human nature. In the democratic view, man has intrinsic value, and this value takes primacy in human relationships. In communistic countries, democracy has the meaning dictatorship of the proletariat, while freedom means elimination or imprisonment of all who differ from the rigid decisions of dictatorship. Communism is a threat against job, home, security, and freedom of every working individual. It is a threat against our American way of life.

In America there are no dual nationalities nor diversion of people according to religion. All men are equally entitled to the free exercise of religion according to the dictates of their conscience. Be they Catholic, Protestant, or Jew, they all say, "In God we trust."

Respect for law, orderly processes of government, and ethical behavior may well be cataloged distinctly American. Through the learning and practice of sound Christian principles, true peace and prosperity prevail in industry and business. Under the basic principles and design of the Constitution we live, and by actions prove our allegiance to God and country.

There are weaknesses in our ways, for America after all, is of this earth. Racial, religious, and social distinctions are found in schools, clubs, unions, and the like. Minorities still suffer, but it is relatively easy martyrdom. There are social disorders, increase in divorce, less family life, and a dangerously low birth rate. It's about time we resurrected the standards of discipline that gave this country its rugged, stalwart honesty of purpose, determination, and achievement.

In former days, obedience to the laws of God signified obedience to the established laws of our democracy and today we sadly need a revival of this basic spirit. Conditions are far from ideal. Headliners would do well to come down from their high horses and lead the hero-worshipping youngsters on to a moral victory. Americans can make America as clean, high-minded, and progressive as they desire it.

Yet, opportunities offered by the United States cannot be found elsewhere in the world, due to her system of protective law and popular government, her standards of living and national wealth, her guaranteed freedoms and God-given resources, free schools, labor, speech, press, and ballot with sovereignty in the people.

Such is our heritage and American way of life and such it must and shall continue to be. This is what it means to be an American. With all gratitude and thankfulness to God, we can proudly say, "It's great to be an American."

WHAT IT MEANS TO BE AN AMERICAN

(By Mary Veronica North, of D. A. Harman Junior High School)

Oh, say, can you see, by the dawn's early light,
What so proudly we hailed at the twilight's last gleaming—

As the bold chords of the Star-Spangled Banner reach your ear, do you ever wonder why they send a chill up your spine or why the whole world seems to turn almost solemn with respect and reverence as Old Glory passes in review? Why does your pride swell within you as you boastfully proclaim to the world that you are an American? Just what does it mean to be an American?

Many of us do not fully realize what it really means to be an American because this privilege was, as the saying goes, handed to us on a silver platter as our birthright.

On the other hand the American who has become one through naturalization, who has known oppression, suffering, and hardship, knows full well the advantages which our great country showers upon us.

Were you to ask one of them what it means to be an American, the reply would probably be "freedom." Although it is doubtful whether he could enumerate our many freedoms for you, we all know what he means.

The equality of the richest and the poorest, the brightest and the dullest, the right to worship as one sees fit, the right of security, of freedom from want and fear—these are all the gems of democracy.

Our public schools are a striking example of the principle upon which our country is based. Here the opportunity of an education is offered to everyone regardless of sex, race, creed, or financial standing.

Since July 4, 1776, when a group of brave men signed the Declaration of Independence, the cornerstone upon which a great Nation was built, Americans have suffered by tears, sweat, and blood to maintain the government of the people, by the people, and for the people.

The words of Sir Walter Scott express beautifully the point which I have sought to express:

"Breathes there a man, with soul so dead,
Who never to himself has said,
'This is my own, my native land'."

Pier Congestion in New York City

EXTENSION OF REMARKS
OF
HON. DAVID M. POTTS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. POTTS. Mr. Speaker, under leave given to me to extend my remarks in the Appendix of the RECORD, I wish to include an item with respect to the tremendous pier congestion in New York City. This article appeared in the New York Herald Tribune of Sunday, June 15, 1947. There is no doubt that New York City is utilizing all of its pier facilities and if shipping which should go through the port of New York is to be put through the port of New York, expansion is necessary. No better natural deep-water area remains than that along the East River in the vicinity of Hunts Point in the Bronx. This is the section which has been many times referred to as the Bronx seaport. This is the area which Captain Dollar considered to be the best in and about New York City.

The people of Bronx County want their seaport, and I think it behooves the officials of New York City to get behind the Bronx Chamber of Commerce and the Bronx Board of Trade in their efforts in this connection.

SHIP COMPANIES ORGANIZE TO END PIER CONGESTION—WILL ASK MOTOR CARRIERS TO FORM BUREAU TO DEVISE SOLUTION FOR PROBLEMS

Organization of the steamship industry's share of a joint steamship-motor carrier project to relieve congestion at the city's piers is expected to be completed at a meeting Tuesday afternoon at the Maritime Exchange, 80 Broad Street.

The meeting will be devoted to choosing a negotiating committee of six steamship officials to represent the industry in talks with a similar committee of motor truck company officers. The outcome of the talks will be the organization of a central bureau to study the causes of pier congestion and attempt to work out methods of alleviating them.

The bureau will probably be given powers to enforce its recommendations. These powers are expected to be similar to those of the Association of American Railroads which can impose embargoes against ships that are tying up more than five lighters.

Since organizing on June 5, 30 steamship companies have pledged financial support to the undertaking and more are expected to join. The bureau will receive the assistance of the Maritime Association of the Port of New York and will probably have temporary offices at the Maritime Exchange. Most of the principal motor carrier companies have agreed to support the project in an effort to relieve a situation that has been immobilizing as many as 5,000 trucks on some days through waiting in long lines outside the piers.

The steamship companies have named the following officers to represent them in the project: Philip E. McIntyre, of United States Lines, as chairman; T. C. Hopkins, Funch, Edye & Co., secretary, and Morrison Pretz, Moore-McCormack Lines, Inc., treasurer. The executive committee is composed of Capt. T. J. Sartor, American South African Line; A. F. Kearney, American Export Lines; L. B. Pate, Seas Shipping Co.; J. B. Young, Barber Steamship Lines; F. A. Warner, Isthmian Lines; D. J. Nerney, International Freighting Corp.; John Gammie, State Marine Corp.; J. J. Walsh, Furness Withy, and J. E. Light, A. H. Bull & Co.

Foreign Information Bill Filibuster

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. SABATH. Mr. Speaker, I cannot help but believe that you Republicans are willfully delaying action and even are filibustering in order to bring about the defeat of the bill. You fail to realize that business and all men of good will and intentions believe that there is a great need for this legislation, and I am inclined to feel that your opposition to the bill, though unanimously reported by the Committee on Foreign Affairs, will, instead of helping you, come to plague you.

I take it for granted that very few of us in this House have time to listen to the foreign short-wave broadcasts or to pay much attention to the barrage of words showered upon us from abroad; but we do know that every country, even those friendly to us, is, due to jealousy, trying to persuade and influence our people by their propaganda to their point of view, and to justify their actions.

OTHER COUNTRIES PROPAGANDIZE

You and I know that these millions of words are, for the most part, the product of official government propaganda agencies, no matter how carefully disguised they may be.

On the other hand, almost as many words are filed every day from foreign correspondents here in the United States. Some are seasoned observers or native Americans who do give a fair picture of American life. Others are

unfortunately fanatic propagandists who distort and deliberately misunderstand and misrepresent everything they hear and see. Our great news services have been doing the job that our Government should have been doing. It is unfair to expect them to carry on an official propaganda campaign to meet the war of ideas. These great news services are, after all, private enterprises which must make money to stay in business. They cannot afford to disappoint their customers nor to write and forward material which they cannot sell. The people owe our American news services a deep debt of gratitude, but that does not mean that in this critical time we should expect them to continue to do the job which the Government ought to do.

Ideas are weapons.

Are we going to let our businessmen, our diplomatic, or official representatives, go into the world-wide struggle of ideologies unarmed?

We are sending military aid to China, to Greece, to Turkey, to our good and some not so good South American neighbors; we are arranging to maintain our air bases in the far-flung corners of the globe; we are going to keep the South Pacific Islands we tore from the grasp of the treacherous Japs.

GOVERNMENT SHOULD HAVE FACILITIES

Why then should we balk at providing our Government with the means of justifying these actions, and of assuring the people of other lands that our purposes are laudable, and intended to aid and assist in bringing about a just and lasting peace, and to promote in every way friendly relationships, political and commercial?

Even if this program should cost $30,000,000 it will be an exceedingly well-paying investment in public relations, as it will greatly aid in bringing about better understanding and an earlier peace.

I feel personally that it will help to offset the many rash statements on the floor as well as of the publicists and radio commentators who are working overtime to leave the false impression the world over, that, due to our overwhelming power and might and size, we are girding for war, which is the farthest from the thoughts of 90 percent of the American people.

UNFRIENDLY WRITERS MISREPRESENT OUR AIMS

We believe that we are right; but when our warlike and aggressive acts are reported to the frightened, hungry, war-weary people of the world by unfriendly writers, without any explanation of why we are doing these things, I fear we are making enemies.

I want to go back to October 28 of last year when Philip D. Reed, chairman of the General Electric Co. and chairman of the United States Associates of the International Chamber of Commerce, explained to the members of the New York Financial Writers Association how a program like this could reduce the hazards of war and thus reduce national defense costs.

INSURANCE AGAINST WAR

The Republican Party is committed to reducing the budget regardless of whom it hurts. Even so, the United States is spending almost half of its income in insurance against war; that is, for the armed services and for development of atomic energy, and in pensions and disability compensation for which the cost is growing by leaps and bounds.

Would it not be foolhardy and short-sighted to balk now at the expenditure of just a few million dollars for a program which might enable us to reduce our payments for past and future wars by eliminating the need for new and more terrible physical weapons?

EXCERPTS FROM REED SPEECH

I shall insert at this point, Mr. Speaker, some of the more trenchant paragraphs from Mr. Reed's speech.

Mr. Reed said in part:

Let me say at the outside that I believe America must maintain a strong, modern military machine. We must not only be formidable—and, if possible, the most formidable—in land, sea, and air forces but we must be known in the capitals of the world to be in this commanding position.

The dreadful thing about this insurance is that it costs so much. During the fiscal year ending June 30, 1947, the American people will pay more than 10 percent of the total national income and roughly 50 percent of the Federal Government's total tax receipts for the support and development of our Army, Navy, and Air Force. This is the premium we are paying on our insurance policy against war. If you and I were using half our income to pay our fire, automobile, and accident insurance premiums, we would be giving a great deal of thought and putting a great deal of heat on our Government to adopt measures which would reduce fire, automobile, and accident hazards and thereby make possible a substantial reduction in the cost of that insurance. This, precisely, is what we must do to reduce the cost of our war insurance. For only as the risk or hazard of international warfare is reduced will it be possible to cut the terrific premium on our war insurance policy to more reasonable levels.

Briefly stated, the three major tools or instruments for reducing the hazards of war are: trade, travel, and the facts. Let me enlarge a little on each of these items.

TRADE

The arguments for expanding world trade both in the interest of high employment and better living standards here at home and in foreign countries are well known to you. * * * I am profoundly convinced that a far larger volume of foreign trade—and this means imports as well as exports—would be good for America, good for America as a whole, not simply for those who would profit directly from increased exports or imports.

Today national trading areas are separated from each other by a complex and staggering number of obstacles and barriers to the natural, easy flow of goods and services. They include tariffs, monetary restrictions, exchange controls, import and export licenses and quotas, and endless formalities and red tape encumbering or prohibiting the movement of materials and products across national boundaries. Many, if not most, of them have come into being during the past 25 years. And they stand today as a veritable fortification against exchange. * * *

TRAVEL

If there is any more potent instrument for building international understanding and reducing the risk of war than travel, I have failed to discover it. And on this subject I can give direct testimony based on my experience in London during the 2½ war years I spent there.

THE FACTS

This brings me, gentlemen, to the third item in our triumvirate for reducing the cost of insurance against another war. Intelligence, information, communications—call it what you will—the essential objective is to provide means of currently and continuously exchanging the facts with other countries of the world. Trade and travel are themselves important means of exchanging intelligence or information with our neighbors abroad.

What I am concerned with under this heading, however, are the other well-known media for communicating information about our country to every corner of the earth to the end that a true picture of America, her way of life, the interests and activities of her people, her current events, her accomplishments, and her failures, shall be faithfully depicted and understood everywhere.

It is important that this running story be well and fully told. The very fact that we are today the greatest economic power on earth and thereby have, whether we like it or not, a responsibility for leadership, requires that our aims, our policies, and our objectives be made known to other nations. Anyone in a position of great power will be feared, suspected, and perhaps ganged-up on if he fails to demonstrate his good intentions or to win the confidence and respect of the community.

The urgency and importance of getting this job organized and under way is emphasized by the fact that other powerful governments, notably Russia and her satellite countries, are continuously putting out false and misleading statements about us, our activities, and our objectives. These statements are designed to arouse fear and resentment toward us and to attract other countries into the Russian orbit.

The job of telling adequately and truthfully the story of America to the rest of the world is not a simple one. It is a mixed task in which both Government and private agencies must play important roles.

I also wish to insert an editorial appearing in the Washington Post of June 18, as follows:

SOTTO VOCE

The fate that seems to be in store for the State Department foreign-information program is nothing short of disastrous. By a series of pettifogging delays the unrepentant isolationists in the House have prevented the Mundt bill from reaching the floor. This is the bill that would continue after July 1 the short-wave broadcasts, the American libraries abroad, and the other informational and educational services which seek to present a true picture of this country. The strategy of the House diehards is to kill the program entirely by talking it to death. The disturbing part is that now the Senate Republican leadership, which should know better, apparently has thrown in the towel. Influential GOP Senators are reported to have consented to a compromise which would narrow the information activities to a constricted broadcasting program with an appropriation of only $6,000,000 instead of the thirty-four million originally asked.

Important as are the overseas broadcasts in themselves, their consideration should not exclude other significant aspects of the foreign-information program. If the present congressional tack continues, for example, it will force the closing of our libraries abroad. In many capitals these libraries constitute virtually the only source of accurate factual information about the United States. The libraries are fountains of Americana. They contain reference books, periodicals, copies of official publications. They

are becoming increasingly popular. Another essential which congressional parsimony would eliminate is the distribution of the texts of important American speeches and policy statements, texts which otherwise would not be available in many areas of the world. These activities in making the truth known about America add up to a composite package of the most effective advertising we could have.

The issue now becomes a matter of principle. Either we present the facts, along the line established by the Mundt bill, or we leave it to the Kremlin to explain our motives. No American who knows the diet of falsehood dished out by Pravda can want that. But we may rest assured that if we do not continue to tell our story, no one else will do it for us.

The Voice of the Vatican

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann from the Washington Post:

THE VOICE OF THE VATICAN
(By Walter Lippmann)

Twice within the past week the newspaper of the Vatican, L'Osservatore Romano, has discussed the relations between the United States and the Soviet Union. The full texts of these two editorials are not yet available over here. But excerpts are available and there are news reports from Rome which state that the editorials were written by the chief editor, Count Guiseppe della Torre, at the suggestion of Pope Pius, and that "in Vatican circles" the arguments were said "to reflect the Pope's anxiety over the increasing tenseness between Washington and Moscow."

The significance of these editorials lies in the fact that despite the traditionally strong anti-Communist stand of the Vatican, they take a position of complete impartiality and realism in the Russian-American conflict, admonish both Moscow and Washington to be more objective, to avoid an ideological struggle which could lead only to war, and to seek practical compromises.

The warning and the advice from the Vatican came at a time when Mr. Bevin and M. Bidault have been meeting in Paris in response to Secretary Marshall's speech at Harvard. Their first concern has been with an aspect of the question which the Vatican's newspaper is discussing. The immediate question for them is whether they can cooperate with us and not break irreparably with Russia. It is most important that all who make and administer our foreign policy, and that all who discuss it, should see clearly this dilemma of the Europeans—which is the occasion for the Vatican's warning and is a principal subject matter in the Bevin-Bidault conversations.

All the leading countries of Europe, including many within the Russian orbit, are deeply opposed to the expansion and the domination of Russia. But none of them is prepared to accept American leadership in an anti-Communist coalition. And they have come to believe that this is the intent of the so-called Truman doctrine, and of its progenitor, Mr. Churchill's Fulton speech.

During the past year reaction and resistance have been growing in Europe to any policy which would make Europe the stakes of Soviet-American competition, and the Continent the battlefield of an ideological and an international war.

We have been, I believe, curiously blind to this phenomenon, and have failed to appreciate its historical importance. The fact is that Europe is rising again, and is determined and is destined to align itself neither with Russia as she is now nor with America, as we have in this past year appeared to be. This is not, as so many of us imagine, the opinion exclusively of the left and of the fellow travelers. The idea that the European states, including Britain, should mediate between Russia and America and prevent a war, was put forward for the British Commonwealth and Empire by Prime Minister Smuts last June, by General de Gaulle in France last July, in effect by Mr. Churchill in his more recent speeches about the United States of Europe, and now by the Vatican newspaper. When President Truman was in Ottawa recently, he seems to have been talked to on this subject by the Canadians.

It goes without saying that on the continent almost any leader of a labor party, a Socialist Party, or a popular Catholic Party, and of an ordinary liberal party, dreads and resists being placed in the position where in order to retain the good will of this country he must be uncompromising and irreconcilable with the Soviets. For the Europeans do not wish to be ground between the upper and the nether millstones.

The question now is whether the Marshall proposals are a revision of the Truman doctrine. To answer that question sincerely would greatly improve the likelihood of their success abroad. Yet it must be admitted that a sincere answer may cause some embarrassment within the administration here at home.

The fact is that the Truman doctrine was a hasty and ill-considered improvisation, designed to meet an emergency for which the State Department was not prepared, and propounded in a form which, whatever its effects elsewhere, was deemed most likely to win quick support in Congress. The Marshall plan is a considered attempt to supersede the crudities and the unworkable elements of the Truman doctrine—and to place this country behind a constructive settlement rather than at the head of an ideological crusade.

The sooner we admit this, the more frankly we say it, the sooner and the more surely we shall regain what we have been losing—the confidence of the great masses of the people who are too civilized and too proud to be the satellites of Russia or the clients of the United States.

Neither the exhibition of our military power nor the spending of money can restore that popular confidence. We shall have also to prove to mankind that our influence and power are the instruments of statesmanship, which seeks peace, and the rehabilitation of this shattered world, and the settlement of the secular issues that divide it.

The Mundt Bill Versus Previous "Voice" Legislation

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. JUDD. Mr. Speaker, during the debate on H. R. 3342, the Mundt bill, establishing the Office of Information and Educational Exchange, it became apparant that many Members believed the Committee on Foreign Affairs was recommending a bill which gave the Department of State broader grants of power in this field than it has had heretofore. The reverse is the truth.

As evidence, I include with my remarks the portion of Public Law 490, Seventy-ninth Congress, the Department of State Appropriation Act, 1947, which provides for the program for this year substantially as it has been carried on in Latin America since 1939. It will be seen at once that many of the provisions of H. R. 3342 are the same as those heretofore prepared and approved by the Committee on Appropriations and the Congress. H. R. 3342 makes no additional or broader grants of power, except that it authorizes the program in the Eastern as well as the Western Hemisphere. On the contrary, the bill places many important limitations and restrictions on the scope and nature of the program to be carried on in all countries hereafter, and it contains for the first time strict safeguards as to reciprocity, loyalty of personnel, use of private agencies, deportations, termination by Congress if it desires, and so forth.

The overwhelming testimony of those Americans who have observed the previous program first hand is that even with admitted mistakes and some bad personnel, the net result has been very beneficial to the United States in many countries. H. R. 3342 authorizes a more carefully defined and a much more strictly controlled program. After careful study, I am convinced it will have correspondingly increased effectiveness and value.

The text referred to follows:

COOPERATION WITH THE AMERICAN REPUBLICS

For all expenses necessary to enable the Secretary of State to meet the obligations of the United States under the Convention for the Promotion of Inter-American Cultural Relations between the United States and the other American Republics, signed at Buenos Aires, December 23, 1936, and to carry out the purposes of the act entitled "An act to authorize the President to render closer and more effective the relationship between the American Republics," approved August 9, 1939, and to supplement appropriations available for carrying out other provisions of law authorizing related activities, including the establishment and operation of agricultural and other experiment and demonstration stations in other American countries, on land acquired by gift or lease for the duration of the experiments and demonstrations, and construction of necessary buildings thereon; such expenses to include personal services in the District of Columbia; not to exceed $150,000 for printing and binding; stenographic reporting, translating and other services by contract, without regard to section 3709 of the Revised Statutes (41 U. S. C. 5); not to exceed $15,000 for entertainment; not to exceed $5,000 for expenses of attendance at meetings or conventions of societies and associations concerned with the furtherance of the purposes hereof; and, under such regulations as the Secretary of State may prescribe, tuition, compensation, allowances and enrollment, laboratory, insurance, and other fees incident to training, including traveling expenses in the United States and abroad in accordance with the Standardized Government Travel Regulations and the act of June 3, 1926, as amended, of educational, professional, and artistic leaders, and professors, students, internes, and persons possessing special scientific or other technical qualifications, who are citizens of the United States

or the other American Republics: *Provided*, That the Secretary of State is authorized under such regulations as he may adopt, to pay the actual transportation expenses and not to exceed $10 per diem in lieu of subsistence and other expenses, of citizens of the other American Republics while traveling in the Western Hemisphere, without regard to the Standardized Government Travel Regulations, and to make advances of funds notwithstanding section 3648 of the Revised Statutes; traveling expenses of members of advisory committees in accordance with section 2 of said act of August 9, 1939 (22 U. S. C. 249a); purchase (not to exceed six passenger automobiles), hire, maintenance, operation, and repair of motor-propelled and animal-drawn passenger-carrying vehicles; purchase of books and periodicals; rental of halls and boats; and purchase, rental and repair of microfilming equipment and supplies, and colored photographic enlargements, $5,375,000; and the Secretary of State, or such official as he may designate is hereby authorized, in his discretion, and, subject to the approval of the President, to transfer from this appropriation to other departments, agencies, and independent establishments of the Government for expenditure in the United States and in the other American Republics any part of this amount for direct expenditures by such department or independent establishment for the purposes of this appropriation and any such expenditures may be made under the specific authority herein contained or under the authority governing the activities of the department, agency, or independent establishment to which amounts are transferred: *Provided further*, That not to exceed $100,000 of this appropriation shall be available until June 30, 1948: *Provided further*, That this appropriation shall be available to make contracts with, and grants of money or property to, nonprofit institutions in the United States and the other American Republics, including the distribution of materials and other services in the fields of education and travel, arts and sciences, publications, the radio, the press, and the cinema.

Agricultural Appropriations

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution of the Legislature of the State of Alabama:

Whereas the huge reduction in the 1947 agricultural-conservation program funds from $301,720,000 to $165,614,290, and the reduction in other agricultural appropriations, recommended by the House Appropriations Committee in Washington, has halted practically all Production and Marketing Administration (AAA) activities in Alabama. Preliminary estimates recently made by PMA show that funds already obligated will equal or exceed the $165,614,290 allowable by the Appropriations Committee recommendation; and

Whereas much progress has been made in conservation during the past 9 years with the aid of AAA; practically one-half of Alabama farmers are now planting winter cover crops; terracing and other soil-conservation work is being carried on with great benefit to Alabama and the Nation; and

Whereas there are now about 65,000 farmers in Alabama cooperating with and being directly benefited by this program; and indirect benefits are being derived by all the people of Alabama; and

Whereas the conservation needs of Alabama are far in excess of what are now being met; we believe it is the responsibility of society to see that our soil resources are maintained and improved for future generations; and

Whereas the proposed reduction in agricultural appropriations threatens to wreck the school-lunch program in Alabama unless the State greatly increases its funds of matching Federal money; and funds will be denied for farm tenant loans to thousands of Alabama veterans, and small farmers under the Bankhead-Jones Farm Tenant Purchase Act; and

Whereas we believe the farmers will be forced to exploit and drain the soil fertility if the agricultural-conservation program is curtailed; much heretofore accomplished will be lost: Now, therefore, be it

Resolved by the State Senate of Alabama (the House of Representatives concurring):

1. That the Congress of the United States be most respectfully urged to continue and not to reduce the appropriations for the United States Department of Agriculture to carry on the agricultural-conservation program and other programs being put on by the Agriculture Department.

2. That the United States Senators, Hon. LISTER HILL and Hon. JOHN SPARKMAN, and our Representatives in Congress, be asked to support the agricultural-conservation program and to vote for and to lend their support for the continuance of the annual appropriation of $301,720,000, and other agricultural appropriations vital to the people of Alabama.

3. That the secretary of state of Alabama be directed to transmit duly certified copies of this memorial to the President of the United States, chairmen of the United States Senate and House Committees on Agriculture, the United States Senate and House Committees on Appropriations, the Secretary of Agriculture in Washington, and to each Member of our congressional delegation.

Approved June 13, 1947.

The Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. ROONEY. Mr. Speaker, under permission granted me by the House today, I include in the RECORD the two following editorials published in the Brooklyn Eagle, the first on June 17, 1947, following President Truman's veto of the so-called tax-reduction bill; and the second on June 18, 1947, following the action of the House in sustaining that veto:

[From the Brooklyn Eagle of June 17, 1947]

PRESIDENT'S VETO OF TAX BILL WISE IN FACE OF HUGE DEBT

The reasons which President Truman offers for his disapproval of a bill to reduce individual income-tax payments cannot effectively be refuted. They have their origin in the requirements of a sound national economy and are designed to promote an orderly return to normal conditions which will make possible tax reductions without danger to economic stability.

Politically, the effects of President Truman's veto of the tax-reduction bill may be harmful. The relief which it provided would have been experienced by millions of Americans who have borne a great load of taxation through the war years and who have hoped that peace would bring an easing of the burden. They will be disappointed. Those who are fair-minded, however, can hardly question the logic of the President's reasoning.

At present the United States is carrying a war debt which must be reduced if it is not to bring danger of economic disaster in later years. It must be slashed drastically as quickly as possible, not whittled away by barely perceptible degrees as the years go by. The most advantageous time to reduce the debt is when business is good, money is plentiful, and wages are high. Nothing can be accomplished toward this purpose once the trend has turned and a recession becomes either a fear or an actuality.

At the risk of inviting the political disfavor of both business interests and workers who would like the pressure of high taxation eased, President Truman has followed a course of practical realism. If the national debt is to be reduced, the time for such action is when unemployment is at a minimum and the national income is close to record levels.

The arguments for the tax-reduction bill have never been very impressive. It has been maintained that tax relief would stimulate business. But business does not require stimulation. While it is true that the purchasing power of certain elements of the population has been impaired, the remedy lies, as the President insists, in "wise policies and improved practices of business and labor," not in governmental intervention.

Eventually, and not in the distant future, there will be a proper and a safe time for tax reductions. This will be when inflationary pressures have been eased, when commitments abroad which involve an investment in world peace are less exacting, when the national debt is lower, and when the whole future can be envisioned in clearer perspective.

When this transition is complete, or further advanced, there must be a downward revision in taxes. But it must be, as the President insists, on an equitable basis. The bill vetoed by the President is both untimely and unfair. Its obvious weaknesses, emphasized so impressively by the President, would seem to preclude the possibility of the passage over his rejection.

[From the Brooklyn Eagle of June 18, 1947]

VETO SUSTAINER A TRUMAN VICTORY

When Congress voted to give tax cuts precedence over debt reduction it followed a course which would have brought a great deal of satisfaction to many Americans and would have strengthened the party politically in anticipation of 1948. About 48,000,000 Americans would have benefited to the extent of more than $4,000,000,000 if the Republican tax reduction bill had become law. Failure of the House to override President Truman's veto ends insofar as this year is concerned all hope of lower taxes.

This failure, although only by the narrow margin of two votes, revealed a surprising weakness in the forces supporting the bill. While there was a disposition to concede that the bill could not be passed in the Senate over its rejection by the President, no such difficulty was expected in the House, where its supporters were believed to present a solid front.

President Truman is accordingly in a position to claim a substantial victory over his opponents in Congress. It is one which is all the more creditable to him because it can hardly bring anything in the nature of political benefit. The voters will be reminded next fall that it was a Democratic President, not a Republican Congress, who stood in the way of tax relief.

Among those who are concerned for the stability of the Nation's economic structure, however, rather than personal financial advantage, there will be willingness to concede

that the President has acted wisely and that the House has shown creditable restraint in sustaining him.

President Truman has stated repeatedly that he felt sound finance called for the avoidance of tax cuts until fiscal, budget, and debt uncertainties are cleared away. When profits are at an all-time high and the national debt was never higher taxes should be maintained and the debt reduced. And when tax benefits are granted they should go principally to the lower income classes, whose purchasing power is impaired by high prices.

Strange Doings in State Department

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. ELLIS. Mr. Speaker, it appears from the news items in the press during the past week that the administration now is really going into high gear with European spending. It is evident that the State Department has made its decision and now is beginning the process of selling the American people on the idea that it is our duty to take over and support the whole of Europe for the next decade.

The following is an editorial from the Washington Times-Herald of June 19, which gives you an idea of what is going on:

STRANGE DOINGS IN STATE

Secretary and ex-Gen. George C. Marshall's State Department has recently developed a most peculiar looking method of merchandising the Truman-Marshall plan for restoring Europe or as much of Europe as Russia doesn't grab first.

Whether Mr. Marshall himself dreamed up this scheme, or whether he is even aware of it in its entirety, we don't know. Anyway, here is how it works:

State Department invitations are sent out at intervals to various people to come to Washington and sit in on meetings described as off the record and extremely important. These people are lady and gentlemen leaders of various church, patriotic and lodge groups in their communities.

Naturally they are flattered, and naturally they fall over their feet to get to Washington on time. At the meetings, under State Department auspices, they listen to hush-hush talks by key Government men, from Marshall down.

The gist of these talks is that it is vitally important for the guests to go home and spread among their fellow citizens the Truman-Marshall gospel that the world or a large part of it has to be saved from Joe Stalin at no matter what cost to the United States taxpayer.

No real news, we understand, is dealt out at these sessions. But the mysterious-urgency atmosphere is as thick as Mahatma Henry Wallace's hide; and to make it all the more impressive, reporters are barred, and the guests are warned not to talk to the press afterward.

Just what in the hell does this mean, anyway?

Here is a scheme which will affect every American for years to come, perhaps even to the point of involving us all in a war with Russia. Yet the State Department is bypassing the press as regards stating the administration's arguments for the Truman-Marshall plans.

Why? What is Truman, or Marshall, or somebody, afraid of? Or if fear or something isn't behind this strange procedure, what is behind it?

The whole business reminds us of pre-Pearl Harbor times, when Roosevelt was shouting peace with his mouth while trying to provoke a German attack on us with his right hand and a Jap attack with his left. Like Harry Hopkins, he felt that the American people were "too damn dumb to understand" what was good for them.

Most Americans, we think, are still doing their best to hold Secretary of State Marshall in high esteem. The Secretary will not help them to do that by playing along with the kid-the-people great brainers who still infest the Truman administration.

Mr. Speaker, I admonish my colleagues to be alert on this subject and inform the people throughout the Nation in regard to this new insane proposal on the part of the administration.

Hoover's Plan for Germany

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 18, 1947

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Washington Post recently. It is most interesting and enlightening. The mad rush for the rebuilding of Germany has many Americans deeply disturbed. The article follows:

HOOVER'S PLAN FOR GERMANY

After reading Mr. Herbert Hoover's letter to Chairman TABER of the House Appropriations Committee, published May 27, regarding the treatment of Germany, I am convinced that if Mr. Hoover's recommendations were carried out, the structure of peace would be built upon quicksand.

The sum and substance of Mr. Hoover's latest proposals is that the Allies must ignore the lessons learned from our failure to protect peace after World War I and to discard the economic controls agreed upon at the meetings of the Big Three. The Allies will be repeating the mistakes made in 1919, if Mr. Hoover's views are made official policy.

The Allies paid bitterly during World War II for not having learned the nature of such economic controls and for not having imposed them upon Germany. It is apparent that Mr. Hoover would repeat the very same blunders again when he states "It is urgent that we at once revise the reparations and industrial demilitarization policies imposed * * * by various Allied agreements."

Mr. Hoover conveniently forgets the fact that the whole aggregate of economic and industrial power, left intact after World War I, enabled the Germans to experiment and plan for the future production of weapons of war. When Mr. Hoover now calls for the elimination of the disarmament program, he not only approves the present failure of military disarmament (in the British zone, for instance, only 7 percent of the tank, gun, and other military factors have been eliminated thus far) but in fact, is in favor of a policy to leave the tremendous German war potential intact.

Significantly, Mr. Hoover also ignores the entire problem of atomic research which would imply that Germany should be permitted to engage in such work.

The implementation of Mr. Hoover's recommendations would make Germany the greatest industrial power in Europe. When Mr. Hoover advocates the scrapping of the reparations program to which our country is committed, he is striking an irreparable blow at the economic rehabilitation of Germany's victims. Thus, Mr. Hoover completely ignores the plight of the occupied countries which were deliberately bled white, in order to perpetuate Germany's economic domination of Europe.

Mr. Hoover, in discussing reparations, omits pertinent facts which the American people should know. He failed to tell Representative TABER and the public that, out of 1,557 plants which have been earmarked for reparations, only 6 have been actually delivered to the victims of German aggression. Nor does he reveal the sabotage of reparations deliveries by the Germans and the failure of the Allies to prevent it. Although Mr. Hoover knows the serious conditions of French industry, due to war devastation and the shortage of coal, he complains that "we are supplying France with Ruhr coal which could be used in the manufacture of exports from Germany with which to pay for food."

The American people should know the real facts which Mr. Hoover has chosen to bypass:

1. Besides the fact that France is not getting reparations from the Ruhr, she must pay in dollars or in gold for the small quantity of coal she gets from Germany. These dollars are being used by the AMG to pay for food imported to Germany—contrary to Mr. Hoover's implications.

2. France has received only 160,000 tons of coal per month from Germany for the first quarter of 1947, although she must import 10 times as much to balance her economy.

3. At present, Germany retains 79 percent of the coal produced in the Ruhr and only 21 percent is sold to all her neighbors, against dollar payment.

4. The present German consumption of coal per capita, per year, is greater than in France.

5. German coal which is a major factor in European industry is being deliberately withheld in order to use it as a political and economic weapon against Germany's neighbors.

Though Mr. Hoover was supposed to survey the German situation from the point of view of our security requirements, he has presented a distorted picture. Because we listened to Herbert Hoover after World War I, we paid in blood, sweat, and tears. Must we pay that price again?

Secretary, Society for the Prevention of World War III, Inc.
NEW YORK.

Explaining America Abroad

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. KEATING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

EXPLAINING AMERICA ABROAD

Despite Secretary Marshall's earnest appeal, the State Department's cultural and informational program is still in danger of being largely suppressed. Its troubles began when the House eliminated the entire $34,000,000 appropriation for this purpose on the ground that the activities had not been authorized. To eliminate this objection Rep-

resentative MUNDT, of South Dakota, introduced an enabling bill, which with some amendments was unanimously approved by the House Foreign Affairs Committee on May 21. This bill, if passed, would naturally be followed by an appropriation, though perhaps a smaller one than the State Department asked for. Its consideration has been repeatedly postponed and it has not yet passed the House. Meanwhile Senator BALL, of Minnesota, has asserted that the Senate will cut to $6,000,000 the sum of about $19,000,000 asked, mainly for the radio programs known as the Voice of America. Such a cut would keep us out of Russia, where otherwise no American voice will be heard.

If the Senate goes this far, we cannot be hopeful about the rest of the cultural and informational program—the highly important interchange of "sudents, trainees, teachers, guest instructors, professors, and leaders in fields of specialized knowledge or skill"; the interchange and translation of books and periodicals; the maintenance of American libraries abroad and assistance to schools, libraries, and community centers in other countries. Hope for favorable action on the Mundt bill in both House and Senate, and for an adequate appropriation may rest on a dawning perception that, if the Marshall plan for systematizing our aid to foreign countries is to succeed, we shall have to continue to explain ourselves to people in those countries. We might save a few millions by not explaining ourselves and in so doing vitiate the results of an investment of billions.

NAM's Free Enterprise—Not American, Not Christian, Not Too Free

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, June 19 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article, NAM's Free Enterprise—Not American, Not Christian, Not Too Free, written by Rev. Benjamin L. Masse. This thoughtful, scholarly, and penetrating article appeared in the Catholic magazine America for May 31, 1947.

The National Association of Manufacturers has appeared prominently in the public press, claiming credit for having exerted such influence on the citizens of this Nation and their elected representatives in the Congress as to result in the untimely killing off of price control last year and forcing the passage of the labor bill now on the President's desk. Such an institution of big business pressure, spending over $3,000,000 a year on propaganda of this kind, does so, according to its own widely advertised statements, in the interest of the "American system of free enterprise."

Now, I for one believe strongly in a system of free competitive business enterprise, as does Father Masse, the author of the article appearing in "America." But when he examines the two weighty volumes describing NAM's conception of the American individual enterprise system, he finds that NAM indulges in a dangerous line of propaganda, petty prejudice and careless scholarship, in defending an antisocial, anti-Christian philosophy of economics, identified by NAM with American capitalism.

I commend the entire article to the Members of the Senate as important in determining the weight to be given NAM's lobbying and propaganda activities in the interest of our system of free competitive enterprise.

There being no objection, the article was ordered to be printed in the RECORD as follows:

NAM'S FREE ENTERPRISE

(By Benjamin L. Masse)

For a long time the writer has wondered what exactly the National Association of Manufacturers means by the popular phrase, "American system of free enterprise." He has had his suspicions, but only recently, with the appearance of an elaborate book, have these suspicions been confirmed.

Six years ago the NAM created an Economic Principles Commission, composed of 7 industrialists and 8 economists, and ordered it to make a study of the American economic system. The fruits of that study have now been published in two weighty but attractive volumes. (The American Individual Enterprise System, 2 vols., McGraw-Hill, $10.) Although NAM Board Chairman Ira Mosher explains in a foreword that the views expressed by the authors are not necessarily those of the NAM, it is safe to assume fairly general agreement. Otherwise the book would scarcely have been published under NAM auspices. We can regard it, then, as a representative account of the NAM outlook on the American economy.

As seen by the authors, the "American Individual Enterprise System" is first and foremost American. "We could not have our present system of production and distribution without our present system of government," they affirm, "nor our present system of government without our present system of business." The system was not imported from abroad; it is uniquely our own; it marks a new departure in economics.

No formal definition of the "American Individual Enterprise System," we are told, can do justice to all its qualities. It regards the individual as supreme; sharply limits the economic function of the state; recognizes competition as "both the guardian of efficiency and the guarantor of progress"; protects private property and the right of the individual, within certain limitations, to exchange his goods and services as he sees fit; consecrates "hope of reward" and "fear of loss" as energizing principles constantly urging the individual to his maximum capacity; deprecates and discourages governmental paternalism.

In more technical terms the authors describe the system as "closely identified with the economic doctrine of laissez faire." With approval they quote the following summary of that doctrine by Edwin G. Nourse:

"1. As to government, let its activities in the field of business be limited to the very minimum necessary for the maintenance of property rights and peaceful life.

"2. As to business, let the system of private capitalism grow naturally under free enterprise, and the law of supply and demand will operate automatically to establish the right prices. Commodity and service prices will reflect the lower costs resulting from progress in technique and organization. As for wages, they will reflect the productivity of each worker. Economic activity will be guided by such prices into the most productive channels and thus promote to the fullest possible extent the national prosperity. These principles were conceived as embodying universal truth capable of achieving 'the wealth of nations' and the welfare of the masses."

The NAM writers add that laissez faire does not mean unrestricted freedom. It does not prohibit the Government from passing "safety and health legislation," or from enacting laws to protect the public against fraud. It simply means "that there should be no legislative interference with the competitive price system; that special privileges should be prevented, and reliance should be put upon competition."

This idea the authors develop more fully further on. Adverting to the fact that economic activities are undertaken for the most part for "selfish gain," and that individuals are motivated not by considerations of the general welfare but by what will benefit them most, they concede the necessity for some regulation. But under the American system this regulation is provided mostly by competition. Distinguishing two types of regulation, by government and by competition, the authors write:

"Of these two types of regulation, competition is by all odds the more important. In fact, it is safe to say that competition is the real 'regulator' of our economy, and so-called Government regulation is, or at least should be, nothing more than an effort to strengthen and make more effective the regulation of competition. In other words, freedom of competition truly is one of the basic principles of the individual enterprise system."

Although some errors have been made, "such has been the philosophy," we are told, "under which as a Nation we have grown great." This is the system which "has given amazing results, more amazing results than any other system or economic philosophy yet devised by man."

Such, then, in broad outline is the system to the explanation and defense of which these volumes are dedicated. To the reader who is acquainted with elementary economics, who has followed the controversies of the past 15 years and read the publications of the NAM and the works of such economists as Willford I. King, Rufus S. Tucker, and Ludwig von Mises, it is scarcely necessary to catalog and describe the contents of this work. It is a mélange of elementary economics (clearly written but not superior to a dozen textbooks in current use), of applications of laissez-faire principles to wages, prices, profits, etc., of economic controversy (some of which are competent, scholarly, and respectable), of apologies for big business. It includes also some dubious assumptions, bad scholarship, propaganda, and special pleading.

I am aware that this résumé may sound somewhat ill-tempered and ungracious. Frankly, it is. When the most powerful business organization in the country, at a time of world crisis, lavishly subsidizes a second-rate piece of work, a piece of work which reflect the narrow viewpoint of the most reactionary economists in the country and the prejudices of our least enlightened industrialists, a piece of work which defends economic principles that are in conflict with the Christian conscience and have been repudiated by responsible religious authority, Catholic, Protestant, and Jewish, I cannot find the patience either to take it seriously or to treat it urbanely. At a time when the institution of private property, the democratic system of government, the freedom and dignity of the individual are under savage attack from the most ruthless and dangerous enemy in the history of Christian civilization, I find it impossible to deal gently with a book, coming from supposedly friendly sources, which betrays the good cause. And that is exactly what the American individual enterprise system succeeds in doing.

So that the reader may understand my reaction, I shall offer a few exhibits.

Let us consider in the first place the bald assertion that our economic system is something entirely original with us and unique in

all the world. The fact is, of course, that laissez-faire economics, like a lot of other things, was imported lock, stock, and barrel from Great Britain. The great bible of the capitalistic system, The Wealth of Nations, was published in 1776, the year of the American Declaration of Independence, and was written by Adam Smith, a professor at the University of Glasgow. His theories, and those of his British successors—David Ricardo, James Mill, and Nassau Senior—were discussed in American academic circles as early as the first quarter of the nineteenth century, if not before. For more than a half century after the United States was established as a Nation, our economic literature was almost entirely a discussion and application of the writing of British economists.

This constant British influence on American economic thought, which continues to this day, was intensified during the two decades between 1870 and 1890, when Herbert Spencer became the darling of big business, the inspiration of university presidents, and even the mentor of the Supreme Court. In an opinion dissenting from the Court's ruling in *Lochner* v. *New York*, a decision which held unconstitutional a State law fixing a maximum 10-hour day for bakers, Justice Holmes adverted to Spencer's influence on the Court. Wrote the judge:

"This case is decided upon an economic theory which a large part of the country does not entertain. * * * The liberty of the citizen to do as he likes so long as he does not interfere with the liberty of others to do the same, which has been a shibboleth for some well-known writers, is interfered with by school laws, by the post office, by every State or municipal institution which takes his money for purposes thought desirable, whether he likes it or not. The fourteenth amendment does not enact Mr. Herbert Spencer's Social Statics."

If the NAM should undertake a study of the influence of Herbert Spencer on the thinking of American industrialists, it would find in his Social Statics and Man versus the State, wherein Darwinian evolution was made to support laissez-faire economics, the seedbed of much business oratory. In this superficial English writer it might even discover one of the prime sources of its own propaganda for the American way.

For another example of the curious "scholarship" which occurs in The American Individual Enterprise System I cite the treatment accorded the quotation from Edwin G. Nourse printed above. The quotation occurs in the text in such a way that the reader naturally gets the impression that Dr. Nourse, who is Chairman of the President's Council of Economic Advisers, concurs in the theory which the authors are expounding. To make matters worse, there is no reference to the source from which the excerpt is taken. Now the fact is that the quoted passage occurs on page 34 of Dr. Nourse's Price Making in a Democracy, in the midst of a chapter in which the writer is criticizing American businessmen, including some NAM bigwigs, for their careless and unrealistic use of such slogans as "Free enterprise," "Capitalistic system," "American way," etc. Far from approving the theory of laissez-faire economics as advanced in the NAM book, Dr. Nourse, in the passage cited, is merely defining it in order to show how inadequately it accords with the economic realities of our day. The whole chapter from which it is taken is an effective criticism of the chapter in this book which it is used to confirm. Such writing is at best careless and slipshod; at worst it is dishonest.

A third example of deficiency in scholarship is the prejudiced treatment of organized labor. All forms of union security are condemned as un-American hindrances to the operation of the individual enterprise system. The condemnation is dogmatic and universal. There is, apparently, not a single intelligent argument on the other side, as though competent moralists and economists had not often defended union security.

The wage policies of organized labor, especially those of the American Federation of Labor, are given similar summary treatment. The A. F. of L., the authors argue triumphantly, has been contradictory and inconsistent. It demanded a living wage in 1907, but in 1922, because living costs were declining, abandoned this position and insisted that wages be geared to the increasing productivity of the worker. Should the circumstances be reversed, they charge, and productivity decline while living costs rise, labor economists would in all probability return to the now abandoned advocacy of a living wage. In other words, the wage policies of organized labor are based on nothing more scientific than a kind of irresponsible expediency.

Although this cavalier treatment is exasperating to any fair-minded reader, it is not without its amusing side. The very evidence which the NAM writers cite and from which they argue, shows that the A. F. of L. did not abandon its insistence on a living wage when it emphasized productivity in 1922. Here is the exact text of the A. F. of L. statement:

"A wage based solely upon cost of living or subsistence or a saving wage bears no direct relation to production or service rendered. However, a wage based upon productivity or service must accept as an initial standard a wage based upon human needs and aspirations * * * without reference to the other considerations that enter into a wage which compensates for productivity or service."

It will be immediately obvious that the A. F. of L., far from denying its stand in 1907 on the living wage, is here reemphasizing it and relating it to the wage based on other factors, of which productivity is one. It is merely stating that a wage rate tied to productivity and service must not disregard the fundamental criterion of a just wage, namely, the needs and aspirations of the worker. That is, it must not disregard the criterion of the living wage.

It is scarcely necessary to observe that it is a fundamental rule of controversy to know your opponent's position. Otherwise, as in the present case, your argument may be ineffective and foolish.

Incidentally, I also found it amusing that in a two-volume work which contains a good deal of economic history, there is no mention of such important terms as "labor spy," "yellow-dog contract," "strikebreaker," "industrial munitions," etc.

But one could overlook the propaganda, the petty prejudices, the careless scholarship, and enjoy the undeniably good things which the authors have set before the reader were it not for two facts: (1) the book defends an antisocial, anti-Christian philosophy of economics and identifies this philosophy with American capitalism; (2) it gives the utterly false impression that we must either embrace laissez-faire capitalism or resign ourselves to endure communism or fascism. These contentions are so vicious and dangerous that a reviewer feels justified in not dallying to pluck the occasional good fruit from an otherwise rotten tree.

I laid these tomes down with a prayer of gratitude. I thanked God that the Committee for Economic Development exists among us, and the American Management Association and the National Planning Association; and that many, many industrialists, inside the NAM as well as outside, do not agree with the small group of men who, apparently, still dominate that organization and profess to speak in its name.

And someone, I think, ought to warn Stalin, in the event that this work should come to his attention and lead to exaggerated hope and optimism, that the NAM no more speaks for American business than does Henry Wallace for the common man.

Address of Hon. Mary T. Norton

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mrs. SMITH of Maine. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a speech recently made by the Honorable MARY T. NORTON, of New Jersey, to the Ninth Congress of the International Council of Nurses at Atlantic City:

Madam Chairman, distinguished guests, delegates and representatives to the International Congress of Nurses, and friends, it is a privilege and very great pleasure to join you today in this Ninth Congress of the International Council of Nurses, particularly as this meeting follows the World War. My good friend, Miss Murdock, who, as you probably know, is director of the School of Nursing of the Jersey City Medical Center, has told me a great deal of the remarkable work that has been, and is being, done by the ICN. It is a record of which you should feel justly proud and one closely conforming to the tradition of Florence Nightingale and many others whose professional lives are not to the same extent a matter of record, but whose great services have been recorded in the hearts of their patients, and so, Madam Chairman, I salute you, the officers of the ICN, the international representatives and delegates present, and the membership of your very important and great council.

It is good to know that women everywhere in the world can be depended upon to answer the call for service. And I believe it can be recorded that you have made a great contribution to bring peace and solidarity to the world.

There are many things I would like to discuss with you, but time will not permit more than a bare outline. Other speakers will no doubt tell you how happy you should be that you are members of a profession ranking second in importance over all others and thirtieth in all occupations. I congratulate you on this achievement, but may I also suggest that you have a very great responsibility because of these facts. We who are part of this changing world have witnessed a tragic upheaval in our way of life. We have had to adjust our standards—to think in terms of world solidarity—of good-neighbor policy. It is good for us, and we have gained much by the contacts we have made. You women here today from many countries are proving how right this is. You have come to us with your much older world civilization and also much more tragic experience to broaden our world and our thinking. We are grateful to you, and we welcome you to the State of New Jersey and to the United States of America, and we hope and pray that some day there will be a United States of Europe and of the world.

I was born at a time when women were given little consideration by the policy makers of our Nation. We had no power other than the power women have always wielded as women—based on their beauty, personality, and sometimes brains. We were supposed to adorn—more or less—to go to a finishing school, if we were rich; to marry, be a good wife and mother, a good cook, a good housekeeper, and many other things the mothers and grandmothers were noted for in that and preceding generations. And, may I say, most women in those days, doing the things they were expected to do, found contentment, much peace of mind and happiness. Well, we have come a long way since

that day. We have gained much in experience, have taken a proper place in the affairs of our home, our city, and our country.

We have been accepted in business, in the professions, in politics, and even on the assembly lines. We have proved, that given the opportunity, we can compete with the men of our Nation, and, in some instances, even do a better job. And so, we now have some power—not too much, to be sure, but some. And we are gaining but our improvement is not nearly what it should be for we, too, have had tragic experiences during two World Wars, which should have added much to our thinking and which should have strengthened our will and given us a clearer vision of things to come. Unfortunately, much that has happened seems to have been forgotten by the many, and remembered only by those who played a part—often a tragic par'—in the events of those years.

You women have had the opportunity of playing a very important part in the development of all women and of yourselves. Because of your profession you come closer to the hearts of people—men and women. And you can be a distinct influence in their consciousness. I have said many times, and I repeat now, that one of the things we should all develop is the art and habit of thinking, of using the brains that God gave us and not accept, as we so often do, the opinions and comments of people, who may be completely one-sided in their thinking. As nurses are truly the vanguard of health, you must also take your place as one of the great influences on the future social structure of our great country. Your profession takes you into the far-flung corners of the world. You know that we are all part of one great world. The world of yesterday, when oceans divided us, is no more. North, south, east, and west are now merely parts of one great world, and the responsibility of knowing its movements, trends, and policies has become an individual responsibility to each and every one of us. And I think particularly it is a responsibility to the nursing profession. There is no group of workers who should have better balanced judgment. Therefore, you should prove of great value to the peacemakers and policy-shapers of the world. And, I would suggest that whenever the opportunity is presented, you do not hesitate to take your well-earned place in the consideration of world affairs. Get away from being just nurses. You are citizens of the world, and, as such, you must give all you have of heart and mind to help shape the policies of the world of today and tomorrow.

What we are all greatly in need of today is faith in God, in our world, and in ourselves. If we cultivate this state of mind, we can accomplish almost anything we set ourselves to do. In this life we are now living, with its broader usefulness, its great need of right-thinking women, lies our great opportunity. We must ask ourselves how we shall meet the challenge to our citizenship, to being part of this great world we have given so much to build. Let us evaluate just what our contribution has been in terms not only of money, but in that much greater contribution—the lives which have been sacrificed, broken health, broken homes—all this, and much more—to build a world in which this and future generations can live together in harmony, in serving God, in serving our country, and in courageously accepting whatever part we are called upon to take.

I like to think of the nurses of today, particularly the young women, as a great force in the world. Most of you have had the advantage of higher education. You have been trained in a broad field. Many of you have distinguished yourselves on the battlefields of the world, all of which should equip you for the important part you will have to play in the battle for democratic freedom. In this battle, it is necessary to have a firm foreign policy and, if we are to live in harmony, we must learn to give and take. I do not mean that we must give up any of our ideals but I do mean that we must learn how to successfully arbitrate international disputes. None of us is always right. The hope of the world is based upon economic cooperation. If we are realists, we cannot get away from that fact. The necessities of peace are no less important and serious than were those of war. We must find a way to live together. This does not mean we need to love a people or a country with whom we cannot agree. It does mean that we must hold fast to the things we believe in, the things of the spirit, and the things which were responsible for making the United States the greatest country in the world.

We should make democracy a living thing, talk democracy, live it every day, forget politics, forget our advantage over other countries, avoid criticism, and remember we are the one nation in all the world that has come out of the war inferno unscathed. And because we have been given much, much will be expected of us. Perhaps this thought was brought home to me during my visit to Europe in 1945. I saw, as no doubt many of you have seen, tragedy and starvation such as I could not have believed possible, and I saw heroism and courage that almost broke my spirit. Never again could I think of the brave people I met without a tear in my eye and a prayer on my lips.

And so I say to you, let us base our international good will on mutual understanding and loyalty to the ideals of our great country. I have lived and taken part in two World Wars. I know that I shall never see another. I hope and pray that you never will. If my long public life gives me the privilege of suggesting to, or advising with you, I would say never permit yourselves to be discouraged. Remember that your sons and husbands fought for freedom of individual conscience, freedom of religion, freedom from want. We can never let them down. You, yourselves, were part of that fighting force. You did a great job and now you are engaged in another big job, to see to it that we shall establish a just and lasting peace in the world, that war shall be outlawed, and that democracy will become a living, vital force around which all the peoples of the world may live in harmony and understanding. We have laid the cornerstone of peace and solidarity through the United Nations organization. How well we shall build the structure depends, to a very great extent, on our individual effort. How much we want peace and how much we shall put into it to make it a vital force. There is no other way.

An Example of International Probity

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. DINGELL. Mr. Speaker, it is noteworthy that the hard-pressed people of Finland, despite the ravages of war and the oppression by Russia, have made another payment of $164,852.24 on their $8,400,000 debt of World War I.

This payment constitutes more than an expression of common honesty or of good business; it denotes the heroic courage of the Finnish people and serves the world as an example of honor and the integrity of a nation's word. Repudiation is unknown to the Finn, while it is rife on all sides and among nations far better situated from the standpoint of finance and liquid resources.

Seems to me that such exemplary courage and honesty should more than be acknowledged by the American people; it should be rewarded by the prompt remission of the entire undiminished principal.

In these days of readjustment, when we aim to stabilize the European economy, let us not forget the valiant and honest Finnish people. The plan evolved by Gen. George Marshall will be deficient if it does not provide amply for struggling countries like Finland. But entirely aside from the Marshall plan, in view of the billions already spent and about to be expended in Europe, it would be a splendid and a worth-while gesture to remit the outstanding indebtedness to Finland. It would be a reward for honesty, integrity, and courage.

Polish Relief Program Bogged Down

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. SADOWSKI. Mr. Speaker, after checking with the Parcel Post Overseas Shipments Division of the Post Office Department, I have received the following report on parcel-post packages sent to Poland and to Germany. I have had them broken down on a monthly basis. The report shows that parcel-post shipments to Germany are four and five times as great as the shipments to Poland.

The Polish shipments for May and June 1947 are particularly disturbing, and it is difficult to understand why they have dropped so low in the last 2 months. This report clearly calls for the most energetic, concentrated, and united effort of all individuals, clubs, and organizations. The Polish people need our assistance desperately. We must help them.

Of the fall sowings, 23 percent of their rye, 44 percent of their wheat, and 62 percent of their vegetable oil seeds were destroyed, and a total or over 1,000,000 hectares of fall planting was killed by the severe winter. The spring crop is suffering because of the terrible drought. There has been no rain during April, May, and June thus far. President Truman stressed the urgency of immediate relief in his message to Congress.

The War Department spent over $1,000,000,000 in Germany in 1946. With the help of Mr. Hoover and others, another billion dollars will be dumped into Germany this year. Besides this, the report shows that Germany is receiving through private parcel-post packages more relief than Poland, Yugoslavia, Czechoslovakia, Greece, and all of the victims of Nazi aggression combined.

Certainly the American friends of these people who have suffered so much will not let them down.

The Atom Bomb

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered on June 17 at Tulane University before a forum sponsored by Tulane and Loyola Universities:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am indeed glad to be here tonight on the campus of my alma mater, and to participate in this discussion sponsored jointly by Tulane and Loyola Universities. I am flattered that you should ask me here to talk about some of the social and political implications of atomic energy. After all is said and done, it is the central problem facing all of humankind today; so grim are its potentialities in the field of international relations. I fervently wish that I could tell you that great progress is being made and that man's political institutions were at last abreast his scientific ingenuity. But such is not the case.

The other speakers here tonight have been part and parcel of the great scientific team which made possible this new force for good and for evil in our world. They know so much better than you and I can know the awful implications as well as the promises of a better day for mankind, as a result of their discoveries and inventions. And certainly it would serve no point for me to attempt to enter any discussion within the complex technical realm of their unique knowledge. As an American citizen, however, I, as you, have attempted to learn as much as possible about the subject from the standpoint of its effect upon the world in which we live.

There have been available to those of us who are laymen the printed copies of the exhaustive hearings conducted last year before the McMahon committee in the Senate of the United States; the reports filed by the Army on the results of the bombings in Japan; the Navy documents on Operations Crossroad; the Acheson-Lilienthal report, and the Baruch recommendations or the American plan submitted to the United Nations for the international control of atomic energy.

I believe that every study, whether made by the military, by impartial and conscientious laymen, or by scientists, has come to the conclusion that there must be effective international control of atomic energy, if we are to prevent world catastrophe on a scale heretofore undreamed of.

I need not here engage in any flight of rhetoric to describe what may happen if we fail. That great elder statesman, Bernard Baruch, has said that already we are in a struggle between the quick and the dead. The picture of the next war has been painted by far greater artists than I. Suffice it to say that in the next war our country, with 50,000,000 people living in crowded cities, with our complex and interdependent industrial machinery, with our highly centralized Government, will be the principal target, and this time our institutions, our great plants, our schools, our churches, our centers of learning will be turned into heaps of rubble and the love of truth, of freedom, and justice which has built them will be buried in the rubble. Millions of us may die, and millions of our children may die, and all that has made life full of hope and meaning for us may disappear. The race of men that will emerge from all of this will be men of yet more unstable natures; they will be poorer men; they will be more frightened, more superstitutious and weaker and they may be men living without the hope of justice and happiness. They may have lost all the instincts of freedom.

With the knowledge at hand, it seems incomprehensible that statesmen would not sit around the conference tables and within a reasonable period of time perfect the machinery required to effectively prevent an atomic war. How impatient the scientists of all nations must be. Again and again they must say to themselves, "Are the leaders of the world deranged? Certainly they must know how critical the danger is. The mere existence of this weapon should insure the end of war."

In the final analysis, it is perfectly obvious that there is no real security against the bomb except the elimination of war, and the most certain way to eliminate war would be the setting up within the United Nations of a world government of limited sovereignty, based on law, possessed of overwhelming force and supported by the confidence of the peoples of the earth. We cannot achieve this by international control of atomic energy alone, but it would be the beginning of world government.

One of the most enlightened books on the subject of war and peace was written some years ago by Mr. Emery Reves. He calls his book the Anatomy of Peace. In it he shows the intimate relationship between unbridled nationalism and war. He traces the growth of the concept of sovereignty from the family to the clan, to the city, to the state, to present-day nations. He points out how practical it is for various political subdivisions to exercise limited sovereignty.

(For instance, here in Louisiana we have drainage districts, school districts, fire districts, ward, parish, municipal, and State political subdivisions, as well as the Federal Government exercising limited and well-defined sovereignty over us.) He shows the growth of the American constitutional system, and the development of our Federal Government on a program of limited powers. It is his conclusion that only by the delegation of sovereignty in the fields of armaments and war making to a world organization dedicated to the preservation of peace by force if necessary can world peace be guaranteed. It is a sound, logical, and unassailable thesis. The difficulty about all of this, however, is that we are faced with very practical realities. That despite the existence of the bomb; that despite the universal understanding of the necessity for international control we have made little progress, and alternatives to the ideal of international control now must be considered. But before considering these alternatives, it may be well to very briefly review our thinking immediately after the bomb was dropped and the difficulties now blocking international control.

Two years ago, when the American people were suddenly confronted with the atomic bomb, and we came to realize that in dealing with atomic energy we were dealing with the basic power of the universe—in the words of the President, "the force from which the sun draws its power," the reaction swept the country that we must, for reasons of national safety maintain the secret of this great force; that we must establish security patrols heretofore unknown in our country. But again the men who had made possible this awful force came forward and soon convinced most Americans that there was no basic secret, and that the only advantage that our Nation had was the fact that it had perfected the industrial know-how. As a result of one of the most enlightening debates ever conducted in our Nation in the press, over the radio, in public forums, in hearings before Senate and House committees, the people decided in favor of international control of atomic energy. This decision resulted in the plan which was presented to the United Nations by our country, and the other countries which had a part in the perfecting of the bomb.

It would be time-consuming for me to discuss those proposals, because they are known to all of us. In the opinion of statesmen, laymen, scientists, these proposals are most generous for we would completely forsake whatever monopoly we may enjoy. They involve fundamentally the relinquishment of national control of the sources of and development of atomic energy.

Our proposals were accepted by all the United Nations except the Russians and their satellite, Poland, who has refused because they will not (1) relinquish the veto power, and (2) permit international inspection.

Effective international control with a veto power retained nationally is utterly silly and unthinkable. Likewise to contemplate control without free and uncensored inspection is equally foolish.

It therefore appears at this time that the one sure way of controlling future wars and the atomic bomb is hopelessly mired in the diplomatic double-talk of the Kremlin.

And that, my friends, brings us to a discussion of alternatives, most of which are unpleasant, and all of which will involve continued sacrifice on the part of the American people if the institutions of freedom are to survive and if an atomic war is to be prevented. But none of them can give a guarantee against that catastrophe. Within the realm of alternatives, many people have seriously discussed what has been termed a "preventive war." Their argument goes about as follows:

We now have the industrial know-how. We are some years ahead of Russia. Russia has conclusively demonstrated that she has no desire to cooperate with the rest of the world, and while we are able and have the preponderance of force, we should immediately attack Russia, leveling her cities, destroying the Communist regime, and establishing a democratic administration in order to insure Russian participation in a cooperative world movement for peace.

This argument has much logic, but it too is entirely unrealistic. Our Nation would never sanction such a war, and we would be torn by internal dissension; in addition to this, whatever claim to moral leadership we might have we would lose by fighting such a so-called "preventive war," which by any other word would be labeled "aggressive."

Therefore, it is the considered opinion of the vast majority of the people today that a so-called "preventive war" just won't work and won't happen. What next then as alternatives?

President Truman, in his address before the Canadian Parliament last week restated the ideals and objectives of the United States when he declared that we are seeking "a peaceful world, a prosperous world, a free world, a world of good neighbors. We intend to support those who are determined to govern themselves in their own way and who honor the right of others to do likewise. We intend to aid those who respect the dignity of the individual, who guarantee him equal treatment under law, and who allow him the widest possible latitude to work out his own destiny and achieve success to the limit of his capacity. We intend to cooperate activity and loyally with all who honestly seek, as we do, to build a better world in which mankind can live in peace and prosperity."

This is a reaffirmation of the historic American tradition. The difficulty about it is that in the past we have spoken in these words, but we have not maintained the power to back them up. The result has been that Hitler did not take us seriously and by a combination of intrigue, propaganda, political warfare and fifth columns, subjugated the smaller nations of Europe. Today we see a repetition in Hungary, Rumania, Yugoslavia, Poland, Bulgaria, Latvia, Estonia, Lithuania, Finland—in all of the countries of eastern Europe. Documents produced in the Nuremberg trials proved conclusively that Hitler's timetable was scheduled upon the weaknesses of the western democracies. Had these weaknesses not existed history may have been quite different.

Therefore, it seems to me that until such time as Russia decides to enter the society of free nations there is only one alternative that we can follow in order to prevent World War III.

The first part of this alternative is the so-called Truman doctrine, supplemented with a program for Europe. It is doubtful that Russia has the slightest concept today of a shooting war, but it is, and has been, conducting a political war—principally throughout the continent of Europe. Therefore, we must evolve a positive program for Europe, such a program taking into account the conditions under which communism thrives and spreads—hunger, disease, insecurity, unstable economic systems, reactionary and undemocratic governments, and excessive and senseless nationalism.

We must have a program for Europe—all of Europe. Not a program for Greece, or for Turkey, or for Italy, or for France, but a program for the whole of Europe, so that Europe can become economically self-sustaining, and can become economically strong so that in itself it will be a bulwark against the spread of communism by solving its social and economic problems.

That is why at the behest of many of our constituents Senator FULBRIGHT, Senator THOMAS, and I have been pressing for the enactment of a resolution endorsing the formation of a United States of Europe, and that is why the Kremlin has been opposing that plan. In all of the Russian propaganda spread throughout the world the central theme is that an economic collapse in the United States is inevitable. The piece-meal feeding of millions upon millions of American dollars to a failing economic and nationalistic structure in Europe could very well hasten such an economic collapse within our own country.

We have been encouraged in the past several days by the endorsement of the necessity of a positive European policy by Secretary of State Marshall, first in his splendid address of several days ago at Harvard, and a few days later in his letter to Senator VANDENBERG, endorsing in principle our resolution. The idea has appealed to statesmen for generations, but it now is a virtual necessity for the preservation of Europe and the United States. The essential thing is that a constructive, positive way has been pointed, and the Truman doctrine, supplemented by a Western European Confederation, now begins to take form. It appeals to the common sense as well as the idealism of the American people, and the way is left open for Russian participation, if Russia can forget her suspicions long enough to examine our proposals.

The second part of our alternative involves the maintenance of American power. It is sad to contemplate that with so much needed in the fields of education, of public health, of housing, of public works, flood control, and the public welfare generally, that our Nation and the other democracies of the world must continue to burden themselves with a tremendous load of debt and taxes to maintain an army, navy and air force second to none and the most modern and expensive facilities for scientific research in the field of military power. Yet more men are under arms today throughout the world than at any previous peacetime period, and if we desire to prevent the calamity of an atomic war, we must maintain our power. There is no point in kidding ourselves about this matter. There is only one possible nation on the face of the globe today that could involve us in war—Russia. And here too history is important. The documents leading up to the Stalin-Hitler pact have been carefully studied by the British and American experts. They reveal that despite all of the years of friction between Hitler and Stalin, Stalin above all, wanted peace in order to develop his economy. They show that he made numerous concessions in order to avoid war, and when the German attack finally came, many Russian divisions acting on orders did not respond in the hope that even then war could be averted. As I pointed out previously, the Hitler documents show that World War II developed principally because of the lack of an intelligent social and economic program to prevent the rise of nazism and fascism in Europe, and secondly by the lack of power on the part of democracies to stop its spread once it was under way. So that today, as long as the world is divided as it appears to be, the American Nation must remain superbly strong economically and militarily. The isolationists of 1947 would bring us into World War III more rapidly than they brought us into World War II. The appeasers today are every bit as dangerous as the appeasers at Munich. The "business as usual" and "back to normalcy" boys who would abandon our power in order to promote selfish gains are the heralds of the atomic war.

Many of you have no doubt read the Compton committee report on the necessity of universal training. That committee is made up of citizens of highly divergent political beliefs. It includes some of the best known educators of America. The committee reached the unanimous conclusion that the only way we can lend authority to our position in international affairs and to inspire confidence in the determination of the United Nations to enforce peace, is to maintain our armed strength at a level of efficiency and power that will defy challenge by any would-be aggressor. The committee has come to a clear, unanimous, and forthright conviction about the course which our country should follow in respect to universal training. Our Nation has been warned that unless its recommendations are adopted, in spite of the costs involved, that the United States may soon risk calamitous defeat at the hands of an aggressor power which in a few years will possess the know-how of the atom bomb, and other instruments of destruction now unknown to the public. The report should shake Americans out of their complacency.

All over the Nation we are seeing a revival of the thinking which prevailed prior to World War II that our Nation could not be attacked successfully, and the consequent weakening of our armed forces. This thinking made possible the Second World War, and it will make possible a third world war. There is a fundamental difference this time, however. Before the First World War, and the Second World War, we had the time to prepare, and, in addition, man had not invented the atom bomb and the other fantastic weapons of destruction.

The alternative which I have put forward is certainly not new or novel and it is grim. It carries all the implications of being prepared for instant atomic warfare: underground installation, decentralization of our cities, great delegation of powers to small groups, frightful costs. But have any of you in light of the developments of the past 2 years, in light of Russia's aggressive and expansionist attitude a better or a safer solution? God knows the democratic world yearns for it.

In conclusion, in order to avoid the horrors of an atomic war, it is my belief that we must continue to press for international control of the sources and the production of atomic energy, and we must continue to insist on a program similar to the one now pending before the United Nations. This is the real hope of humanity, and if adopted it would permit mankind to reduce its armaments, and to devote its wealth to the manifold problems of the human race. It would also permit the rapid development of the peacetime uses of atomic energy, bringing wealth and happiness to millions upon millions of people everywhere. Unfortunately, however, before such a plan is adopted, there must be a change of attitude on the part of the rulers of the Kremlin, and there must be a change in the present Russian policy of aggression and expansion. Until that change comes, the alternative seems to be the development of a positive program in Europe, which will remove the soil in which communism thrives, and will make possible the reconstruction and reconstitution of a great and strong democratic society on that continent. At the same time, the strengh and power of our own democracy as a world leader must be maintained, despite the cost and the sacrifices which such a program inevitably means.

Synthetic Scandal in Occupational Currency

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. DINGELL. Mr. Speaker, the occupational currency question has been bandied about and has reached the level of near scandal. Much of the yapping is, of course, cheap, but nefarious, political claptrap intended for partisan political gain and emanates from political sources. Gleaned from the pages of the Detroit News is a brief, but comprehensive, fact-packed editorial bearing on the subject which should dispel the smoke and clear the atmosphere, even though it might not drive to cover the mouthy partisan.

AMERICAN GREED WAS THE CAUSE

The Senate demand for an inquiry into the reports that the United States has redeemed

millions of dollars worth of German occupation money printed by the Russians is our latest national sensation.

As the incident is reported, it makes our Army authority look like a pack of chumps, witlessly taken in by the conniving Russians. The stories have been somewhat artfully slanted that way.

But this view simply ignores the real circumstances.

When the war ended it was necessary to void the currency system of Hitler's Reich and to substitute a system which would be based upon the economic plan and purposes of the Allied armies. At that time we still believed that all would work together toward a reunified Germany.

Consequently the occupation currency was intended for use by all armies. It became legal tender with the Russian Army as with our own. Whether the Russians borrowed plates from us to print money, as is reported, is only incidental to the fact that they had the same right to pay their troops in occupational currency as had we.

But the system broke down not because of Russian plotting but because of American greed. Had not our own people gone into the German black market with all four feet, there could have been no hurt to our finances.

They sold the Russian wrist watches, alarm clocks, picture frames, and every kind of junk at many times its real value. In many cases American families shipped their sons cigarettes, foodstuffs, and other goods just so they could deal in this market and swindle Russians out of hard earned war pay.

Where is the money today? Do the Russians have it? Not at all. All that they have to show for the squandered millions is a certain number of new possessions, largely manufactured in this country, which aren't worth 5 cents on the dollar.

The money is in American banks, put there by dishonest American hands, after Russian occupation money had been converted into American dollars. True, the Army might have stopped this larceny by a stiffer discipline. But we should at least recall that at that time the whole Nation was riding hard in exactly the opposite direction.

McGregor Objects to Petroleum Exports

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. McGREGOR. Mr. Speaker, I note in the newspapers of today that President Truman is greatly disturbed over the Nation's critical petroleum supply shortage and I also note that Secretary of Interior J. A. Krug declares it may be necessary to again ration gasoline and fuel oil.

I would like to call your attention to an Associated Press release issued from San Pedro, Calif., and I quote:

RED SHIPS LOAD UNITED STATES OIL—HEAVIEST MOVEMENT OF PETROLEUM SUPPLIES TO RUSSIA REPORTED

SAN PEDRO, CALIF., June 15.—The heaviest movement of petroleum supplies to Russia reported by Los Angeles harbor officials was well under way today as the 50,000-barrel Soviet tanker, *Elbras*, loaded oil and gasoline.

Two other 50,000-barrel oilers, the *Emba* and the *Krasnia Armia*, arrived yesterday and were scheduled for early loading. A fourth vessel, the *Taganrog*, of 65,000-barrel capacity, is due Thursday, the Marine Exchange said.

Russian tankers have been loading petroleum products here on regular voyages during and since the war. The purchase is being made through the Amtorg Trading Co., Soviet agency with offices at Long Beach and San Francisco.

Mr. Speaker, I insist that the exporting of our petroleum products to Russia be stopped immediately. Is it not about time we gave the American people some consideration?

I am wondering if this policy of exporting critical materials is not a cleverly arranged plan to maintain shortages in the United States which certainly makes our living costs remain at a high level. I firmly believe if we would stop these exports we would have sufficient amounts of everything to meet our needs in this country, which would mean our living costs would be reduced. Again I say, let us give the American people more consideration.

FEPC Resuscitators

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith a timely editorial from the New Orleans Times-Picayune. Unfortunately, this editorial pretty well sums up the reasons for the new FEPC drive. All thinking people must realize that this type of legislation will bring about the worst form of regimentation that the country has ever seen, and yet we find Republican Members of both branches of the Congress bent upon agitating this question, notwithstanding the fact that they went before the country last fall on a program of doing away with so-called New Deal regimentation.

The editorial is submitted herewith with the suggestion that these gentlemen stop, look, and listen before pressing such proposals:

FEPC RESUSCITATORS

Back of Congress' new FEPC drive is a curious mixture of idealism and politics with the idealism on the scanty side. The pressure for a vote-fishing expedition among minority groups is what is getting the bill a hearing before the Senate Labor and Welfare Subcommittee.

Members of Congress from politically close States are being told they must find a way to revive the FEPC—just any kind of a fair practices law that can be used for political propaganda in next year's campaign. That, we suppose, is back of all the compromises various supporters of the measure propose in order to get its passage. To reduce the opposition they are willing to make it apply only to employers of more than 50 workers, and one of the GOP bigwigs is thinking of asking an amendment that would leave all enforcement to the States. Give them a law, a new bureau—and it is no matter of great moment if the law is useless and harmful and the bureau expensive.

The drive has placed the Republican-dominated Congress on an uncomfortable seat. Most of the 100 or more groups behind the FEPC movement do not like the present Congress. They have denounced its economy-mindedness and generally they don't like its labor bill. But they are quite ready to have the GOP majority believe it can extend its sweep in 1948 by creating a permanent "witch hunting" bureau or "thought police."

Congress has not been impressed with the progress the FEPC boosters have made with the States. In New York, where the minorities constitute a majority, there is a State FEPC. But it is a caricature on the law rather than law, since enforcement is left to a bureau which can choose among those whom it wishes to antagonize or please. Similar statutes were pressed through the New Jersey and Connecticut Legislatures, but nowhere else do the "antidiscriminationists" seem to have had any success.

Congress doesn't expect to go anywhere with the bill of New York's Senator IVES at this session. But apparently the National Council for a Permanent FEPC is willing to wait until next January when it thinks political juggling in anticipation of the Presidential campaign may get for the measure enough Republican support to put it over. They might be too optimistic, for it is evident that some Members of Congress, even in close States, have not been impressed by the home support for a Federal bureau with the obvious mischief-making potentialities of a permanent FEPC.

Taft-Hartley Bill

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following analysis of the Taft-Hartley antilabor bill which now awaits action by President Truman, made by the Honorable Irwin Steingut, Democratic minority leader of the Assembly of the State of New York, and discussed by him at a "Heartless"-Taft labor bill meeting of the Democratic organization of Kings County in Brooklyn, N. Y., on June 11, 1947:

TAFT-HARTLEY BILL

Section 2 (2) changes the definition of an employer from "anyone acting in the interest of an employer" to "acting as an agent of an employer." This means that an employer will be responsible for the acts of his foreman or supervisor only when he authorizes their anti-labor activities. This will give employers a defense whenever charged with antiunion activities.

Mr. Justice Douglas pointed out in *International Association of Machinist's* v. *NLRB* (311 U. S. 73):

"The employer however, may have held to have assisted the formation of a union even though the acts of the so-called agents were not expressly authorized or might not be attributable to him on a strict application of the rules of respondeat superior. We are dealing here * * * with a clear legislative policy to free the collective bargaining process from all taint of the employers' compulsion, domination or influence."

By section 4 (d), the appointment of a general counsel nominated by the President and confirmed by the Senate who would be in charge of all legal work and administrative, as well. Counsel would determine which cases shall be investigated, tried and enforced and he would be responsible only for clear malfeasance in office, by reason of the method of his appointment. Much of the general

counsel's work will not be reviewable on appeal to the Board or other courts. No real power is vested in the Board which is increased from three to five members. Coordination in policy is essential in order that rules and regulations, prosecutions and decisions maintain some consistency and this would require complete cohesion of effort by all of the parties charged with the enforcement of the NLRA.

Section 8 (b) (2). A union may not demand the discharge of, and under section 8 (a) (3) an employer may not discharge an employee for nonmembership in a union unless such nonmembership arises from failure to pay dues.

In this connection if a union member leads a wildcat strike, is a Communist or is a labor spy or steals union funds, he may not be discharged upon demand of the union.

There is a provision in the new law which states that any views expressed shall not constitute or be evidence of unfair labor practice unless it contains evidence of a threat or promise of a benefit. One can readily see the difficulty in presenting and being successful in such presentation of an unfair labor practice charge when the proof to be submitted is so difficult to meet the act.

The Board is now precluded from holding prehearing elections and conducting cross-checks of pay rolls against union cards. These two methods were extremely useful in matters which presented no substantial issues. This will now require a hearing in practically every case where representation heretofore was easily determinable. The bill will require the union to file voluminous and extensive records with the Secretary of Labor and the failure to comply with this section of the bill will deny to the union the right to obtain the benefits under the act. The report must show:

1. The name and address of the union.

2. Names, titles, compensation and allowances of its three principal officers and the compensation of those officers in excess of $5,000.

3. How were these officers elected, appointed or otherwise selected?

4. The initiation fee or fees for new members.

5. The regular dues in order to retain members in good standing.

6. A detailed statement of bylaws and constitution showing the procedure followed with respect to:

(a) Qualification for or restriction on membership

(b) Election of officers and stewards.

(c) Calling of regular and special meetings.

(d) Levying assessments.

(e) Imposition of fines.

(f) Authorization for bargaining demands.

(g) Ratification of contract terms.

(h) Authorization for strikes.

(i) Authorization for disbursement of union funds.

(j) Audit of union financial transactions.

(k) Participation in insurance or other benefit plans.

(l) Expulsion of members and grounds therefor.

The union must also show that it has filed with the Secretary of Labor:

(a) A report of its receipts and the source of its receipts;

(b) Its total assets and liabilities at the end of its last fiscal year; and

(c) The disbursements made during the year including the purposes for which it was made and that the union has furnished to all its members copies of the financial report required to be filed with the Secretary of Labor.

Industry and management is not required to file any such information with the Secretary of Labor or any other department or official in order to come before the NLRB, even though industry and management has been found to have committed an unfair labor-practice act or other violation of the act.

No union may receive the benefit of protection under the act unless the heads of the union file an affidavit with the Board that within the preceding 12-month period none of the officers of the labor organization nor the officers of any national or international labor organization is not a member of the Communist Party nor that he is not participating in the overthrow of the United States Government by force or by any illegal or unconstitutional methods. An affidavit which is false, the affiant may be punishable under the provisions of section 35A of the Criminal Code.

Unions will now be charged for the first time with unfair labor practices, such as union coercion of employees in their choice of a bargaining agent; union attempts to discriminate against employees for dual union activity; union refusal to bargain with an employer, participation by the union in jurisdictional strikes or secondary boycotts; and labor violations of a collective-bargaining agreement. There will be one election annually for a collective-bargaining representative. Every agreement would include an automatic 60-day cooling-off period. Unions would not be permitted to terminate or modify a contract without following the giving of a notice, conference, and cooling-off requirements. The closed shop is banned. The union shop and other forms of union security will be regulated more closely by the secret ballot conducted under the supervision of the NLRB. This means that on only those things which have been adopted by a union at a secret ballot, as aforesaid, the employer will be bound to negotiate with the union, and it removes the bargaining for concessions that heretofore existed in the negotiation of a contract. Individual employees would have the right to present their grievances to their employer and the employer would have the right to adjust such grievances without the act of intervention of the union. The employer would not be required to bargain with foremen supervisors. In situations affecting national industries and creating national paralysis the Federal Government would have an opportunity, through the Attorney General, to obtain an injunction without regard to the Norris-LaGuardia Act.

Hague Tribute by Moore

EXTENSION OF REMARKS
OF
HON. EDWARD J. HART
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. HART. Mr. Speaker, it is a pleasure to extend my remarks by including a news item appearing on the front page of the Jersey Journal in its edition of Wednesday, June 18, containing the address delivered at the ceremonies which took place in Jersey City on Tuesday evening, June 17, incident to the resignation of Hon. Frank Hague as mayor of that city.

The address was delivered by Hon. A. Harry Moore, the only three-time Governor of the State of New Jersey and former United States Senator. Mr. Moore began his elective public service as a member of the first City Commission of Jersey City in 1913. One of his colleagues in that first Commission was the beloved and extraordinarily popular Frank Hague. Mr. Moore has maintained his close friendship with Mayor Hague ever since that time and no one is better able to interpret the character and motives which have marked Mayor Hague's long and distinguished career.

The sentiments expressed so eloquently and with such feeling by the former Governor are those of Mayor Hague's legion of friends and followers.

In addition to the speeches referred to in the newspaper article, an address was delivered by Hon. MARY T. NORTON.

The news item follows:

HAGUE TRIBUTE BY MOORE

In the speeches delivered last night in the Dickinson High School at the demonstration in honor of Frank Hague on his retirement as mayor, an outstanding address was that of former Gov. A. Harry Moore, who, while differing at times with Frank Hague, was also proud to be associated with the mayor in many of the conspicuous accomplishments marking the Hague career of 34 years in the city commission.

Detracting in no way from the superb eulogies uttered by Congressman EDWARD J. HART, former United States Senator John Milton, and former Chief Justice Thomas J. Brogan, the Moore eulogy of Hague is printed in full because of its contents and its review of a record to which Moore for 34 years contributed in a notable way as commissioner, Governor and United States Senator.

Here is the speech of the three-times Governor, A. Harry Moore:

"In June 1913 I sat with Frank Hague as a member of the first commission in Jersey city elected under the commission government act. With hands upraised, Frank Hague, as did the rest of us at that time, took the oath of office and before God and the people of our city promised to serve Jersey City to the best of our ability.

"We were young and had dreamed and had visions of what we could do for our city.

"Time marches on. Thirty-four years have passed.

"Tonight, with emotions that are akin to sadness, I stand with him again as he relinquishes the reins of office to younger hands. While I am sorry to see him go, yet I am sure that tonight he, too, is filled with mingled emotions as memory rolls back the screen of time and he recounts the highlights of his public career. And tonight he may at least lift up his head, look into the eyes of friends and foes and say, 'I have kept the faith. I have been true to my oath, and I defy anyone to point to an act of mine that was detrimental to the best interests of the city which I love and have served.'

"I did not always agree with Mayor Hague, but as a young commissioner I was dazed at his ability and daring and captivated by his fearless efforts to give Jersey City a government of which it might well be proud.

"As a commissioner of public safety, he fell heir to a police department shot through with politics and antiquated in its methods. He was confronted with a fire department, many of whose members considered it their first duty to attend all the political picnics and dances. Oftentimes, the alarm having been sounded, a fire company would arrive at the fire with only a driver and one or two firemen.

"With his customary vigor and forthrightness, he reorganized these departments until there finally emerged a police and fire department unsurpassed for ability and equipment by any police and fire department in the world.

"Low dance halls, houses of ill fame, honky tonk joints and places where crime is bred, were never allowed to carry on their unholy practices in this city.

"During prohibition, when highjacking, thuggery, and bootlegging were rampant

throughout the Nation, never were these activities permitted to sully the good name of our city.

"Is it any wonder that he was acclaimed by the people and reelected to office?

"Well has our local paper said: 'There was never a case of protection money paid by any businessman or industrialist, even during the days when racketeers in other cities flouted the authorities by exacting tribute under threat of destroying life and property.'

"Labor found in him a fair and friendly advocate, and industry found encouragement and equity in its dealings with him.

"All over the United States mayors come and go, but what mayor of any city throughout the Nation has caused such a wave of excitement and interest in his retiring as occurred when 2 weeks ago the mayor announced his decision? The announcement drove the United Nations deliberations, the labor bill, and the tax bill from off the front page, while editors and commentators in amazed excitement proclaimed that Mayor Hague had retired. Surely, there must be something interesting about such a man.

"He has confounded and bewildered his critics by his ability to be elected and reelected to the office of mayor.

"He has been investigated time and again by experts, by politicians, by prosecutors breathing brimstone and fire, but when the shouting and the fighting died, Mayor Hague stood out calm and straight as the champion of his people who trusted and honored him.

"His critics overlooked the fact that he is a great humanitarian.

"Frank Hague never forgot the fact that he was born in the second ward and that he sprang from the ranks of the common people.

"He could have forsaken his heritage and joined forces with the rich and powerful interests but he chose rather to walk with the crowd.

"The poor and needy found in him a strong and able defender and friend. He never failed them.

"Out of his personal knowledge, he realized that there were many good but needy families who could not properly care for their sick; who could not afford to pay for nurses and the necessary needs of serious illness.

"So he dreamed his dream of a great medical institution where the poorest of the poor might get the very best in medical and surgical treatment.

"He built the medical center with more than 3,000 beds and every modern hospital accessory. There it stands second to none in the country.

"And, mark you, he did not choose as its head a political henchman, but he took a man who for more than 20 years was medical director of the Allied Hospitals of New York.

"Of course, he has made mistakes. We have all made mistakes, and like every successful man, he has felt the sting of slander and enmity.

"But he has never turned his back to the foe. He has always carried the fight to his adversaries and no matter how powerful they were, they found that Frank Hague could punch just a little harder and was just a little smarter than they were.

"When the legislature, bowing under the lash of their master's whip, sought by legislation to deprive Jersey City of millions of dollars of railroad tax money, he sprang to the defense of his city, defeated the administration in the State courts, even in the highest court of the United States, and won for his city many millions of dollars which belonged to it by right.

"Was this the act of a mercenary?

"Was this the act of one who sought emoluments from the mighty?

"A humanitarian yes, who looking over his city was intrigued by the sight of crippled children vainly trying to keep pace with more fortunate children.

"Thus the first public school for crippled children came into being and here hundreds of poor little crippled kids with their limbs clamped in braces, dragging their pain-racked bodies along, have found education, manual training, medical, and surgical attention, and were given a new horizon of life.

"In these days when colleges are crowded and entrance difficult, he realized the disappointment of those who sought a college education but could not get it. So, there came into being a city college where any ambitious boy or girl might gain their heart's desire without money and without price.

"No, it was the act of a humanitarian, a man of courage, a man of the people.

"A man who knew no master's lash but fought singly and mightily for the protection of the people.

"His fights were difficult, and perhaps he did not always come out unmarked, but he could well say with Henley:

"'In the full clutch of circumstance,
I have not winced nor cried aloud,
Under the bludgeonings of chance,
My head is bloody, but unbowed.'

"And he might well add:

"'I am the master of my fate
I am the captain of my soul.'

"Mayor Hague made enemies, but he was always loyal to his friends and he and I have been friends for 40 years or more. I have no better friend.

"I would not be true to myself if I did not credit him as leader of our party with making it possible for me to be three times a candidate for Governor of New Jersey and United States Senator.

"An old philosopher has said:

"'Let him not boast, who puts his armor on,
But he who takes it off, the victory won.'

"Here tonight, amid the acclaim of his friends and fellow citizens, the warrior takes his official armor off.

"And as he looks back over the road he has come, the victories he has won, the service he has rendered his people, his soul is satisfied.

"So as he passes from official life, fair-minded man must join with us in saying, 'Here is a man, a great man, a great humanitarian.'"

A Gruesome Story

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. ELLIS. Mr. Speaker, from the noise coming from the administration's cheering section, it would appear that Secretary Marshall has won a great diplomatic victory and is measuring up to the administration's expectations. He evidently has decided to continue the State Department's policy that all wounds and all troubles can be healed with American dollars. The fact that we have expended approximately $15,000,000,000 in Europe and Asia since the war, with disastrous results, bothers him not a bit.

The latest diplomatic victory the administration is crowing about is that the Secretary of State has actually succeeded in talking Europe into accepting some $20,000,000,000, in addition to present commitments, from the American taxpayer during the next 3 or 4 years, and, as in the past, the steam and propaganda for this insane financial undertaking seems to stem from our own State Department.

The following news item—a guesome story—indicates that all Europe is in favor of grabbing United States gold, provided we agree to further concessions:

SEEK UNITED STATES GOLD HOARD TO BACK MARSHALL PLAN—EUROPE MAY INSIST ON FREE TRADE

(By Henry Wales)

PARIS, June 15.—Europe will eliminate customs barriers and prohibitive tariffs and adopt an identical money standard if the United States will abandon its protective systems against cheap foreign labor and toss the gold reserve buried at Fort Knox into a common jackpot. (The total gold holdings in the United States as of June 11 were more than $21,000,000,000.)

The Tribune learned today that is the essence of a preliminary agreement thus far reached by advance conversations among the British, French, Dutch, Belgians, and Luxemburgers in response to Secretary of State Marshall's offer to let American taxpayers pay for the Old World's reconstruction and modernization estimated by some observers to cost $24,000,000,000.

BEVIN LOSES NO TIME

British Foreign Secretary Bevin is losing no time to make Britain the spokesman for Europe and persuade the continental nations to support the British viewpoint on the terms to be imposed on the United States for acceptance of the latter's aid.

Downing Street also believes that Sweden and Switzerland and even Spain should participate as they form an integral part of Europe and must be included if the Continent expects a quick revival. London does not consider that Eire should share in the deal but should look to Britain for help.

Seeking elbow room from British domination in the scheme and placating the powerful local Communist Party, the French Government seeks to draw the Kremlin into the conversations, but thus far Russian Foreign Minister Molotov has declined to respond to the invitation.

REJECTS RESTRICTIONS

The leftist newspaper Franc-Tireur today remarked that Washington is forced to resuscitate Europe to provide a market for American surplus manufactured goods, as otherwise a depression would swamp the United States.

"Let America level her customs barriers, and abandon tariffs and accept other payment than dollars," the editorial said.

Franc-Tireur also rejected any restrictions on various nations subsidizing various industries even though they are condemned in advance to lose money, as it would impinge on sovereignty. Furthermore, it added, every state is entitled to decide what industries it requires for national defense and security.

PROPOSES UN SUPERVISION

The editorial further proposed that the whole scheme be shifted out of the hands of the United States and European governments and placed within the jurisdiction of the United Nations, with Uncle Sam delivering the key to his bullion vaults and letting the international politicians decide how to divide the precious metal.

Communist Leader Maurice Thorez's mouthpiece, l'Humanite, warned Marshall that the stipulation of any conditions or strings on American bounty will split Europe into the east and west.

"We must be extremely careful about accepting Marshall's proposals or it will cut Europe in two and deliver a helpless France

to the subtle intrigues of American imperialism," l'Humanite warned.

OTHERS MORE RESERVED

"If there are any conditions attached to Marshall's offer, then American control on European economy compromises the political independence of every government accepting it," the editorial said. "It is absurd to believe that the Soviets would permit intervention of American capitalism in their economy."

Rightist and centrist newspapers took a more reserved view and while insisting that France can accept no foreign dictation, they urged acceptance and grabbing of the gold offered before American public opinion turns cold on the bickering and haggling over terms and forces Washington to withdraw the offer.

My Trip to Washington

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jack Hamilton, 9 years old, fourth grade, Central School:

[From the B. and W. Boilermaker of May 1947]

MY TRIP TO WASHINGTON

(By Jack Hamilton, 9 years old, fourth grade, Central School)

Early Thursday morning, May 8, I joined a happy group of Barberton patrol boys at the B. & O. Railway Station. In spite of the snow and cold we got on the train with faces all aglow to start our "never-to-be-forgotten trip" to our Nation's Capital. It was a most enjoyable train ride.

Then at breakfast time we were served sandwiches and milk. At lunch time we went into the dining car to eat, and that is quite an experience. As we went on our way we came to Sand Patch, W. Va., which is 2,250 feet above sea level. The people around Sand Patch get snowed in when there are heavy snows, and planes have sometimes dropped down food to the people. There is one family who have a dog, and when the engineer of the train blows the whistle the dog comes to the train. The conductor throws out some newspapers he has tied together, then the dog catches them and runs home. We have arrived in Washington, and there is great excitement among us, and we can see the Capitol with its great dome high up against the sky. The fine Union Railway Station is the largest station in the world without roof supports.

We walked to the Plaza Hotel, and after we ate dinner we went out walking. We saw the Senate Building, the Capitol, and the Library of Congress. The Library of Congress contains the largest collection of books and maps in the world.

We looked at the Union Station from across the street, then went back to the hotel.

After a good night's sleep we got up at 6 a. m. Friday morning. We ate a very good breakfast, then our sight-seeing bus came for us. Our first stop was the United States Mint, where we saw them making 5-, 10-, 20-, and 50-dollar bills. We even saw a 200-dollar bill.

From there we went to the FBI Building. There we saw articles taken from saboteurs. There was a cane and inside a sword was hidden. The FBI showed us chemicals that are used to find hidden words in letters. We saw guns belonging to criminals. The story of John Dillinger's capture was told to us. We were taken down to the shooting gallery in the basement where the FBI men practice shooting at paper dummies. From there we went to the Washington Monument.

The elevator carried us nearly to the top, a height of 555 feet. We stepped out on a platform and through little windows we had a bird's-eye view of the city. Most of us walked down instead of riding in the elevator. There were 898 steps and I was one who walked down. Boy, did I have sore legs after that! From there we went to the White House. We went up a broad stairway and went into the East Room where all the formal receptions are held. There was a beautiful gold piano there. Then we looked into the Blue Room, Red Room, and Green Room.

We got on our bus again and rode by the foreign Embassies. Then to the House of Representatives and to Mr. HUBER'S office. Mr. HUBER took us through the tunnel to the Capitol. Each one of us sat on the Speaker's chair in the House Chamber. At night when the Representatives are in session, two lights burn on the dome of the Capitol. Mr. HUBER took us to the basement of the Capitol to see the tomb where George Washington was going to be buried. But they found in his will that he wanted to be buried at Mount Vernon and that is where he is buried. We came upstairs and as we looked up into the great dome of the Capitol we saw a beautiful painting.

Before the artist finished the painting he fell to his death and another artist had to finish it. In this room if you whisper your voice carries across the room. On our tour through the Capitol with Mr. HUBER we saw beautiful paintings and marble figures. As we came out of the Capitol Building we saw two marble figures, one of Christopher Columbus and an Indian girl. The other represents a pioneer fighting with a savage.

We came down the broad flight of stairs and walked back to the hotel for lunch. After lunch our bus took us to the Tomb of the Unknown Soldier, and we were in time to see the changing of guards. In front of the tomb there was a bed of beautiful tulips. From there we went to Alexandria to see the little church where George Washington worshipped. On our way to Mount Vernon we passed the airfield and saw President Truman's private plane called Sacred Cow. When we arrived at Mount Vernon we found it was being redecorated. So we couldn't see so much, but we did visit the kitchen. From Mount Vernon we went to the Lincoln Memorial. There are 57 steps, one for each year of his life. There is a lovely marble figure of Abraham Lincoln.

We returned to the hotel, and after eating supper we went to the theater at the base of Washington Monument. After the theater we went back to the hotel and then to bed. On Saturday was the big parade. There were 15 States represented, 15,000 boys, and 29 divisions. It was a wonderful parade, and we were all very proud of ourselves. We all wore hats, belts, and tee shirts the same. The parade was over by lunch time. After eating we went to the Zoo.

We saw all kinds of wild animals and two gorillas. Also the cutest little prairie dogs.

Then we went to the Philadelphia-Washington ball game. It was an exciting game, with Washington winning.

Washington is a beautiful city with lovely lawns and trees in nearly all the streets. The grounds around the buildings are beautiful. We checked out of the hotel at 8 p. m. and boarded the train for Barberton, arriving home at 8 a. m. Sunday morning.

We all had such a good time, and I want to take this opportunity to thank the American Automobile Association Club and the Central Labor Union for making this trip for us possible. And thanking Officer Seryak, Mr. Cordray, and Dr. Benner for taking such good care of us, and for all thoughtful things they did for us. The Barberton Patrol Boys have been very lucky to have Officer Seryak over us.

Aid for Greece

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered in Greek Parliament on the message of President Harry Truman, concerning the help to Greece, by George Bacopoulos, deputy for Athens:

[Translated from the Journal of Proceedings of May 5, 1947]

G. BACOPOULOS. Gentlemen, it is clear from the contents of the communications made by the President of the Council, or at least such is the impression given therefrom, that their main point is the one referring to the decision of the people of the United States and their great President, Mr. Truman, to save Greece from the total economic collapse that is now imminent; an event which would have decided the fate of the Greek state and the Greek society; to save Greece from the threat of communism and slavism lurking at its back. And this impression is justified, because this is, indeed, the principal subject of the communications. In the course of the debate on these communications, however, this subject was confined to a secondary place. It is reasonable that the debate should principally devolve around the question of public order and the security of the state. It was proper that the debate should cover this burning question, and previous speakers have reported events of great importance, especially those described for the first time, with such convincing force and national feeling, by Mr. Eliades, the honorable and so hardly tried Florina member. This, however, does not justify the transfer of the principal subject of the Government's statements to a secondary degree and its being placed on a plane almost equal to nonexistence.

As though it had itself been subjected to an attack by the parastatal organizations, which were so triumphantly led to this House by the distinguished diplomat and experienced politician from Argolis and Corinthia. And as if frightened by this attack it drew away from sight to avoid the danger. It dived down into the swamp, shall we say, of untimely and purposeless debate on parastatal organizations in order to avoid moral injury.

It would appear that there is still an insufficient apprehension of the moral and material omnipotence of the decision of the people of the United States to put an end to the activities of small or big agitators, the enemies of democratic principles and international justice. All talk about parastatal organizations, which in fact do not even exist, at this time and after this important decision, is mere pettishness. Assistance has last year been granted to us by Great Britain, and we are grateful for it, but no decision was taken to put an end to the unsettled conditions and the gradual undermining of Greece, owing to bad neighbours, because the assistance granted was not accompanied by a will to this effect. All sorts of parastatal organizations, EAM, Communist, NOF, SNOF, etc., and everything that goes against the decision of the great American commonwealth to impose justice and peace on earth, will be swept away like

toys by the irresistable current of the creative capacity of the American spirit.

Let us only pray that this spirit will also extend its directive capacity and interest in Greece to all aspects of society and even of the State, and let us ignore the malignant and calculated calumnies that this decision should serve imperialistic aims of the great American democracy. What a blasphemy! But this blasphemy is being uttered by those who in their fight for supremacy have made it a principle to distort even the simplest truth. The great decision of the American commonwealth, to assist and save Greece, derives from the tradition first created on that historic day of July 4, 1776, and the cause is that small nations are facing the danger of losing their freedom.

In 1776 the heroes of the American Revolution and founders of the present great Commonwealth wrote in that historic document by which they declared the independence of the United States, that all men have equal rights, among which are the inalienable rights of life, liberty, and pursuit of happiness. It is from this declaration that the tradition starts, which led to the present great decision. And it is not the first time that Americans take up the defense of the freedom of small peoples. In the course of time this tradition took solid roots in the history of the United States.

In 1822 President Monroe declared that the United States would not be indifferent in case the independence of any people of the Western Hemisphere were to be threatened by any European power. This took place at the time of the Greek revolution during which many Americans came here and assistance of all sorts was sent to support the Greeks in their fight for liberty; an assistance granted with the knowledge of the American Government but without its pursuing any imperialistic aim whatever.

In 1863 Abraham Lincoln, the greatest of Presidents, manifested again, with his famous Proclamation of Emancipation, the belief of American spirit in liberty and the right of all to be free.

Inspired by this belief, Americans fought in 1889 against Spain for the liberation of Cuba. They defeated Spain and occupied the island. They kept it just as long as was necessary to reconstitute it economically and to organize it as an independent state, and then departed. During the period of their occupation they had not omitted to organize a sanitary service which freed the island from the scourge of yellow fever.

True to the same tradition, Americans have sent their armies to Europe in both World Wars to fight for the freedom of peoples and international justice. And we all know the share of their contribution to the victory over the evil spirits of humanity as personified in the Italian Duce, the German führer, and Boris of Bulgaria, in their attempt to subjugate other nations. In all these cases there is not the slightest sign of an intention to follow an imperialistic policy on the part of the American Commonwealth, but only sacrifices in the interest of the freedom of others. But even if the assistance granted to us and the interest shown by the people of the United States in our country, does have the sense of an imperialistic policy, we accept it with pleasure, because it is incomparably preferable to find ourselves under the political influence of such a people than to come under the yoke of criminal communism and barbaric Slavism [applause]: under the influence of a people whose political leaders are competing as to who will be the first to serve international justice in the case of their beloved Greece. Just a few hours ago the news was given over the radio that one of the leaders of the Republican Party, Senator from the State of Ohio, leader of the Senate majority, son of the late President William Taft, and one of the candidates for the office of President, Mr. ROBERT TAFT, declared that he will insist on a speedy assistance to Greece and will oppose the amendment of the House of Representatives as regards a reduction in the amount and any other amendment attaching any strings to the assistance given.

Besides the said tradition, substantial reasons and immediate causes have called for this decision of the American Commonwealth. And these reasons have been created by those who, with actually imperialistic intentions of domination over other nations, have endangered fundamental principles for which a second world war, such a destructive one, had to be fought.

One is tempted to think that a malignant fate was jealous of the good luck that was coming to the peoples of the world, victors and vanquished, after the victory of right over injustice, of real civilization against camouflaged barbarism.

The same malignant fate which for centuries keeps appearing at important turns of humanity, at critical moments, to hinder the progress of the peoples toward mutual understanding put forth again on the international scene the malevolent spirit of the times, to protract the drama of war and unsettlement. It presented communism, this satanic organ of Slavism, by which it is threatening the independence and freedom of many peoples, for whom the Americans have fought and sustained large sacrifices.

The danger was immediate and great. We Greeks were running the greatest danger of all. In fact, from what has recently come to light, the conspiracy against our country was of a much larger scale than what we imagined. The Slavs had dangerously armed and organized much of the riffraff in Greece.

The whole world and we ourselves were wondering whether there was any hope of a "Deus ex machina" appearing to save the liberal-minded nations from the gloom of slavery and despair. And there the sunrise from the west. The message of President Truman appeared in the gloomy international horizon as an enlivening sun. Its historic contents are well known. It will constitute a most important milestone in human history. On one side it will be a breakwater against the waves of the communistic plague, which was threatening to flood over the whole of humanity, and on the other hand it will constitute the starting point for favorable evolutions. It has been an honor for us that this milestone was placed in Greece. The Fates have again set Greece as one of the advance sentinels of civilization.

It is up to us to prove ourselves worthy of this honor. It depends on us to take advantage of the good fortune sent us by God through President Truman at the most critical moment.

The Government, which includes men of high ideals and capable of fully grasping the significance of this event, should turn its undivided attention to it and prepare the premises for its realization, adapting them to American mentality which hates bureaucracy, procrastination, useless red tape, and slowness. All of us here must rally around the Government, or any other nationalist government, to contribute all we can so that the great aim of social and economic reconstruction of our country may be attained. And when our fatherland is reconstructed, thanks to the assistance of our great friends and to our own efforts, and when economic despondency and misery, into which we have sunk, on account of the war, is followed by prosperity and a moral order of things, then even the slightest vestige of the multiple organizations and rebellions will have also disappeared in the same manner as mosquitoes disappear after a morass has been drained.

Then, we may be sure that Greece will prosper. Greece will prosper, as she deserves to.

Then, grateful to God and Truman, to Truman and the people of the United States, to the people of the United States and anyone who would have cooperated for the good of Greece, we will build on the highest summit of our Macedonian mountains a replica, an immense replica of the Statue of Liberty, adorning the port of New York, with the torch in her hand to show the light to the peoples beyond our frontiers and to show to them what liberty and social justice are. With the other hand she will be crowning the statue of Truman, who will in this case symbolize the idealistic greatness of the American spirit. [Long applause.]

The Crime of Apathy

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

THE CRIME OF APATHY

The Farm Journal, like thousands of other special interests, admits it has a pet appropriation request, but unlike thousands, it is sending no wires. It is not high pressuring Congress.

This is a refreshing note to drop into the veritable battle raging over the economy cuts a Republican Congress is attempting to make in Federal expenditures.

Yes, the Farm Journal would like to see more money spent—on new crops research. But not now. It puts the "general welfare" first.

Congress is receiving big bundles of letters and telegrams imploring it not to cut favored items.

Strangely, all the petitioners are for economy but at somebody else's expense. As for their pet scheme—ah, but that's different. There are exceptions you know.

The Farm Journal's comments exemplify a constructive attitude. It might well have beaten the drums for appropriating the full amounts sought by the Agriculture Department since it works the formers' side of the street.

But this magazine and other leaders in its school of thought represent America before they represent any group therein.

"More important than any single appropriation or any single activity of the Department," it says editorially, "are these: That the Government * * * and the American dollar keep their strength; that the mammoth debt be reduced; that taxes be lowered so that men have incentive to produce.

"These things can't be accomplished unless Federal expenses are sharply lowered. Expenses can't be lowered except by cutting appropriations, and cutting them hard.

"Before any citizen sends his wire to protect some favored activity, let him ask whether the reduction of expenses and taxes will not serve him and his country better."

The Farm Journal observes that agriculture did pretty well for a great many years while the Department's funds were only a fifth as much.

And won't little pigs make pork and crops be harvested whether the Department has two billions or two millions to spend?

If people must wire their Congressmen, let them for once back their economy efforts.

They might write in an encouraging tone similar to messages from a group of Fort Wayne businessmen.

"Yours is a difficult and unpopular task," they said in a letter to the Senate and House Appropriations Committees. "Please know that you have our wholehearted support."

A sufficient number of messages like these from representative citizens, one may be very sure, would flatten the special grabbers in nothing flat. As it is, public apathy becomes an accessory in the crime of continued Government extravagance.

Southern Conference for Human Welfare a Stooge for Communism—Editorial From Memphis Commercial Appeal

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an editorial from the Memphis Commercial Appeal, Tuesday morning, June 17, 1947, entitled "Stooge for Communism," referring to the Southern Conference for Human Welfare which the Committee on Un-American Activities has found to be a Communist-front organization.

If we had more editors with the courage and conviction of Mr. Frank R. Ahlgren, the distinguished editor of the Commercial Appeal, we would have less trouble in driving the curse of communism from American soil.

The editorial referred to reads as follows:

STOOGE FOR COMMUNISM

The Southern Conference for Human Welfare has been branded officially as a manipulated stooge for international communism.

It is, says the House Committee on Un-American Activities, "perhaps the most deviously camouflaged Communist-front organization in the United States."

That is something every American should recognize, and particularly those living in the South against whose best interests the SCHW has long labored insidiously and damagingly.

The published findings and conclusions of the House committee are contained in a document which should be read by every southern law-enforcement officer and ought to be thoroughly known and understood in every southern home.

The only welfare in which the SCHW is genuinely interested is that of communism.

It has successfully duped some splendid southerners and genuine liberals, the majority of whom, be it said to their credit, quit the group when they discovered its real purposes.

Based on an investigation the House committee conducted into activities of the SCHW, the report sets forth that the organization "seeks to attract southern liberals on the basis of its seeming interest in the problems of the South."

"Careful examination of its official publication (Southern Patriot) and its activities, however, will disclose that the conference actually is being used in devious ways to further basic Soviet and Communist policy.

"Decisive and key posts are in most instances controlled by persons whose record is faithful to the line of the Communist Party and the Soviet Union."

That is an undeniable fact to which the Commercial Appeal has repeatedly directed attention during the SCHW's almost decade of existence.

Exploitation of the Negro for purely selfish reasons and chiefly for the purpose of creating the type of dissension which is a prerequisite to violent revolution is fundamental with the American Communist Party and with international communism.

Activities of the SCHW in matters pertaining to Negroes too closely follow parallel basic Communist policies to be something of mere coincidence, and on that score the report says this:

"In allying themselves with the Communists and in permitting the Communists to control policy and strategic positions, the non-Communists in the Southern Conference for Human Welfare are wittingly or unwittingly promoting the following fundamental principles of the Communist Party in dealing with the Negro question:

"1. The Communists are not interested in the long-range welfare of the Negro. They are interested rather in using the issue as an explosive and revolutionary tinder in destroying American democracy.

"2. They have placed themselves on record as favoring an independent Negro Soviet Republic in the southern Black Belt, which, in essence, is a call to civil war in which the Negro population would be the unhappy victims and in which all their social gains in recent years would be sacrificed."

There's no regard for human or southern welfare in any such objective as that.

The report names names—does not neglect to point out that Clark Howell Foreman, president of SCHW, "has been most successful in confusing the people as to the Communist-front character" of his group.

Besides setting forth a conclusion as to the Communist camouflage, the committee finds that—

The Southern Conference for Human Welfare "shows unswerving loyalty to the basic principles of Soviet foreign policy."

That it "has consistently refused to take sharp issue with the activities of either the Communist Party, U. S. A., or the Soviet Union."

That it "has maintained in decisive posts persons who have the confidence of the Communist press,"

That it "has displayed consistent anti-American bias and pro-Soviet bias, despite professions, in generalities, of love for America."

Such an indictment is sufficient to condemn it in the minds of all earnest Americans.

The House committee has done the South a great service in debunking this organization which has so misused the cloak of humanitarianism to hide its machiavellian scheming.

When an enemy's ugly countenance is fully seen and recognized it can be more readily, effectively repelled.

There is no room in the South for the evil things of which the SCHW is the evil agent-provocateur.

Propaganda Activities of Government Personnel

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. ELLIS. Mr. Speaker, I submit for the consideration and information of my colleagues a broadcast by Fulton Lewis, Jr., on Thursday, June 12, 1947.

The broadcast will give the Members of the House first-hand information regarding the propaganda activities of Government personnel, particularly in the Agriculture Department, and their campaign to influence the action of Congress and maintain the enormous wartime pay roll of the administration.

The letter contained herein, in addition to being an illegal act on the part of the sender, is misleading to the extreme.

The broadcast follows:

If you're interested in knowing why it's so difficult for Congress to accomplish any reductions in appropriations and in Government spending, I have here before me tonight an original document which should be of interest to you. I found this afternoon that it was of such interest to the Senate Appropriations Committee that they demanded that I turn it over to them after this broadcast tonight, as evidence for the Government in Federal prosecution by the Department of Justice. (Seems like the Department of Justice is getting a lot of business here tonight.)

The Agriculture Department appropriation bill which has been passed by the House of Representatives, and is now before the Senate Appropriations Committee provided certain reductions under President Truman's budget requests, in appropriations for soil conservation and for price-support activities.

This is a letter, mailed under Government frank, free Department of Agriculture mail, with the usual penalty for private use and so forth, and it is mimeographed with the letterhead, United States Department of Agriculture, Agricultural Adjustment Agency, Agricultural Conservation Program, Elkhorn, Nebr., June 9, 1947. And it is signed by George C. Bull, chairman for Douglas County.

The letter reads as follows:

"Farm Owners and Operators:

"The House of Representatives of the Eightieth Congress, has taken action which cut the $300,000,000 committed by the Seventy-ninth Congress to $165,000,000, thus reducing the amount farmers should receive for approved conservation practices.

"They also voted to no longer allocate to the Department of Agriculture $148,000,000 of the money derived from excise taxes, heretofore used in supporting the prices of farm products.

"If this action is sustained by the Senate, when they vote on this measure in the near future, it will mean that you as well as all other farmers owning or operating land in this county cannot be paid the full amount of money appearing on your copy of the notice of approved practices, which was recently mailed to those of you who signed up before May 1, 1947. Amounts paid on practices already carried out may have to be refunded in part, possibly to the extent of 50 percent or more. The payments retained or the amounts of payments to be made depend entirely on the final action of Congress in voting funds.

"The price-support program will, of course, be curtailed if money for that purpose is not made available. The plan is to offer a so-called simplified loan program which, if the farmers fall for it, will in effect again place us at the mercy of the grain trade.

"As your elected AAA representatives, we believe it to be our duty to keep you informed of actions that affect not only the immediate status of agriculture, but that may eventually result in economic disaster for agriculture and the Nation in the years ahead.

"If price stabilization is denied farmers and no provision is made to protect the land against the damages caused by the elements, history will repeat itself and economic disaster can be the only result.

"GEORGE C. BULL,
"Chairman, Douglas County ACA."

That is the form letter sent out by official Government free mail, under Department of Agriculture letterhead, to farmers in Nebraska. Whether it has been sent out elsewhere the Senate appropriations will find out.

Now, section 18 of the United States Code, paragraph 201, provides that no money appropriated by any act of Congress shall be used directly or indirectly for any communication, letter, printed or written matter, or any other device, intended to influence, directly or indirectly, any action of Congress for or against any legislation or appropriation. And that any violations shall be punishable by dismissal from Government service of those individuals responsible, and a fine of $500 and 1 year in jail.

I called this case to the attention of Chairman STYLES BRIDGES, of the Senate Appropriation Committee, today; he ordered that I turn the letter over to the committee as evidence immediately after this broadcast, and stated that it was a flagrant example of a thoroughly immoral practice that has been operated on a wide-scale basis by virtually all departments and agencies of the Government, to resist reductions in appropriations. He said it is an excellent sample of the manner in which Government bureaus and departments use taxpayers' money to propagandize the public to support continuation of their jobs and their spending.

He said that as soon as he has this document his committee will issue subpenas for those responsible, to appear before the committee with an explanation, and that the committee will then turn the matter over to the Department of Justice, with instructions that all violations of the Federal statutes be prosecuted.

Charles Lewis Gerlach

MEMORIAL ADDRESS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. CHARLES LEWIS GERLACH, late a Representative from the State of Pennsylvania

Mr. SIMPSON of Pennsylvania. Mr. Speaker, it was with deep sorrow and a sense of personal loss that I learned of the death of our colleague from Allentown, Pa., the Honorable CHARLES L. GERLACH.

Mr. GERLACH ably represented the Eighth Pennsylvania Congressional District in Congress since first entering the House of Representatives with the Seventy-sixth Congress.

He served with honor and distinction on the Committee on Foreign Affairs. His devotion to duty, both in the House and on the committee throughout the years of World War II, demanded its toll and contributed to his untimely death.

The Members of the Republican congressional delegation from Pennsylvania, together with the entire Congress will miss Charlie. He was a wise counselor in our delegation conferences. An outstanding Republican, he was not given to compromising principle for expediency and once knowing himself to be right, his determination for the right would not waver.

I sympathize with Mrs. Gerlach and others close to Charlie, who mourn him. May our Heavenly Father make their burdens light.

Address of Maj. Gen. L. C. Sheppard

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 18, 1947

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a copy of an address delivered by Maj. Gen. L. C. Sheppard, assistant to the Commandant, United States Marine Corps, to the thirteenth annual encampment of the Veterans of Foreign Wars, Department of Mississippi, in Jackson, Miss., on Monday, June 16, 1947:

It is my pleasure on behalf of the United States Marine Corps to extend greetings to the Department of Mississippi, Veterans of Foreign Wars on the occasion of its annual encampment. Our commandant was most distressed at not being able to keep this engagement himself, as originally planned. Unfortunately, he was required to appear before a congressional committee this morning. General Vandegrift has asked me to express his regrets to you and to extend his best wishes for a happy reunion.

It is, indeed, a pleasure for me to visit this historic Mississippi town and to experience the hospitality of the deep South. I always enjoy attending veterans' gatherings and reminiscing with old comrades in arms.

In the first year of the war, when I was in command of the Ninth Marines, I had in my regiment a lieutenant from Jackson, Miss., by the name of Lewis H. Wilson. During training this young officer showed great promise of becoming an outstanding leader. I was later pleased to have my opinion justified when he was awarded the Congressional Medal of Honor for heroism above and beyond the call of duty during operations on Guam. Wilson is now a major in our corps, and the city of Jackson has every reason to be proud of its distinguished son.

It is apparent from the newspapers that the veteran is beginning to assume a rightful share of influence in national affairs.

From considerable experience with speeches at gatherings of this nature I have found that it is customary to tell a story at this point. Again from experience, I can tell you that a great many of those stories are rather ancient. However, I am going to tell one that is more than 300 years old, but which I believe will be in keeping with the subject of my remarks.

In the year 1630 the British Parliament received a petition about a tax matter which began: "We, the people of England." Naturally, the members of Parliament were keenly interested immediately. However, they noticed that the petition was signed with only nine names. An investigation was made and they discovered that all of the signers were tailors, who lived on Tooley Street, near London Bridge.

Today, 300 years later, this practice is still in vogue. I have noticed in the Letters to the Editor columns of most newspapers that it is a habit of many writers who are veterans to begin by saying, "We veterans of World War II."

Now I think it is quite apparent that no government can determine its policies merely on the advice of "nine tailors from Tooley Street" or from a few veterans. There are nearly 15,000,000 veterans from World War II alone. The veterans are not a majority in our Nation of 140,000,000 people. However, we must consider that the families of veterans are as much concerned as the veterans themselves by what is, or is not, done to aid the veteran. By including the families it has been estimated that this group will include anywhere from one-third to one-half of all our citizens.

Of course, it is obvious that the opinions of individuals are important. That is a basic tenet of democracy. The majority is not always right, but it is fact-proved by history that the majority is very seldom entirely wrong.

It is another tenet of democracy that public opinion is stronger than the Congress or a legislature. Public opinion is strong, but it is many-headed and has a tendency to sleep. Without freedom of expression and our jealously guarded freedom of the press, public opinion might well remain dormant. Statesmen here tonight can tell you, I am sure, that it is a difficult and thankless task to attempt to carry out the will of the people when that will has not been expressed.

That is why we have leaders, such as our Governors, Senators, and Congressmen. We need more leaders. We need leaders on all levels, not only on the top ones. It is as important to have good government here in the city of Jackson. and in Hinds County, as in Washington.

An English writer speaking of America once said, "The republican form of government is the highest form of government: But because of this it requires the highest type of human nature—a type nowhere at present existing."

We cannot agree with that statement in full. We have developed leaders, and we will develop more. Our governmental system is in itself a school for the education of citizens and the development of men to hold high office.

I know something of the veteran. I know what he can do in combat. He requires the minimum of leadership because of his initiative and common sense. He is himself a leader. There were many times when a situation was saved by junior officers, noncommissioned officers, or privates who leaped into the gap when their commanders fell and took charge. This initiative and willingness to assume the responsibilities of command is even more important than raw courage. It is more than physical courage; it is moral courage, and that is a quality which good citizens must have. Our veterans have it, and they will make good citizens.

There is no need to fear the future. Many of us can remember an earlier postwar generation. That was a generation which passed through the jazz age and the turbulent twenties, and all kinds of other horrible things. Then came the depression, and we found that those who make a profession of viewing with alarm were sure that our youth was soft, flabby, weak, spineless, and totally unfit. They did us a favor, because our enemies believed those words and counted on an easy victory against the so-called luxury-loving American youth.

They must have begun to have their doubts at Wake and Bataan, but by the time Tarawa, Iwo Jima, and the campaigns in Europe were over they knew for sure that they had guessed wrong. The generation that had been so scorned had written its name in the pages of history.

That generation is not going to stop now and rest on its laurels. That is not the American tradition, and it is not the tradition of this new generation. We were not content to dig in on the beaches of Iwo Jima and Normandy. We attacked. We must not be content to hold the peace which has been partially established. We must win the peace.

The veteran is bound to be in the forefront of the campaign for a lasting peace.

I am here to express my confidence in the future of the United States, which will soon be largely in the hands of the veterans who have preserved it. I do not have to tell this organization why it is important to maintain our defenses.

The Veterans of Foreign Wars stand for preparedness. The Nation learned a lesson after the last war when we scrapped our weapons without finding a way to keep the peace when marauding nations were on the prowl across the world. The vast numbers of veterans of this war who have rallied to the standard of the Veterans of Foreign Wars is proof that the veteran is vitally concerned with the maintenance of peace. He is not going to tear down our defenses until he knows that a proved, workable method of insuring peace has been found.

It is a primary duty of the veteran to be defense minded. He has successfully completed many and arduous duties already, but all that has been done can be lost by default. It was almost lost not long ago, but it was saved, and this time it will be preserved. Two world wars have been two wars too many. I do not need to tell you how horrible war can be. I cannot tell you how horrible it will be in the future, if we should allow one to begin. And if war begins, we have found that we cannot remain aloof.

This whole Nation has become a primary target. The city of Jackson is as much an objective as a warship or an airfield. We must face facts.

Even an ostrich with its head embedded in a bucket of concrete has to recognize the fact that the possibilities of war have not yet been eliminated from the world. This does not mean that we must have war, but it does mean that refusal to face the facts would be criminal folly.

We want peace. We are working for peace. God willing, we shall have peace. The cost of victory has been defined as "blood, sweat, toil, and tears." Can we offer less for the security of our ideals and the safety of our children?

Another duty of the veteran is to be politically minded. By that I do not mean that every veteran should seek political office. Those who are qualified should be willing to enter the public service, even though that service may mean that they will not be as well off financially as others.

There is no doubt that our veterans are qualified for the high duties of citizenship in a great and free republic. They are qualified by birth, by heritage, and by sacrifice. As I have said, they have learned to meet responsibility squarely from the reserves of moral fortitude which they have demonstrated so effectively to the world.

It is also the duty of the veteran to be civic-minded. The path which leads out of our present difficulties begins right in our own backyards. We can make a beginning toward a better life by our efforts in the communities in which we live. The veteran is going to be interested and active in every facet of the life around him. That is obvious from his training during service overseas. The men who have been doers will not be content with a place as bystanders.

The talent, drive, and initiative of the veteran is making itself felt throughout American life today. In everyday life the veteran is not a member of a special class of citizen. The extra drive comes from the fact that he must catch up for lost time. His war service has retarded him in the economic race, but he has come out of the war with a matured and consolidated viewpoint. He will catch up.

The complete absorption of the veteran into national life is not the problem that it has been painted. Some would have us believe that absorbing the veterans is a project comparable with the depression or a scourge of 7-year locusts. This is obviously absurd. Our veterans served in many a foreign land, but they are not immigrants suddenly thrust upon the Nation. They were born here, they have lived here almost all of their lives, and there is a place for every one of them.

The absorption of 15,000,000 matured, ambitious young men is not a problem. It is a privilege. These men will be a leavening influence in our national life. They will quicken the pulse of the Nation's business, both as producers and as consumers.

I have spoken of the duties of the veteran to the Nation. No matter what sacrifices he has made he cannot escape the vital, and sacred, duties of citizenship. At the same time the Nation cannot escape its duty to the veteran. Laws have been set up; benefits have been provided. These are all well and good. The job will not be completed, however, until every veteran has been given an equal chance with other citizens. It is a job which must be followed through, and I am sure that it is one which the Veterans of Foreign Wars will follow through for as long as is necessary.

In the words of Theodore Roosevelt, who fought in one of the battles that gave this organization its start, "A man who is good enough to shed his blood for his country is good enough to be given a square deal afterward."

I suppose housing is a relative matter. On Guadalcanal I was fortunate to inherit a house of sorts from the previous occupants of Henderson Field. One night some of the previous owners came back with a battleship and served eviction papers in the form of a 14-inch shell. I was out at the time and my sentiments were not so much regret at the loss of this shack as relief that I had not been at home.

In civilian life today, when a man has a wife and children to care for, a house is vitally important. I am glad to see that the Veterans of Foreign Wars are actively supporting measures to obtain housing for veterans. Housing is only one of the many problems which assail us today.

The problems of prices and food, of getting a new car, and of finding the right job are vital. They are tremendously important and they always have been. We do know that they can be solved, because they have been solved before. The problem of a permanent peace has most obviously never been solved before.

Lack of houses, food, clothing—all these can be compared with the buzzing of mosquitoes when you are trying to find a soft spot in a fox hole. Mosquitoes can give a man malaria, just as these problems can make our Nation sick. But war is like a bullet or a shell. It can completely destroy this Nation and everything for which we stand.

The New England sage, Ralph Waldo Emerson, often quoted an observation made in the days of the forming of the United States:

"A monarchy is a ship, which sails well, but will sometimes strike on a rock and go to the bottom; while a republic is a raft, which would never sink, but then your feet are always in water."

The history of the United States, which was a new experiment in government, has proved that a democracy can work if all its citizens work together. There have always been those who said it couldn't be done. There always will be.

I had the high honor of serving during the war with some young American men and women who wore the uniform of the United States Marine Corps. They proved to me that "impossible" is a highly overrated word.

I saw young marines whom nothing could stop. The jungle couldn't stop them on Guadalcanal, a reef couldn't stop them on Tarawa, and a hail of steel couldn't stop them on Iwo Jima. A few civilian problems are not going to stop them now.

The United States will lead the way to world recovery and the establishment of a workable peace. These are the problems which count. The man who knows why they count—the veteran—will insure that they are solved.

With 15,000,000 veterans we can establish a firm beachhead on a new and better world. We can and we will.

Taft-Hartley Labor Bill

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 19, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the National Clergymen's Committee on the Taft-Hartley bill:

WASHINGTON, D. C., June 17.—A statement signed by 642 prominent religious leaders in all parts of the country urging a veto of the Taft-Hartley labor bill will be presented to President Truman today. Representing the National Clergymen's Committee on the Taft-Hartley bill, a four-man delegation bearing the petition will arrive at the northwest gate to the White House at 2:15 p. m. The delegation will include the Reverend John Duffy of New York City, Rabbi Ira Sud of Arlington, Va., Father Charles Owen Rice of Pittsburgh and the Reverend Sheldon Rahn, secretary of the committee.

Among those supporting the delegation are Bishop William Scarlett, of Missouri; Father William Kelly, of Brooklyn; Dr. David De Sola Pool, of New York City; Dr. Sidney E. Goldstein, of New York City; Dr. Liston Pope, of New Haven, Conn.; Father Wilfrid Parsons, of Washington; Rabbi Bernard Segal, of New York City; Rev. Donald Harrington of New York City; Rabbi Julius Mark, of Nashville; Bishop Charles K. Gilbert, of New York City; Rev. Ernest Fremont Tittle, of Chicago; Bishop Edward L. Parsons, of California; Bishop Francis J. McConnell, of New Haven; Rev. William Lloyd Imes, of Dundee, N. Y.; Father Richard B. Lavelle, of Brooklyn; Dr. Howard Thurman, of California; Father Joseph F. Buckley, of Brooklyn; Rabbi Manuel Laderman, of Denver; Father M. Sidney Rushfort, of Brooklyn; Father Philip Dobson, of Jersey City; Dean Walter Muelder, of Boston; Father Joseph Hammond, of Brooklyn; Rev. Edwin McNeil Proteat, of Rochester, N. Y.; and Bishop Walter Mitchell, of California.

Catholic members of the committee pointed out today that strong opposition to the Taft-Hartley bill has been voiced by such leaders as Archbishop Robert E. Lucey, of San Antonio; Bishop Bernard J. Sheil of Chicago; and many priests in local communities throughout the country. The National Catholic Welfare Conference, representing America's Catholic Bishops, in opposing the bill, has said it "will almost inevitably lead to industrial strife and unrest."

The formal statement of Protestant and Jewish leaders follows:

"We appeal to you to veto the Taft-Hartley labor bill because it would violate human freedoms essential to the ethics of both democracy and religion. Basically it substitutes Government regimentation for sound collective bargaining and wise attention to the fundamental economic and psychological causes of industrial strife. It is a measure calculated to destroy the real strength of a free labor movement by undermining basic principles of collective bargaining, making the Government of the United States a ready instrument of employer resistance to legitimate needs of workers, and subjecting unions to a process of decimation and frustration under Government control.

"The closed shop and the union shop developed historically as a defensive union measure against determined employer resistance to independent unions. Many industries such as clothing have combined closed shops with some of the best and most constructive industrial relations in America.

But, in addition, just as every town resident must share the costs of community services by paying taxes, so every worker in the industrial community bears an obligation to share the costs of collective bargaining through the agency designated by a majority of the employees. Just as some towns have occasionally enforced tax-collections under tyrannical administrations, so a few industries have had closed shops under tyrannical and dishonest union controls. But the remedy lies, not in abolition of compulsory union dues or town taxes but rather in the enlightened concern of free community and union members. This legislation would destroy constructive industrial relations already achieved.

"We look to you for a vigorous veto message."

David I. Walsh

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, June 20 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials eulogistic of the late Senator David I. Walsh, the first from the Boston Herald of June 12 and the second from the Boston Globe of the same date. I am sure the editorials will be read with great interest by all the many friends in the Senate of the late Senator Walsh.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston, Herald of June 12, 1947]

DAVID I. WALSH

Even though defeated for reelection to the United States Senate last November, David I. Walsh remained an imposing and influential figure on the Massachusetts political scene. But death intervened before he could rise again, as it seemed he must.

To young people Senator Walsh no doubt seemed a rather stodgy conservative, who regarded with fear and concern the New Deal with which he was embarrassingly affiliated by party ties. While he liked Franklin Roosevelt personally, he undoubtedly had little more respect for the late President's political policies than did most the Republicans. Mr. Walsh, moreover, was a Democratic mugwump who strayed from President Wilson's leadership on the League of Nations in 1919, and who openly opposed Mr. Roosevelt's interventionist strategy in 1940–41. A New Englander who had been brought up in a mill town, he was a protectionist to the end, no matter what Secretary Hull and other Democratic liberals might say.

But the David Walsh who become Governor of Massachusetts at 41 in 1913 was a different man. He was "the people's candidate," a man who had worked his way up from near poverty, the shining, knight in armor who represented thousands of Irish, Italian, and other immigrants, and children of immigrants, who were just beginning to make themselves felt in State affairs.

Then in 1919 he went to the Senate, the first Democrat to be elected to that august body from Massachusetts since before the Civil War. Possibly Washington made him homesick for the safe, familiar ways of his home State. Possibly some of the real radicals from the West shocked and frightened him. But aside from a rather conventional loyalty to organized labor he thereafter became so conservative that it made it extremely difficult for a Republican rival to pick a fight with him.

The explanation seems to be that this earnest, ambitious individual had gradually absorbed most of the traits of his Yankee environment. In his isolationism, he no doubt went further than many of his Yankee contemporaries would have, including even the grandson of the famous Henry Cabot Lodge. But, after all, this change from radical to conservative was a natural development from youth to old age. The important thing, and the thing for which all Massachusetts will honor his memory, was that David Walsh was always a loyal, honest, and thoughtful agent of the people of the State, as he understood their wants and needs.

[From the Boston Globe of June 12, 1947]

DAVID I. WALSH

Massachusetts will remember David I. Walsh as a Democratic Party pioneer. When he was elected lieutenant governor in 1913, he was the first successful candidate to wear his party's label in that office in almost 90 years. But that was only a beginning. After he had served two 1-year terms as Governor of the Commonwealth, he was the first of his party to break the long Republican monopoly upon the United States Senatorships from this State. Elected in 1918, he was the first Massachusetts Democrat whom the Senate had seated since Robert Rantoul went to Washington, for a brief term, in 1851. And Rantoul's victory had been won before the Republican Party was born.

The promise that the youthful Senator Walsh had thus shown in his early campaigns was fulfilled by his later career. His Senate service, from 1918 to his retirement in 1946, totaled 26 years. Only two Massachusetts Senators have served a greater length of time—George F. Hoar, whose terms add up to a few months more than Mr. Walsh's, and the elder Henry Cabot Lodge, who was a Member for 31 years. But it must be recalled that Mr. Walsh's political life spanned a period of political tumult. Two of the major changes of that time—the strong Republican tide that ran in favor of Calvin Coolidge in his Presidential campaign of 1924 and the equally definite Republican turn of 1946—resulted in defeats. On the five other occasions when he sought election, in 1918, 1926, 1928, 1934 and 1940, Mr. Walsh was successful; and each time he won, his plurality was larger than it had been at the previous election.

His grip upon the voting public was amazing, and all the more striking because he acquired it by no familiar set of political rules. He was not, for example, a rabble-rouser and never dealt in the large promises that are likely to attract a following as large as his came to be. His philosophy of public service was, instead, a philosophy of dignity. He believed in a dignified appearance, dignified debate and dignified action. He scrupulously observed the code in his own case and he was jealous of any threatened infringement upon it by others.

That philosophy, entirely his own, was doubly useful to him. On the one hand, it kept him from engaging in petty altercations within the party—disputes whose effects might have been felt at the next election. On the other hand, since the philosophy sprang from a small-town upbringing and an understanding of what small-town people expect of their representatives in office, it struck a responsive chord in the hearts of those whose backgrounds in other communities resembled Mr. Walsh's in Clinton. Analysis of the vote in any of the Senator's successful campaigns shows how he benefited, in Boston and the larger cities, from freedom from factional quarrels and, in the smaller cities and the towns, from shared experience and, consequently, a shared point of view.

As a Senator, Mr. Walsh grew conservative with the years and for that reason he was an independent during the New Deal Congresses. His major committee post was as chairman of Naval Affairs in the years preceding and during World War II. He worked willingly and earnestly for the Democratic party nationally and helped to write most of the platforms drafted at national conventions during his political lifetime.

His contributions to these larger affairs were many, but Massachusetts always has thought of him and long will remember him as an honorable, hard working, and faithful public servant who worthily upheld the traditions of the Commonwealth.

UNCLE DUDLEY.

Plight of the Navajos

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Arizona Republic of June 10, 1947:

PLIGHT OF THE NAVAJOS

GANADO, June 10—RICHARD F. HARLESS, Arizona's junior Congressman, flying from Washington to view first-hand the crisis today confronting the huge Navajo nation, was told here that the end of Federal wardships would be the first step in a long-range program for salvation of these red men.

Confirming reports that some of the Indians in isolated areas on the sprawling Navajo Reservation face starvation this winter unless relief comes quickly, Dr. C. G. Salsbury, noted medical missionary, told Congressman HARLESS:

"Today, not tomorrow, is the time for adequate, concerted, cooperative action to meet and solve the Navajo health and education problems."

Superintendent of the world-famed $1,000,000 Ganado Mission Hospital and School operated here by the Presbyterian Church, Dr. Salsbury believes granting to the red man of the right to vote and assumption by the State of responsibility for education and health regulation is the only real solution to the critical Navajo situation.

Congressman HARLESS agreed there already is talk in Washington of the Federal Government "getting out of the Indian business" and delegating its wards to the States in which they reside, with Federal subsidy payments to those States for a specified number of years.

The threat of hunger isn't the only Navajo problem, Dr. Salsbury declares.

"It is apparent to every experienced worker in the Navajo country that only a handful of the school-age children are in school because schools are not available. It also is apparent that only a very nominal effort is being made to control the flow of venereal disease and tuberculosis and other diseases which are running unchecked through the reservation like a river of death.

"It also is plain that no serious attempt is being made to enforce liquor laws or to eliminate the use of peyote, a drug menace which is growing at an alarming rate.

"What is needed most is constructive use of the discouraging facts now in our hands, and that effective measures be put into operation at the earliest possible time."

Dr. Salsbury declares two closely related problems—education and wardship—must be considered in any long-range measures for relief of the Navajo.

"It is virtually impossible to carry on any effective educational campaign along health or other lines among largely illiterate people so widely scattered as are the Navajo. Only about 20 percent of these Indians speak English with any degree of ease, and those who don't speak English have no written language. This makes it all but impossible to spread information by use of literature."

Declaring that the Federal Government has "toyed with Indian education" for more than three-quarters of a century, Dr. Salsbury cited the thousands of Navajo boys and girls now unable to gain an education for lack of school facilities, and the overcrowded conditions in ill-equipped Government boarding and day schools still in operation.

Of Federal wardship, the medical missionary declares, "The Navajo is a sharp, keen individual, skilled in the arts by which he has had to make a living. There is no valid argument against his being granted the full rights of citizenship."

He pointed out that Elma R. Smith, a member of the Navajo Tribe who was graduated from the University of Arizona in 1941 with a bachelor's degree, last week received her master's degree—yet cannot vote.

"The first step in a long-range program for education of the Navajo and carrying out of an effective health program," the doctor told HARLESS, "would envision the end of Federal wardship over the Indians, the granting of the franchise, and assumption by the State of responsibility for the education and health regulation of the Navajo.

"This," he said, "would mean elimination of the Indian Bureau. It would mean the Federal Government would need to make substantial grants in aid to the State until the backlog of ignorance and disease could be overcome and the Indian become an asset rather than a liability."

Believing that the classroom is a strategic point from which to carry on health education for the children and, through them, their parents, Dr. Salsbury says, "If prompt, adequate action could be taken, in less than 15 years every child of school age could have at least an elementary education and the problem of health and education would, to a very large extent, be solved."

In advocating taking the Federal Government out of the business of caring for Indians, Dr. Salisbury declares the big reservation headquarters agency at Window Rock should be converted into a Navajo high school or sanitarium.

In conferring upon the Red Man the right to vote, he does not believe more than 2,000 could at present qualify because of the tribe's high rate of illiteracy, but emphasizes the right to vote would be another incentive to seek an education.

Would Navajo who could qualify as voters be controlled by traders, missionaries, or governing officials? Emphatically not, says Salsbury. The Navajo are rugged individualists who make up their own minds.

The medical missionary says Government day schools now are acknowledged failures. Busses can't transport the children to and from their isolated homes over the spider web of unimproved reservation roads which become quagmires when rains fill the washes and gulleys with rushing water.

Boarding schools, he says, are the only answer.

"To meet the immediate medical need a number of small but well-equipped hospitals should be built. Probably these should not be more than 50 to 60 beds, and strategically located so as to render the greatest service in the neediest sections.

"Every trading post and day school should be a clinic center where regular visits are made by a visiting doctor. Mobile clinic cars with facilities for simple X-ray examinations, minor surgery, and simple laboratory procedures would be of great service in some areas. Such units, staffed by a doctor and nurse, could spend several days at regular intervals in remote areas.

"Existing laws controlling use on the reservation of liquor by whites and Indians should be vigorously enforced.

"The need for action is urgent," says Dr. Salsbury. "The Navajo is ready to be helped. The day when the medicine man was a constant and effective stumbling block to medical progress is gone. Often he is our most enthusiastic and influential ally. And, with a little diplomatic public relations on the part of the doctor, he can become our most valuable ally.

"If approached and appealed to in a friendly manner, the Navajo themselves will cooperate wholly and wholeheartedly in correcting wrongs of so many years standing."

Reason for Voting To Override Presidential Veto on Labor Bill

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. WOLVERTON. Mr. Speaker, I voted to override the President's veto of the Taft-Hartley labor bill because I believe certain conditions relating to stoppage of work have grown up in recent years that have been highly detrimental to the public welfare and need correction.

There is nothing more important in this postwar period in meeting its numerous and varied problems than full production. Any stoppage in work is a detriment to full production and consequently a serious handicap in our economic recovery.

I believe in trade-unionism. Throughout my entire service in the House for more than 20 years I have supported legislation that would promote the right of workers to organize and thereby make effective the principle of collective bargaining, in which I firmly believe.

I represent a congressional district which has a population of approximately 350,000 people. There are naturally many different viewpoints. It is my duty as a Representative to do that which, in my opinion, will best promote the welfare of all the people, regardless of class.

Unfortunately, the last year or more there have been stoppages of work that affected all the people and required stoppages of work in industries other than those in which the labor-management disputes existed. As an illustration, the coal strike and certain utilities strikes, including the telephone strike. The strikes I have mentioned affected not only the workers in the particular industries where the strikes existed, but thousands of other people who were innocent, including union workers in other industries whose work was stopped by lack of fuel, power, light, and transportation.

Furthermore, it is my opinion that jurisdictional strikes are absolutely indefensible—likewise secondary boycotts. The President seems to be of the same opinion. The bill which he vetoed sought to correct these matters.

There are many other features of the bill with which I am in accord, particularly those that would give the individual union member a larger part in fixing the policies of the union of which he is a member and that would protect his or her right in respect to the amount of initiation fees, dues, and contributions, and other financial obligations placed upon the individual member of the union. On the other hand, there are some features that I would have liked to have seen eliminated, especially those which some think might curtail freedom of expression. While I do not agree with the interpretation that has been placed upon these provisions by those who oppose them, yet I would have liked to have seen language used that would have left no doubt. However, the sponsors have given assurance that there is no intention to curtail freedom of expression. The proper administration of the act, in my opinion, can remove any danger in this respect. After considering the bill as a whole, I was of the opinion that more good for more people would come from its enactment than harm.

I would not have voted for any bill that would destroy unionism or collective bargaining. This bill does neither. It merely seeks to correct conditions that have proven detrimental to our public welfare, and I am certain that, if administered with wisdom and equality, it will prove helpful and not harmful in working out the economic problems with which we are now confronted.

Whether or not the bill will improve existing conditions depends in large measure upon the kind of administration that is given to it. I hope, notwithstanding the misgivings expressed by the President in his veto message, that there will be an administration that will prove fair and equitable with respect to all interested parties—labor and management, and the public in general.

Celler Offers Bill To Abolish Office of Vice President

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. CELLER. Mr. Speaker, I have this day offered a bill to abolish the office of Vice President of the United States. The office of Vice President makes possible the seating of a person as President of the United States one who in actual practice has never been subjected to proper public scrutiny for the high office of President. We must admit frankly that the person most often nominated for the

office of Vice President is chosen, not for innate ability to carry on as chief of state should the need arise, not for his probity or perceptions, not for his past performances in public office, not for his experience, but for the circumstances surrounding him that will best promote the election of the nominee for President.

As Lucius Wilmerding, Jr., of the Institute for Advanced Study, at Princeton, points out in his article on the Presidential succession in a recent issue of the Atlantic Monthly, the office of Vice President has no duties; his position as President of the Senate is analogous to those of the Speaker of the House and has nothing to do with duties as Vice President. The Vice President does not sit in judgment on the Senate, has no vote except in cases of a tie, which happens once in ten decades. Actually, the office of Vice President is used as bait in many instances, either to placate a petulant State, to offer a favorite son the nomination for bargaining purposes, and so forth. This is a practice well known. The result, however, is of serious concern to all. The death of a President promotes a man to the highest office who, in most instances, was not considered a first choice. We are then asked to take what I put politely as second best.

Six times in our history we have been called upon to accept Vice Presidents in lieu of the man elected for such office. The deaths of Presidents Taylor, Lincoln, Garfield, McKinley, Harding, and Franklin D. Roosevelt brought into the Presidency Vice Presidents Fillmore, Johnson, Arthur, Theodore Roosevelt, Coolidge, and Truman, respectively. I am not discussing the capabilities of the successors. I am emphasizing the danger that exists in permitting men not specifically chosen for high office to walk into high office automatically. The nominee for Vice President is not searchlighted by public interest; his convictions or vigor are never election issues. Throttlebottom was good healthy satire and essentially correct in emphasizing the inanities of the office of Vice President.

Mr. Wilmerding has cut through to the heart of the matter. In the simplicity of his recommendation lies its virtue. Abolish the office of Vice President and provide by law for a new election in the event of the President's death, resignation or removal, the election to take place at the next congressional election. Congress could then designate the Secretary of State to be a caretaker of the office until such election is held.

Since the abolition of the office of Vice President requires a constitutional amendment, I have made provision by way of constitutional amendment. On the other hand, provision for midterm elections of a new President can be regulated by statute, and to that end I shall within a short while introduce this measure by way of a simple bill.

My chief concern with the problem is to eliminate the danger because of the complexity of government today, because of our role in world affairs, never contemplated by the founding fathers, and because of the need for an elastic and active democracy of a man being elevated to the highest office in the land who had never been chosen by the people explicitly for that post and whose fitness for that post had not been sufficiently explored. We want and need a President by choice and not by accident.

A copy of the resolution follows:

Resolved by the Senate and House of Representatives of the United States in Congress assembled (two-thirds of each House concurring therein), That an amendment is hereby proposed to the Constitution of the United States which shall be valid to all intents and purposes as part of the Constitution when ratified by three-fourths of the legislatures of the several States. Said amendment shall be as follows:

Article —

SECTION 1. After noon on the 20th day of January 1953, the office of the Vice President shall cease and the Senate shall choose their own President and other officers.

Commander Griffith on Immigration

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. MADDEN. Mr. Speaker, H. B. Snyder, editor of the Gary Post-Tribune, of Gary, Ind., in the accompanying editorial, makes some highly constructive suggestions in regard to our deplorable immigration regulations and the need for common sense in dealing with the same. He sets out some common-sense advice to the leader of the American Legion in going off half-cocked on a highly involved problem without making a thorough study of the facts.

The editorial follows:

COMMANDER GRIFFITH ON IMMIGRATION

Some very serious charges against this country's immigration officials and its defense and security forces have been made by National Commander Paul Griffith, of the American Legion. He told the DAR convention in Washington that a flood of illegal immigrants is making the United States "the laughingstock of the world."

We do not know how true his charges are. He did not document or prove them. He simply fired a broadside and left the burden of proof to others.

Thousands of foreigners enter this country illegally ever day, said Griffith—10 illegal immigrants for every legal one. He called immigration "a racket of specific racial, religious, or economic groups." Furthermore, he charged, this country still harbors a large number of atomic spies whose names are known.

These are pretty specific accusations. They suggest that Mr. Griffith has made a long, careful study of the situation, aided by a staff of assistants who have checked these facts.

But we doubt Griffith's wisdom in saving all this up to spring as a surprise on the Daughters of the American Revolution. It might be better if an organization as publicly dedicated to patriotism as the American Legion had turned its information over to the proper authorities or, failing to get cooperation from them, had proceeded through official channels.

(Immigration Commissioner Ugo Carusi said, "Griffith's figures and ours are at tremendous variance, but we would be glad to receive any information he has on the subject," and would "want to do something about it." This suggests Griffith hasn't checked with Carusi.)

Nor do we think that Mr. Griffith's proposed solution is the wisest possible. If his charges are true, the Legion commander does not call for strengthening of the immigration department, or greater vigilance by the armed forces or the FBI. Instead, he would close down all immigration for 1 year, thus shutting off the legal one while permitting the illegal 10 to continue their infiltration.

Also, we doubt Griffith's wisdom in making immigration a strictly foreigner-versus-veteran issue, which he does when he said, "Every foreigner in the United States is a veteran's immediate rival for a job, for an apartment, for a house, for a suit of clothes, for a hard-to-get automobile."

We believe that statement is open to question. We believe that condemning a foreigner simply for being foreign is neither very just nor very American. After all, the nonveteran citizen is the veteran's immediate rival, too.

If Mr. Griffith has proof of an immigration racket, or of flagrant immigration violations, or of lax authority, let him present it to the proper authorities. But let's not try to panic some 14,000,000 veterans with the bogey of 100,000 or even a half million foreigners. The ancestors of a majority of those veterans were foreigners once themselves.

Aid to Foreign Nations

EXTENSION OF REMARKS
OF
HON. JOHN H. KERR
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. KERR. Mr. Speaker, it is quite evident that if this Nation is to speedily regain our world business, we must do our utmost to increase our foreign import trade, and the outstanding justification for this Nation's spending billions to provide relief and purchasing power to foreign nations is that it will enable them to regain their business activities and normal business with us.

Under unanimous consent, I include in the RECORD the following article which appeared in the Washington Evening Star of June 14, 1947, written by Mr. Jay G. Hayden, which is a statement of facts, unquestionably correct, and discloses the business situation of the world and its importance to this Nation:

AID TO FOREIGN NATIONS HELD MATTER OF UNITED STATES ECONOMIC NECESSITY

(By Jay G. Hayden)

While largely increased financial help to foreign nations so far has been argued for mainly on the ground of resisting the spread of communism, it is even more a matter of sheer economic necessity for the United States itself.

This is so because the United States was left by the war so exclusively the source of supply of both food and manufactured goods that the whole world is rapidly going bankrupt to buy from us.

A compilation in the June bulletin of the National City Bank of New York arrives at

the astounding conclusion that our exports now are running ahead of imports by $12,000,000,000 a year. This means that foreign nations are dissipating their buying power, beyond exports, at a rate of a billion dollars a month.

LATIN-AMERICAN BUYING

The disparity by no means is confined to the war-stricken countries of Europe. Latin America, which immediately before the war sold to the United States on the average $58,000,000 more goods a year than they bought from us, currently is buying from us at an annual rate of $1,608,000,000 over and above the goods sent in exchange.

Our prewar trade balance as against Canada averaged $109,000,000 a year—a differential which was more than offset by Canada's sale of foodstuffs to Europe in excess of her purchases from that continent.

But now Canada is buying from us at a rate of $920,000,000 a year in excess of her sales to the United States, while her European customers can no more pay her than they can pay us.

Before the war Brazil, because of her huge export of coffee, always had a substantial balance of trade as against the United States. But Brazil now is buying from us at more than 10 times the prewar level, and the same is true of Mexico, Argentina, and other South American countries. Cuba, Colombia, and El Salvador are the only American countries with an export edge over the United States.

FAR EAST PURCHASES SOAR

In times past the Far East (especially China and India) had a favorable balance as against the United States but now the overall far eastern purchases from us are running $710,000,000 a year in excess of our compensatory imports.

As for Great Britain and continental Europe, excepting Russia, the excess of our exports over imports right now is at the rate of $4,529,000,000 a year.

And even Russia is buying from us $147,000,000 worth of goods in excess of our purchases from her.

The National City Bank bulletin mentions wool, silk, furs, textiles, liquors, leather goods, diamonds, and ferro-alloys among commodities which we presently are importing even at a lower rate than in 1946.

That condition, of course, is due solely to the fact the exporting countries simply haven't got goods to offer.

Silk, before Pearl Harbor, accounted for 90 percent of Japanese export to the United States, but silkworms were eaten and mulberry trees used for firewood during the war and, in consequence, Japan now has little silk to sell. The British, still with a skimpy food ration, can't spare breadstuffs for whisky manufacture.

WAY TO ALLEVIATE SITUATION

The simplest and most economical way to alleviate this situation is to stimulate American buying of foreign goods. Certainly we should not double an already sky-high tariff on wool, as the House has proposed, and we might well remove the tariff entirely from furs, liquors, diamonds, and other high-priced luxury goods—specially useful in bolstering foreign exchange.

Certainly no outside nation is in position at present to ship enough of that sort of goods to the United States market as seriously to interfere with home production.

And even with the utmost that can be done to increasing imports, American taxpayers inevitably will be called upon for uncounted additional billions to provide purchasing power to foreigners until they can regain their economic feet and make things for themselves.

St. Lawrence Waterway Would Be Detriment to This Great Nation

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Senate Foreign Relations Committee in opposition to the St. Lawrence River waterway:

Gentlemen of the committee, if the St. Lawrence River waterway becomes a reality it will not only jeopardize but destroy a large part of the economic future of our great Nation. Our waterways, our ports, and our transportation would all suffer, and many sections of our Nation would pass into economic obscurity. The Mississippi Valley is the market basket of the United States. With the building of the St. Lawrence River waterway it would be a national—if not international—discrimination against this country, every vestige of our economic advantage would be surrendered to foreign flags and our potential economic competitors.

If the St. Lawrence River waterway is built, it will turn the Mississippi River traffic in reverse gear. This traffic now naturally goes down the river touching the docks of many American cities, finally offering itself to the marts of the world at the port of Louisiana's greatest city, New Orleans. The Mississippi River is an American river, serves the American Nation, which constitutes one of the greatest waterways in the world to make possible easy and natural handling—by Americans—of the fruits and vast bulk of products of American farmers and industries. It brings lifeblood to the port of New Orleans, which, without the river's traffic, would tend to shrivel as an important city. The river, as it is being used, in its natural way, guarantees to America a great trade with our neighboring countries of South America. In these respects, the Mississippi Valley traffic as now charted is an absolutely essential economic instrumentality for the prosperity of all America.

On the other hand, the St. Lawrence waterway would divert this great stream of American commerce into channels immediately foreign; would allow flags of foreign countries to enter into the heart of our great country—there to dictate to us—the terms and conditions of their service and business; would allow unfavorable competition with our own industry and commerce; and, finally, by shunting the business northward and away from normal and natural trends, would weld still another shackle upon the great Southland—already discriminated against by too many adverse economic influences.

We cannot allow the Southern States of this country to be sacrificed to an unfair and unnatural competition with foreign economies that pay nothing toward our well-being, but instead seek to sap the substance from our own American economy.

It is freely predicted that if this St. Lawrence waterway is completed the Southern States of this great Nation would be gutted economically to a point that without hope we shall be abandoned forever as a perpetual sacrifice to a foolish foreign economic policy that would never be a benefit to our great country.

I have discussed this matter in my State with dairymen, cotton farmers, vegetable and sugarcane growers, rice planters, oil producers, various civic clubs and organizations representing the principal industrial activities of the great State of Louisiana, and I find them practically unanimous in their opposition to the St. Lawrence River waterway. If this problem is settled from strictly an American viewpoint, I feel reasonably sure that by far the vast majority of the people of this great Nation will be opposed to this St. Lawrence River waterway.

Must the Old Folks of America Move to Foreign Countries To Share in Old-Age Security and Disability Benefits From Uncle Sam's Treasury?

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. ANGELL. Mr. Speaker, I pose a question, Must the old folks of America move to foreign countries to share in old-age security and disability benefits from Uncle Sam's Treasury? I am prompted to do so by reason of the fact that the American Congress has refused to give any consideration to the elderly citizens of America who are in dire need of a minimum of the essentials of life to maintain them in decency and health. Notwithstanding this refusal, since the war ended, the United States has sent overseas to foreign nations—some of whom did not join with us in the recent war—over $21,000,000,000 for relief and assistance.

In this conection, Mr. Speaker, I particularly call attention to H. R. 16, which I introduced on the opening day of the Eightieth Congress, which has for its purpose the providing of security against old age and disability. This bill has been pending before the Ways and Means Committee since its introduction. In response to a request by the committee, I appeared before it on May 16 and made a statement in support of the bill, urging that it be reported to the House so that action thereon might be taken at this session of the Congress. The request has not been granted.

I made the following statement to the committee which sets forth the names of our colleagues who are sponsoring the legislation, and also some of the reasons why the legislation should be enacted and particularly why it should receive consideration by the House before we adjourn:

STATEMENT OF HOMER D. ANGELL, MEMBER OF CONGRESS, IN SUPPORT OF HIS BILL, H. R. 16, BEFORE THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES, MAY 16, 1947

Mr. ANGELL. Mr. Chairman and members of the committee, I appreciate this opportunity to appear before you and urge the consideration of H. R. 16, introduced by me on January 3, 1947.

This is a bill to provide every adult citizen in the United States with equal basic Federal retirement insurance, permitting retirement with benefits at age 60, and also covering total disability, from whatever cause, for certain citizens under 60; to give protection to

widows with children; to provide an ever-expanding market for goods and services through the payment and distribution of such benefits in ratio to the Nation's steadily increasing ability to produce, with the cost of such benefits to be carried by every citizen in proportion to the income privileges he enjoys.

The following Members of the House are sponsors of this bill:

HOMER D. ANGELL, Third District, Oregon.
EDWIN ARTHUR HALL, Thirty-seventh District, New York.
HOMER A. RAMEY, Ninth District, Ohio.
J. HARRY MCGREGOR, Seventeenth District, Ohio.
CLAIR ENGLE, Second District, California.
WALTER E. BREHM, Eleventh District, Ohio.
GEORGE H. BENDER, Representative at Large, Ohio.
ALFRED J. ELLIOTT, Tenth District, California.
WILLIAM S. HILL, Second District, Colorado.
FRANK A. BARRETT, Representative at Large, Wyoming.
JOSEPH P. O'HARA, Second District, Minnesota.
MICHAEL J. KIRWAN, Nineteenth District, Ohio.
GEORGE W. GILLIE, Fourth District, Indiana.
MARION T. BENNETT, Sixth District, Missouri.
WILLIAM LEMKE, Representative at Large, North Dakota.
GEORGE P. MILLER, Sixth District, California.
GORDON L. MCDONOUGH, Fifteenth District, California.
RICHARD J. WELCH, Fifth District, California.
FRANCK R. HAVENNER, Fourth District, California.
JOHN PHILLIPS, Twenty-second District, California.
HAROLD C. HAGEN, Ninth District, Minnesota.
NOBLE J. JOHNSON, Sixth District, Indiana.
CHET HOLIFIELD, Nineteenth District, California.
EMORY H. PRICE, Second District, Florida.
J. HARDIN PETERSON, First District, Florida.
GEORGE A. SMATHERS, Fourth District, Florida.
BERTRAND W. GEARHART, Ninth District, California.
HENDERSON H. CARSON, Sixteenth District, Ohio.
TOBY MORRIS, Sixth District, Oklahoma.
RAY J. MADDEN, First District, Indiana.
ROBERT L. F. SIKES, Third District, Florida.
JOE HENDRICKS, Fifth District, Florida.
CHARLES R. CLASON, Second District, Massachusetts.
RAYMOND H. BURKE, Third District, Ohio.
WALTER B. HUBER, Fourteenth District, Ohio.
CHESTER H. GROSS, Twenty-first District, Pennsylvania.
JAMES E. VAN ZANDT, Twenty-second District, Pennsylvania.
THOR C. TOLLEFSON, Sixth District, Washington.
ALVIN E. O'KONSKI, Tenth District, Wisconsin.
EARL WILSON, Ninth District, Indiana.
DWIGHT L. ROGERS, Sixth District, Florida.
W. M. (DON) WHEELER, Eighth District, Georgia.
CECIL R. KING, Seventeenth District, California.
JOHN A. CARROLL, First District, Colorado.
BARTEL J. JONKMAN, Fifth District, Michigan.
THOMAS D'ALESANDRO, JR., Third District, Maryland.
JAMES H. MORRISON, Sixth District, Louisiana.
JOHN R. MURDOCK, Representative at Large, Arizona.
PAUL W. SHAFER, Third District, Michigan.
GEORGE G. SADOWSKI, First District, Michigan.
P. W. GRIFFITHS, Fifteenth District, Ohio.
AUGUSTINE B. KELLEY, Twenty-seventh District, Pennsylvania.
WILLIAM H. STEVENSON, Third District, Wisconsin.
JACK Z. ANDERSON, Eighth District, California.
EDWARD A. MITCHELL, Eighth District, Indiana.
WALTER K. GRANGER, First District, Utah.
ROSS RIZLEY, Eighth District, Oklahoma.
JOHN A. BLATNIK, Eighth District, Minnesota.
REID F. MURRAY, Seventh District, Wisconsin.
EDWARD O. MCCOWEN, Sixth District, Ohio.
MICHAEL A. FEIGHAN, Twentieth District, Ohio.
MERLIN HULL, Ninth District, Wisconsin.
GERALD W. LANDIS, Seventh District, Indiana.
NORRIS POULSON, Thirteenth District, California.
MARGARET C. SMITH, Second District, Maine.

On February 28 I called a meeting of the sponsors of this legislation and other Members who are interested in old-age security. At this meeting the merits of the bill were discussed and a program outlined for its consideration. Attention was called to the great interest throughout the Nation for the enactment of old-age-security legislation. A recent poll taken disclosed that this program was approved by 39,432 of those polled with only 1,912 in the negative.

At this meeting I called attention to the great contribution that has been made by Dr. Francis E. Townsend, founder of the Townsend program, to the advancement of social security for old people in America and in recognition of his service I proposed the following resolution, which was adopted unanimously:

"Inasmuch as there was no such thing as a Federal old-age pension law 14 years ago when Dr. Francis E. Townsend startled the Nation with the first draft of his Townsend plan; and inasmuch as since that date, with the friends and workers for the Townsend plan constantly keeping their objectives before the Congress, the first Social Security Act was enacted and amendments in two other Congresses have liberalized its provisions, it seems fitting that this group of congressional friends of the Townsend plan here and now go on record as complimenting the 80-year-old father of old-age pensions in America, Dr. Townsend, for his activity and integrity and continuing fight in the cause of America's senior citizens."

Mr. Chairman, the basic principles underlying the Townsend national recovery program in the main have been approved by the Social Security Board. On July 16, 1946, the functions of the Social Security Board and its Chairman were transferred to the Federal Security Administrator, under the President's Reorganization Plan No. 2, and on the same date the Social Security Administration was set up as a branch of the Federal Security Agency. In a final report the Board, which was the policy-making body, made a number of far-reaching recommendations which, if adopted, would put into force in our social-security program many of the provisions of the Townsend national recovery program. During the war many social-security programs were put into operation as emergency measures to alleviate distress and provide social security for the families of America. We find, however, that in the postwar period, although we are at peace with high levels of employment and earnings, many of our people are in distress, particularly those in the old-age groups. It has come to be realized by all forward-looking citizens that disability and old-age, as well as unemployment, are hazards in our modern society against which provision must be made. The Social Security Board in its final report, to which I have referred, made the following recommendations:

"A COMPREHENSIVE PROGRAM OF SOCIAL SECURITY

"The Social Security Board recommends the establishment of a comprehensive basic national system of contributory social insurance, covering all major risks to economic independence and all workers and their dependents threatened by such risks. The program would include insurance against wage loss in periods of disability and against costs of medical care, for which no general provision now exists in the United States, as well as old-age and survivors insurance and unemployment insurance, with benefits related to past earnings and with provision for additional benefits for dependents. It would be designed to close existing gaps in the coverage of both persons and risks, to remove present inequities in the protection of workers and the financial burdens of employers, and to provide a consistent relationship among insurance provisions for the various risks and between provisions of the basic system and of supplementary special systems for particular groups. As compared with separate programs to meet particular risks, such a system would reduce administrative cost and reporting burdens and simplify arrangements as they affect workers, employers, and public agencies.

"OLD-AGE AND SURVIVORS INSURANCE

"The Social Security Board recommends:

"Coverage of all gainful workers, including agricultural and domestic employees, public employees, and employees of nonprofit organizations, railroad employees, and self-employed persons, including farmers and small businessmen.

"Legislation to prevent servicemen from losing the protection of the old-age and survivors insurance system because of service in the armed forces.

"Reduction of the qualifying age for all women beneficiaries from 65 to 60 years.

"Changes in the average monthly wage and benefit formula to increase benefit amounts, particularly for low-paid workers.

"Increase from $3,000 to $3,600 a year in the maximum amount of earnings which are subject to contribution and counted in computation of benefits.

"Increase in the amount of earnings a beneficiary may receive in covered employment without suspension of benefits.

"Greater uniformity in defining, for purposes of the insurance system, family relations and conditions of dependency that qualify members of a worker's family for benefits.

"Benefits during periods of extended or permanent disability, like those for old-age retirement.

"Provision for insuring uniformity in coverage decisions relating to liability for contributions and eligibility for benefits, which are based on identical language in the Social Security Act and Internal Revenue Code but are made by two separate Federal agencies—the Bureau of Internal Revenue and the Board.

"Adoption of a long-range plan for financing old-age and survivors insurance which looks toward an eventual tripartite division of costs among employers, employees, and the Government.

"PUBLIC ASSISTANCE

"Deletion of the Federal matching maximums for individual payments of aid to dependent children, and deletion or increase of such maximums for old-age assistance and aid to the blind.

"Abolition of State residence and citizenship requirements as a condition of eligibility for assistance under State plans approved under the Social Security Act.

"Elimination, as a condition of Federal grants, of State requirements for transferring title or control of property by an applicant or recipient to the State or locality.

This action would not preclude any agency from claiming from the estate of a deceased recipient recovery of assistance formerly paid.

* * * * *

"The Board in discussing social security in a democracy said:

"'In the opinion of the Board, no time should be lost in taking every feasible step to extend the present protection of the social-security program to all households in the United States, and to wipe out limitations and inequities that can no longer be justified by logic or necessity. For a people, as for an individual, it is prudent to provide in good times against adversities that almost surely will arise sooner or later.'"

An examination of this comprehensive report of the Social Security Board and the recommendations made by it discloses that the advanced steps in social security recommended are in keeping with much of the program of the Townsend old-age security plan. At the beginning of 1946 nearly half of all civilian jobs were excluded from coverage under social security, and two in five of all persons employed were neither fully nor currently insured. At best the social security law we now have is a haphazard program which, in effect, is largely financed by the public generally, but the benefits of which are shared in by only a few selected groups. It encourages inflation by collecting a huge fund currently used for deficit spending. These difficulties would be overcome by the adoption of H. R. 16, which would cover all citizens falling within its provision and the obligations and benefits of the program would likewise be shared by all. It would be all-inclusive in its provisions and therefore would obviate the necessity of continuing many social-security laws now in existence and would for the first time set up in our country an old-age security program which would insure all of our elderly citizens 60 years of age or over against the hazards of old age. It would build up no reservoir for deficit spending, but the moneys collected would go back into the channels of trade each month, providing local markets for American production and buying power for aged citizens.

Mr. Chairman, the whole problem of social security, and particularly for our elderly citizens, is one of deep concern to the citizens of the United States, and the Congress has been dilatory in giving it consideration and making adequate provision for our old people. It has been reported on reliable authority that it costs a $5,000 a year income family $12,750 to rear a child to 18 years of age. This forcibly brings to our attention the heavy investment the old people of America have made in rearing their families and providing the Nation with its citizens. The families of yesterday made possible the men and women of today who are in positions of authority protecting the liberties of America. Unfortunately many of these old people, some ten or twelve million of them in fact, having expended their funds in rearing their families and providing for themselves, now are in need and want. The average assistance given to them approximates $25 a month.

The Census Bureau has just released a report showing that the median income for American families living under one roof rose by $169 during 1945 to a total of $2,378. This means that half of the 40,075,000 family units of America receive an annual income of $2,378 or less. Certainly families with children to support, under the high cost of living of today, cannot provide the funds for taking care of fathers and mothers of the heads of these families, who are in need.

The Congress has just passed a bill opening the Public Treasury to send $400,000,000 overseas, much of which, according to plan, is to be used for developing the resources, economy, and for relief of the peoples of foreign lands, some of whom did not join with us in the recent war. The United States since the war's end has made available for world aid $21,058,422,818, as follows:

Contributions:	
UN	$29,289,349
UNRRA	2,700,000,000
World Bank	3,175,000,000
World Fund	2,750,000,000
Lend-lease	2,163,000,000
Other advances:	
Surplus property	1,148,000,000
Loans to Great Britain, Philippines	4,390,000,000
War Department grants	1,771,926,293
Export-Import Bank	2,931,209,176
Total	21,058,422,818

Would it not be good judgment while considering this expenditure for the Congress to grant some relief to the old folks here in America as well? There are in excess of 10,000,000 American citizens over the age of 60 years, many of them in want and distress, yet the Congress has denied their appeals down through the years for some relief. Many of them receive a stipend of old-age assistance of less than $10 per month and the average is a little more than $25 a month, while living costs are mounting skyward.

Mr. Chairman, the sponsors of H. R. 16 and the companion bill H. R. 2476, introduced by Representative J. HARDIN PETERSON, have asked me and the other members of the committee in charge of the legislation, to urge that the Committee on Ways and Means provide for a hearing upon this bill so that an opportunity will be given to present evidence of the merits of the legislation and the necessity of its enactment, and also an opportunity for its opponents, if any there be, to be heard.

In the event that the committee finds it impossible by reason of the demands upon its time to grant a hearing before the full committee, we request that a subcommittee be appointed to hold these hearings; and if the committee in its judgment finds it is unable to hold any such hearings at this session of the Congress, we most respectfully request that the record of the hearings made in the Seventy-ninth Congress be considered by the committee and H. R. 16 be reported to the House so that an opportunity may be had by the Members of the House to vote on this important legislation. I, personally, request that such action be taken by your committee.

Mr. Speaker, on behalf of myself and our colleagues sponsoring this legislation, I most respectfully urge that the leadership of the House make it possible for the House to have an opportunity to discuss the merits of this and other legislation which will provide a program of social security for the elderly citizens of America at this session. As set forth in the foregoing statement, we have sent these billions of American money overseas since the end of the war for relief and aid to the people of foreign lands. There seems to be no valid reason why the Congress should longer delay in providing old-age security for our own people if American tax dollars are available for such generous aid to foreign countries. As I said in my opening statement, will it be necessary for the elderly citizens of America to move to these foreign lands in order to share in social-security protection from the American Treasury which is necessary to keep their bodies and souls together in their declining years? Let us not adjourn this Congress without passing legislation for old-age security. Let us put it on the "must" agenda for this session.

Address of Mr. Eric Johnston

EXTENSION OF REMARKS
OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the address of Mr. Eric Johnston, president of the Motion Picture Association, which was presented before the banquet of the national convention of the Young Republicans on June 7, 1947, at the Schroeder Hotel, Milwaukee, Wis.

Mr. Johnston was introduced by Hon. Ralph E. Becker, chairman of the Young Republican National Federation. Mr. Becker's introduction follows:

It has, perhaps, been unfortunate for American businessmen that their strong point has been, and is, actions—not the putting of inactivations and thoughts into words. Only a few, by reason of their positions as spokesmen for business, develop from their actions a reasoned philosophy. We have the exception with us tonight.

Our guest speaker tonight grew up in the West. He sold papers (like a Horatio Alger hero) in grade school. In high school he was a part-time reporter for the Spokane Spokesman-Review. While in college, he worked on the Seattle docks.

He served in that famous body of fighting men, the United States Marines, during World War I. And, going into business after his discharge, his ability and personality brought almost immediate success.

After heading various businessmen's organizations, he was elected to head the United States Chamber of Commerce. And following a most successful tenure of office, he became president of the Motion Picture Association of America.

It is a pleasure and a privilege to introduce to you one of the leading apostles of the American way—Mr. Eric Johnston.

The address of Mr. Johnston follows:

Every time I go abroad, I find out once again that Europeans look on our American political system with increasing wonderment. The functionings of our two-party system utterly confuse them. They are perplexed because they try to interpret our political methods in terms of their own situation and their own backgrounds. And there just isn't any comparison.

All over Europe there's a sharp, distinct, and definitely defined cleavage between an economic right and an economic left. That cleavage is based on the issue of government ownership of industry. If you're against it, you belong to the economic and political right; if you're for it, you belong to the economic and political left.

This issue simply doesn't exist in America. Americans who believe in Government ownership; in State ownership—or in socialism of any kind—hardly constitute a good-sized platoon of people compared to the great mass of us Americans who believe in America's going system of free, competitive capitalism based on private ownership.

In contrast, capitalism in Europe has either been obliterated from the map or is being shoved toward oblivion by socialism.

In Britain, Socialists are aggressively pushing forward their program of nationalization

of industries. Even the Conservative Party now states it will accept some measure of nationalization.

On the Continent, the grip of socialism is even tighter.

Communists, Socialists, and other parties of the left dominate the scene. All favor government ownership of industry in varying degrees. The parties which still favor private ownership are weak and growing weaker.

Over here, the American kind of capitalism and the American political system are stronger than ever.

The real, underlying reason why the Old World doesn't comprehend our political system is because it never experienced the kind of capitalism we have in America. Old World capitalism was related to American capitalism in name only. We didn't import our kind of capitalism from Europe. It grew right here on this side of the Atlantic. It is as native to America as Indian corn or the Mississippi River.

But Old World capitalism gave the capitalistic system a bad name everywhere. It wasn't a people's capitalism. It had a preponderance of plutocrats on one hand and a preponderance of paupers on the other. It was a capitalism of class distinctions; of special privileges for a ruling class; of colonial exploitation; a capitalism of private monopolies, cartels, state grants, and charters. Its creed was to divide up markets, restrict production, guarantee profits, keep wages down and prices up.

Our American-born capitalism is a long way from perfection, but it holds the loyalty of Americans because it is a partnership capitalism—a more truly participating capitalism than any which ever existed.

From what I've said you might think I almost agree with our European friends who can't see how we can have two great competing political parties in this country when both of them are stanch advocates of capitalism. I hope there always will be two strong, competing parties.

In a free society, the spirit of competition is as inevitable as it is necessary and valuable to the society. The competition of ideas; the competition of personalities for posts of leadership, constitute a bulwark of a free society. It is the antithesis of the total state system where no competition with the views of the central ruling group is tolerated. The two-party system, based on competition, is part of the bedrock on which our society rests.

Our own party was born in an hour of national crisis. It was born in the restless, insurgent West. It was a party of the people; a party of middle-class people, of workers, of farmers. It stood for freedom, for liberty. It held that human rights come ahead of property rights. It believed the worker was more important than his tools and the man more important than the machine.

It was this attitude—it was this principle—which swept the Republican Party to its first victories. When it has abandoned or neglected this attitude and this principle, our party has gone down to defeat.

Demagogs delight to toss around the phrase "human rights above property rights" as if the two were always and inevitably in conflict. They attempt an emotional appeal, not based on facts.

I espouse the doctrine of human rights above property rights too, but as an appeal to reason. I say that human rights and property rights can be and should be in harmony. But when these rights conflict, the decision should always be in favor of man over property.

The right to hold property is also a human right—and the human rights here in America could not long continue unless they were bolstered by the rights of property.

The Republican Party's first platform reflected the attitude that human rights must be supported by property rights—that the right to hold property contributed to human rights. The first platform called for an orderly and early disposal of the public lands of the West. It advocated a homestead act, with the land to go free to settlers who would work it and produce on it and make their homes on it. "Vote yourself a farm" was the popular Republican slogan of 1860.

Our party wanted to build the new and untamed West, conscious that the destiny of America lay in developing the giant of wealth which slept beneath the western prairies, timberlands, and mountain ranges. Toward this end, it also called for construction of a transcontinental railroad—with Government help to build it.

Its whole concept was to build, develop, spread the benefits of capitalism; give men a chance to take a chance. That was its attitude then, that must be its attitude today if it expects victory next year or any other year.

There are issues before us today by which we can determine the party's attitude on basic humanitarian needs.

There is the question of housing. The need is desperate. What is to be the Republican attitude on housing? Shall it support a Government program to finance homes for lower-income families at prices they can afford to pay?

I think it must. I think it is obvious that this crying need can be met only in this way, and I think it is equally obvious that such a program, wisely administered, would stimulate private construction. I think that good citizenship depends in large measure on good citizens; that decent homes make decent people; that delinquency develops in shacks and slums. By fathering the proper kind of housing act in 1947, the Republican Party, which sponsored the Homestead Act in 1860, can demonstrate again that it believes in decent homes for men and their families as part of their human rights.

Once again, too, the West looks to the Republican Party. The natural resources of the West, poured out so bountifully for so many years, today must have replenishment. Erosion has robbed us of some of our richest soil. Recurring droughts have done their tragic work. We can't afford to take chances on reduced farm production in an hour like this when we are feeding a large proportion of the world's peoples.

So now is the time to rebuild as we built; to plan out carefully new projects for reclamation, for irrigation, for soil conservation, and for power development.

These are jobs for government. Private business can't dam great rivers. Government must do it, but let me say this: Once government has done its share in power development, for example, then let government get out of the development as quickly as it can. The distribution of power is a job for private business under our system and not a job for government.

We want our Government to stimulate business, to encourage business to help make more and more business, but we do not want the Government doing business which private individuals are willing and competent to do.

I am proud that the Republican Party has remained faithful to the ideal of freedom which imbued it at its birth. I am proud of its stand against the poll tax. I am proud of its support for fair employment legislation. I am proud that it has consistently stood for civil liberties.

It is one of our great national embarrassments today that we preach about civil liberties and then fail to practice them in full measure here at home. We talk about democracy abroad and crudely ditch it now and then here in America. We can't have two classes of citizens in America.

Hand in hand with civil liberties and human rights, it seems to me, is the chance for the individual to advance himself materially as well as politically and spiritually. This is a land of initiative; a land which attracted persons from the Old World because it offered men a chance to be somebody; to make something of themselves; to provide for their families; to rise above the fixed, arbitrary class standards which prevailed over there.

Today, initiative in America is being substantially thwarted by the Federal tax structure. It is freezing opportunity for too many younger people. We need a tax system today which will encourage new men and new dollars to go into new businesses.

I am not as interested in cutting taxes as I am in adjusting them to a point where they cease to do mischief to our economy. One of the strengths of our capitalism is the number of small businesses. We need more and more of them. Our tax structure should be overhauled so that it will encourage, and not discourage, young men in young business enterprises.

The things I have talked about—a program of decent housing for our low-income groups; redevelopment of the inland empire of the West; a genuine application of our civil liberties; and a tax program to stimulate new business—are only a few of the measures we need here at home to keep our social and economic system robust, vigorous, and vibrant.

I am not trying to write platform planks for the Republican Party. I am only suggesting a few things I believe would contribute substantially to the material, moral, and spiritual progress of all our people.

In the Old World, living standards have steadily deteriorated since the war. Production is still 20 to 50 percent below prewar levels, in marked contrast to an American production almost double the prewar level.

Europe is prostrate. It is haunted by the four horses of hunger, cold, nakedness, and pestilence. It lives with daily doubts, suspicion, and the threat of another war. We can't be indifferent to the plight of Europe even if we wished. Our purse strings and our heartstrings are both involved in the fate of the world. A rich man can't long retain his riches in a community of paupers. What is true of a rich man in a community is true of a rich nation in a world community of poor neighbors. And America's innate sense of decency and justice rebels against the spectacle of want and hunger anywhere.

What can we do about it?

To answer that question intelligently, our people must first have a clear understanding of what the problem is. The American objective is clear-cut and simple. I believe it demands constant restatement to keep it always before the world. America wants these three things:

First, we want a peaceful world of free people and free nations.

Second, we want an effective United Nations organization, its members cooperating with one another for the common good.

And, third, we want world economic reconstruction, recovery, and stability.

Every move America has made in the last 2 years has been to promote our three broad objectives. We want no new territory. We seek no conquests. The spirit of aggression simply does not exist in America.

Never before in history has a victorious nation been so magnanimous in trying to lift up the vanquished and in helping nations ravaged by war to rebuild from devastation and ruins.

The task would have been immensely easier if we had been joined in it by Soviet Russia. Russia, second only to us today in power, has chosen the course of noncooperation in the United Nations. Her refusal to join various agencies of the United Nations raises the question whether Russia really wants world order.

Her consistent attempts at pressure and coercion upon small and weaker neighbors have created an unwholesome atmosphere for world economic recovery. It is idle to talk about economic rehabilitation while aggression still stalks world boundary lines.

Meanwhile we have already poured out billions of our dollars for the relief of the world. But the international crisis has deepened. The world is in far worse shape than we thought.

As I see it, there are two great dangers we must guard against today: One is economic and social collapse in Europe. The other is any possible break or rupture in our bipartisan foreign economic and political policy.

The crisis in Europe exhibits alarming symptoms. The loan to Britain is running out. France and Italy are near bankruptcy. China is desperate. Other nations need help.

Up to now we have been operating in a piecemeal fashion, making unrelated appropriations for this purpose and for that purpose in the world. But what we've done is only a start—a palliative.

The world needs food at once, but, more important for the long period of years ahead, it needs seed and machinery to plant and harvest its own crops. It needs clothing, but, again, more importantly, it needs raw materials and machines to make its own clothing. Europe can't borrow out of trouble. It must work it out.

If we are going to meet the giant problems ahead of us, we must have two things: First, an inventory of the world's needs, and, second, a survey of our own resources. Add them together, and we can get a bill of particulars covering a correlated program of relief and reconstruction. It can't be an exact blueprint, for world conditions constantly change, but it can, and must, indicate the general pattern of our efforts and purposes.

Only with such a bill of particulars can the American people make up their minds what they want to do. There seems to be a tendency in some places to keep the facts of the situation from the people on the notion that the facts of the burdens ahead of us are likely to be unpleasant. That's a mistake. The American people are not children. They can be trusted. They don't run from responsibility when they know what needs to be undertaken. But they do ask for facts—all the facts—and they're entitled to them.

This bill of particulars is needed now, before the American people are asked to contribute yet unestimated billions for world recovery. Any world program on which we embark inevitably will affect our taxation program; our national budget; our employment; our own food supply; our wage levels, and our price levels. All these things must be examined and pulled together into a related whole.

Congress is preparing to recess next month. When it reconvenes, it should have before it a coordinated study of the needs abroad and the resources at home. Then, and only then, can the American people decide what course to follow. To me this is only common sense. To me this is the proper and orderly procedure. To me this should be the aim of government in Democratic America. To me this is sound national policy.

This bill of particulars should be drawn under bipartisan sponsorship. The most effective way to do it, I think, is to create a joint council to make the study and draft plans for the consideration of the people. This council should be composed of officers of the executive departments and of members of appropriate congressional committees, such as those dealing with foreign affairs, appropriations and taxations. It could be set up on the initiative either of the President or of Congress. Obviously, the council would have a competent technical staff and would call in responsible representatives of American labor, agriculture, and industry.

In this way, we would get the bill of particulars. In this way, too, we would maintain our bipartisan foreign policy. It is not in the spirit of bipartisanship to place halfway measures before Congress and ask for rubber-stamp approval. Bipartisanship should start with the formulation of policy and carry right on through.

In our relations with foreign nations, the most important thing of all is to have a dependable policy—a policy backed by the American people and one on which the world can rely. Vacillation is no policy at all. It is weakness. It is undependable.

We know the tragedy of the phrase "too little and too late." We don't want to do too little in furtherance of our policy of world reconstruction, and we don't want what we do to be done too late. Such a course invites disaster. So does any course today which denies the American people the answer to these two questions: "How much?" and "How soon?"

The American people want to know how much a program of world reconstruction will cost to accomplish—or how much it might cost them not to do anything at all—and let the world wag as it will.

They want to know to what extent it is to their own self-interest to carry out a program of that kind. They are the judges.

If we do wrong on what we do today in this world crisis, it will be principally you young men and women who will suffer. You will pay for the mistakes in money or in blood, or both.

From now on, this is your country—until it becomes your children's country. I urge you, as the heirs to leadership in the Republican Party, to exert every influence at your command to insure that our part in world affairs will be kept as a people's policy; I urge you to demand a bill of particulars—to ask "How much?" and "How soon?"

Ours is a party which built altars to the spirit of freedom for all men. Ours is a party which believes in equality; in justice; in civil liberties. Ours is a party born in an hour of crisis—and this is an hour of crisis. Ours is a party born among the people, and today's decisions must be made by the people. This is our Republican creed.

A Proper Veto

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. CARROLL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of June 19, 1947:

A PROPER VETO

The reasoning behind the President's veto of the income tax reduction bill should appeal to the common sense of the American people.

The prospect of continuing high taxes is not, of course, a pleasant one. The man or woman who likes to pay taxes has not yet been born, and it must be admitted that the Republican promise of tax reduction appealed to an instinct that is deeply rooted in human nature.

Nevertheless, the better arguments are on the President's side.

We are in the midst of an era of exceptional prosperity, and it is in such a period that debt must be reduced if it is ever to be done. The Senate was aiming at a reduction in the national debt of $2,600,000,000 in the 1948 fiscal year. That, however, is only 1 percent of the total debt. At this rate, and on the highly improbable assumption that an equivalent reduction could be made annually, it still would take 100 years to pay off the debt.

This is enough to demonstrate the desirability of reducing the debt as much as possible in the years when we are able to afford it. Every man who has wrestled with his own budget problems knows that debts must be paid when the money to pay them is available. For if they are not paid then, they never will be paid.

Another effective argument against tax reduction at this time lies in the uncertainties of the international situation. As Mr. Truman said, we are still in the midst of a transition period, and we continue to be confronted with relief and rehabilitation demands. The exact cost of these is unknown, but it certainly will be heavy.

In the face of these considerations, it seems to the Star that it would be sheer folly to reduce Government income at this time. The President is to be commended for his veto of the tax bill. It may prove politically harmful to him, but in the long run it will best serve the interests of this country.

Spotlight on Bonneville

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. ANGELL. Mr. Speaker, pursuant to request granted, I include as a portion of my remarks the following editorial from the Oregon Daily Journal, dated June 31, 1947:

SPOTLIGHT ON BONNEVILLE

What are gentlemen in the Congress thinking about when they slash the appropriation for the Bonneville Power Administration? Why do they wish to emasculate the Nation's greatest power source? Why do they forget that Bonneville helped win the war with power for shipyards and aluminum plants? Why do they ignore the indispensable place of power in the peacetime progress of the Pacific Northwest? Why do they wish to reduce the contribution of the Pacific Northwest to the economic fortunes of America?

Bonneville Power Administration is a half billion dollar utility. It includes Bonneville and Grand Coulee power plants, a partially completed electric transmission grid and facilities for service to public agencies, industries, and private utilities. It will include McNary Dam at Umatilla Rapids on the Columbia and other power derived incident to flood control, navigation, and irrigation works.

Nobody in the Congress or anywhere else has the right to play ducks and drakes with an enterprise in which so much Federal capital has been invested and which is so vitally related to every other Pacific Northwest activity.

It isn't enough for the small but noisy Senator THOMAS of Oklahoma to condemn Bonneville because it represents public ownership. The power sites on the Columbia and its tributaries belong to the Government.

The Government is but playing the part of a prudent and responsible steward in developing them at the rate of demand not only for power but for flood control, navigation, irrigation, industry, and agriculture. But the fact shown by the 1946 Bonneville report is that private enterprise is a large beneficiary because of BPA. While public agencies have first call on 50 percent of Bonneville power, the present distribution shows 12 percent to public agencies, almost 45 percent to directly served industrial users and a little more than 22 percent to private electric utilities. Moreover, the private utilities can buy Bonneville power for less than they can generate it for themselves and very properly give their customers the benefit of the saving.

Nor is it enough to say, as does the bill introduced in the House by Representative DONDERO, of Michigan, that all sales should be at the bus bar without transmission.

High-transmission lines are an integral part of the power plant. Interconnecting lines not only unify supply of electric current and spread its availability over wider area, but largely dispense with the need for steam standby plants.

While a part of the attack on Bonneville results from the enmity of private electric utilities, especially in the East, local utilities (example the Portland General Electric) have joined in the plea for development of more power to prevent a demonstrable shortage.

It is wholly sane that Bonneville Administration, its methods and personnel be overhauled. Revisions of organization will doubtless have to be made in any event. But the vital relationship of Bonneville Power Administration to the region should not be disturbed.

Should not be disturbed, we repeat, because of an argument that transcends, yet strengthens, all previously stated—the millions of people, whether served by public or private agencies who are entitled to the power, to opportunity and to a widening future.

Clatter in the Congress by men willfully heedless should not drown out words Franklin D. Roosevelt once uttered. He said:

"More power to you!"

Who Is Following What Party Line and Why?

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. McDONOUGH. Mr. Speaker, on June 10, William Z. Foster, head of the Communist Party, demanded that Truman veto the labor bill, in a speech over the Mutual radio network.

At that time Foster said:

The workers and other progressives should demand that President Truman, besides vetoing the Taft-Hartley bill, should also as Democratic party leader mobilize the Democrats in Congress to sustain his veto.

On June 20 Truman vetoed the labor bill, but he was decisively overridden by a vote of 331 to 83; 106 Democrats voted to override Truman, 71 to sustain. Foster's demand fell flat in the House. Truman's leadership was a complete failure.

Is it not reasonable to ask who is following what party line and why?

Hoover Warns of Limit

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Boston Post of June 19, 1947:

HOOVER WARNS OF LIMIT

While British and French foreign secretaries meet to discuss the plan set forth by our Secretary of State Marshall for the rehabilitation of Europe, former President Hoover has issued a warning that there is a limit to how far we can go in extending aid to some billion people in foreign countries. Especially after President Truman finds it impossible to cut our taxes to the extent of about $4,000,000,000 2 years after the end of the war, our people might well wonder how we can afford to spend three or four times that amount in building up the rest of the world.

Hoover agrees that we must help the foreign countries that have been devastated by the war. He says that there is greater danger of political and economic chaos in the world than at any time since the war ended. "There is more hunger and want today than there was during the war, but," he adds, "the greatest danger to all civilization is for us to impair our economy by drains which cripple our productivity. Unless this one remaining Gibraltar of economic strength is maintained, chaos will be inevitable all over the world."

He further points out that we have been helping with too lavish a hand and with too little cooperation by the rest of the world, especially by Russia. He says there is no question but that we have been sending out food and other supplies in such enormous volume as to increase prices for necessaries here at home to the present inflationary level. Not only have we been thus putting an undue strain upon our domestic food supplies, but, he also says, that other exports have placed a strain upon our own railroad, factory, and housing construction. As a result, he says, "Prices have risen so high in the construction industry that we now have considerable unemployment in these trades, while at the same time our country is crying for homes and building."

He specifically declares that, "the obstruction of the Soviet Government to peace has during the past 2 years imposed billions in expenditure upon us through support of occupation armies and relief to starvation which would not otherwise have been required."

How long are we going to stand for this dog in the manger policy by Russia? Are we going to continue sending out more billions until, as Hoover says, we may find our own country on the verge of bankruptcy?

At the conference this week between the French Foreign Minister Bidault and the British Secretary Bevin, it was reported the main concern was to insure that their acceptance of Secretary Marshall's plan for further assistance to Europe should not widen the split between Russia and the western democracies.

Apparently Secretary Marshall's plan for spending more of our billions in restoring Europe may not be put through until Russia O. K.'s it. Already the Communist parties in France are tearing the plan to pieces and, while Russia had not officially replied to the British and French on the proposal to discuss the matter, there was an unpromising article in Pravda, the official Russian news organ.

It would seem that the time has come when our State Department must break with Russia on this matter. It must insist that Britain and France go along with us and make peace with Germany and arrange a scheme for rehabilitation. Then tell Russia to take it or leave it.

Veto of the Tax Reduction Bill

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 19, 1947

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials on the tax bill, one from the Durham Morning Herald and one from the Greensboro Daily News.

[From the Durham Morning Herald]

THE PRESIDENTIAL VETO OF THE TAX REDUCTION BILL

It may be that President Truman's veto of the tax bill was "cold-blooded politics," as Representative KNUTSON terms it, but to this newspaper it appears that the bill, and not the President, deserves this description. In his veto, President Truman revealed a devotion to principle above politics, for tax reduction is good for votes. No matter what you say about it, you can't make it unpopular with the people.

The President has contended all along that the financial condition of the Nation would not permit tax reduction at this time. Even if the time were right, he would not have signed this particular bill. To him it was the wrong bill at the wrong time, and even if it had been the right time it still would have been the wrong bill.

As he pointed out in his veto statement, the Republican bill would give the average family with an income of $2,500 a year a tax saving of less than $30 a year, while the man with the income of $50,000 a year would have a saving of nearly $5,000.

On top of this, the President has the very firm conviction that the Nation has commitments which make tax reduction at this time impossible. He feels also, that the money saved by American taxpayers would merely serve to increase the inflationary pressures which in turn actually would take more money from the pockets of the average man.

Now that the deed has been done, the Republicans cannot get by with placing the blame for failure to reduce taxes on the President alone. They have bungled the thing from the start. All of us want tax relief and we want to be convinced that such relief is practical and desirable. But the Republicans by their insistence upon tax reduction regardless of other consideration destroyed much of the confidence of the people in any plan that they might have advanced.

[From the Greensboro Daily News]

THE PRESIDENT IS RIGHT

Wholly aside from politics, of which both Democrats and Republicans are playing their respective parts in the tax-reduction battle, soundness and sense undergird President Truman's veto of bill No. 1 of the GOP-controlled Congress.

Everyone would like to have an easement of his tax burden But stronger qualities

than personal likes are required to further the national welfare, strengthen and preserve the national economy, and enable us to meet the obligations and responsibilities inherent in world leadership and an international security synonymous with peace and not merely sustainment but projection of our way of living.

While the President devoted considerable portion of his veto message to what he regarded as defects, deficiencies, and inequities in the Republican-sponsored bill, the Chief Executive was on firmest ground in his denunciation of the timing of the proposed reduction. We do not know just how we stand financially as a nation now. From the very outset the tax-reliefers have placed the cart before the horse in that they did not first reduce expenditures to determine what our actual spending would be during the next fiscal year, next set aside a given amount for debt reduction, and then meet the tax-reduction issue on the basis of this sound approach and intelligent determination of primary figures. What the GOP, with some Democratic assistance it is true, did was to pass a tax-reduction bill and attack expenditures with a hatchet afterward. At no time has there been definite decision as to what would and should go into debt reduction. Yet, it is this $275,000,000,000 indebtedness which is hanging over our economy and our future and which must be met, if at all, during times of easy money, high income, and inflation such as we are now having.

Those who are charting our fiscal course must likewise remember that while the war is over peace has not been established in the world, that our armed forces must be maintained at a reasonable level during the occupation and otherwise transitional period, and that, even since tax legislation was cleared by Congress, the European crisis has broken squarely upon us with the Greco-Turkish commitment already voted and a gigantic program apparently shaping up for attempted unification of Europe as an antidote to chaos and political confusion.

Patently, the present is no time for tax reduction. And, when that reduction does come it should be arrived at through an orderliness and intelligence which were not manifested in preparation and passage of the bill to which the President applied a veto and the House promptly gave the coup de grâce.

Showing of Immoral Pictures

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Associated Press article from Durham, N. C.:

THEATER MANAGER FINED FOR MOVIE—DURHAM POLICE TO RETURN FILMS BRANDED AS IMMORAL AT THEATER SHOWING

DURHAM, June 18.—A plea of nolo contendere, submitted by a defense counsel in the case of Francis Mahoney, manager of a local theater, charged with showing of alleged immoral pictures, was accepted by Assistant Judge W. C. Purcell today.

A fine of $50 and the costs of the case were assessed against the defendant, bringing to a close the controversial matter in which Judge R. Hunt Parker had ruled at Hillsboro Monday Durham police should not be required to relinquish the confiscated films until trial of the charges against Mahoney.

The theater management had sought return of the films on grounds of financial loss. The defense had denied from the beginning charges that the films were immoral, claiming that they were shown for educational purposes. The films were Birth of a Baby and Main Street Girl. Under agreement which was a part of today's judgment the confiscated films are to be returned to the theater management with the provision that they are not to be shown here by the theater.

Veto of Tax-Reduction Bill

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Clifford B. Ward:

GOOD EVENING

(By Clifford B. Ward)

President Truman vetoed the tax bill because of party politics. You can't have a winning political machine unless you have millions and millions to spend to keep the machine properly lubricated. When the chips were down and he had to decide whether to be a President of the United States, representative of all the people, or the head of the Democratic Party, eager for another 4 years of power beginning in 1948, he ran true to his political upbringing in Missouri and went along with the boys in the back room.

This country, as Herbert Hoover and every other intelligent person knows, is on the way to fiscal chaos. It is nothing less than obscene that any party chieftain now should put party welfare ahead of our national welfare, but President Truman has done it. The hypocrisy of his pleas to business to keep prices down is shown by his determination to keep the price of Government up at its highest level. If a government, getting more money to spend than ever before in its history, can't reduce prices, then capital can't reduce the price of its hire and neither can labor.

Mr. Truman, insulting logic to justify his political partisanship, says that reducing taxes would add to the inflationary spiral, ignoring completely the fact that it is government in this country which is responsible for inflation. The greatest setback for inflation would be reduction of Government expense and retirement of the national debt.

Mr. Truman gives the impression that taxes must continue to be at high levels so that the debt may be reduced. He is guilty of dishonesty when he says this because there is no disposition on the part of himself or his administration to apply the excess of current income over current expenses to payment of debt. That excess will be dissipated in political expenditures both at home and abroad.

The veto of the tax-reduction bill was expected, yet there were some who were hoping against hope that Mr. Truman would think in broad national terms rather than in narrow party terms. These persons he sadly disappointed. If Mr. Truman now vetoes the labor bill, he will have completed the disillusionment of millions of Americans and written off as a waste of time, the present session of Congress.

As Mr. Hoover in a communication made public Monday states, this country must soon run off a balance sheet and when it does it will probably discover that it is no longer a creditor Nation but a debtor Nation. We cannot afford, despite our motives, to ruin this country financially and thus extend the chaos of Europe to this country. Despite the fact that we have poured billions into the rat holes of Europe, there is not a country in the world today that would give the United States a thousand-dollar bill unless collateral in excess of $1,000 was provided. We haven't a friend among the nations of the world, except possibly England and there it's a wish rather than a fact that we are indulging.

Mr. Truman in vetoing the tax reduction bill has played politically into the hands of professional Republican Party leaders, because his veto is political capital for his opposition, but despite the fact that I am a Republican, interested in a Republican victory, I would rather have seen the President do what is right than to see him do something against the national welfare even if it does advantage Republicans.

Mr. Truman has only succeeded in convincing the American people that they can't expect much at Washington until they make the Republican control of the House effective both in the Senate and in the White House.

Admission of Veterans to the Bar of the District of Columbia

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. KEATING. Mr. Speaker, today I have introduced a bill to facilitate the admission to the bar in the District of Columbia of former members of the armed forces.

It provides that the written examination shall be waived in the case of any veteran who has served honorably for a 2-year period, or whose service was terminated in less than 2 years because of having suffered a service-connected disability.

My interest in this matter was aroused by a petition which was presented to me by the legislative representative of the Veterans of Foreign Wars, signed by about 50 Washington veterans who consumed several years of their lives in the service of their country, some returning with varying degrees of disability. During the time when they would normally have prepared for and taken the bar examinations, they were busily engaged on the beaches of Normandy or Iwo Jima. It seems to me we owe them the consideration of attempting to place them, so far as the time element is concerned, as nearly as possible in a comparabale position with those whose studies were not interrupted by World War II.

As a member of the legal profession, I am also acutely aware of the desirability that the standards of the profession be in no way lowered. For that reason, this measure provides that anyone seeking its benefits must meet all of the educational tests and the high character requirements which are now prescribed.

My own State of New York, where the admission of attorneys to practice is

governed by rules promulgated by the court of appeals, and where we take pride in endeavoring to maintain a high standard, has adopted similar amendments to its rules following both World War I and World War II. I have been in correspondence with Hon. Edmund H. Lewis, one of the eminent judges of that high court, who advises that in the action which they took, and which, incidentaly, goes even farther in liberalizing the requirements than the bill which I have introduced, they enjoyed the benefit of collaboration and careful study of the problem by a special Committee of the American and New York State Bar Associations, and by the Joint Conference on Legal Education, of which Hon. John W. Davis is president. This special committee consisted of Mr. Warnick J. Kernan, a leading lawyer of Utica, N. Y., and Daniel J. Kenefick of Buffalo, former Supreme Court Justice, and the deans of Albany, Columbia, Cornell, New York University, and St. Johns Law Schools.

A public hearing was held, which was widely attended. After study of the record and after giving due weight to various reports and recommendations which were filed, the court adopted the new rules. Judge Lewis then says:

The rules as promulgated represent the court's best judgment as to appropriate regulations governing admission to the practice of law in this State, with proper regard not only for our duty to deal fairly with the veteran whose legal education was interrupted by active service and with disabled veterans whose war-incurred disability will constitute a definite handicap in their professional ambitions, but also to preserve for the bar those high standards for which the profession in this State has long been noted. Those high professional standards are essential not alone to the well-being of our profession but also to the vast business and private interests of our citizens.

I think it is fair to say that there have been relatively few protestations, most of which have involved requests for relaxation of requirements for admission without proper regard for our duty to maintain the standards which our profession and the public have the right to demand.

It is my considered judgment that the enactment of the legislation which I have offered will in no way tend to affect adversely the maintenance of a high standard of the bar in the District, but will give great aid and correct an existing injustice to those young men who have served our country and deserve this tangible token of our gratitude.

Fiftieth Anniversary of the Jewish Daily Forward

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. McCORMACK. Mr. Speaker, the fiftieth anniversary in the life of any newspaper is an important event and one of public interest, particularly to the subscribers and readers of such a newspaper.

On June 1, 1947, the Jewish Daily Forward celebrated the fiftieth anniversary of its establishment.

Under permission to extend my remarks, I include an address given on that occasion in the Boston Opera House and carried over Station WNAC by Alexander Kahn, general manager of this splendid newspaper:

We feel grateful for this outpouring of friendship.

We welcome you, and with you, we hope to be of service to our people, to our country, and all humanity, for many years to come.

Two weeks ago the New York celebration took place in Madison Square Garden. The place was filled to the roof. The previous evening, the Communists had a meeting in the same place, and it was half empty.

Madison Square Garden can be used for many purposes; for ice-skating, for prize fighting, for a circus—a circus that exhibits queer animals from foreign countries, who love their homelands, and hate to come here. It is also used for a circus to exhibit peculiar American creatures, which hate their own country, but stay here, and give their loyalties to a foreign land, and an all-powerful foreign potentate. All the circuses are now over and closed.

That day Madison Square Garden was filled with people—real people, who came from various parts of the world, who appreciate the freedom of this country, and love its democratic spirit. Our people have abandoned Russia, Poland, and Rumania, because of the tyranny, oppression, and dictatorship that existed there, and, unfortunately, still exists. When we swore off all allegience to the potentates of those countries, and swore loyalty to the United States, we meant it. We are happy to be a part of this great democracy, the United States of America.

We know that many abuses still exist here, and during our entire existence, we have labored to remove them. But as long as freedom exists, and democracy is in action, our peaceful progress is assured. It is only under tyrannies and dictatorsships that hope for progress and liberty is in vain.

This fiftieth anniversary of the Forward is being celebrated in every large city in the United States, from Boston to Los Angeles. The greatest part of the Jewish people in the United States is participating in the celebration, and rejoicing in our success.

The history of the Forward is a record of struggle and triumph.

The Forward has been the high school and college of the Jewish masses. When our people first came to this country, the Forward taught them to speak and read English, American customs, laws, and American history.

We organized them into trade unions, to protect them from exploitation, to improve their standard of living, and we taught them to aspire to a world free from exploitation, tyranny, and oppression.

We organized the greatest fraternal order among Jews, a unique benevolent and cultural organization—the Workmen's Circle.

We translated the world's classic literature into Yiddish, and the greatest Yiddish literature which was translated into European languages, was first published in the Forward.

The Forward was the first in the Jewish community to fight against the sweatshops, against slums, against corrupt politicians, and against domination of trade unions by demagogues and cheap politicians.

We started the movement among the Jewish masses for the New Deal. It was in this same Madison Square Garden that our great editor, Ab. Cahan, was nearly hissed off the platform, when he endorsed our then great President, Franklin Delano Roosevelt.

The reactionaries on the Right, and the Communists on the left, supported Roosevelt whenever it suited their purposes, and called him a war monger, when Hitler and Stalin joined hands.

The Forward was the only Jewish newspaper that supported Roosevelt consistently, throughout his entire administration.

Our 50 years have all been years of struggle. We are for a better world, and for freedom, democracy, and peace. We believe we can attain it with the democratic process. But that means eternal vigilance and struggle.

We must, by all means, defend our liberties, and fight dictatorship, if we are to make progress.

During the last 30 years, therefore, the Forward has been consistently fighting the Communist menace. The Forward fought them when it was alone, with small means, against unlimited resources poured into this country through secret channels.

Due to the influence of the Forward, the Communists are an insignificant element in the Jewish community. The noise they create is made by paid agents and brass bands, at so many dollars per day. But the people are not with them.

Fortunately, our country, and the world, are now fully aware of the menace of totalitarianism, and the fight has been taken over by more powerful hands than ours.

These 50 years cover some of the greatest progress and triumphs of Jewish existence. But they also record the greatest calamities that have befallen our people. The Forward was on guard at all times to help our people in their misfortunes in Europe and settling them in Palestine, and wherever else havens could be found for them.

In all these 50 years, the Forward was true to its principles, and served our community with talent, ability, sincerity, and honesty, and the Jewish communty has recognized this.

In spite of the millions of dollars that have been spent to destroy us, the Forward, today, is the largest and most influential Jewish newspaper.

We thank you for your support, for your loyalty, and for your good sense.

With your help, we shall continue to labor for peace, progress, civilization, and a free, democratic world.

Management Speaks to Labor

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Management Speaks to Labor" by Alexander Printz, president of the Printz-Biederman Co., of Cleveland, and chairman of the National Coat and Suit Industry Recovery Board, at the June 20th session of the twenty-sixth convention of the International Ladies' Garment Workers' Union at the Public Auditorium in Cleveland:

It is, indeed, an honor to be invited to address this great convention. I look upon the invitation as tendered to me not as an individual employer, nor even as chairman

of the National Coat and Suit Industry Recovery Board, but as symbolizing the admirable progress that has been made over the years in harmonious management-labor relationship in the industries with which your organization is identified.

As a Clevelander, who has been in the garment manufacturing business here for more than half a century, it is a source of particular pride to me that this city should be the scene of your triennial meeting. I want to join with other of my fellow citizens and the industry members of this city in bidding you welcome and in expressing the confidence that you will find Cleveland so satisfactory a meeting place that you will come here soon again.

I had the privilege of speaking at your convention in Atlantic City more than 10 years ago and again at your noteworthy gathering in Boston in 1944.

Each time you have asked me to speak, I have accepted your courteous invitation, not because I felt that I could make any significant contribution to your deliberations but because it seemed to me that it was fitting and proper that a representative of management should, when afforded the opportunity, report to labor on matters of common concern.

The fact that there is a community of purpose between management and labor in the wholesome functioning of an industry was cogently expressed a number of years ago, at a time of grave depression, by the late Morris Hillquit, the able counsel to your union and a truly distinguished figure of his time. He declared that labor was interested in the creation of proceeds by industry; that, without such proceeds, there would be nothing with which to give adequate remuneration to labor.

AN INSIGHT INTO MANAGEMENT'S ROLE

It would, I sincerely believe, aid in the consistent improvement in worker-employer relationship for management to accord to labor an insight into management's role in the operation of an industry. Such an insight is made possible in the coat and suit industry through the National Coat and Suit Industry Recovery Board, which serves as a medium of common consideration of industry affairs by management and labor. The meetings of the Executive Committee of the Board, which comprises representatives of your union and the employers' associations in the various coat and suit manufacturing centers throughout the Nation, has been aptly described by your president, David Dubinsky, as the "Parliament of the Industry."

This is an attitude free of the isolationism that precipitates controversies and that causes the waste inherent in suspicion and in conflict. It is a form of relationship in which neither side surrenders its individuality nor dilutes its partisanship but which recognizes the sound precept that labor and management are not traditional enemies or ingrained adversaries.

It requires courage for union leadership to take part in such a program as that represented by the Recovery Board. It is not as dramatic or colorful as are more belligerent forms of union activity; it does not have the popular appeal for fist-brandishing or saber-rattling. It is a broad-visioned pattern for peaceful progress worthy of the widest possible emulation.

CONSTRUCTIVE INTERCHANGE OF VIEWS

In those industries in which the worker-employer concord has not reached a point at which a program such as that of the Recovery Board can be introduced and developed, a beneficial purpose would, in my opinion, be served through joint conventions of representatives of labor and management. This would constitute a forum for the interchange of views and ideas, not under the stress of contract negotiation, but in the spirit of mutual enlightenment.

Not to presume upon your kindness in inviting me here today, I do, however, wish to dwell for a moment upon the true character of management's role as the marketing agent of the grist of the skill and effort of an industry's workers. An outline of management's duties in the apparel industry quickly discloses it to be a many-sided, arduous job that merits the respect, not of labor alone, but of the public as well.

It is management's task to utilize to the utmost its knowledge and ingenuity, not merely in intraindustry competition but in the broader intercommodity rivalry.

Management in the apparel industry does not rest upon laurels of the past; it recognizes the fact that each season poses a separate challenge. Fabric and other resource markets must be exhaustively studied and conclusions concerning them must be supported by substantial investment. Management must direct extensive styling activities, hazarding a sizable part of its capital in the preparation of its lines. Management must engage in intensive merchandising and distribution procedure and must underwrite and coordinate a great many other functions that make for lasting good will and for product improvement.

STABILIZED LABOR CONDITIONS ESSENTIAL

To enable management to center its attention upon the capable performance of its manifold duties, orderly and stabilized labor conditions are not merely desirable; they are unquestionably essential.

It is, indeed, my opinion that the weakening of constructive unionism would be as injurious to conscientious employers as it would be to labor itself. In an industry such as ours, made up of numerous comparatively small firms, a responsible labor organization is necessary to prevent an unreasonable and unfair minority of employers from undermining those who depend for survival upon the merit of their product and their service.

Advancement toward an equitable management-labor relationship in industry in general cannot be achieved through depriving conscientious labor groups of their effectiveness. It is true that jurisdictional disputes, secondary boycotts, and similar actions have evoked justified criticism but it would be everlastingly regrettable if, in attempting to curb these, the very life of wholesome unionism were to be endangered.

The fact that there has been some unsavory union leadership does not justify any generalizations that ignore the role of organized labor in our Nation's march of progress.

LEADERSHIP OF HIGH INTEGRITY

You of the International Ladies' Garment Workers' Union are to be congratulated upon the leadership of your organization—men of high integrity and proven ability. They give aggressive representation to your great organization and although we, as employers, disagree with them on many occasions, they have our sincere and enduring respect.

In closing, let me voice my belief that there is an awareness among reasonable and capable employers that strong unions, led by men of vision and probity, are indispensable to industrial orderliness and stability.

Speaking out of my own experience, I withstood the unionizing of my firm for a quarter of a century—from 1910 to 1935. Now, after 12 years of conducting a union plant, I feel that, despite the occasional problems and differences that are inevitable in any relationship, I would not want to revert to a nonunion status and I would view with regret any developments that would place unionzation in our industry as a whole upon a demoralizing defensive.

The task of making way for a better tomorrow in our Nation is, properly, a joint endeavor of us all. It is the common goal of worker and employer—of management and labor. Drastic curbs upon either labor or management will not attain this eagerly desired objective.

Mutual confidence and good will, as exemplified by your extending to me the privileges of this platform, are the basic essentials for lasting betterment for ourselves and for the generations to come.

Tax Bill Veto

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. SABATH. Mr. Speaker, your vote today to override the President's veto of the vicious Taft-Hartley bill, after having heard his thorough analysis of its faults in his message, which should have convinced any fair-minded American that this repressive bill, far from encouraging industrial peace, will destroy it, is now a matter of public record. Nothing now can erase this blot.

I am sure that the American people will hold the Republican Party, and the Republican Members of the House, responsible for this, in the same way but in greater degree than they have the unfair and discriminatory tax bill.

If you have any doubt of the sentiment of the American people, read the results of the Gallup poll as published this morning in the Washington Post. Ponder it well. The American people have not been fooled by your political appeals even to their pocketbooks. No more will they be fooled by the discredited appeals to their emotions on the labor bill. Remember this: There are more people working for a living than there are people clipping coupons for a living.

Following is the text of the poll results as published in the Post:

TAX-BILL VETO IN LINE WITH PUBLIC SENTIMENT

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., June 19.—President Truman's tax-bill veto was closely in line with majority public sentiment throughout the country as expressed in public-opinion surveys dating as far back as last year's election campaign.

The majority of voters have felt that if it came to a choice between cutting taxes and cutting some of the public debt, the latter should take preference.

Obviously, nobody enjoys paying high taxes. And nearly two voters out of every five feel that taxes should be reduced regardless of what happens to the public debt. But most of the rest express greater fear of the huge mountain of public debt than of the heavy burden of taxation which they have to carry.

This issue was put to the public as early as last October, before the Republicans captured control of Congress in the 1946 election. At that time, before any concerted drive had been launched in Congress to cut taxes, the weight of sentiment was more in favor of debt reduction than tax reduction.

Then came a long blast of publicity about tax cutting, with Republican leaders advocating substantial cuts. While it might have

been expected that this would increase public sentiment for tax reduction, actually the movement of public opinion was in the opposite direction. As the discussion continued there was a drop in the number of voters favoring tax reduction in preference to debt reduction.

In October, just before the 1946 congressional elections, the country's attitude was as follows:

Should the Congress elected in November reduce income taxes in 1947, or should this wait until some of the national debt has been paid off?

The vote:

	Percent
Reduce taxes	41
Wait	49
No opinion	10

In May of this year the issue was again put to the voters in a question which named the specific surplus involved.

The United States today has a billion dollar surplus in its running expenses. Should this money be used to reduce income taxes, or should it be used to reduce the national debt?

As reported May 30 the vote was:

	Percent
Cut taxes	38
Reduce debt	53
No opinion	9

The typical American has raised few objections to high taxes when he felt the need was clear.

When war broke out in Europe in 1939 and our own outlays for defense began to mount, polls found the Nation's voters saying they were willing to pay more in taxes. In fact, the public was ahead of the Government, in the sense that its own ideas about what it should be taxed were stiffer than what the Government proposed. The majority of Americans recognized that they would have to carry a heavier burden and were more than willing to do their share.

At the same time, there was no sentiment among the general public for soaking the rich. When asked what income tax a man earning $20,000 or $50,000 annually be required to pay, the public named a rate much lower than the Government was already requiring people with such incomes to pay in taxes.

New evidence that the general public is not out to soak the rich is contained in a survey just completed. This shows that the majority of voters believe the amount of income tax for persons with large incomes should be limited to 50 percent. In short, no one in the United States should be required to pay more than half of his income to the Federal Government, in the opinion of the majority.

The present tax rates go up to more than 80 percent.

A Surprise in Sugar

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, the following appeared in the Tulsa Daily World, of Tulsa, Okla., June 13, 1947, as an editorial in that newspaper:

A SURPRISE IN SUGAR

Suddenly there comes a Department of Agriculture order for the discontinuance of sugar rationing. Regardless of the mixed motives and the unclear factors, the release is welcomed by the public and the retailers. Aside from the pleasing release of this big item from a long control, the action is welcomed because it marks practically the end of the rationing system begun about 5 years ago. Vast harassment has been caused. That rationing was necessary was unquestioned, but there were many disagreeable features which seemed unnecessary and unfair. Abolition of the whole system will not make all of us forget the weariness, but it will add to general content.

Obviously the order for stopping of rationing for households, hotels, and restaurants was hurried up by the knowledge that Congress was about to pass a law requiring an end to the system. Ostensibly, the order took note of 350,000 tons of sugar above the amount anticipated a few months ago. Other unexpected supplies are said to have developed. This leads the mind backward. How long has the Department known of the increased supply, or did that supply just show up day before yesterday? This leads to the unpleasant reflection that the Government or somebody has been holding out information and somebody must have been manipulating sugar itself. How did the Department make up its mind so suddenly? Did the big manipulators who have been cooking up messes ever since rationing started get scared and decide they better be good?

Probably the swift move of the Department will take some of the steam out of the congressional investigations and exposures. Undoubtedly there would have been, in the course of the debate on the termination bill, revelations and exposures. The controversy could easily have developed leads which would lead to the finding of crookedness. The manipulators may have fooled the Government along with the public and at last have sensed the danger of keeping up artificial and burdensome conditions too long.

We are just about in sight of release from all food controls. Whether there will be some price gouging on the strength of the releases we do not know. Hereafter, however, the fight will be directly between the householders and the dealers. Government is mostly out of it, and that is a great gain. While necessary at times, price control, particularly in foods, tends to trouble.

The public will know how to deal with extortioners now that the Government gets its hand out of the matter. Supply and demand should now come into proper operation.

No Premium on Stealing

EXTENSION OF REMARKS

OF

HON. ROBERT TRIPP ROSS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. ROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the National Tribune, the Stars and Stripes, of June 19, 1947:

NO PREMIUM ON STEALING

Three weeks ago the House Committee on Veterans' Affairs reported favorably a bill that proposes to increase the subsistence allowances now provided to married veterans of World War II who are pursuing studies under the GI bill of rights, but, before the measure was sent to the House floor, there was included a proviso that no veteran can receive its benefits if he is a member of an organization which advocates the overthrow of this Government by force or violence or who belongs to any group listed by the FBI as one in sympathy with the general aims of the Communist Party.

It is a little surprising that so far there has been very little public expression about the amendment. It is a new departure in veterans' legislation, and, if accepted by the Congress, may be applied to other veterans' benefits. Doubtless, it has been accepted as a desirable restriction by most thinking ex-servicemen, who will not place themselves on record for fear of some sort of reprisal. We go for it in a big way, largely for the reason that it can affect only a few disloyal persons who deserve no consideration, but we are amazed that there has been so little comment from left-wing commentators who usually find in such matters ammunition for their poison pens.

Editors of the Washington Post, which is not universally considered as a particularly conservative sheet, term the committee action "a vicious move" because "it does violence to the principle of freedom of thought," promotes martyrdom, furthers Communist ends, and "casts dishonor on all military service," and Tom Stokes, of the Washington Daily News, says it is contrary to American tradition for the reason it denies to student veterans "the privileges and delights and frivolities of a college education." Of course, it does nothing of the kind. As a matter of fact, those who would pay anything to anybody who is attempting to aid and assist enemies of our form of government to overthrow it, who would give them greater rein by adding to their means of doing it, whether they be war veterans or not, would be subsidizing disloyalty with the taxpayer's money, and would be opposing this Nation's adopted policy of putting an end to the appeasement of Communists.

Honorable service, according to the Post, was honorable service regardless of the political affiliation of the men who performed it. With that we do not disagree. It is nevertheless a well-known fact that far too many men in the American uniform during the war just concluded did not render honorable service even though they were awarded honorable discharges or were released under conditions other than dishonorable. Many of them, officers and men, were given soft jobs through political influence, or took on noncombatant duties to escape the rigors of real service. All are eligible to GI rights under existing law, yet it is also known that some caused untold embarrassment to the big brass under the guise of freedom of speech. In addition, there were those in uniform who were placed there for the specific purpose of sabotaging the war effort, and some got away with it. We hold no brief for that breed of cat, and, if they can be identified belatedly through their present chosen company, they should be spotted and labelled as the traitors to their country that they are. They get no sympathy from honest veterans; they deserve none.

Stokes falls back on memories of "bull sessions" in college dormitories as sacred to the institution of learning, to the freedom of mind, spirit, and inquiry. He says they are places where men gather at night to talk about everything under the sun "and advance the craziest or silliest or most revolutionary notions, or talk seriously or frivolously" about many things. Well, we can easily recall such sessions when they were more frivolous than serious, but in far too many instances they have in recent years been profaned. Such meetings as are sponsored by Communists and their fellow travelers are a deadly serious proposition and are purposed to tear down the very institutions that house them. They may be a joke to Stokes, and he may attach his own yardstick when measuring their danger, but we cannot concede that the Government is

obliged to educate rascals when it has hope of being repaid only by a stab in the back if or when the opportunity is afforded.

People are only obstinate when they disbelieve what organized Communists openly admit. There is nothing spontaneous about some of these youth movements in our schools and colleges. They are Communist-inspired and Communist-directed, and they are too frequently tolerated and encouraged by professors who have lied their way into their college chairs. Fortunately, there is only a very small minority of GI's in the whole mess, but our people certainly should not be called upon by legislative failures to encourage the ungrateful few who have not the intelligence to take advantage properly of the rights accorded to them.

Too many of our people are today disgracing their citizenship in the name of liberalism. There was never a time in all history when the rights of free peoples were more seriously threatened. Attacks upon their morals are being made flagrantly through the press, the motion picture, and by mail, and the accent is placed on our youth. The most American of all American institutions are the schools of our land, and the minds of school-age persons are the most susceptible to false propaganda. As the Red influence was deliberately sifted into the armed forces, so it is being filtered into our schools and colleges. It is not funny. It is a disgrace, and those who condone it can do so only through ignorance or through design.

Real Americans want no part of it. Those who make up the great bulk of organized veterans will oppose it with all of the will they possess. They, therefore, favor any measure that will help to guarantee a maintenance of the freedoms for which they fought and for which their pals gave their lives. Many of them are already finding the going tough and they know it will get tougher as time goes on. They learned the hard way that there is no such thing as partial allegiance, that one cannot be partly loyal to this country and in part true to a foreign power. They know the fallacy of any attempt to subscribe to conflicting sets of principles, and they appreciate that hyphenated Americanism has no place in this land of ours. They do not choose to encourage the placing of a premium on stealing.

Education for Democracy in a New World

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. HARRIS. Mr. Speaker, in the quiet, scenic, and majestic foothills of the Ozarks stands the College of the Ozarks, steeped in tradition and with a heritage heralded throughout the educational circles of our country, a college noble and proud. Noble for its greatness; and proud of its accomplishments.

Many great and illustrious sons have adorned the halls of this institution to go forward in mighty conflict and take their places in the cause of peace, proclaiming truth and liberty. Included in this fine and successful group of citizens is one of our colleagues from Arkansas, the Honorable W. F. NORRELL. Over a period of years the College of the Ozarks has recognized the success and accomplishments of its esteemed sons and other outstanding citizens. For the success he attained in 1945, for the contribution made to his country and humanity, for the tradition he upheld throughout the years, he was awarded in a fitting ceremony at commencement an honorary degree of doctor of laws.

On May 25, 1947, the fifty-sixth commencement was held at the College of the Ozarks. Our colleague, Mr. NORRELL, was invited to deliver the commencement address to a fine and outstanding class. At this memorial occasion, a former colleague, the Honorable David D. Terry, who served in this House for many years and held the admiration and respect of all of the Members, was too awarded an honorary degree of doctor of laws for his notable accomplishments and outstanding service to his State and Nation.

Education and democracy have grown and progresed together throughout the history of the United States, accentuating the basic philosophy that has made our country great. I believe many will be interested in the graduating address of Mr. NORRELL on this occasion on the subject of education for democracy in a new world. Under leave to extend my remarks in the RECORD, I include his thought-provoking, sustaining, and inspirational address:

President Hurie, members of the graduating class, members of the faculty, ladies, and gentlemen, I am happy to have the privilege, pleasure, and honor of returning to this great institution, sacred in my memory, not alone for the purpose of delivering the address on the occasion of the graduation of these splendid young men and women, but to visit this campus once again, look inside classrooms, meet schoolmates, faculty members, and old acquaintances, and to recall very pleasant memories of bygone days.

Someone has said that reminiscing is a sign of old age. Well, if it is, I must be very, very old indeed.

I recall happy days spent here—days when I increased in wisdom and stature and, I hope, to some extent, in favor with God and man. I am grateful for the honors bestowed upon me by this institution—the first college which lived to be chartered in Arkansas, and also for the honor award given me in 1945 by the almuni association.

I have chosen to speak to you on the general theme of Education for Democracy in a New World. This subject may seem to you to be abstract and visionary on first thought. However, upon reflection, I think you will agree that it has vital implications for the maintenance of international peace and the welfare of all nations.

In these hills of the Ozarks every one of you has had the experience of attaining a broader vision by climbing from the depth of a small valley to the top of one of the surrounding mountains. Those of you who served overseas during World War II, and others of you who have traveled far, have likewise had the experience of attaining a broader mental vision from the acquired knowledge of other lands and other nations. Furthermore, in your studies at this college and in other ways you have gained a basic understanding of the international situation and how it may vitally affect the life of every one of us.

A NEW WORLD; A NEW CRISIS

With the advent of the atomic bomb a new world was born. It is a new world of physical power. More importantly, it is a new world of ideas. Man's conception of his place in the universe is basically changed. He is conscious of far greater power. It remains to be seen to what extent he will use this power for good, and to what extent for evil.

The House Appropriations Committee, of which I am now and was a member during the war, supplied the money for the atomic project. When the committee was first approached on the subject, the members were opposed to the idea of making an atomic bomb. They felt that the world would be better off without it. However, General Marshall, who had at first presented the proposal to the committee, reappeared and emphasized that the nation which first obtained atomic bombs would win the war. The committee finally granted the money. Some of the members later witnessed the test of the bomb in New Mexico. When the bomb was dropped on Hiroshima, the world quickly learned what had been done.

Early last year the Army and the Navy decided to see what atomic bombs could do to ships. As a Democratic member of the House committee, I was designated to witness the test at Bikini. We all know what happened there. This Nation shuddered when we first heard the news of the atomic bombing of Hiroshima. For months thereafter newspapers and magazines predicted the destruction of civilization by this awful force. A few pointed out that if diverted to constructive use, this great power might be a boon to mankind.

The possibility of utter devastation from the misuse of atomic energy still hangs over the earth like a great cloud; yet, throughout history of civilization, man has many times faced what appeared to be an agent of complete destruction.

Imagine primitive man seeing the lightening start great forest fires, which seemingly would devour all living things. Surely he must have thought at first that if man ever learned to make fire and use it as a weapon he could destroy the earth.

As centuries passed, and men learned to use stone axes, iron spears, and bows and arrows in warfare, many must have been the predictions that warring with such weapons would destroy the human race.

The consternation upon the spread of news of the invention of gunpowder was comparable to that upon the advent of the atomic bomb. When gas was first used in World War I, it was widely believed to be an agent of destruction of all mankind. Yet defenses against gas were invented, as defenses against all earlier weapons had been.

So may defenses be found against the atomic bomb. We do not know; but we have reason to believe that men will not disappear from the earth because of the use of atomic energy. There is a new world crisis, but it has been preceded by other comparable ones. In some respects, they have been essentially different.

NOT A CRISIS OF FEAR

The new world crisis is not primarily one of fear. As has been pointed out, man has faced the fear of utter devastation many times before. But fear has never adequately motivated him to build a better world—a world in which all could live as free men.

Now, as never before, man faces an opportunity to build such a world, but we cannot rely only upon fear of atomic bombs to cause him to do this. Fear may motivate him to build defenses against these bombs. It may also influence him to use other and more commendable methods, such as the furtherance of world-wide education for international respect and understanding, for the maintenance of international peace. Unless this is done on an unprecedented scale, fear will produce greater distrust among the nations and cause them to arm themselves more powerfully than ever before to wage war with one another.

In many foreign lands I have had opportunity to observe the suspicion and distrust of one nation toward another. Some time before Japan actually surrendered, we had information that she was willing to do so.

The question arose as to how much money appropriated to the War Department for the prosecution of the war could be returned to the United States Treasury for peacetime uses. In order to help find an answer to this question, I was one of several Members of the House Committee designated to accompany Maj. Gen. George Richards, Chief Budget Officer for the War Department, and a number of other high-ranking Army officers, on a tour of investigation to practically every major country of the world, Australia, China, India, Iran, Egypt, Italy, Greece, Germany, France, and England. I was impressed with the evidences of distrust and suspicion among the nations—even those allied in the war. By world-wide education for democratic living, we can combat this distrust and create conditions conducive to world peace. About this I shall have more to say.

A MORAL CRISIS

It is tragic that men today generally see in the use of atomic energy only a greater danger to their physical existence. The present crisis is a moral crisis. With the aid of atomic energy, men at last have the power to build a world of freemen. Will they do it?

In his great work, the Dawn of Conscience, James H. Breasted has recounted the expansion of the feeling of obligation for our fellowmen. He tells how man at first felt obligation toward his family, and later, in succession, toward his tribe, community, state, and country. But not all have developed a concern over the welfare of their countrymen. Few have developed an interest in the welfare of the people of the world. Until recently those who felt such concern could do comparatively little about it. The world was too poor, and communication and travel too difficult.

A CRISIS OF OPPORTUNITY

For the first time in history, men are able, if they wish to use existing means, to think, work, and act on a world-wide basis. We all know of the wonders of the radio, and of modern air travel which makes any point on earth only about 40 hours distant from any other point. Such rapidity of communication and transportation as we have today was never forseen by most of those who lived a decade ago.

The nations of the world are faced with a crisis of opportunity to work together for the welfare of all peoples. It is a crisis of opportunity to dispel ignorance and fear, and to create feelings of good will among the nations.

THE POWER OF EDUCATION

I have pointed out to you that we are living in a world of new physical power, and of new basic ideas; that the present period is a period of crisis, and that this is a crisis not of fear but of moral responsibility—a crisis of opportunity to build a world of freemen. Let us now consider the role of education in meeting this crisis.

In a famous statement of the 1920's, H. G. Wells predicted that the fortunes of the world were dependent upon the outcome of the race between catastrophe and education—the right kind of education. By 1939, it was clear that catastrophe had won the race. It cost the world 6 years of bitter warfare, 60,000,000 casualties and $3,000,000,000,000 to give itself another chance—a chance to start the race all over again.

The great power of education—good and bad—has been dramatically demonstrated in recent years, both by democratic and totalitarian nations. It is evident that now, more than ever before, democratic government and a democratic way of life are possible only to a people well educated under democratic principles.

Our government and the governments of the world to a great extent are now recognizing that fact. In an address at San Francisco, in 1945, the President of the United States said, "We must set up an effective agency for consistent and thorough interchange of thought and ideas, for there lies the road to a better and more tolerant understanding among nations and among peoples." Pursuing this thought the Secretary of State wrote to the chairman of the Committee on Foreign Affairs of the House of Representatives early in 1946: "In a world where nations may arm themselves with weapons against which there is no physical defense, basic security lies in the creation of mutual trust and confidence among the peoples of the world."

Education is the most effective instrument by which such mutual trust and confidence can be created. It is more powerful than the atomic bomb in this respect. Thus education constitutes a primary basis of peace.

One man has said: "We shall never achieve an international relationship, marked by understanding, peace, justice, and good will unless we make full use of the instrument of organized education to that end." Another has said: "When victory is won, we should see to it that the evil which has brought about the world catastrophe is attacked at the source—in the schools." Still another has said: "Education has a role of the first importance to play in building the foundation of a just and lasting peace."

I think it can be said that every great change in human society from tribal government to nationalism, from chattel slavery to modern capitalism, has been accompanied by equally profound changes in the structure, scope, and purpose of organized education. This idea to use education for mutual understanding and peace is not new. It has been developing ever since there were nations and organized school systems. If it can be demonstrated that a desired extension of knowledge is apt to show us how to make war less likely and peace more probable, then international cooperation to discover that knowledge must be our business. I would permit one reservation: Our purpose is not intended to promote peace at any price. There could be a peace of slavery—a peace where human rights are ignored—the peace of death. There could be a security in the submission to injustice—a security in stagnation—the security of a cage. These are not the peace and security to be established.

It is generally agreed that wide difference in economic and social conditions among the nations are major causes of war; these variations are largely accompanied by differences in educational standards. For example, the Scandinavian countries, in spite of relatively poor natural resources, are distinguished by their high standard of education and by their superior economic and social development. On the other hand, many areas in Africa and South America, with the richest of natural resources, have very low standards of education and inferior standards of living.

Throughout the world, literate and educated nations tend to have a higher standard of living, illiterate and ignorant nations tend to be poverty stricken. By working together for mutual understanding and for higher standards of democratic education everywhere, the nations can further their democratic, economic, and social progress and reduce the probability of war. The United Nations has taken decisive action toward the attainment of these goals through the creation of the United Nations Educational, Scientific, and Cultural Organization.

EDUCATION FOR DEMOCRACY

If world peace is to be maintained, nations must be taught the love of God and of their fellow men. They must learn to understand and respect each other. All peoples must obtain sufficient knowledge to utilize modern inventions and develop the natural resources of their countries, so as to minimize the economic differences which produce wars. As long as there are dictatorships, there will be wars; and as long as there are nations inadequately educated in the principles of democracy, there will be dictatorships. There must be world-wide education in democracy, for the maintenance of peace and for the welfare and progress of all peoples.

UNITED STATES ACTION ABROAD

The United States is engaged in a number of activities for the promotion of peace and progress through education. Many of these activities involve cooperation with other countries. The United States is serving as the chief architect for the structure of peacetime living which the people of our country and the people of some of the other countries are working together to build—largely using the material of education.

Our country has played a leading role in the establishment of the United Nations educational, scientific, and cultural organization. While serving as Secretary of State, James F. Byrnes defined the task of this organization in the following terms: "Its task is to lay the foundations of future world peace in the minds and hearts of men. A major duty of modern statesmanship is to establish conditions of mutual understanding among the peoples of the world. This can only be achieved if the peoples of the world themselves turn their thoughts toward this goal."

Assistant Secretary of State William Benton (then chairman of the United States delegation to the General Conference) said: "I know of no task more challenging, more difficult, or more hopeful than the task of the United Nations Educational, Scientific, and Cultural Organization to advance the cause of peace through understanding among peoples. It is both a symbol and an instrument of our determination to construct the defenses of people in the minds and hearts of men."

Our Departments of State, War, and Navy, and other interested agencies, have cooperated in formulating and carrying out a comprehensive program for the reeducation of the defeated Germans and Japanese in the ways of democracy. The United States is actively participating in several phases of education for democracy abroad. However, in its international information program we are doing far less to teach other nations the principles of democracy than the Union of Soviet Socialist Republics is doing to teach them communism. Concerning this point, I should like to tell you a very brief story.

A small boy was riding a mule which balked near a country doctor's office. After overhearing for some time the sounds of the boy's futile efforts to make the mule go, the doctor came out and offered a remedy. He rubbed some very powerful, hot liniment on the mule and shortly thereafter the mule suddenly rose and went galloping across the field. The boy looked at the mule in amazement, and then said, "Doctor, did that liniment cost much?" "No," replied the doctor, "only a nickle." "Well," said the boy, "you better rub about a dime's worth on me, 'cause I've got to catch that mule."

The international information program of the United States needs a double dose of stimulation in our efforts to educate the world for democracy, or to catch up with the efforts of the Soviet Union to indoctrinate the world for communism. Upon this race may depend whether or not the world will remain at peace. Dictatorships lead to wars, and the Government of Russia today is a dictatorship.

UNITED STATES ACTION AT HOME

To many people coming from foreign lands to this country, the opportunity for democratic education has been a beacon in the darkness. Such opportunity did not exist in the lands of their birth; so they determined that their children should be given better advantages. Our educational system has been the guardian of America's ideal of equal

opportunity. There is common agreement that the educational attainment of the peoples is important to the welfare and progress of the country as a whole; that a fairly high minimum level of education is of fundamental importance for all citizens in a modern democracy is no longer a subject for debate. Yet in the school year 1944–45, the latest year for which such data are available, the United States spent only $2,600,000,000 for the operation of its public elementary and secondary schools—somewhat less than $2,700,000,000 which the people of this country spent for tobacco in the calendar year 1944. In the same year our people spent $7,100,000,000 for alcoholic beverages—an amount approaching three times the expenditure for the public schools.

During the school year 1944–45 the total amount spent in the United States for all types and levels of education, public and private, was about $3,500,000,000—only a little over 2 percent of the national income for 1945. During the calendar year 1945 it is claimed that the Union of Soviet Socialist Republics spent over 8 percent of its national income on education.

While the data on expenditures for education in the Soviet Union is questionable, it appears that they are spending considerable sums in support of the distribution of Communist propaganda throughout the world.

Higher education in this country is faced with unprecedented problems. With tremendously increased enrollments following the war, the colleges and universities are still hard pressed to find adequate classroom space and teaching equipment, enough qualified instructors, and sufficient housing for the students.

Numerous proposals are now before the Congress for additional Federal aid to the States for education. Some of the proposals are for universal military training, with emphasis on the military. Others are simply for universal training. Some time ago the President appointed a Commission on Universal Training, which has been making extensive studies and is expected soon to render a report on this question. What action the Congress will take on these national issues remains to be seen. Action by the Congress, either to institute a universal training program or to provide for annual appropriations to the States for education, will establish an important national policy.

When the entire long record of Federal activities in education is considered, it is evident that throughout the years the Federal Government has been increasingly concerned with the satisfactory education of the Nation. This trend may be expected to continue. Let us hope that our Federal, State, and local Governments, and the governments of other nations, will cooperate in the furtherance of education for democracy in the new world of atomic power. Therein lies the road to mutual understanding and respect among peoples, and to the maintenance of peace and increased prosperity of all nations.

Soil Erosion by Floods

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, June 20 (legislative day of Monday, April 21), 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled, "Your Country's Soil Is Being Stolen," appearing in the Evening Bulletin of Philadelphia on June 15, 1947. This dramatically worded editorial shows an awareness of the problems involved in the Mississippi flood, in areas far removed from the scene of the disaster. Appearing in a Philadelphia newspaper, more than a thousand miles from the Mississippi-Missouri River area where these raging floods are causing such havoc and destruction, the editorial shows the widespread interest of the American people in this problem. These floods are recognized as having national and not merely local effects on our economy. They require the earnest, concerted, and intelligent action of the Congress of the United States. I remind the Senate that there is now before a committee of this body a joint resolution introduced by me on June 12, urging appropriate action to meet the present flood emergency in the Mississippi-Missouri region.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YOUR COUNTRY'S SOIL IS BEING STOLEN

Year in and year out, the United States is openly robbed of millions of dollars' worth of its natural resources.

The robber is the Mississippi River, aided and abetted by its tributaries.

These tributaries grab soil that belongs to the people—soil the possession of which is connected with the country's future properity—and deliver it to the master thief. The master thief carries it down to the Gulf of Mexico and dumps it.

The people cry "stop thief!" They have been shouting for more than a hundred years that the pillage must stop. They have created committees and commissions of investigation, and hired men skilled at dealing with that kind of criminal, and have got practically nowhere.

Ol' Man River, he jes' keeps rollin' along, stealing from his banks, stealing from all the surrounding country, and unloading the loot according to his centuries-old plan.

Every year, in flood season, he extends his operations. Every few years he goes on a special rampage, as he has done this June, and then the anguished cries of the victims rise to high heaven.

Now, this is 1947. Since first we began to talk about the ravages of the Mississippi and the Missouri and their pillaging of a vast productive area the engineers of this country have grappled successfully with many major problems.

They have dug the Panama Canal. They have impounded the waters of many great rivers with seemingly impossible dams. They have built a sea-going railroad and bridged San Francisco Bay. If they had the backing, they could not only stop the Mississippi floods, but save the soil that is being wasted and the lives that are annually destroyed and the thousands of houses carried away and valuable livestock drowned by the unregulated flow of the waters of this robber gang of rivers.

Of course, the Mississippi is a thousand miles from here, and we have river thieves at work right in our own State. But we have a long-range stake in the prosperity of the great plains area and in the protection of the property taken away by the Mississippi, for it's part of our national heritage.

And of course we want economical government. It is not regarded as an extravagance to take out burglary insurance and to capture and confine professional thieves.

This country might, with prudence, invest in the control of raging flood waters any sum the interest on which would not exceed the money losses it suffers by inaction.

Truman Blocks Tax Relief

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the State Journal, Lansing, Mich., entitled "Truman Blocks Tax Relief":

President Truman has interposed his veto between millions of Americans and a substantial measure of relief from the staggering tax burden. He has raised a number of objections to the tax-cutting legislation approved by the Republican-controlled Congress, but none of his criticism will prevent him from having to bear the full responsibility for denying the taxpayers a $4,000,000,000 cut in their income-tax bill.

Mr. Truman makes the claim in his veto message that the tax-reduction measure is inflationary—a position which may surprise many persons who have gained the impression that the President was in favor of the reduction of prices which they are required to pay.

There is likely to be a widespread inability to understand why savings which would result from reduction of taxes would be more dangerous to the national economy than the savings which would accrue from other price reductions which the Chief Executive has been urging upon business.

Inasmuch as it now costs Americans billions of dollars more to pay the costs of government than it does to provide themselves with food, President Truman will seem to many to be inconsistent in appealing to business to reduce the prices which it charges for goods and in refusing to reduce the price which the Federal Government charges the people for its services on the grounds that reductions in the latter field would be inflationary.

Mr. Truman also maintains that income-tax reduction is not now necessary to permit business expansion—a contention that is likely to make little impression upon those in the lower-income brackets who have been thinking of tax relief in terms of more money with which to buy the necessities of life.

Despite the fact that the bill which he has vetoed properly would provide the greatest percentage of reduction in the lowest income brackets, the President complains that tax savings to the average family with an income of $2,500 would be less than $30. Because he apparently does not believe this to be enough, he has decreed that they shall get no reduction at all.

It is very possible that the bill in question is not perfect but to millions of Americans upon whom the payment of taxes at the present rates is a hardship it undoubtedly would be preferable to no relief.

Mr. Truman claims that the legislation is unsafe from the standpoint of Government finances despite the lack of proof that, if rigid economy is practiced by Government, enough would not be left for tax relief after balancing the budget and making substantial payments on the public debt.

The President's refusal to cut income taxes because of an apparent conviction that the Nation's economy still can stand up under high taxes would seem to place him in the position of others who contend they have a right to charge for what they sell all that the traffic will bear.

Regardless of all the objections which Mr. Truman has raised to cutting taxes now rather than at a time less distant from the

1948 Presidential election, the President cannot alter the fact that he has stood between the people and a lightening of the tax burden.

By passing the tax-cutting bill and sending it to the White House, the Republicans in Congress completed the redemption of one of their major pledges in last fall's campaign. Mr. Truman will have to bear the full responsibility for preventing the American people from obtaining the benefits of that redemption.

Tax Bill Veto

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit an editorial which appeared in the Chicago Daily News on Tuesday, June 17. In addition, I want to say that I have been receiving letters from many people indicating keen disappointment that the President saw fit to veto H. R. 1, which would have provided reductions in personal income taxes. It is notable that the majority of these letters come from people in the lower-income tax brackets. They had counted upon the relief that it would have afforded.

The editorial follows:

DEMAGOGIC VETO

If we were not firmly convinced that President Truman hopes to sponsor and take credit for tax reductions in time for his 1948 campaign, we would consider that his veto of the Republican bill showed at least the political courage of his expressed convictions.

But the arrant demagogy with which he denounced the tax bill as favoring the rich makes it impossible to credit him with sincerity. His fight for every last cent of his extravagant budget exposes the false pretenses of his professed concern for sound economy.

His charge that the wealthy would be unduly spared by a 10.5-percent reduction on large incomes, as compared with 30 percent on small incomes, is pure vote bait, pitched to appeal to the envy and malice on which the New Deal thrived. The income tax is already steeply graduated. The 10-to-30-percent spread in the vetoed bill would have saved money for all, but it would have magnified the difference in the rates paid by the lowest and the highest incomes.

Under the present law, a married man with two dependents earning $2,500 a year pays $95 in tax. A similar individual earning 4 times as much does not pay 4 times the tax; he pays $1,862, nearly 20 times as much.

The income tax has become a means of bringing the incomes of all citizens closer to that dead level so beloved of the Roosevelt regime and its heirs. It could be argued that if this country had ever dreamed that the income tax would be turned into this socialistic instrument it never would have been accepted back in 1913.

We agree with the President that a substantial start toward the reduction of the $257,000,000,000 debt is more important than tax reduction. Contrary to his opinion, however, we believe that a determined drive to shoo the hordes of useless bureaucrats away from their entrenched positions at the public trough would enable us to have both.

Mr. Truman's talk about deferring tax cuts "until the structure of prices is on a more stable basis" is unadulterated twaddle. Relief from the heavy burden of wartime tax rates would do as much as anything else to shake out the notion that all costs are on a permanently higher plateau.

It appears unlikely that votes can be mustered in the Senate to override the veto, although the House may be able to do so. The Republicans will be false to their pledges and derelict to their duty if they allow this veto to prevent a relentless hunt for every dispensable item in the administration budget.

If the Treasury surplus can be boosted to $6,000,000,000 or more, and protected from Mr. Truman's spenders, a debt reduction of that amount would be gratifying salve for the taxpayers' welts.

Blow at Religious Liberty

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. ARNOLD. Mr. Speaker, the decision rendered by the Supreme Court recently, permitting the use of public funds to pay for the transportation of pupils to sectarian schools, is a subtle but nonetheless dangerous decision to the cause of religious freedom, upon which this great Nation was founded. In this connection I wish to include an editorial from the Christian Science Monitor, entitled "Blow at Religious Liberty":

BLOW AT RELIGIOUS LIBERTY

Separation of church and State is a bulwark of religious liberty. To remove a stone from that bulwark is to weaken the fortress of religious liberty. In our opinion the Supreme Court, by its decision permitting the use of public funds to pay for the transportation of pupils to sectarian schools, has torn down a whole section of that bulwark.

The majority opinion protests, "We would not approve the slightest breach." It holds that the adherents of any church should not be deprived of the benefits of a general law under which the State of New Jersey reimburses the parents of pupils who have to use busses to get to school. This appears plausible until one realizes that where the public pays for transportation to public schools, parents are deprived of no benefits unless they insist on sending their children to private schools. It is their own act which cuts them off from free school facilities.

That fact makes it plain that pay for busses to facilitate attendance at parochial schools gives special aid to such schools. This is underscored by the fact that other private schools get no aid. This entering wedge of support could be pushed very far, as the dissenting opinions of Mr. Justice Rutledge and Mr. Justice Jackson point out. Will the next step be to reimburse parents for the tuition they must pay to sectarian schools? Since taxes pay the tuition in public schools, could they not plead for such aid on the same ground?

Indeed, there is a Nation-wide campaign to get public aid, and this Supreme Court decision fits right into it.

It seems to us that the Court has opened a very wide door. Where will it draw the line? It might be well for friends of religious liberty to carry a new case to the Court, to permit it to call a quick halt to this breaking down of the separation between church and state, or even to reverse itself. Meanwhile a movement is already under way to establish an explicit safeguard by means of a constitutional amendment which cannot be overturned by any court.

In the beginning we said the separation between state and church is a bulwark of religious liberty. This is so because where there is no separation either the state dominates or the church dominates the combined power.

In one case the state uses the church for political purposes. This tends to a condition in which vital religion is either corrupted or suppressed, and where the church dominates it uses political power for its own ends. This tends to a condition where other churches are banned or hampered, clericalism completely controls education, and a pampered church decays. In either condition real religious liberty is lost. History is full of the evil results. Spain and Russia, Italy and Argentina, have furnished modern examples.

Statistics of Veterans in Kentucky Schools and Colleges

EXTENSION OF REMARKS
OF
HON. W. HOWES MEADE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. MEADE of Kentucky. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tables:

TABLE 1.—*Sex, by school, marital status, and presence of children, for a selected group of veterans in Kentucky schools and colleges*

School, marital status, and presence of children	Total	Male	Female
All schools:			
Total	4,868	4,812	56
Not married	3,173	3,133	40
Married	1,695	1,679	16
Without children	988	976	12
With children	707	703	4
University of Kentucky:

United States Frigate "Constellation"

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

SOCIETY FOR THE PRESERVATION
OF MARYLAND ANTIQUITIES,
Baltimore, Md., June 19, 1947.

The Honorable G. H. FALLON,
House Office Building,
Washington, D. C.

DEAR MR. FALLON: We have had several communications with you on behalf of the Society for the Preservation of Maryland Antiquities with reference to the return of the frigate *Constellation* to Baltimore. Enclosed you will find copy of the resolution that has been drafted representing the views of this society in support of the resolution you have introduced in the House of Representatives. I trust the form of the resolution will meet with your approval and will be helpful in furthering your objective. Copies of the resolution are being sent to the President, Secretary of the Navy, and all the Senators and Representatives from the State of Maryland.

If there should be anything else we can do in this connection, kindly let me know.

Sincerely yours,

ROBERT GARRETT,
President.

RESOLUTION OF THE SOCIETY FOR THE PRESERVATION OF MARYLAND ANTIQUITIES

On April 9, 1947, a resolution was offered, and adopted by unanimous vote, to petition the Congress to return the U. S. frigate *Constellation* to her home port of Baltimore.

The *Constellation* was one of the six frigates authorized by the Congress in the administration of President John Adams, her sister ships being the *Constitution*, the *Chesapeake*, the *President*, the *Congress*, and the *United States*. She was built at the shipyards of Samuel and Joseph Sterett on Harris' Creek, in the Baltimore Harbor, and launched on September 7, 1797. She was equipped and manned in Baltimore before putting to sea.

Of the 13 commissioned and warrant officers assigned to her, 6 were Marylanders. Among them was John Rodgers, then a second lieutenant. During the quasi war with France, Rodgers was present on the *Constellation* during her victorious engagement with the French frigate *L'Insurgente*. He later became her executive officer. John Rodgers, who had a distinguished naval career which culminated in his command of the fleet with the rank of commodore, shares with Stephen Decatur the honor of being one of Maryland's two greatest naval heroes.

Though the *Constellation* was relatively inactive during the War of 1812, she is a sister ship of the frigates which made history during that conflict and were so largely responsible for establishing the traditions of the United States Navy that have been passed down through the years. No other scene in that war is more sacred than Fort McHenry, in Baltimore Harbor, whose gallant defense was the inspiration of our national anthem, the Star-Spangled Banner.

Fort McHenry is now excellently maintained as a shrine by the National Park Service of the Department of the Interior. Convenient to the National Capital, it is visited annually by thousands of tourists from all parts of the country. It would, indeed, be appropriate if the *Constellation* were returned to Baltimore and berthed near the Fort as a magnificent addition to its present exhibits.

For the past 50 years the *Constellation* has been attached to the United States naval training station at Newport, R. I. It is quite understandable that Rhode Islanders have come to look upon the frigate as their personal property, to dispute Baltimore's prior claim and to fight the ship's removal. On the other hand, Rhode Islanders, who are familiar with and rightly proud of their great contribution to the Nation in the persons of Oliver Hazard Perry and Matthew Calbraith Perry, would be the first to recognize that the *Constellation* has no part in their ancient naval tradition. That tradition stands on its own merit. It needs no artificial stimulation.

Would it not be a generous gesture if the Representatives of Rhode Island in the Congress were to surrender their claim to the *Constellation*, recognizing her association with Baltimore and also with John Rodgers, whose son, incidentally, married a daughter of Matthew Calbraith Perry? Certainly it would be most gratifying to Baltimoreans who would see to it that Rhode Islander's sacrifice was publicly memorialized on some part of the ship.

The Society for the Preservation of Maryland Antiquities heartily endorses the bill of Representative FALLON, of Maryland, authorizing the return of the *Constellation* to its home in Baltimore and begs that the Congress give the proposal full and complete consideration.

A Political Veto

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. CURTIS. Mr. Speaker, the Omaha World-Herald, one of the outstanding newspapers of the Nation, which was founded by former Democratic Senator Gilbert M. Hitchcock, has carried an editorial analyzing the President's veto of the tax bill. I wish to extend my remarks by including that editorial:

A POLITICAL VETO

The essence of President Truman's objections to the tax-reduction bill is contained in two short passages of his veto message.

In the first he said:

"The time for tax reduction will come when general inflationary pressures have ceased and the structure of prices is on a more stable basis than now prevails. How long it will take for this point to be reached is impossible to predict. Clearly, it has not been reached as yet."

In other words: Not now. Wait a while.

In other words: Harry S. Truman, the President of the United States, is going along with the often stated, openly acknowledged strategy of the Democratic Party. He is blocking Republican tax reduction in 1947, and giving every indication short of an actual promise that he will propose and support Democratic tax reduction in the campaign year of 1948.

The second significant passage is this:

"In addition to the fact that this is not the time for tax reduction there is a fundamental objection to this particular bill. An adjustment of the tax system should provide fair and equitable relief for individuals from the present tax burden, but the reductions proposed in H. R. 1 are neither fair nor equitable. H. R. 1 reduces taxes in the high-income brackets to a grossly disproportionate extent as compared to the reduction in the low-income brackets. A good tax-reduction bill would give a greater proportion of relief to the low-income group."

A fast reading of that paragraph might give the impression that H. R. 1 provides greater reductions, percentagewise, for the rich than the poor. But that is not the case.

H. R. 1 provides a reduction of 19¼ percent in 1947 for those whose total tax is not over $200. It provides a reduction of only 10 percent for those in the highest brackets.

Thus the bill which the President vetoed actually followed his formula. It offered "a greater proportion of relief to the low-income group," although possibly it did not go as far in that direction as Candidate Truman would advocate.

When income taxes were raised spectacularly during the war the stiffest percentage increases were levied against the upper brackets. The rate went as high as 91 percent. "Soak the rich" said the administration then in power.

Now Harry Truman echoes: Soak the rich.

He apparently takes the view that when taxes go up the increases should be levied mainly against the upper brackets, but when they go down the benefits should go almost exclusively to the lower brackets.

That is a share-the-wealth program, a sort of American state-socialism program, bearing the respectable seal of the Democratic Party and Harry S. Truman of the Pendergast school, Kansas City, Mo.

The truth is that soaking the rich doesn't really hurt the rich but it takes the pep out of the American enterprise system. It prevents the rise of future Henry Fords and Walter Chryslers. It tends to freeze economic power in the hands of old corporations and old families, and to repress unmoneyed youngsters with ability and drive and bounce—the kids who should have a chance to use their talents for America.

There is little need to discuss such truths. They are well known to all informed Americans—including President Truman and his advisers.

But—1948 is election year.

So don't let the opposition claim credit for doing the sensible thing, the thing that 40,000,000 Americans want. Postpone it for a year, and then put it over with a whoop and a holler and a loud Bronx cheer for the idle rich.

That quite evidently was the White House reasoning.

The veto was a political action and the message was a political document from beginning to end.

The Truman Foreign Policy

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. MASON. Mr. Speaker, before Dean Acheson resigned his position as Under Secretary of State, he said that the new Truman foreign policy, if carried out, involved the following:

(a) Relief to needy nations totaling several billion dollars and additional loans totaling an unknown number of billions of dollars—all at the expense of the American taxpayer.

(b) Congress must extend the President's war powers over the same, transportation, and exportation of a list of

commodities; extend the power to assign priorities to producing firms upon a restricted list of items; and continue the present export controls over all exported goods.

Dean Acheson knows what he is talking about. Do we want to pay the price—in dollars, in goods, in continued controls, restrictions, and scarcities, in continued high prices, in furnishing American boys to police the four corners of the world?

OUR FUTURE TAX LOAD

Mr. Speaker, Uncle Sam has extended aid to 59 different countries since the fighting ended. A total of $20,000,000,000 has been handed out in loans, grants, relief, lend-lease, surplus property credits, and cultural cooperation projects, all to come out of the American taxpayers' pockets. General Marshall, our Secretary of State, now says that it will require at least $6,000,000,000 more per year for the next 3 years to put European countries back upon their feet, economically and politically. This is a staggering load to place upon the American taxpayers' back. It requires some explaining by those responsible for doing it.

In the break-down of the $20,000,000,000 handed out since VJ-day, we learn that France has received $2,000,000,000, plus credit on the purchase of 75 Liberty ships; Great Britain, $4,400,000,000, plus 800 fixed war installations we built there; Italy, $530,000,000, plus her share in the $350,000,000 new European Relief Fund. We begin to realize now what the rehabilitation of Europe is going to cost us before we are through, because these three countries are again seeking more aid.

When we consider the $50,000,000,000 lend-lease hand-out we made during the war—$11,000,000,000 of which went to Russia—the $20,000,000,000 handout since VJ-day, and the $20,000,000,000 that General Marshall estimates we must yet hand out to rehabilitate Europe, one can easily see that our American tax burden will be a heavy one during the next 100 years.

Mr. Speaker, as part of my remarks, I include an editorial entitled "Taxing Americans to Support Europe," from the Chicago Daily Tribune of Wednesday, June 18, 1947:

TAXING AMERICANS TO SUPPORT EUROPE

Herbert Hoover, whose expertness in postwar relief and reconstruction has been recognized by President Truman just as it was a quarter of a century ago by President Wilson, is alarmed over the draining of America to rehabilitate Europe. In a letter written to STYLES BRIDGES, chairman of the Senate Appropriations Committee, the former President asserted that America is exporting beyond its means. He said that exports exceeded imports by $14,100,000,000 in the last two fiscal years.

There are further commitments which will run the import deficit in the present calendar year to a much higher figure. In largest part the exports are being provided as gifts and as loans which will never be paid.

"The greatest danger to all civilization lies in the possibility that the United States will impair its economy by drains which cripple our own productivity," Mr. Hoover warned. He added that "unless this one remaining Gibraltar of economic strength is maintained, chaos will be inevitable."

The country will have to consider along with this dark picture a proposal of Secretary of State Marshall that the United States make new loans or gifts to European countries to an aggregate of eighteen to twenty-four billions in the next 3 or 4 years.

While the war was still being fought, a program brought to the United States by John Maynard Keynes was approved by American experts and President Roosevelt, and later was authorized by Congress. This was the Bretton Woods proposal which provided for the creation of the International Monetary Fund and the International Bank for Reconstruction and Development.

Many thoughtful economists opposed the creation of these organizations because of the drain they would place upon the American economy and because of the debilitating effect the easy-money institutions would have upon the countries which were aided. Nevertheless, the Bretton Woods plan was approved and the American Government subscribed $6,000,000,000 for two institutions to restore world currencies and to finance the reconstruction and development of war-torn countries.

Bretton Woods had scarcely been approved by Congress when the British sent a delegation here to obtain huge additional funds. The delegation, headed by Keynes, said that England would handle her own internal reconstruction and development without any outside help. However, extra dollars were needed until the British export industries were put back on their feet so that they could earn enough foreign exchange to pay for imports. A great deal was said about the re-equipping of the industries, whose machinery was old and obsolete.

Upon these representations the United State assented to the second plan for postwar aid. A credit of three and three-quarters billion dollars was authorized to be drawn as Britain desired. At the same time the lend-lease debt of $20,000,000,000 was canceled, and the debt still owing as a result of the other war was ignored, indicating that we were willing to forget it.

As Congress had to approve the big loan, a campaign was conducted to convince the American people that the credit would help this country. It was asserted that British revival would help all the countries of the world. The Truman administration positively stated that the British credit would not be a precedent for other loans.

The loan was to meet Britain's requirements until 1951, by which time repayment was to start. That was only a year ago, and already the British have used half their money. At this rate, it will be entirely gone early next year. Has the British economy been rehabilitated? Read what Winston Churchill said about this in a speech in Britain on April 18: "Everyone is conscious of the approaching crisis in our financial and economic affairs. The Socialist government is living upon the American dole and squandering with profligate rapidity this loan which can only be justified as a means of reequipping our industries."

The British even in the highest circles refer to the loan as dole money obtained from the American Treasury, and in turn provided by taxes levied upon the American people!

The $3,750,000,000 will last another half year, but the British are looking ahead. Stafford Cripps, one of the top men in the British Government, in a speech in Bristol on March 29, first stated publicly that more money would be sought abroad. A month later there was a story describing a new method the British had suggested to give them dollar aid "to tide them over the reconversion period." The plan was for America to make loans to France and other European countries so that they could pay in dollars for whatever purchases they made in Britain.

Within the last week Secretary of State Marshall and his associates have been giving out bit by bit the terms of the new deal. Britain has a commission to get the countries of Europe to make their demands upon us in one package. The proposed relief budget for Europe which America is to meet is estimated by State Department officials at $6,000,000,000 annually for 3 or 4 years. It is described as Europe's help yourself plan—which really means help yourself to the American Treasury.

The latest eighteen-to-twenty-four-billion-dollar program is to be managed in our interest by the British. Foreign Minister Bevin is enthusiastic about it. If Congress were so foolish as to approve it, there would be no end. The existing commitments are beyond our means. It it is time to tell the world to go to work. Only ruin is in it for ourselves if we try to carry them on the dole any longer.

Our Republic Form of Government or Communism?

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mr. SCHWABE of Oklahoma. Mr. Speaker, recently I was furnished by the author with a copy of an address delivered by Mr. Edward F. Hutton, of New York, before the Long Island Association on June 10, 1947.

In this address the author has stressed the fact that either communism or our republic form of government is going to be strong. Not two of us. Only one will survive.

He urges that we make our Declaration of Independence not a declaration of dependence, based upon the doctrines of communism. The author outlines the duty and responsibility that rests upon each of us as citizens of this great country, and insists that we should resell the Constitution and the Bill of Rights to the American people and the oncoming generations in order that communism and other foreign ideologies may not be substituted for our American traditions and institutions.

I call especial attention to the quotations used by Mr. Hutton from numerous New Deal advocates who have held positions of responsibility and policy-determining rank in the Federal Government. These quotations, with their implications, are enough to make us shudder for fear of what may and can happen here, unless we restore and preserve Americanism for America and for the world.

I am pleased to quote the address to which I have referred:

The time has come, I think, for all of us to consider the obligation of the press of America to the American people. The time has come also for us to consider the tremendous power of our press; power to save the Declaration of Independence and prevent it becoming a declaration of dependence. The press as a whole, stretched across the country, should assume this obligation and do it right now, and in no uncertain terms.

The press is in business for profit. You gentlemen are attending to your affairs on the same basis. Without a profit, the press is out of business and you are out of business. When you go out of business, labor loses jobs. If our press goes out of business,

our country as we know it will end. That is a simple truth.

The only way we can hope to remain in business is by making every effort we can to keep our press free and to suggest, and even demand, of the press, a new realization of its responsibilities to the American people. Joseph Pulitzer said: "Our Republic and its press will rise or fall together." That is a fact. As long as we have a free press, we have a free country. That too is a fact. When once we have a government press, you can rest assured we will have a police state. That is axiomatic.

It is the obligation of our free press to put this question on the record. What would communism do for all Americans, men, women, and children? What would it do to anyone with the God-given ambition to get somewhere and be somebody? The kind of people that are common only in America.

Our free press should answer questions like these right on the front pages: Will communism give us more liberty—freedom—than our Constitution and Bill of Rights now gives us? Or will it smash them? Will it give us the right to earn more and achieve our own security? Or will it take away everything we have? Will it give us greater freedom of religion, or is the church to be abolished? Will we have the right to trial by jury or will it abolish justice? Will we have the right to strike, the right to work where we want to work? It may be that this type of reading is not what we would like to have. But it had better be, if you want a free press and the press wants its freedom.

Progress is a change of attitude. The people want the truth as to where we are heading. Not so much of sensational reporting about commonplace and sordid things. Either comunism, or our republic form of government, is going to be strong. Not two of us. Only one will survive.

To talk about the Constitution and Bill of Rights sounds as dry as dust. It cannot compete with a juicy divorce proceeding or any other kind of sensational news. If I could write an editorial which would make Daniel Webster look like a pool player, 5 percent of the people would read it in their press. I know I could write an editorial attacking the local constable on the grounds that he stole a kiss from the housemaid, dramatize it, and 95 percent of the people would read it. The responsible American citizen has withdrawn from politics and apparently is indifferent to public questions. They have surrendered their rights to think and act to those who refuse to think and act. Government, they say, is for the politicians. The constitutional Bill of Rights should convey to him, as it should to the press, just this: It is our bread and butter document. It makes America the strongest nation on earth. This document is the foundation of freedom upon which rests the good will and assets of all private and free enterprise and liberty. If it is ever superseded by the communistic doctrine, it would mean a treadmill of the state for we, the people; your right to conduct your affairs would be at an end, the good will and assets, all your possessions, would be at an end. Your key to your home, under communism, would belong to the state.

The press to be free should inform the people. The press creates public opinion. One's judgment is no better than one's information. It is important and a "must" program to have the press print the news of those sniping at our Constitution, to erode our Bill of Rights, to make our Declaration of Independence, one of dependence based upon the doctrines of communism. Unless the press talks about this, in terms of what can happen by those planning to make it happen, our press will never have the chance to print it as news after it does happen.

Who are they who have been sniping at our republic form of government?

Tugwell, Governor of Puerto Rico: "Business will logically be required to disappear."

Berle, Assistant Secretary of State: "The Government will gradually come to own most of the production plants in the United States."

Porter, of War Labor Board: "All owners of stocks, bonds, mortgages, land, buildings, or equipment shall be required to surrender them in return for commonwealth bonds."

Durr, Federal Trade Commission: "The Government will provide the market and say what and how much is to be produced."

Aimlee, Assistant Attorney General: "Congress shall have power to enact laws to provide for the ownership, operation, and management of business, manufacturing, commerce, industry, and banking."

Blanchard, of State Department: "Having once captured the Government and shelved the Supreme Court, we Socialists would nationalize as many large industries as we could chew. We would do it peacefully, if possible, and otherwise, if necessary."

Sifton, Department of the Interior: "The whole capitalistic shell game can sink and be damned. Tell them we've got a war on—a war to establish a workers' government."

Olds, Federal Power Commission: "Ownership will become more and more divorced from any active part in the business of society. The owners will cease to be necessary."

Trippett of OPA: "Take control of industry and Government, abolish the present capitalistic system and build a workers' republic."

Wallace, ex-Vice President: "The Government can't take its heavy hand off of business after the war. Furthermore, no Silas Marner will be allowed to close his plant for banking reasons and let his workers starve."

Mrs. Evelyn Burns, chief author of the National Resources Planning Board Report on Postwar America which report the President urged on Congress: "Society will have to devise methods that would refuse individuals the right to make what use they wish of their own labor and property."

Hansen, of the same Board: "Congress will surrender to the administration the power to tax and to direct when and how the money will be spent."

What has happened to Hungary can happen to the United States of America. Those men in appointed key positions in government are attempting to make it happen. That is a fact, not a theory.

To endorse this, Senator BYRD has stated in 1942: "The people must realize this dictatorship is not a thing born of war. It was conceived 10 years ago, when the New Dealers came into office and stealthily tiptoed toward the abandonment of government by the people; under these war powers, they have the authority to do what they have always dreamed of, to take complete control of the fortunes and the conduct of every citizen."

Unless the press exposes those who have been attempting to destroy our form of life for other isms, if they fail to do so, they, the press, are in danger of their freedom. Little Hungary is now a land of Russia. Freedom of the press in that country no longer exists. It is now a government press. Our press should be on guard. It can happen here. But not, if the people are told how and why it can happen. The press should be feeding the people this type of news. Permit them to know the directions of world events and the dangers to their liberty right here in the United States of America. It is our Republic form of government or communism. I repeat: one of us is going to be strong, not two of us. One will survive. The first line of defense of our liberty and the front line of attack in defense of our liberty is the press of America. In no uncertain terms, the press should resume the responsibilities that were vested in it at the birth of liberty, the voice of we, the people.

When groups or individuals assault our system, the press should flank it with the truth. Once a week or more, run an editorial on your front page in defense of liberty, and in language we the people can understand. Show the trends, point out the dangers, state both sides, expose those who exercise free speech under the Bill of Rights to discredit the American system. Would it be news if their bills were paid by a foreign paymaster? Would it be news that if the foreign idea to take over is accomplished, you would not be a newspaper and we the people would be in a closed shop, the Communistic closed shop? Then, what becomes of liberty and freedom? If that is a fact, tell us, would that be news? So much for the press.

The bar association also has a responsibility. Every man and woman practicing law took an oath to uphold and defend the Constitution "so help me God." If there has been any public protest respecting the whittling away of the rights of the people by the bar association, I have not heard of it. The lawyers and the bar association have put aside their oath of office for legal expediencies. If America loses its freedom, then the gentlemen of the bar association will not be practicing law. If you want to continue your legal activities, your obligation is to protect your right under the constitutional Bill of Rights to continue to practice law.

The businessmen of our country have the same responsibility. They are spending in national and local advertising over $2,000,000,000 reaching the consuming public to promote acceptance of their products. They fight like a pack of wildcats to protect their competitive positions while neglecting the very product which gives them the right to advertise and remain in business. That produet is the Constitution and Bill of Rights, and that is the one product that must be resold to the American people.

The existence of freedom can be held and secured by an aroused and informed public opinion. This can be accomplished only by the awakening as to the consequenees of their loss of liberty. Abraham Lincoln summed it all up when he stated: "Public sentiment is everything. With public sentiment, nothing can fail. Without it, nothing can succeed." Consequently, he who molds public sentiment goes deeper than he who enacts statutes or pronounces decisions. He makes statutes and decisions possible, or impossible, to be executed.

This is a big undertaking at this present moment. Seeking courage, fortitude, and self-sacrifice from the businessmen, from the bar association, from the life-insurance companies who advertise security and longevity to sell their products, and also the press is not an easy road to contentment. Those who are willing to carry the toreh for freedom are far and few between. It is the obligation of us of this generation to keep open the road for the young—our children and posterity—which road today has been darkened by philosophies foreign to liberty. Our press, American business, bar association, and life-insurance companies should be telling the people how and why this country grew from three-cornered pants into the No. 1 world power—because we had a Constitution and Bill of Rights. This gave us liberty, freedom, and enterprise. This developed the romance of American business, high wages, and mass production. Mass production created high wages and less hours of work. But high wages and less work did not create mass production.

What has the Bill of Rights done for you gentlemen here tonight? Without our Bill of Rights, I couldn't be talking to you and you couldn't be listening. We are what we are, whether it be doctor, lawyer, businessman, scientist, because our Bill of Rights permitted us to choose to climb the rungs of the ladder to success. Without that document, we would not have had such rights. Communism does not give the right to success, to ambition or the right to exercise our affairs within the framework of law and

order. If we want to change this atmosphere, we must have a stomach for a fight and a combative instinct. Otherwise, the picture of America as we know it and see it is over.

To most people, our Constitution is an abstract document. Maybe it has ceased to be a human document, born of blood and tears. Unless the press, American business, and the bar association, do a good selling job on these two foundation stones of the American people, then our Republic will be out of business.

If only the press will resell the fact that our system is far from obsolete, decrepit and in need of replacement by a glorious communistic state. If they would recite the fact that we are not a downtrodden, frustrated, exploited people, not yet, but we could be. Those who are frustrated and downtrodden need our dollars because their system has failed to produce that which our system has produced. That is the great prize the Communist Party want to grab. Recite these truths and state them often; shout them out loud. The press, which stretches across our free land, can carry such messages. Otherwise, the future looks dark.

The Communists here have the right of free speech—so have the press—and we, the people, businessmen, life insurance activities, Bar Association, should exercise that God-given gift and do more shouting than those who would take from us our rights to conduct our affairs, own our own homes and live within the Constitution. Save our country? It can only be done by those, I repeat, who have a stomach for a fight and a combative instinct. It means just this: Americanism or communism. That is the issue facing us.

These United States are confronted by the biggest problems history has revealed within its recorded past. If we discover a lasting solution, it will come from ordered thinking backed by courage by those who, I repeat, have a stomach for fight.

Expediency is a vicious taskmaker. What we pile up ahead always turns into a mortgage, falling due at the most inopportune time. The world has a cancer. That is the first thing to consider. It serves no purpose to direct our thinking to how nice it would be if the world did not have a cancer. It has; that is a fact, not a theory. We ask for a remedy, not just to help the pain but to prevent recurrence. No palliative will suffice. It must be a cure or it will develop into a fatality later. The cancer centers wherever our mortal enemy, communism, spreads its talons.

One of us, communism or our republic form of government, is going to be strong. Not two of us. One will survive. If ever a people were charged by Almighty God with the preservation of freedom on earth, that people is this generation.

We cannot buy with American dollars the cure for communism. America did not buy with its dollars our freedom. If we could buy peace, it would be cheap. And we could forget the price; but money will not suffice, no matter how much there is. A dissipation of our national wealth will serve only the purpose of removing the one remaining strong hand in the world. That is the first thing; we should put it first. If the last few years have failed to convince us of the need of our fullest possible strength, then it would appear that nothing will ever convince us. That is unthinkable. We stand as a people consecrated to liberty. We oppose communism. Let us not by incipent appeasement debilitate the very power we have to keep freedom.

"A task without vision is drudgery,
A vision without task is a dream,
A task with vision is victory."

Will the press, the bar association, the businessmen, the churches, accept this challenge to save our country with vision and make it your task?

Spendthrift Hunt

EXTENSION OF REMARKS
OF
HON. HUGH D. SCOTT, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. HUGH D. SCOTT, JR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the current issue of Newsweek:

SPENDTHRIFT HUNT

The following story—heretofore untold—was prepared by Newsweek's Washington bureau on the basis of reports made by special investigators to the House Appropriations Committee and cites some of their examples of governmental waste:

"The yelping and griping had been heard for years: Management methods in the Federal bureaucracy were slipshod. No private enterprise could survive with such stupid and inefficient administration. What the Government needed was the know-how of competitive business.

"Representative JOHN TABER, of New York, heeded such beefs when he became chairman of the House Appropriations Committee last January. He set out to give private experts a crack at the Federal budget instead of relying solely on governmental investigators from the FBI and General Accounting Office to probe governmental expenditures.

"Quietly, TABER recruited a private staff of nearly 30 from chambers of commerce, financial institutions, accounting firms, and pricate industry. He borrowed them temporarily, paying most of them only $15 a day.

"BULLETS FOR BUREAUCRATS

"What this staff dug up was not publicized. It was used, instead, as ammunition for TABER and other congressional economizers to fire at Government agency heads who were trying to justify their proposed budgets. By last week it had enabled the Taber committee, at a cost of only $25,000, to squeeze hundreds of millions of dollars out of the Federal budget. Typical wasteful practices which the private experts exposed:

"Veterans' Administration field offices doing similar work had wide variance in staffing policies—ranging from 1.16 to 14.6 employees for every 1,000 veterans.

"VA hospitals varied from 1 employee per 6.8 patients to 1 employee for each patient.

"The VA sought $557,920 to purchase 303,217,500 letterheads—enough to permit each employee to write 1,348 letters. It also asked $7,900,200 to buy 3,674,511,600 blank forms—an average of 25 for every American man, woman, and child.

"The VA's 3-year $1,000,000,000 hospital-construction program, which will be used almost entirely for treating non-service-connected cases, has a construction cost per bed as high as $23,600, compared with $10,000 in private hospitals.

"The Department of Agriculture has five unintegrated, duplicating agencies dealing with soil conservation.

"The Maritime Commission was discovered to have $505,075,000 which, because of inept bookkeeping, it didn't know it had. The Commission operates from receipts as well as appropriations through a revolving-fund arrangement. It had failed to list income from the sale and charter of vessels.

"The Maritime Commission also asked $2,400,000 for reconverting four cargo vessels, when by its own estimates the sum should have been $1,050,000. Again, it asked $10,000,000 for a job which it figured would cost $5,000,000.

"The Federal Public Housing Authority's records were so poorly kept that a well-known accounting firm refused to audit them. The agency built up cash reserves of between $40,000,000 and $50,000,000 in local housing authorities to use as a cushion in case Congress cut off subsidies.

"A Commerce Department office, ordered to cut its staff, reduced itself to nine $9,000-a-year men and one file clerk. Throughout the Government, the trend is to keep on the highly paid workers and fire the others. Such disproportionate staff cuts play havoc with efficiency.

"Department heads are paid according to the size of their staffs. They are therefore reluctant to purge superfluous workers lest their own pay be cut.

"The General Accounting Office is 3 to 5 years behind in its work. By the time it discovers an irregularity, the people responsible often no longer work in the department concerned and sometimes the office itself doesn't exist any more.

"Army and Navy make no joint use of such similar facilities as ports of embarkation and ocean-going ships. The Army has its ships overhauled yearly by private contractors, even though navy yards could do the work.

"The Navy requested funds for new autos and station wagons at a time when it had large numbers of all type of vehicles on hand as a carry-over from the war.

"For every 150 jobs created in the Government, 3 more must be added for new timekeepers, records clerks, etc. One investigator's comment: 'It's like throwing a pebble in a pool. Each ripple makes another.' "

The Deportation of the Slovak Population in Sudeten by the Czechs

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 20, 1947

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following appeal of the Slovak Action Committee to the civilized world concerning the deportation of the Slovak population in Sudeten by the Czechs:

APPEAL OF THE SLOVAK ACTION COMMITTEE TO THE CIVILIZED WORLD CONCERNING THE DEPORTATION OF THE SLOVAK POPULATION IN SUDETEN BY THE CZECHS

Since the occupation of Slovakia by the forces of the Red army, and the imposition of antidemocratic rule upon Slovakia by the Czechs and the Communists, there has been no interruption in the series of crimes committed against the Slovak Nation. And now, after the political oppression, the introduction of terrorism and violence, the extermination of a great number of the Slovak intelligentsia, the establishment of concentration camps, the reinforcement of Communist rule in the anti-Communist Slovakia and after the destruction of the Slovak economy, the Czech-Communist Government had stretched its hands to the very root of the Slovak national existence and to the fundamental freedoms of the Slovak population.

These are the facts shocking the mind of the Slovaks, at home and abroad, and shaking the very foundation of humanity. Till the end of November 1946, 200,000 Slovak peasants and workers were violently trans-

ferred to the uninhabited ex-German Sudeten countries in order to populate them, as the daily Cas (December 18, 1946) reported and the Prague Ministry of Foreign Affairs admitted in a statement on November 27, 1946. Counting women and children, the number reached 300,000 inhabitants. This number is increasing daily and must reach 500,000, including those Slovaks who return from Rumania and Hungary, allegedly to their fatherland, in reality to be violently settled in Sudeten-German homes.

In order to keep the territory of the former Czechoslovakia, where once lived 15,000,000 inhabitants, for his 7,000,000 Czech nation, Mr. Benes violently expelled 3,000,000 Sudeten Germans and is now deporting there Slovaks and the Hungarian minority from Slovakia. In this way, Mr. Benes intends to realize their Czechization, to make them his accomplices in the Sudeten-German tragedy, and thus impose upon the so-called Czechoslovakia the uniform Czech character.

This violent transfer of Slovaks has doubtlessly the ruthless characteristics of deportation:

(a) It is carried out through written orders, forcing the deportees to move and indicating the locality of resettlement;

(b) Peasants and workers are constrained to move together with their families in order to remain definitively in Bohemia;

(c) Freemen are compelled against their will to abandon their native homes, and that in spite of a great shortage of labor in Slovakia;

(d) Nobody is allowed to oppose the deportation under pain of confinement to a labor camp;

(e) No consideration is taken of pregnant wives whose husbands are deported;

(f) Resettlement is going on regardless of arctic cold during the winter;

(g) Lastly, this measure is authorized only by a presidential decree (Nr. 88/1945), being the decision of a single man; thus, it has no legal basis; but even if a law were promulgated, the measure would not be justified by it, since no positive law is able to render an antinatural action into a just one. Besides, the Czechs have no right to deal with the Slovak population, because no nation has the right to dispose of the members of another nation. And the Slovaks, even if akin to, are a different nation from the Czechs.

As far as the inhuman methods of the deportation are concerned, they have been described by the French correspondent, L. Hubert-Rodier, in Le Monde for February 1, 1947.

In order to hide the criminal aspect of the deportation the Czechs are asserting that the Slovaks have to stay in Bohemia only for the period of the 2-year plan. This affirmation is easily denied by these facts: (a) The deportation is intended to be definitive, as the Czechs also banish the families of the deportees; (b) Mr. Lettrich, President of the Slovak National Council, admitted the definitive character of the deportation. He said: "The Czechs require us to replace the Germans who have left the Sudeten edge countries" (daily Cas, October 23, 1946); (c) in Slovakia there is also a great shortage of labor and a greater need of reconstruction as Slovakia suffered greater war damages than Bohemia.

Carrying out the deportation the Czechs told many falsehoods.

The Slovak population was said to go to Bohemia only in order to get acquainted with the industrial machinery which would be transferred to Slovakia from Sudeten. Now, after having deported the Slovak labor, the Czechs assert that no transfer of industry equipment is possible as in Slovakia there is not sufficient labor to man it.

The Slovaks from Hungary and from Rumania were enticed to move by the promise that they were returning to the Slovak fatherland of their ancestors, but the trains transporting them did not halt in Slovakia and brought them to Bohemia. The Czechs know too well that no Slovak would have consented, if he had known that he was to be settled in Bohemia instead of in Slovakia. In fact, that is the reason why today no Slovak from Hungary desires to be repatriated.

The wages of the Slovak deported workers are those of slaves. The daily Cas (January 8, 1947) is quoting the Czech newspaper Obzory concerning the wages: "The Czechs are employed in the offices and therefore we are hunting for agricultural labor in Slovakia. Thousand crowns (viz, monthly wage) suffices for the nourishment of a single person, but under the condition that one live in a barrel (sic!), go barefooted and naked and that one smoke potato leaves."

The deportation of Slovaks has the character of crime both against humanity and nationality.

The Nazi violent recruitment of labor in occupied territories was condemned in the Nuremberg trial as a crime against humanity. In fact, the mass deportation of labor is unnatural and inhuman, because it violates the personal freedom of the workers, it separates them from their native homes and natural milieu, it deprives them of its benefits and exposes them to the incognita of the foreign milieu. The deportation of the Slovak labor is yet more unpardonable as it is a consequence of the brutal deportation of the Sudeten-Germans in Germany and of the fact that the Czech population declines hard work in fields, mines, and factories.

Besides this crime against humanity, the Czechs also acted criminally against the Slovak nationality. The Slovak nation as well as other nations has the right to exist and its members have right to Slovak nationality. By deporting 500,000 Slovaks from their fatherland the Czechs violate the Slovak right of nationality. The Czechs, directly or indirectly, force them to become Czechs. In fact, during 20 years of the former Czechoslovakia the Czechs endeavored by all means to Czechize the Slovaks.

The Czechs brutally violated the right of the Slovak nation to exist for by the deportation of 500,000 of its members they seriously menaced its very existence. The Slovak nation counts only 3,000,000. Since 1850, the Slovak nation not only did not increase, but fearfully diminished in consequence of the denationalizing and exploiting policy of Hungarians and Czechs.

The national, political, and economic consequence of this deportation constitutes a catastrophe for the Slovak Nation. From the national viewpoint the Slovak Nation will be terribly weakened, politically it will lose its physiognomy, and economically, the chance of reconstruction and development, as 300,000 workers is the maximum of the Slovak labor market. In fact, rehabilitation and economic planning are impossible for Slovakia, according to Mr. Frastacky, vice president of the commissars body, speaking before Prague Parliament as reported on December 18, 1946, by the daily Cas.

And these are precisely the aims of the Czech Communist Government and of Mr. Benes: by this raw encroachment in the biological substance of the nation itself they want to disperse the Slovak Nation and break its resistance to Czechoslovakia and international Red totalitarianism, of whom the Slovaks are mortal enemies, as the general elections on May 26, 1946, clearly showed.

The Communists approved the deportation as Czech industry is working for Soviet war plans.

Writing on the exploitation of Slovak labor in Bohemia and Moravia the daily Cas has emphasized recently: "The Slovak poor labor are unable to rid themselves of this modern slavery" (January 8, 1947). In fact, without international intervention it is impossible for them to break free.

The Slovak Action Committee, being the representative of the Slovak Nation, calls the attention of the civilized world to the brutal deportation of Slovaks by the Czech Communist Government of Prague, to the inhuman treatment of the Slovak Nation's members and to the unnatural oppression and unjust occupation of Slovakia by the Czech Communist forces.

We appeal to civilized men and to responsible statesmen to defend democracy and humanity against their violators, the Communists, and the Czechs. Do not believe the lying propaganda of Mr. Benes. Mr. Benes is the most mendacious helper of international communism and a vanguard of the Red totalitarian menace in Europe. With communistic help Mr. Benes oppresses the Slovaks because they resist communism and the Czech imperialist policy.

Help us to overthrow the regime of terror and oppression. Help us to restore the sovereignty of the Slovak Republic. Help us to give the Slovak Nation its national independence and the Slovak population its human rights and fundamental freedoms.

The injustice committed in one part of the world concerns the whole of it. Without justice being restored in the world, there can be no lasting peace for the nations.

SLOVAK ACTION COMMITTEE,
Prof. Dr. FERDINAND DURCANSKY,
President.
Dr. STEFAN POLAKOVIC,
Secretary General.
BRIDGEPORT, CONN., *February 1947.*

The Clark Hill Project, South Carolina

EXTENSION OF REMARKS
OF

HON. BURNET R. MAYBANK

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, June 20 (legislative day of Monday, April 21), 1947

Mr. MAYBANK. Mr. President, I hold in my hand copies of statements by two eminent and distinguished South Carolinians with relation to the appropriation for the Clark Hill project in my State. The first is a statement by Gov. J. Strom Thurmond, of South Carolina, before the Civil Functions Appropriation Subcommittee of the Committee on Appropriations of the House of Representatives. The second is a statement by Hon. Butler B. Hare, a former Representative from South Carolina, before the same subcommittee.

I ask that both these statements be printed in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

STATEMENT OF J. STROM THURMOND, GOVERNOR OF SOUTH CAROLINA, BEFORE THE CIVIL FUNCTIONS APPROPRIATIONS SUBCOMMITTEE OF THE HOUSE APPROPRIATIONS COMMITTEE

Chairman ENGLE and members of the Appropriations Subcommittee, the construction of the Clark Hill project by the Federal Government is of vital importance to the States of South Carolina and Georgia, and we greatly appreciate the courtesy extended us of a hearing in this matter.

It is our firm conviction that the Federal Government should continue with the construction of the Clark Hill project and for two reasons should not accept the offer of the Savannah River Electric Co. to build it.

1. THERE IS NO ASSURANCE THE POWER COMPANY WILL CONSTRUCT THE PROJECT

We doubt the good faith of the power company in its request to build this project. The past history of this company, or its affiliates, indicates that it would not. A license was granted to this company in 1928, and it held this license until 1932 and did not build the dam. It surrendered the license. The company changed its mind.

About 1929 or 1930 the company, the Georgia Power Co., started the Furman Shoals project on Oconee River, near Milledgeville, and after spending several million dollars upon it over a period of 17 years, the company decided to build steam plants instead of hydroelectric plants, and the Furman Shoals project has never been completed. With regard to continuing with that project, the company changed its mind.

In 1935 the Georgia Power Co. promised to cooperate with the people of the Savannah River Valley in the construction of the Clark Hill project by the Federal Government. It expressed no desire to build it and offered to assist Georgia and South Carolina in furthering the project. In July or August 1946 the company again changed its mind.

At the Federal Power Commission hearing in Atlanta, Ga., during October 1946, when the power company attempted to obtain another license to build this project, Mr. Arkwright, former president of the power company, stated conditions had changed, that money rates were low, coal high, and it was their desire now to build the project. But, what will occur if money rates go up, coal down, or a depression occurs? We are fearful that the company will again change its mind. If a license should be granted to the power company to construct the project, about 1 year would be required to design plans and specifications. I say this time would be required because a private concern, Charles T. Main & Co., of Boston, which designed the plans for the Government, required about this time to design the present plans. The power company would require a similar length of time or approximately that, in our judgment, especially since it says it will furnish its own plans, and especially since under the company's proposal the powerhouse would be placed on the Georgia side instead of the Carolina side, necessitating considerable change from the present Government plans.

On the other hand, the past history of the Federal Government in projects of this nature leads us to believe that it will complete the project. We do not know of any Government project of this nature that has been abandoned by the Government. We know of many such projects that have been constructed by the Government and carried to speedy conclusion.

On the Tennessee River there are approximately 50 dams known as the TVA project. They were all carried to completion. On the Colorado River there is the Boulder Dam, which was carried to completion. On the Columbia River there are the Grand Coulee and Bonneville Dams, which were carried to completion. On the White River in Arkansas there is the Norfork Dam, which was carried to completion. And there is now being constructed a project on the Allatoona River, which we are informed is going forth without delay.

There is further assurance that this project will be completed by the Federal Government. The Government has shown a steady and continuous interest in this project. Pursuant to the resolution of 1927, the Clark Hill project was included among the navigable streams of the Nation as worthy of development. In 1936 Congress acted favorably in the Flood Control Act by embracing therein a proviso authorizing this project again to be investigated. In 1938 an appropriation was included to begin work on this project, but the Comptroller of the United States ruled that the project has not been authorized, therefore the appropriation could not be used, and it was not used, but it showed the interest of Congress in the project of 1938.

In 1944 the Flood Control Act actually authorized the construction of the project. In 1945 the first Deficiency Appropriation Act included an appropriation of $1,000,000 to begin construction of the project. In 1946 there was appropriated an additional $4,500,000 to continue construction of the project. This makes a total of $5,500,000 actually appropriated for construction, and of this amount about $4,500,000 has been spent or committed.

2. FEDERAL CONSTRUCTION OF THE PROJECT IS IN THE PUBLIC INTEREST

Public development of this project has been recommended by every public agency that has investigated it. In 1935 the Army engineers submitted a report to Congress and recommended it, known as Report 308. In 1936 a special board appointed by President Roosevelt investigated this project and submitted a favorable report to him. In 1939 the Chairman of the Federal Power Commission concurred in the reports of the Rivers and Harbors Board and the Chief of Engineers, both of which reports recommended the construction of this project. In May 1944 the Chairman of the Federal Power Commission recommended it to the Chief of Engineers of the United States Army. In June 1944 the Secretary of War recommended it to Congress in House Document 657 of the Seventy-eighth Congress.

Not a single public agency that has investigated this project, so far as we are informed, has recommended private construction. On the other hand, the numerous boards and agencies that I enumerated have all recommended that this project be developed by the Federal Government.

If the Federal Government develops this project the natural resources of the Savannah River Basin will be more fully utilized and the potential values of the entire Savannah River Valley will be developed to the maximum, whereas, we are very much concerned if it is developed by the power company.

The proposed development is a multiple-purpose project. It has three primary benefits: Power, navigation, and flood control. We think it is better for the Federal Government to develop this project from the standpoint of the primary benefits. A more complete job will be done and the benefits will inure more to the people than if it is developed by the power company.

This project also has numerous secondary benefits:

Malaria control: This would be handled by the United States Public Health Service and will give adequate malaria control and not be a mere stab at the matter.

Reforestation: This will be handled by another branch of the Government, and will be a great asset to the Nation in the development of this comprehensive project.

Soil conservation: This means a great deal to the country and to the people of the Savannah River Basin; and with the great arm of the Federal Government behind soil conservation, we feel that adequate steps will be taken along this line.

Wildlife conservation: It is felt that under Federal construction, wildlife will be conserved to a much greater extent and more pains will be taken to preserve it than under private development.

Recreation: This is one of the most important benefits of the project, although classified as a secondary benefit. Under the proposal about 16,000 acres of land in the Savannah River Basin would be used for recreational purposes. If the power company should develop this project, as I understand it, the land would be available for recreational purposes, but someone else would have to do most, if not all, of the recreational work on the project in order for the people to reap the biggest benefits from the standpoint of recreation. If the Federal Government develops the project the plans call for beautiful parks, roads, and trails. Water is to be provided. Facilities will be available for fishing, boating, swimming, and picnicking. This means not only more enjoyment but increased health to our citizens. All of these things mean a great deal to our people of the Savannah River Basin. We feel that the working people, the farmers, textile workers, barbers, mechanics, people on the street, the people we frequently refer to as the common man, will have an opportunity to enjoy the benefits of this basin from a recreational standpoint. Recreation is now given more attention throughout the country than ever before. We who have dealt with courts and crime know the importance of proper recreational facilities in preventing crime in this country. We, the people who reside in the Savannah River Basin, do not want these benefits I just enumerated only passively concurred in. We want them aggressively accomplished. We do not feel that any private company will aggressively accomplish them to the extent that the Federal Government will.

We also feel that since there are 10 other dams to be constructed in this Savannah River Basin, the Keystone Dam should not be allotted to any private company to develop, as it might then be probable that the Federal Government would not see fit to develop the other dams. Or, if it did see fit to develop the other dams, we are very fearful that the proper coordination in regard to all these benefits that I have just enumerated would not be had, and that best results for the people would not be accomplished. There can be no doubt that the power company would not develop the other 10 dams.

The Constitution and laws of the United States provide that the waters of navigable streams belong to the people. We want the greatest benefits from these waters, and under the proposed plan of the Federal Government for construction, and under that plan alone, do we feel these benefits will be derived.

The power company is in the business to make money. It was organized for that purpose. Monetary considerations govern its actions. The profit motive will undoubtedly determine the course it will pursue in every major decision. If the Federal Government develops this project, there are many considerations, other than making money or deriving a profit, that are of great advantage to the people of the Savannah River Basin, and we feel these benefits deserve the utmost consideration.

If the Federal Government develops this project, the first consideration will be the public good. If the power company develops this project, we feel their first consideration will be the company's good. A great majority of the people of South Carolina, one of the States vitally interested in this project, favors public development. If we are to receive lower power rates for REA cooperatives and for other purposes, our best hope, in fact, practically our only hope, lies in the development of this project by the Federal Government.

I would like to briefly consider the objections that have been raised to Federal construction by those who favor the power company developing this project:

1. The first point raised by them is that the counties and political subdivisions might suffer a loss of taxes. If the project is developed by the Federal Government, the cheap rates to be afforded the people will far more than offset the small loss in taxes by the political subdivisions concerned. In addition, the manner in which the power company gets the money with which to pay its taxes is from the people, and, after all, it

comes out of the people, and the company has to make a profit from the users of current in order to pay the taxes. Besides, we are not too certain there will be a loss in revenue to the political subdivisions, because the Federal Real Estate Board is now working upon a plan, which we understand it will recommend, to make payments to political subdivisions in the respective States for land taken over by the Federal Government, in lieu of taxes that would have been paid upon that land.

2. The second point raised by opponents to Federal construction is that this project will increase the public debt. This is a self-liquidating project and it will amortize itself over a period of years, as many other projects are now doing, and for this reason the finances of the country will not be jeopardized one iota by the building of the Clark Hill project. I am informed that the expected revenue from the sale of power will far more than offset the payments that will be required to liquidate the cost of the project over a period of years.

3. The third point raised by opponents to Federal construction is that roads will be destroyed. Plans for this have already been worked out by the Federal Government. Also, I understand other plans are in contemplation of being worked out for the county roads, so there should be no loss to any political subdivision on account of the roads that would be destroyed by the construction of this project. Whether the power company builds the project, or the Federal Government, the roads will have to be relocated, and we believe the Federal Government will be more reasonable with the people and reconstruct better roads than would the power company.

4. The fourth objection that has been raised to Federal construction is that the Government is entering business. On this point we wish to say, we do not object to the Federal Government entering business where the health, welfare, or security of the people is involved. In this particular project, there is no question but that the health and the welfare of the people are involved.

5. The fifth point that has been raised by opponents to Federal construction is that the project is socialistic. It might be said for the record that from 1935 until 1946, 11 years—11 long years—the power company didn't think the project was socialistic so far as we have been able to find out. But after the power company decided it desired to build this project, it used the argument to the people that it was socialism, or bordering on socialism, for the Government to build it. My information is that it has not stated the Allatoona project is socialistic. My further information is that the power to be derived at Allatoona is nothing to be compared with this project. The company feels it could not make a profit on the Allatoona project and doesn't care to build it and doesn't call it socialistic, but does call the Clark Hill project socialistic because it wants this dam site and this area to build the dam, to make a profit for the company.

The people of South Carolina had this issue presented to them this past summer in the Governor's race. My opponent in the second primary stated that he favored building the project by either method, whichever plan would build the quickest. On account of the multipurpose nature of the project, I took the straight-out position that I favored its construction by the Federal Government, and that the benefits which should accrue to the people of South Carolina could only result if the project were developed by the Federal Government in its comprehensive plan for the development of the entire Savannah River Basin.

The South Carolina Legislature at its recent 1947 session unanimously adopted in both bodies a concurrent resolution which was signed by me, endorsing the Federal construction of the Clark Hill project. This resolution had over 100 authors in the body of its origin and signified the strong feeling of the people of South Carolina that the Federal Government should build the project.

The Honorable Monson Morris, president of South Carolina Electric Cooperative, states that 99 percent of the 70,000 members of his organization desired the Government to build the project.

The Honorable Butler B. Hare, former Congressman for the Third District of South Carolina, conducted a straw-vote poll on the question of the Federal Government continuing with the construction of the project, and about 90 percent of the responses were to the effect that it should.

Let me say that all of us appreciate the necessity for economy in governmental expenditures at this time. Certainly nonessential activities and personnel must be eliminated. However, there are some functions and activities of government which are so essential to the future prosperity and happiness of our people that it would be almost criminal to neglect or eliminate them, and one of these is the continued development of our rivers and watersheds. Every dollar spent in making these streams navigable, in controlling floods, in developing power, in the reforestation of the watersheds, and in providing recreational facilities for the people, is an investment in the future. It is protection for generations yet unborn. In the end every dollar invested will yield handsome dividends, not only in dollars but in better living for our people.

STATEMENT OF BUTLER B. HARE, FORMER REPRESENTATIVE FROM SOUTH CAROLINA, BEFORE CIVIL FUNCTIONS SUBCOMMITTEE OF THE HOUSE APPROPRIATIONS COMMITTEE, IN BEHALF OF APPROPRIATION FOR CLARK HILL PROJECT

Mr. Chairman, I come before your committee with a great deal of pleasure and confidence. It is a pleasure because of my pleasant 7 years of association with you and your committee, and I come with confidence because I have learned from these associations that you do not make snap-judgment decisions but base your conclusions upon facts and logic.

I flatter myself in thinking that due to our past associations I may have left with you the impression that in presenting justifications supporting any matter I would rely solely upon information and established facts. It shall be my purpose, therefore, to justify on this basis further appropriations for the development of Clark Hill project on the Savannah River near Clark Hill, S. C.

For the benefit of the newer members I shall briefly review the history of the project before you for consideration. The Savannah River is the boundary line between the States of Georgia and South Carolina, a distance of approximately 300 miles. This is reported to be the longest river flowing into the Atlantic between Maine and Florida. The early settlers of this area found a wide expanse of forests which, for many years, served to control the floods and promote navigation by temporarily withholding floodwaters and feeding them into the main stream over a longer period of time. But after the forests were removed to accommodate a rapidly increasing population and to promote agriculture, the excess waters found their way to the main stream more quickly and more rapidly, resulting in more frequent and disastrous floods along the river for a distance of upward of 200 miles between Augusta and Savannah, Ga. Augusta, one of the oldest and largest cities on the Savannah, was settled a little more than 200 years ago and grew quite rapidly because of its location near the head of navigation. There were quite a number of other trading posts established on both sides of the river, such as Petersburg, Purysburg, Hamburg, Silver Bluff, and a number of smaller towns and villages. Quite a large quantity of export and import trading was carried on through these posts, the early exports being principally cotton, lumber, and clay, the imports being mostly brick and tobacco. However, after the forests were removed and the floods became larger and more numerous, all of these towns and villages were virtually destroyed and abandoned and today you can hardly find a trace of them except the city of Augusta.

The proposal before you has, to my personal knowledge, been of interest to the people in that area for the past 20 years; they have endeavored to interest the Federal Government in assisting navigation facilities by providing a more uniform and regular flow on the river and at the same time obviate frequent and excessive floods. The records will show that the United States Government has manifested its interest in the problem for upward of 50 years and has undertaken from time to time to assist in providing better facilities for both transportation and flood control, particularly the city of Augusta in protecting itself from frequent floods, the city having spent upward of $2,000,000 in the past quarter of a century for this purpose alone. An appropriation of over $600,000 was carried for this purpose in your appropriation bill of 1941. Augusta is now fairly well protected, but little or nothing has been done to prevent the overflow of lands between Augusta and Savannah amounting to upward of 200,000 acres.

In 1927 the river and harbor bill provided that the Board of Engineers should make a thorough survey of the Savannah River with the idea of determining whether there would be justification for additional Federal aid in providing facilities for increased navigation and flood control. A great deal of work was required in this survey and the engineers did not report for a period of 7 years, or until 1934, when a rather full and complete report was submitted. It was recommended that a dam be constructed by the Government across the Savannah River about 21 miles above the city of Augusta at a point near Clark Hill post office, South Carolina. It was recommended further that since the dam was to be constructed at an estimated cost of upward of $20,000,000, a power development should be added in order that it may be a liquidating project and the Government be reimbursed for expenses incurred.

In 1935, upon the request of Members of Congress from South Carolina and Georgia, the Chamber of Commerce of Augusta, Ga., the engineers and other representatives of the Savannah River Electric Co., and the Georgia Power Co., the President of the United States called upon the Secretary of War, the Secretary of the Interior, and the Chairman of the Federal Power Commission to designate one or more representatives from each of these agencies to make a further study and report on the advisability of proceeding with the construction of the project recommended. The following year this committee or board submitted its report, showing that the site near Clark Hill was exceptionally well suited for the creation of a reservoir to impound waters for flood-control purposes; it reported further that the site was equally well suited for storing waters to be used when needed for navigation purposes. To use the exact language, the report read:

"This reservoir is located well down the main stream of the river so that a large volume of water for filling purposes each year is definitely assured. The reservoir could be operated in such a manner as to reduce the stage of major floods at points below the dam, without detriment to either navigation or power, and thus increase the margin of safety at Augusta against possible inundation."

This report not only showed that the construction of the dam would prove to be an insurance against floods for a distance of over 200 miles, and insure a year-round 7-foot channel for navigation, but it found that:

"The Clark's Hill site is one of the best undeveloped power sites on any of the streams entering the Atlantic Ocean from the South Atlantic States."

The following year this report was submitted to the National Resources Committee and to the Federal Power Commission for a further study and report on the necessity and industrial possibilities in the Savannah River Valley and adjacent territory. These two agencies submitted their report in due time and stated that there would be ample and suitable markets for all the electric power to be generated at this plant when completed. The proposal was then considered by the Committee on Rivers and Harbors of the House of Representatives. It was my privilege to attend the hearing and I did not hear of any objection to the proposal from any source whatsoever. The recommendations for this project were approved, reported by the committee and included in the Rivers and Harbors bill and later in the Flood Control bill, both of which were approved by the House of Representatives and the Senate and the latter became a law on December 22, 1944. That is now over 2 years ago. The appropriations for use on the project have been approved by your committee and the Congress. Several contracts have been let and work on the project is now well under way. Entering highways have been constructed and railroad transportation facilities for delivering materials and equipment to the dam site completed. Two contracts for the construction of the approach, one at each end of the dam, have been let and contractors have now been at work for several months. Other contracts for performing specific parts of the construction have been let and others are now being processed.

The Army engineers did not act hastily in preparing its report and making its recommendations. Their study and surveys covered a period of 7 years. The Federal Power Commission did not act hastily. The Rivers and Harbors Committee and the Flood Control Committee did not act hastily in preparing and submitting their report to Congress. The Congress did not act hastily in passing the act authorizing the development of the project. The time consumed by these several agencies of Government covered the period from 1927 to 1944 and at no time was there any pronounced opposition recorded. Then 2 years elapsed before Congress made the first appropriation of $1,000,000 and the second appropriation of $4,500,000 was made in May 1946 and up to that time nothing but cooperation had come from the power companies or otherwise at any time.

SAVANNAH RIVER ELECTRIC CO. OBJECTS

Although the Savannah River Electric Co., owned by the Commonwealth & Southern Power Co. of New York, was one of the outstanding sponsors of this project for a period of 10 years or longer, it is now asking your committee to disregard the action of the Congress and disallow the appropriation recommended by the Budget Bureau to continue the work now in progress; it is also proposing repeal of the act authorizing the development of this project in order that the Federal Power Commission may have the right to consider and approve its application for a license to develop and operate the project itself, saying it is willing to reimburse the Government for all expenditures made to date and develop the project according to Government specifications and operate same under Government directions.

Mr. Chairman, this is an unprecedented procedure. The project involved has been under consideration by one or more agencies of the Government for upward of 20 years. A greater portion of this time the proposal apparently had the hearty support and cooperation of this power company, and to come now and ask a committee of the Congress to ignore its responsibility and wholly disregard the action of the Congress is so unusual and so far reaching in its objective I am sure, if you plan to give the matter any consideration whatever, you will want to go into it with some detail and at length.

Flood control and navigation on the Savannah River was a live issue when I was first elected to Congress in 1924. It has been my honor to represent two congressional districts in the meantime. The two districts together included every county in South Carolina that touches the Savannah River. Therefore, I have been vitally interested and watched the development with a great deal of concern. I shall endeavor to give the committee my sincere reaction to the more recent developments. To do this it will be necessary to review the relationship of the Savannah River Electric Co. to the Savannah River development program for the last 10 or 15 years, and in doing so I shall begin with the written records and not rely upon hearsay evidence.

POWER COMPANY SECURES LICENSE, 1928

In 1928 the Savannah River Electric Co. secured from the Federal Power Commission a license to develop what is now known as the Clark Hill project. The company later decided not to develop the project and voluntarily returned the license to the Federal Power Commission in 1932, simply saying it would not develop the plant. The company says now it did not construct the plant because of the stringent money market and its inability to secure the necessary funds, saying it may become interested later if conditions change. Apparently these reasons were not submitted in writing and there is now a wide difference of opinion as to why the license was voluntarily returned. According to written statements, the president of the Savannah River Electric Co. said in 1935, "The power company which I represent will never build another hydroelectric dam," giving as the reason for this decision, "too much Government red tape, Government supervision, and Government direction exercised over such plants." These statements were made to a group of representative citizens of Augusta, Ga., who called on Mr. Arkwright, then president of the company, in 1935 to inquire as to the future intentions of the company to develop the project at Clark Hill.

In view of later developments, it would appear that this latter reason or excuse is the one which governed their action. If they had really wanted to develop this project, they would have filed an application in 1939, 1940, 1941, 1942, 1943, or 1944, when there was an increasing demand from day to day for electric power, but they did not. In fact, if they had had an intention in the back part of their heads to develop this project, they certainly could have obtained the license in either one of the years mentioned and the Government would have furnished whatever financial assistance that might have been necessary, for it did finance quite a number of power plants in order to secure electric power for use in making aluminum and other materials for manufacturing necessary and highly essential war implements.

The failure of this company to take advantage of this unprecedented opportunity proves that they were telling the truth in 1935 when they declared they had no intention of ever constructing this project, and I am convinced they have no intention of doing so now, even if you should fail to make this appropriation and the Congress should deauthorize the project and the Federal Government should give them a license to proceed with the development. This company knows that the water in this river belongs to the public and knows it is the responsibility of the Government to protect, preserve, and promote the interest of the public, and it knows further that as long as our present system of Government stands and undertakes to discharge its full responsibilities there will be some Government red tape, Government supervision, and Government direction in any kind of water-power development in streams like the Savannah River. Therefore, if the reason assigned for surrendering the license in 1932 was an honest reason, that reason still exists and will continue to exist until there is some change in our system or form of government and I have every reason to believe that the power people will never develop this project. If you were to give them a license today they could change their minds tomorrow and, in light of the past, they would change them, and the people who have been clamoring for this service for 25 years or longer would be absolutely helpless. This committee nor any agency of the Government could in that event require or compel this company to complete the job or even reimburse the Government for money already spent. But they say: "We have made you a bona fide offer in writing and filed it with one or more agencies of the Government, and we have agreed and offered to construct, maintain, and operate the project under the specifications, supervision, control, and direction of the Federal Government." Certainly, but we remember they made what they called a bona fide offer in writing in 1943 and filed it with one or more agencies of the Government, in which they said, in effect:

"We have no intention now or hereafter to develop the Clark Hill dam site. It is a project that should be developed by the Government and if the Government will build it we will cooperate in every way possible in the construction and the operation of the plant when completed."

The offer was accepted in good faith by every agency of the Government to which it was submitted. The Congress of the United States consummated the contract by formally enacting a law providing for the development of this project. Appropriations have been made, contracts have been let, work is well under way, but the Savannah River Electric Co. has "changed its mind" and is now undertaking by every possible means, fair or foul, to defeat or delay the project.

It is true there was a money stringency in 1932, and I think it is true that money is more plentiful now than at that time, but the power company, insofar as I have been able to ascertain, has not submitted evidence to show that because there is a greater supply of money it is easier to get. I do not know that the company has submitted evidence showing any increased financial ability in the meantime, but the record shows at the hearing in Atlanta October 28, 1946, they stated definitely that no action had been taken and no plans made showing whether the money would be available for them if the license should be granted. They may make the statement that they are "willing, able, and ready," but they made that once before and changed their minds.

FLOOD CONTROL

It has been urged that the flood-control provision in this development is only incidental to the power project, saying the Army engineers did not emphasize the flood-control feature in their report from the standpoint of cost. This observation is partially correct, but it should be remembered that the engineers, in determining damages or losses from floods, take into consideration only such things as farm crops, loss of livestock, buildings, persons, etc., for the year previous to the survey or covering a period of only recent years. Naturally the loss or damage from recent floods would be light for the reason that

since the floods have become large and numerous very little property is left in the flooded areas to be destroyed. The heavy losses in dollars and cents from these floods occurred a number of years ago, as we have previously mentioned. The engineers do not include the losses sustained when a town, city, or village was destroyed by a flood 60 or 75 years ago and they do not include any future benefits that might accrue from flood control. That is, they do not attempt to estimate or consider any income that would follow the development of upward of 200,000 acres of fertile lands that would be reclaimed for farming purposes, livestock, industry, and other purposes in case floods on the Savannah are controlled, nor do they take into consideration losses sustained 50 years ago or longer when the floods practically destroyed towns, villages, and farm homes in this area, all of which would probably be restored under an efficient flood-control program.

TAXES

The power companies have propagandized the people in three or four of the counties that would be affected when this project is completed by saying the lands acquired by the Federal Government will not be subject to taxation, whereas if the project is completed by the power company the taxes of the company and its property will be enlarged. They emphasize that if the Government completes the project the taxes of the people will increase, but if the power company constructs it the taxes will decrease—quite plausible, if correct. The construction of additional plants by the company on the property naturally will increase taxes to some extent, but under existing policy, as I am informed, the value of the land covered with water will not be in excess of the assessed value at the present time and, consequently, there would be but little difference in the taxes paid to the counties by the company, as compared with the present taxes, even if the company should construct the plant. Only one county in South Carolina would be seriously affected. That is the county of McCormick, where the Savannah River Electric Co. returns approximately 15,000 acres for taxation and pays approximately $1,300 in taxes per annum. The chances are if the Government constructs the project the county will be reimbursed for any losses it may sustain on account of lands being taken from the assessment books. In this event, the county would lose nothing, but since the Government has already arranged to construct this project and is now at work and, under the prospects of completing it, business activities are springing up in practically every locality within 50 or 75 miles of the project, and it is the taxes from these activities that will increase the revenues of the counties affected. I am advised that one industry alone established in McCormick County primarily because of the prospect of obtaining sufficient power from the Government, will pay into the county treasury annually between two and three times as much as that now paid by the Savannah River Electric Co.

POWER COMPANY ONE OF FIRST TO URGE DEVELOPMENT OF PROJECT BY GOVERNMENT—THEN CHANGES MIND AGAIN

A public hearing in the interest of this development was held in Augusta, Ga., October 2, 1935, where Mr. Arkwright, president of the Savannah River Electric Co., testified at length, and in his opening statement said:

"I didn't come here for the purpose of hurting this enterprise. I came here with the view of helping wherever possible. I do not want to volunteer anything except with the approval of the committee in charge of it. We did not initiate the petition for the development of Clark Hill. We are not in objection or antagonistic toward it. We wish to cooperate with it to the full extent of our ability. I would like to say that we are here for the purpose of its support. Probably it might seem unusual to you that the electric power company in the immediate territory to be affected by the development of a hydroelectric plant by the Federal Government should not be in opposition or an antagonist but should come to support it. For my own part, I know of no other instance where that is so."

While discussing how the electric power would be disposed of following the construction of the plant, Mr. Arkwright said:

"I assume that some of the load would be allocated to South Carolina and perhaps some to Savannah, but whatever remains, or if you cannot get it absorbed in South Carolina or Savannah, I believe the Georgia Power Co. could in time absorb it all. Not all at once. There was a load-building time allowed at Boulder Dam and it would be reasonable to allow a load-bulding period here. Now that means that until that was absorbed, if you wished us to absorb it, it would be turning over to the support of the development all the future growth in the electric market in the main part of Georgia for at least 10 years."

Proceeding further, and in concluding his statement, Mr. Arkwright suggested:

"Now, as I get this situation, the people want improvement for navigation, which would be of inestimable benefit to shippers of this section. They want additional protection from floods, which would be extremely beneficial. They want prevention of soil erosion; nothing could be more desirable. They want adequacy of electric supply. They want reasonable rates, which is perfectly proper. If the Government wants the work done now, and the people care to get it done now, this company is willing to aid by cooperation and the use of the power. I do not demand that we distribute it. I merely say we have the facilities and the market and are willing to do it if you wish. * * * And I state again that our company information, records, men, and engineers are at your service. Any information we have will be available to you. If you examine our records, which I hope you will, and if you find that the best way to bring this about and to assure the economics of the project is by the distribution of the power through existing agencies, you will find us most cooperative in forwarding the project. But, regardless of what plan you may finally recommend, we stand ready to cooperate to the fullest extent in making available to you any information we may have which you may think pertinent to your investigation.

The statements quoted were made about 3 years after the power company had voluntarily surrendered its license and had stated it had abandoned the idea of developing this project and never intended to build or construct another hydroelectric plant.

The printed hearings before the Rivers and Harbors Committee, October 27, 1943, carry the following quotation from a communication addressed to the Board of Engineers by Mr. Arkwright, president of the Savannah River Electric Co.:

"I would also like to mention in this connection that the Savannah River Electric Co., an affiliate of the Georgia Power Co. in the Commonwealth & Southern Corp.'s southeastern power system, owns about 40,000 acres of land, including the dam site, in the proposed Clark Hill Reservoir. In event the Clark Hill development is authorized by Congress the Savannah River Electric Co. and the Georgia Power Co. will cooperate in the construction of the development by transferring this land with the dam site to the proper authority at a fair price based on actual cost to the Savannah River Electric Co. and by purchasing at the switchboard at a fair price, all electrical energy which can be generated (or such portion of the energy which can be generated and allotted to the Georgia Co.) for distribution throughout the State of Georgia over its extensive transmission and distribution system, as rapidly as such energy may be absorbed by normal growth of load on this system, or used to replace steam generated energy. I have made this offer before and wish to renew it at this time, as assurance of our desire to cooperate in any development of the Savannah River area which may be recommended by your Board and authorized by Congress."

COMPANY AIMS TO DEFEAT PROJECT

All these commitments confirm the statement that the power company had no intention of developing this project. The situation is further confirmed by an admittted fact that the power companies have, in the meantime, had plenty of money to construct or now have under construction at least three or possibly four additional steam-power plants to assist in taking care of the increased demands for electric power. If the power companies had any intention to develop this project there never could have been a more appropriate time to do so than some 3, 4, or 5 years ago. Their offer to construct the project now, in my judgment, is only a smoke screen. They really do not want the development. They certainly do not want it until after there is sufficient demand for electric power to absorb the maximum production of their steam plants now under construction and scheduled to be completed and in operation by the middle of 1948. The purpose now is only to delay or defeat the project.

PROJECT DOES NOT COMPETE WITH PRIVATE ENTERPRISE

If the company is offering to complete this project in order to secure additional power, there is no reason why it could not develop one of the several sites above Clark Hill on the Savannah River where the lands have already been purchased by this company or one of its affiliates, but the power people, by their actions, are saying, "this is not the primary reason," and they are propagandizing the public otherwise. For example, they are claiming and magnifying the idea that this is primarily a power project where the Government is entering into business in competition with private enterprise. I note from press reports that a considerable number of people from Georgia and a few from South Carolina have written the Federal Power Commission and the chairman of the Appropriations Committee of the Congress, urging that the project be abandoned by the Government and a license to complete the project be given the Savannah River Electric Co. This power company knows full well the Government has no intention to go into business and compete with private enterprise. In the hearings before the Federal Power Commission in Atlanta, Ga., October 28, 1946, less than 1 year ago its then president admitted that the staff of the power company had been quite active in contacting people and getting them to write such letters, despite the fact he knew that the Government has no intention of going into business in competition with private enterprise. In fact, he so declared when he stated on page 120 of the hearings referred to, as follows:

"The Government is not interested in making and selling electricity. The Government is interested in navigation and flood control. They make and sell electric power as an incident to their control of the river for navigation purposes."

This coincides exactly with the conclusion reached by the Army engineers after they had devoted 5 or 6 years to a study of plans for promoting navigation and assuring flood control on the Savannah River. They concluded the only effective plan would be to construct a dam of such magnitude that it would impound the waters in such volume they would prevent floods and when loosed in an orderly

way facilitate navigation. The estimated cost of the dam alone at that time was approximately $22,000,000. This is quite a sum of money and, in order that there could be some way for the Government to reimburse itself for these expenditures, the added power facility was recommended. Mr. Arkwright is definitely correct when he says the Government is not interested in making and selling electricity. It is interested in navigation and flood control, and the making and selling of electric power is only incidental, which not only refutes the charge that the project is designed to put the Government in business in competition with private enterprise, but it also refutes another argument these same power people, promoters and friends of the project for 11 years, are now putting into the mouths of other people and having them to write Members of Congress, saying they are opposed to the project on the grounds that it is a socialistic program.

NOT SOCIALISTIC

The power company does not object to the dam being constructed for the purpose of promoting navigation and facilitating flood control. In fact, they insist and urge there is sufficent justification for such a project. They do not feel that a dam for flood control and navigation is socialistic, but when you add the power feature to be used by the Government to reimburse itself for expenditures to promote navigation and facilitate flood control, they then insist it becomes socialistic. If they want to be unselfish and sincere in their political philosophy, they may find that the Government expenditures for flood control and navigation alone may come nearer being socialistic than the proposal with the power feature added. In the former, the expenditures would be a gratuity paid out of the Government Treasury, from which the Government would get no immediate return, whereas under the proposed plan the people who are to be primarily benefited from the expenditures for flood control and navigation will be the ones to use the power and will, therefore, reimburse the Government when they buy and pay for the electric power furnished. However, this question seems to have been settled by the Congress when the project was authorized, unless it was definitely settled years ago when authorizing other similar projects. My only reason for referring to it now is to show how easily these people change their minds, and to show the power company has again changed its mind by going out of its way within the past 6 or 8 months in an effort to delay or defeat this project by propagandizing the public to make an effort to have the Government think the people of South Carolina and Georgia are really opposed to this project.

RESERVATIONS

The late Mr. Arkwright, president of the Savannah River Electric Co., at the hearing in Atlanta October 28, last year, stated that when he returned the license to the Federal Power Commission in 1932 he made some reservation by saying his company may want to get a new license and resume their program some time in the future, and that by reason of this reservation the Government was put on notice and that he, therefore, has some right, legal or equitable, that should be recognized and is now calling on your committee to help him enforce such right.

I am not prepared to say Mr. Arkwright did not indicate in some way that he may at some time in the future want to renew his request for a license. Such a suggestion may have been reasonable, but there is no evidence that such suggestion was in writing, and if it had been it would have had no binding effect on the Government; for 3 years later, in 1935, Mr. Arkwright appeared before a representative of the Federal Power Commission, the United States Board of Engineers, and the National Resources Commission in the city of Augusta and says he told them: "We would be glad to let them go on the property for the purpose of surveys and development," saying further he told them that he "offered to sell and convey the land at a reasonable price, not in excess of the cost." He then and there urged these men to recommend the construction of this plant by the Government, and he knew the power feature was incorporated in the plan.

Now, Mr. Chairman, if the Savannah River Electric Co. or any of its officers made any reservations in 1932, their actions from 1935 to 1945 and subsequent thereto show conclusively they never intended to file a request for another license and their tactics in this procedure are not calculated to inspire any confidence whatsoever in the representations or justifications submitted to this committee for consideration.

THE PEOPLE FAVOR GOVERNMENT COMPLETING PROJECT

I understand, Mr. Chairman, that you and members of your committee, as well as other Members of the Congress, have been flooded with a number of letters from people declaring that while they believe the project should be developed, they are opposed to the work being done by the Federal Government and insist that a license should be given to the Savannah River Electric Co., saying that a majority of the people in the two States are opposed to the present program. If you have received such information, I want to say emphatically that such statements are erroneous. When I saw press accounts of such activity and found it was inspired by the power company, I suggested that the Clark Hill Authority of South Carolina make an effort to ascertain the true sentiment of the people. We did not travel from county to county to contact and argue with people and prevail upon them to write a letter in support of the project, as the power people had done. We simply addressed a questionnaire containing one question, which was as follows:

"What percentage of the adult population in your county would prefer having the United States Government complete the flood-control, the navigation, and power project now under construction on the Savannah River near Clarks Hill, S. C., rather than rely upon the promise of a corporation or private individuals to complete it? (Give your answer, name, occupation, post office, county, and State.)"

Many of the questionnaires were addressed to "Boxholder," because we were anxious to secure the unbiased and unprejudiced opinion of the people generally. Between 1,200 and 1,500 questionnaires were mailed, about 45 percent of which were returned, and the tabulated results show that 90 percent of the adult population are reported as being in favor of the Government completing this project rather than having it done by someone else. I tabulated these returns personally, and in the tabulations I found 33 percent of those reporting were farmers, 12 percent merchants, and 1 or more of the remaining 55 percent gave their occupation as follows: Banker, sawmill operator, dairyman, funeral director, lawyer, bookkeeper, automobile dealer, mayor, druggist, farm laborer, engineer, State employee, city clerk, county agent, cotton ginner, fertilizer dealer, school superintendent, cotton-mill superintendent, housewife, college professor, constable, land surveyor, county superintendent of education, magistrate, seed dealer, county supervisor, pharmacist, chief of police, cattle and livestock dealer, pulpwood dealer, clerk of court, radio operator, minister, teacher, vocational instructor, livestock dealer, physician, oil mill operator, editor, RFD carrier, machinist, Soil Conservation Service, linotype operator, furniture dealer, dealer in farm machinery, county treasurer, State board of health, State labor department, junk dealer, clerical worker, contractor, filling station operator, carpenter, textile operator, miller, skilled laborer, member of State legislature, highway commissioner, gas and oil distributor, horticulturist, boarding-house keeper, civil engineer, restaurant manager, secretary, loan association, county auditor, implement dealer, lumberman, electrician.

I note further from the newspapers that some of the letters sent to Members of Congress urging them to reverse their previous action in making appropriations for this project have been publicized to a considerable extent. I do not know whether the letters were publicized because they appeared to be so ridiculous, or whether they were publicized for the purpose of promoting the propaganda of the power people to influence the public and Members of the Congress to change their minds and prejudice them toward this project and other similar developments. I am referring to one of the press reports because it is alleged to have come from a representative citizen of South Carolina not far from my home and he is reported to have been very persistent in having the Congress reverse its action and give the Savannah River Electric Co. a license to construct and operate this project, saying that if this were done and as soon as the Savannah River Electric Co. could begin operating at normal capacity it would contribute in the way of revenues to the States of Georgia and South Carolina, including the Federal Government, at least $900,000,000 annually. Of course, this is ridiculous. If it were true and the revenues could be divided annually in equal parts between the Federal Government, the State of Georgia, and the State of South Carolina, South Carolina would then be able to repeal all of her revenue acts, double her expenditures for education, old-age assistance, including expenditures for every other activity in the State and still have a surplus of $100,000,000 annually.

SUMMARY

1. The Savannah River Electric Co. was given a license in 1928 by the United States Government to construct a dam across the Savannah River near Clarks Hill, S. C., and after holding it for 4 years, voluntarily returned it to the Federal Power Commission in 1932. Then after a lapse of 15 years, which was 2 years after the Congress had provided that the project should be developed by the Army engineers, and after appropriating $5,500,000 for this purpose, and after work on the project has been in progress for approximately 1 year, the company now comes and urges that no further appropriations be made for this purpose and that it be given a new license, notwithstanding that for the past 11 years the company has insisted that the work be done by the Federal Government.

2. The excuse the power company gives for not developing the project when it had a license was because of the stringent money market. No evidence has been given, further than a mere statement, that this was the real reason, but there is a transcribed record showing where and when the president of the company stated the license was returned because they did not want to be bothered with so much Government red tape and Government supervision. It is true there was a stringent money market in 1932, but if that had been the real reason, the company has submitted no reason why the application for a new license was not renewed in 1939, 1940, 1941, 1942, 1943, or 1944, when the money market was in excellent condition and the demand for electric power was greater than any 5-year period in our history. The reason the company gives about the stringent money market does not appeal to reason, but the one about Government red tape and Government supervision is still here and will remain as long as our present system of government remains, and if it were sufficient reason for

not developing the project when the company had a license, it will still be sufficient reason for changing its mind again and delaying the matter for another 15 years, or indefinitely if possible, for this appears to be its only purpose.

3. The power company insists that the license was returned with reservations consented to by the Federal Power Commission, but no record has been offered in evidence to this effect, and if true, there should certainly be a written record of some kind in the office of both the company and the Federal Power Commission. In the absence of such a record, the logical assumption is that the president of the company was definitely correct in 1935 when he said his company never intended to construct another hydroelectric plant, and this company now has no legal or equitable right whatsoever superior to that of any other company or any person for a license to develop this project.

4. The company complains about the Government depriving it of the right to develop its own properties; in fact, it has no properties at Clark Hill except land and forests, and it is water in the Savannah River in which the Government is interested in protecting and controlling. The power company has no interest in this water; it does not own a gallon, not even a drop of water in the Savannah River. These waters belong to the public, and it is a responsibility of the Government to conserve and control same for the benefit of the public. It is true this company owns about 40,000 acres of land adjoining the Clark Hill site, which, according to reports, were obtained about 1928 and 1929, at ridiculously low prices by promising the owners that the company would use the land and water in developing a gigantic power plant, and at the same time control the floods and promote navigation on the Savannah, justifying the promises by saying the company had already secured a license from the Government to develop the project.

5. The power company is endeavoring to lead you and the public to believe this is primarily a power project, but it knows this is not true, for its president, testifying under oath before the Federal Power Commission less than a year ago, denies and refutes the idea when he said, "The Government is not interested in making and selling electricity. The Government is interested in navigation and flood control. They make and sell electric power as an incident to their control of the river for navigation purposes."

6. This company is trying to convince you and the public that the people of Georgia and South Carolina are now opposed to having the Government complete the project. You did not hear of the people objecting in 1935 when the power company pledged its undying support to the proposal, saying the project should be developed and operated by the Government until the revenues were sufficient to reimburse the Government for expenditures, then to be turned over to some municipality, county, State, or power company. These people, or their representatives, did not object to you and other Members of Congress when the matter was before your Rivers and Harbors Committee, your Flood Control Committee, or your own committee when you recommended appropriations for this project on two separate occasions. No; you did not hear of any opposition from the people of these two States for a period of 10 years, or until last August when this power company played the Judas Iscariot act, by renouncing its allegiance to the program and began to propagandize the Congress and the public against further development of the project, saying that a majority of the people are now in favor of taking their chances with the power company rather than the Government. To illustrate the justification for this statement, the company refers to a hearing in Atlanta last October, where 67 witnesses appeared in favor of the company's proposal, and only 7 appeared as being against it. The company does not tell you that its president was one of the 67 witnesses and that he testified that a number of his staff had been contacting people in person and telling them their county or counties would become bankrupt if the Government completed the project, but if the power company could build it, their taxes would be decreased.

To find out to what extent the people had fallen for this propaganda, the Clark Hill Authority of South Carolina sent a questionnaire to 1,200 or 1,500 people in the counties in South Carolina touching the Savannah River, requesting them to state in their opinion what percent of the adult population in the county preferred having the Government complete the project rather than leave it to someone else. The tabulated results show that 90 percent favor the Government completing the project. Many of these inquiries were not addressed to any particular class of people but to box holders and to show how representative of the people from which reports came, we have herein listed the names of the occupations shown from the replies received, where the tabulations show 72 occupations, which would indicate we have a good cross section of the entire population.

Mr. Chairman, when the President of the Savannah River Electric Co., stated orally and in writing in 1935 and subsequently thereto that if the United States Government would agree to construct, maintain, and operate the Clark Hill project the company would convey approximately 40,000 acres of land to the Government at a price not exceeding the cost, turn over its files and records to the Government to be used in any way it may see fit, furnish any information it may have that might prove to be of service, and cooperate in every possible way in the development and operation of the project, it was an offer with no reservations attached, for his concluding words were: "Regardless of what plan you may finally recommend, we stand ready to cooperate to the fullest extent," and when Congress passed the flood control bill in December, 1944, providing for the development and operation of this project it accepted that offer, and both parties then became honor-bound to the fulfillment of the agreement. I shall let the Congress be the judge as to what constitutes honor. Our Government has always been very jealous of its honor, and I am glad to bear witness that the Congress, irrespective of political parties, has ever guarded with jealous care its honor and integrity. "That nation is worthless that will not venture all for its honor."

When the State of South Carolina, through its legislature in 1933, authorized and directed the governor and secretary of state to issue to the United States a grant of such lands, flowage rights or easements, that may be required in the development of the navigation project or projects on the Savannah River, it was a conditional offer to the United States Government and when Congress on December 22, 1944, passed the flood-control bill, the offer, in effect, was accepted by the United States Government and both are now honor-bound to carry out their agreement. When South Carolina, through its legislature in the early part of 1947, unanimously adopted a resolution favoring and urging the completion of the project by the United States Government, it reaffirmed the action of the State legislature of 1933 and declared, in effect, that the State is still willing, ready, and able to discharge its part of the agreement. I understand that similar action was taken by the State Legislature of Georgia, and to turn turtle now, after the action of the Congress in providing for the authorization without any objections on the part of anyone, coupled with the persistent support and cooperation of the Savannah River Electric Co., for 10 years, and with the construction of the project well underway, it would be a breach of good faith with the State of South Carolina, the State of Georgia, with the people of the United States, and it would create much criticism, raise a justified suspicion, and tend to destroy the confidence of the people in the integrity of the Congress of the United States.

Mr. Chairman and gentlemen of the committee, the development of this project has been one of the dreams of my political life, and, in view of the preceding actions of the Congress, I would regret to learn that the interest of the people I represented for 16 years has been subjected to an unprecedented action of the Congress simply to promote the unwarranted selfish interest of a small group of individuals after having broken their faith with the Congress. The establishment of such a precedent would be extremely dangerous. I shall look with confidence for your decision in the matter.

The Central Valley

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 20, 1947

Mrs. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of James G. Patton, president of the National Farmers Union, submitted to the Senate Committee on Public Lands May 3, 1947:

The introduction of S. 912 faces us with just one more stage in a concerted, clever, and unusually well-camouflaged drive to wreck American national land policy.

That land policy was established over the past 150 years, and it has required a lot of hard political fighting to win and to hold. Its principle, simple and clear, is this: To favor the actual farmer who works the land as means of livelihood for his family.

The actual farmers won the Preemption Action of 1841 to protect the squatter on the land against the speculator, who sought by legal cleverness to wring material gain for himself out of the squatter's toil.

The second great victory was the Homestead Act which Abraham Lincoln signed in 1862. Its principle was the same—to settle the land with families who would live on it.

The third victory for the actual settler was the National Reclamation Act of 1902, passed with unanimous support from every western delegation in Congress and bearing the signature of the great Republican President Theodore Roosevelt. It was hailed on the floor of Congress as lineal extension of the Homestead principle, into the arid West.

We now face this issue: Are we to see the great edifice of national land policy torn down stone by stone? The first breach was made in the reclamation law. It was made in 1938 on the Colorado-Big Thompson project. The breach was widened a little on the Humboldt-Nevada project in 1940. Now, in S. 912, the effort is to drive wide the shoulders and create an irreparable breach, to write "finis" to a principle that Americans of past generations laboriously established and held in the confidence that it would endure. If we should allow S. 912 to pass, the death knell of the family farm on western American soil will be sounded and the day of the corporation farm will have arrived. As the agriculture relations secretary of the Council for Social Action of the Congregational Christian Churches, the Rever-

end Shirley E. Greene has just warned, "This broadening of the proposed legislation confirms the fear * * * that the Central Valley bill (S. 66, H. R. 655, 656) was but an entering wedge on the part of those who would sacrifice the family-type farm to their own selfish interest and greed."

The National Farmers Union regrets to have to say that the initial breach was made on a project in Colorado, where our organization has strength, headquarters, and a long history. We regret to find in S. 912 that the repeal of 1938 on the Colorado-Big Thompson is now being made use of as a sort of "precedent" to undermine the family farm on the vast lands of the Central Valley in California, on the spreading, watered lands of the Lower Rio Grande Valley in Texas, and back again in our own State on the lands of the San Luis Valley. By reason of our position in Colorado we feel a special responsibility for exposing at this time the falsity of position of those who seek to use the 1938 repeal in this fashion to carry destruction elsewhere.

When, in 1938, the Committee on Irrigation and Reclamation of the United States Senate presented the bill to repeal the 160-acre water limitation on the Colorado-Big Thompson project, someone wrote into its report this trumped-up two-point argument: (1) The intent of the original reclamation law was to develop undeveloped public lands, presumably not to develop private lands, or partially developed lands with insufficient water supply. (2) Provision of supplemental water to developed land is something different from what was contemplated as the central purpose of the original law, and therefore subject properly to exemption from it.

What this misleading Senate report said is this:

"The Federal reclamation laws, as originally adopted, were for the purpose of supplying unused water to undeveloped public lands. In order to make provision for as large a number of settlers under projects as would be economically feasible, and to prevent individuals from acquiring more than a fair share of the land to be reclaimed, the Congress limited the amount of land which could be owned by one individual and supplied with water from the reclamation project to 160 acres. This provision was entirely appropriate to conditions to which it was intended to be applied." (Committee on Irrigation and Reclamation, 75th Cong., 3d sess., S. Rept. No. 1921.)

That was the first point. Its initial sentence, which has been used over and over again to mislead is, as a complete and adequate statement of the original purpose of the law, erroneous on its face. If, as implied, the intention was not to water private lands, but only public lands, then why was the 160-acre water limitation on private lands included at all in the original statute? That limitation, which now is at issue on private lands in Colorado, Texas, and California, has no other reason for being, except that the purpose of the Federal reclamation laws as originally adopted was not confined to the limited purpose declared by the Senate in its report of 1938 and used as a basis for its recommendation to the Senate for repeal. Besides, the limitation was on water, not on land, and the intention was that no one should get more than his fair share of the water to be developed by public appropriation. The evil that men do lives after them, but we don't want the evil of that distortion of historical fact to spread false justification for repeal to California, to Texas, and then back home again to roost in the San Luis Valley of Colorado.

The second point in the argument of the 1938 Senate report is as follows:

"The situation under the Colorado-Big Thompson project, the only one involved in the present bill, is quite different from that of the earlier reclamation projects. The Colorado Big Thompson project does not bring under cultivation new land. It is intended to furnish a supplemental supply of water to an already highly developed area of agricultural lands. These lands are now in private ownership and irrigated by numerous existing irrigation ditches. Due to various factors, such as more intensive cultivation, drought, and increased consumption of water by other systems, the water supply for this large area, amounting to 615,000 acres, is inadequate in many seasons to insure the maturing of crops. This project will supply the necessary additional water to make certain the harvests which are now uncertain."

The simple truth is that all irrigation provided under Federal reclamation is supplemental, and always has been. It supplements rainfall, underground waters, or both. The fact that water is supplemental furnishes no valid basis for exemption from the beneficent purpose of the law, which is to create many homes on the land. Supplemental water is not a test whether a good law should apply, and it was not so regarded by the framers of Federal reclamation in 1902.

These alleged views—rather than the true views—of those who originated reclamation, have been spread so assiduously, that it is time to remind ourselves what the true intentions were. It is not the lawyers, including evidently those of the great landholding corporations of the Central Valley of California and of the excess land-holding interests of the San Luis Valley and the valley gravity project in Texas, who spread false law. They have no doubts that the reclamation law applies to their private lands. It is rather the propagandists who try to make it appear to the man in the street that the bureaucrats are putting over sometning which the grand men of the last generation had never planned or wanted. The truth is just the opposite.

Let's look at the record of those grand men. Representative Mondell, of Wyoming, made this clean-cut declaration while the reclamation bill was under debate in the House:

"Under nearly every project undertaken by the Government there will undoubtedly be some lands in private ownership and it would be manifestly unjust and inequitable not to provide water for these lands, providing their owners are willing to comply with the conditions of the act; and in order that no such lands may be held in large quantities or by nonresident owners, it is provided that no water right for more than 160 acres shall be sold to any landowner, who must also be a resident or occupant of his land. This provision was drawn with a view to breaking up any large land holding which might exist in the vicinity of Government works and to insure occupancy by the owner of the land reclaimed."

Congressman MARTIN of South Dakota was equally explicit. Referring to the water-limitation clause of the bill under consideration he told the Congress: "The policy of the Government is to build up communities of many settlers with small holdings, and not to encourage the prosecution of agriculture by large corporations." With prophetic insight that belies those who declare that changes have been so great that the standards of the framers no longer fit the times, Congressman MARTIN added: "In this day of colossal enterprises private capital could reclaim arid lands at a great profit, provided the land and water could be owned by private capital on a large scale." That condition is exactly what this 160-acre limitation on water provided against.

Authoritative studies of this subject have been made and they have been published. There is no excuse for ignoring the results of their examination of law and history, or for permitting the continued spread of false information to compound the mistake of the Colorado repeal of 1938.

A study of "Acreage limitation and excess land provisions" included in the report of Central Valley Project Studies, Problem 19, makes careful examination of the declarations of those who framed and passed the national reclamation law of 1902. After quoting a series of clear-cut declarations, it concludes:

"These statements, and others of like character that could be cited, indicate quite clearly that the sponsors of reclamation arrived at conscious decisions (1) in favor of acreage limitation, (2) in favor of supplemental as well as primary irrigation, (3) in favor of the irrigation of private as well as public lands, and (4) in favor of steps necessary to force the breaking up of large private holdings. Provisions in the Reclamation Act of 1902, respective to these points, were not there by accident or through insufficient consideration; they represented deliberate decisions based upon thorough discussion."

This was in keeping with the statement by Congressman Mondell, of Wyoming, who told the House deliberating on the bill that, "No law ever presented to any legislative body has been so carefully drawn with a view of preventing the possibility of speculative ownership in lands * * *."

The framers of the law were familiar with the facts of western land monopoly. The deliberations of the National Irrigation Congress and of other western associations are full of explicity and repeated discussions of how to deal with it.

The statement by Senator Francis G. Newlands, coauthor of the original act, before the Sacramento Valley Development Association in 1905 is definitive:

"Now, what national machinery have you? You have the machinery of the National Reclamation Act, intended, as your Governor has remarked, to meet the demands of the home seekers of the country. Guarded in every way against monopoly and speculation, intended to secure to every man of industry an area of land sufficient, according to the soil and the climate or productiveness, for the support of a family, and sufficient for that alone [applause], it is also intended to break up existing land monopoly. How is that accomplished? We realized in the framing of that act that it would not be fair to apply it only to the public domain, for within reach of every governmental project lie lands in private ownership, thirsting for water to be supplied by national aid, and we felt that it was as much the duty of the National Government to supply agricultural communities that were thus imperiled as to create new agricultural communities.

"And so we provided that water rights could be secured for lands in private ownership within reach of Government projects, to be guarded against monopoly by preventing any proprietor from securing water rights for more than 160 acres, the amount of land fixed in the bill. * * *

"Here let me say that in my own opinion California has no greater curse than these large landed estates. [Applause.] To the Spanish or Mexican land grants was added the concentration of large areas of land secured from the Federal Government, part of the national domain, obtained either under lax laws or by evasion or maladministration of the laws. I have no word of censure to apply to the men who own these grants, or who now own these large areas of land. I only condemn the policy which made land monopoly possible on this coast and throughout the arid region." [Applause.]

That statement of the purposes of the law made by its chief author, was received by the association to develop the Sacramento Valley with evidences of the greatest satisfaction.

A recent student of this subject, after analyzing the past, points out an extreme danger

of the future. Ralph B. Wetheimer, in his Legislative and Administrative History of Acreage Limitation and Control of Speculation on Federal Reclamation Projects, published as part of Central Valley Project Studies, problem 19, states:

"There is no difference in principle between a supplemental and a primary supply insofar as the wisdom of applying acreage limitations and antispeculation provisions is concerned. Pressure to relax the restrictions in such cases may be viewed as a flank attack upon the whole policy, for in the future many million acres which the Bureau of Reclamation expects to irrigate will receive supplemental supplies."

We oppose misuse of "supplemental water" as a phony doctrine for concealing destruction of the American family farm. The National Farmers Union wants to preserve the family farm on those millions of acres which will receive publicly supplied water in the future.

The Colorado-Big Thompson repeal is to be distinguished not only by the clever distortions which enabled it to produce a phony basis for exemption from a sound law. It bears other marks which ought to raise questions in the minds of serious men. The national reclamation law was the result of long, careful, and public deliberation over a decade of time. The destruction of the protections provided by that law on the Colorado-Big Thompson project, on the contrary, was the result of rapid work. If its preparations were careful, and presumably they were, they were not preparations in public.

The same distorted statement of purpose of the reclamation law upon which the Senate committee relied was recited by the Acting Secretary of the Interior (not the Secretary) who gave formal assent for the Department of the Interior. He made it appear, also, that there was no practical need to maintain the law, since its purpose of breaking up land monopoly would be achieved on this particular project by natural processes of land subdivision. If he was correct that the Colorado-Big Thompson project was a special case, certainly he made this repeal unusable as general precedent. The general doctrine of natural subdivision is false, and has been rejected specifically by a dozen Congresses giving approval to limitation by law.

There were no public hearings on the Big Thompson repeal.

There was no debate on the floor of Congress.

The second exemption was obtained on Humboldt project in Nevada in 1940. Since the primary ground for exemption on that particular project was that 160 acres was too little to permit successful family farms, the Humboldt exemption affords no precedent whatever for general exemption. Another Acting Secretary of Interior, the one to give assent to repeal on the Nevada project, was very careful to declare just this. He said that he did not mean to indicate that, in all cases where a project is furnishing merely a supplemental water supply, the excess-lands provisions of existing laws ought not to be applied and enforced. The solution in similar cases, he indicated, might be found, after study, to lie not in exemption, but in flexible acreage determination by the Secretary of the Interior of the size of a farm unit appropriate to each project. Naturally that size might be either larger or smaller than 160 acres. Thus the record of the Humboldt exemption itself recognizes that repeal affords no general remedy.

A third attempt to repeal the 160-acre water limitation was made on the California Central Valley project in 1944. The Big Thompson and Nevada exemptions were used as precedents, but the effort nevertheless failed—as it should have.
